The establishment of a cult center at Dan called also for special security—remains of massive fortifications, a city wall, and a gate were uncovered at the S foot of the mound. In the 9th century B.C.E. a 4 m thick city wall and gate complex which included an outer gate with a large paved sqaure were built. The gate has four chambers and a monumental paved entryway leading up to the top of the mound. Between the two gates is a stone-paved piazza, 19.5 × 19.4 m, with a bench for the elders and a canopied structure where the king may have sat (see Fig. DAN.03; cf. 1 Kgs 22:10). Ahab, who had trading rights in Damascus, may have been the king who thus fortified Dan against possible attack by the Arameans. Also in the 9th century, considerable building activities took place in the area of the sacred precinct. A large almost-square structure, about 19 × 19 m, built of ashlars laid in headers and stretchers, was uncovered. The structure, probably a high place or *bamah,* was surrounded on three sides by a courtyard of crushed yellowish limestone. S of the *bamah* were two square surfaces of flat ashlars. A four-horned altar, one horn of a much larger altar, remains of the bases of circular columns, and pottery vessels were found. West of the *bamah* a complex of buildings, including an altar room with a sunken jar containing ashes and with three iron shovels, were excavated in the 1985–86 seasons. It appears that in the 9th and 8th centuries the sacred precinct at Dan had reached its zenith. See Figs. DAN.04 and DAN.05.

The city enjoyed a period of prosperity due perhaps to the victories of Jeroboam II in N Syria. An upper gate was built on the ridge of the mound and in the houses a large repertoire of Iron II vessels came to light. How the Assyrian conquest of N Israel affected Dan is not clear. In any case, the stone pavement continued to serve as a road leading northward into the city and to the sacred precinct. The houses of the 7th century were well built and in one quarter they were built around a large stone-paved courtyard. A large quantity of vessels, including decanters, storage jars, cooking pots, oil lamps, and a shard with the name Baal-Pelet, indicate that the settlement at Dan continued to prosper until the Babylonian Conquest.

Following the Babylonian Conquest, there is little archaeological evidence of the history of the city—only scattered shards of the later periods were found in areas B, K, M, and Y. The chambers of the upper gate were blocked and benches were built along the walls. The pavement, however, continued in use through the Hellenistic period. At the foot of the mound where the Iron Age gate was originally located, two cisterns and clay pipes which brought water from the spring date to the Roman period. Another cistern or plastered pool and burials of the Roman period were uncovered on the slope. The Roman settlement was apparently limited to the SW area of the site, where a large number of shards were found on the surface. The sacred precinct, however, continued with those activities connected with the sanctuary.

West of the high place, the remains of a wall and shards of storage jars and oil lamps of the Persian period were uncovered. On one shard the impression of a magnificent lion was found. A number of figurines, possibly from a favissa, belong to the end of the Persian or to the beginning of the Hellenistic period. A figurine of the god Bes, two of the god Osiris, one of a smiling Astarte, another of woman and child, a figurine of a rider, coins of Ptolemy I (4), of Antiochus III (2), and of Ptolemy II (4), and a figurine of a temple boy indicate activities in and around the sanctuary in the 4th–3d centuries B.C.E.

During the Hellenistic and Roman periods considerable building activities took place in the sacred precinct. A well-built enclosure wall with the entrance from the S surrounded the sanctuary during the Hellenistic period. A plastered circular basin, coins of Antiochus IV and Demetrius II, oil lamps, and a bilingual inscription attest to the fact that the sanctuary continued to serve the community of Dan and the surrounding area. The inscription is especially significant. Written in Gk and Aram, it reads: "To the god who is in Dan, Zoilos made a vow." See Fig. DAN.06.

During the Roman period the entrance in the Hellenistic wall was blocked and new walls were built next to it. West of the enclosure wall a fountain house was built. Steps led down to plastered basins which were fed by water brought from the spring through a clay pipe. The overflow was returned to the spring in an open channel. Some 38 coins of Constantine I and Constantine II may have belonged to the pilgrims who visited the sanctuary in the 3d and 4th centuries C.E. The last reference to Dan was by Eusebius, who stated that it was located 4 miles from Paneas.

AVRAHAM BIRAN

DANIEL (PERSON) [Heb *dānī᾽ēl* (דָּנִאֵל)*, dānîyē᾽l* (דָּנִיֵּאל)]. **1.** The second son of David, born at Hebron (1 Chr 3:1), the firstborn of David and Abigail of Carmel, Nabal's widow (1 Samuel 25). He is called "Chileab" in 2 Sam 3:3, a reading which undoubtedly is corrupt (see CHILEAB). In Chronicles the textual problem is similarly confused. Greek mss had a variety of readings—*Daniēl* (one codex; so Rahlfs); *Damniēl* (Codex Vaticanus), *Dalouia(s)* (Codex Alexandrinus; Lucianic recension; Aquila)—and the Syriac had *klb,* reflecting the late Samuel reading. "Daluiah" or "Daniel" was most likely his given name.

2. The head of a postexilic Levite family descended from Ithamar, the fourth son of Aaron. He returned to Jerusalem with Ezra, along with other leading Israelites and their households (Ezra 8:2). In the parallel account in 1 Esdr 8:29, he is called Gamael (Gk *Gamēlos*). He was among those leaders who signed and sealed their names upon a covenant document (Neh 10:7—Eng 10:6). They were prompted, according to the text, by their awareness of their shortcomings exposed in the ceremony of reading the Law (Nehemiah

8–9), and were joined by the rest of the community (10:29–30—Eng 10:28–29). Specific stipulations in this document are spelled out in Neh 10:31–40 (Eng 10:30–39).

3. The primary character in the narratives of Daniel 1–6, and the man who had the dreams and visions recounted in Daniel 7–12. See DANIEL, BOOK OF.

DAVID M. HOWARD, JR.

DANIEL, ADDITIONS TO. The Additions (Adds) to Daniel consist of three extended passages in the Greek LXX which have no counterpart in the canonical text of Daniel: (1) "The Prayer of Azariah and the Hymn of the Three Young Men," consisting of 66 verses and located between what would correspond to vv 23 and 24 of the third chap. of canonical Daniel; (2) "Susanna," consisting of 64 verses; and (3) "Bel and the Snake," consisting of 42 verses, the latter two Adds usually appearing after the canonical chaps. of Daniel. All three Adds have their setting in Babylon and describe how some Jew who trusted in the Lord God of Israel was delivered from certain death through the intervention of an angel.

Evidently never a part of the Jewish canon (neither the one probably established by ca. 150 B.C. [*HJP²* 2: 317]) nor as it existed in Josephus' day in the 1st century A.D. (*HJP²* 3/2: 706–8), the Adds were regarded as part of the Christian canon of the Western Church until the time of the Protestant and Catholic movements, at which time they were rejected by Protestants and were termed "apocryphal" while the Roman Catholic Church at its Council of Trent in 1546 reaffirmed them and termed them "deuterocanonical."

———

A. Introduction

1. Their Secondary Character. The external evidence proves that these three compositions are, in fact, later additions. There is no ms evidence for their existence among the Jews of antiquity, not even among the Dead Sea Scrolls, where there have been found, to date, seven Semitic copies of Daniel, most of them

quite fragmentary (Milik 1981), and three Aramaic texts containing hitherto unknown legends about him (Pseudo-Daniel[a,b,c] [Milik 1956]).

Josephus mentions none of the Adds in spite of the fact that he does record some other noncanonical legends about the prophet Daniel (cf. *Ant* 10.11.6–7). Nor is there a Gk translation of them by Aquila, the Jewish convert of the 2d century A.D. who translated the then-current rabbinic text into ridiculously literal Greek (for details on Aquila, see AQUILA'S VERSION). Both Origen (185?–?254) and Jerome (340?–420) expressly stated that they knew of no current Hebrew text of the Adds (on Jerome, see Braverman 1978: 49–52). Finally, the so-called Hebrew and Aramaic "survivals" of these Adds found in the medieval works of Josippon and Jerahmeel (so Gaster 1894–95; 1899) are actually translations of Gk and Lat versions of the Adds (Lévi 1933; Moore 1977: 49, 86, 117; for details on Josippon, see JOSIPPON). An examination of the internal evidence (see below *passim*) also confirms the secondary character of the Adds.

2. The Two Greek Texts. The Gk text of Daniel occurs in two quite different forms: the Septuagint (LXX) and the so-called Theodotion ("Θ"), both of which are printed for purposes of convenient comparison in Swete (1894), Rahlfs' *Septuagint,* and Ziegler (1954). While the "Θ" has many witnesses (Ziegler 1954: 7–76), the LXX has only three: (1) the Chester Beatty-Cologne papyrus 967, dating to ca. A.D. 150 (its fragments are scattered among the works of Ziegler 1954; Geissen 1968; and Hamm 1969, 1977); (2) Codex Chisianus 88, a 9th-century cursive ms; and (3) the Ambrosian Syro-Hexaplar, a very literal Syriac translation of Origen's text made by Paul of Tella in 615–617. Inasmuch as the LXX of Daniel was used by the translator of 1 Maccabees (Bludau 1897: 8, n. 6; Montgomery, *Daniel* ICC, 38), virtually all scholars agree that the LXX of Daniel existed by 100 B.C. and that it originated in Egypt, probably Alexandria (Pfeiffer 1949: 440).

For reasons not altogether clear (Moore 1977: 31), the LXX of Daniel was replaced by "Θ" in the Christian Church sometime between 150 and 250.

Regardless of who the scribe Theodotion (i.e., "Θ") was in other LXX books (Montgomery, *Daniel* ICC, 24–29, 35–42, 46–55; Hartman and DiLella, *Daniel* AB, 74–84), the "Θ" of Daniel does not represent that 2d-century recensionist; for many phrases from "Θ" of Daniel are found in the Greek of Baruch and in Hebrews and Revelation (Hartman and DiLella, 80–81). Nor is the "Θ" of Daniel of the same tradition as Proto-Theodotion (*kaige*) in other books of the LXX (Schmitt 1966: 11–16, 100–12; but see Grelot 1966: 392; Delcor 1971: 22). Rather, the "Θ" of Daniel is best regarded as a separate translation of the Semitic book of Daniel (i.e., not a recension of the LXX), albeit its Gk translator sometimes adopted the wording of the LXX. The "Θ" of Daniel probably dates to the 1st century of the pre-Christian era; the 1st century A.D. is its latest possible date. On the basis of the list of officers in Dan 3:2, Koch (1973) proposes Syria-Mesopotamia as the translation's place of origin.

The origin and relationship of the deuterocanonical sections of the LXX and "Θ" in Daniel are even more puzzling. For even though the LXX and "Θ" are virtually identical in "The Prayer of Azariah and the Hymn of the Three Young Men," they differ considerably (in both wording and content) in "Susanna," while "Bel and the Snake" occupies in this matter a midposition. Schmitt (1966: 100–12) would account for these differences in the Adds by arguing that the canonical and deuterocanonical sections of "Θ" had different translators, the Adds probably being done by Symmachus of the 2d century A.D. By contrast, Schüpphaus (1971: 49–72) maintains that the Adds of "Θ" are but an extensive reediting of both the style and content of the LXX and not a new translation (he ignores, however, the question of whether the Adds had a Semitic *Vorlage*). The consensus of scholars is that in neither the LXX nor "Θ" is there a difference between the Greek of the canonical and deuterocanonical sections, that is, in each case the canonical and deuterocanonical sections were done by the same Gk translator. That being the case, differences between the LXX and "Θ" of Daniel are, in essence, a reflection of their different Semitic *Vorlagen.*

In all the ancient and modern versions of Daniel, the Adds are based upon "Θ", the only exceptions being the Syro-Hexaplar and the earliest edition of the *Vetus Latina* (or OL) (Montgomery, *Daniel* ICC, 29–32; Charles 1929: 1viii). Moreover, the Syriac Peshitta and the Vulgate, as well as the Coptic, Ethiopic, Arabic, and Armenian, are all quite literal translations of "Θ".

B. "The Prayer of Azariah and the Hymn of the Three Young Men"

1. Component Parts. This LXX material is located between what would correspond to vv 23 and 24 of the third chap. of the canonical book of Daniel, where three Jewish youths (i.e., Shadrach, Meshach, and Abednego) were miraculously preserved by God's angel after being thrown into the fiery furnace by King Nebuchadnezzar for refusing to worship a large gold idol. So impressed was the king at their deliverance that he decreed that anyone who spoke against their God should be killed and his house destroyed, for there is no other God who could deliver in that way.

The Add contains three (more likely, four) separate and independent compositions: (1) the prayer (3:24–45 of the LXX); (2) the narrative (3:46–51); (3) the ode (3:52–56) or, as it is called in the Roman Catholic liturgy, *Benedictus es;* and (4) the psalm (3:57–90), or *Benedicite* (for a discussion of their liturgical use, see Daubney 1906: 83–97). Those scholars who regard the ode and psalm as one composition commonly refer to it as the "hymn" (Moore 1977: 75–76).

With the possible exception of the narrative, these four compositions are clearly secondary, being added after the completion of the canonical book (i.e., sometime after 163 B.C.) but before the latter's translation into Greek (ca. 100 B.C.). Questions concerning the original language, date, and provenance must be asked about each of the additions, because there is no justification for treating them en masse.

a. The Prayer. Azariah's prayer (so "Θ") was actually offered by all the martyrs (so the older LXX) while inside the blazing furnace, miraculously unaffected by its searing heat. That the prayer was a separate and independent entity that originally had nothing to do with the fiery furnace is indicated by four lines of argument: (1) the clumsy and repetitious character of the prayer's own introduction to itself in vv 24–25 of the older LXX; (2) its use in v 24 of the heroes' *Hebrew* names, whereas in the fiery furnace account of the MT their Aramaic names are always used (13 times); (3) the obvious inappropriateness of much of the prayer for its context; and (4) the logical and chronological misplacement of the prayer when compared to the narrative (3:46–51).

As for the prayer's inappropriateness, it is clearly a communal prayer of repentance and supplication, the basic theme of which is well expressed in vv 30–31:

> We have not obeyed them [i.e., your commandments] or done them, as thou hast commanded us that it might go well with us. So all that thou hast brought upon us, and all that thou hast done to us, thou hast done in true judgment.

While such a prayer is never out of date, it is totally inappropriate for its present context where the three youths are in their present predicament precisely because they *have* been true to their God. (Admittedly, 3:41–44 *is* appropriate to their situation and perhaps that is why the prayer was initially inserted.) The prayer is reminiscent of national laments such as Psalms 44, 74, 79, and 80, and of such prose confessions as Dan 9:4–19; Ezra 9:6–15; Neh 9:6–37; and Bar 1:15–3:8.

That the prayer was originally in Hebrew is suggested by four lines of evidence: (1) the prayer calls the martyrs by their Hebrew names while the MT uses their Aramaic names; (2) the prayer has a few commonplace Hebraisms (cf. 3:27, 33) and a few unusual ones (e.g., 3:34, 40 [for lists of Hebraisms scattered throughout the Adds, see Bludau 1897: 160; Daubney 1906: 49–53; and *APOT* 1: 628]); (3) Hebrew is ipso facto the language of Jewish prayer and worship; and (4) Kuhl (1940: 132–54), without taking too many liberties with the Gk text, has retranslated the Gk version of the prayer into a rather literal biblical Hebrew poem with a metrical pattern of 3+3 (or 2+2+2) / 3+3 (or 2+2+2).

The melancholy tone of the prayer in general (and of vv 29, 32, 38, and 40 in particular) is especially appropriate for Israel's darkest days under Antiochus Epiphanes IV, the Seleucid king who tried to wipe out Judaism in 167–163 B.C. But if composed then, the prayer was not inserted until later. It was, however, inserted prior to the LXX's translation of the Semitic text of Daniel. Palestine is the probable place of the prayer's composition, especially if it was originally composed in Hebrew.

b. The Narrative. This brief narrative (3:46–51 of LXX), coming between the prayer and the hymn, tells how God's angel kept the interior of the fiery furnace safe and cool for the martyrs even though Chaldeans standing near it were burned to death. In contrast to the other sections of the Add, there is

almost complete agreement between the LXX and "Θ" v 46 being the one exception (Moore 1977: 62–65).

The narrative is the most troublesome of the Adds. Some scholars do not regard it as an addition but rather as either identical to (so Bludau 1897; Rothstein 1900) or similar to (Oesterly 1914: 388; *APOT* 1: 625–37) a section that, they believed, was part of the original book of Daniel but was erroneously deleted from it when the Adds were removed from the canonical book.

The root of the problem probably rests with the MT itself, for a number of scholars have noted "a gap" between vv 23 and 24 of the third chap. of the MT. But the "presence" of such a gap does not necessarily prove that this narrative is the particular material that fell out of the MT (so Kuhl 1940: 84–86; Charles 1929: 72–75), since vv 46–48 of the narrative repeat yet contradict v 22 of the MT (i.e., in the MT those who tossed the martyrs into the fiery furnace were themselves consumed, not later, but immediately).

Either the narrative or, more likely, the prayer is out of place: both logically and chronologically, the prayer should follow, not precede, the description of the youths being thrown into the fiery furnace. Kuhl (1940: 161–64) maintains, probably rightly, that originally the narrative was a prelude to the hymn that a scribe had inserted, and that a still later scribe prefixed the prayer, thereby making what was once a logical sequence an illogical and contradictory one.

If the narrative was originally a prelude to the hymn, then it would have probably been written in Hebrew, the probable language of the hymn. That the martyrs are known in the narrative by their Hebrew names also gives a presumption to a Hebrew *Vorlage.*

If the narrative was erroneously deleted, then it would probably have been in Aramaic, the present language of the fiery furnace narrative in the MT. There is a medieval ms containing an Aramaic text which clearly follows "Θ" 's account of the fiery furnace (Gaster 1894–95), but unfortunately, it has no reading which decisively shows which version was necessarily based upon the other. In any event, the narrative was added to the canonical Daniel after its composition but before it was translated into Greek.

c. The Hymn. This addition, consisting perhaps of two separate compositions, the ode (3:52–56 of the LXX) and the psalm (3:57–90), is antiphonal in character and appropriate for public worship. Thus, it was probably originally in Hebrew, a likelihood considerably strengthened by the fact that Kuhl (1940: 154–59) has, with close fidelity to the Greek text, accomplished the retroversion of the ode back into biblical Hebrew with a 4/4 meter; the psalm, with 2+2/3. There is, however, little internal evidence for a Semitic original for the hymn.

(1) The Ode (3:52–56). Uttered by the martyrs in the fiery furnace, the ode is an antiphonal hymn of praise consisting of six (originally seven [Christie 1928]) verses, or bicola. The first colon always blesses God, while the second offers a refrain which, while differing slightly in phraseology from verse to verse, is always essentially the same in meaning. Verse 52a is typical of the ode:

"Blessed art thou, O Lord, God of our fathers,
and to be praised and highly exalted for ever."

Although most scholars do not distinguish between the ode and the psalm, there are three good reasons for doing so: (1) they have different addresses: God in the ode, his creation in the psalm; (2) they have different types of refrains: the psalm's always the same, the ode's ever changing; and (3) their presumed metrical patterns are quite different.

The ode's date of composition depends, in part, upon one's interpretation of its phrase "temple of your sacred glory" (v 53), i.e., was the temple still standing (a case that contradicts v 38 of the prayer) or is it the heavenly temple? Inasmuch as Tob 8:5 contains the opening lines of the ode as well as the general theme of both the ode and the psalm, the Tobit passage *may* have inspired the writing of the ode (or at least its inclusion with the psalm [but for the opposite view, see Nickelsburg 1984b: 151]), in which case the terminus a quo for the ode would be the date of Tobit's composition, namely, sometime during the late 3d or early 2d century B.C.

(2) The Psalm (3:57–90). The psalm, a beautiful hymn of praise, consisting of four stanzas, is reminiscent of the structure of Psalm 136, in that its second colon is always the same, namely:

"Sing praise to him and highly exalt him for ever."

Its author enjoins a different group in each stanza to praise the Lord: creations in the highest heavens (vv 57–63); elements coming from the heavens (vv 64–73); earthly creatures (vv 74–81); and all mankind (vv 82–90). In its message and content, the psalm is especially reminiscent of Psalm 148.

Like the ode (and for all the same reasons), the psalm was probably composed in Hebrew, in Palestine, during the 2d century B.C. Its frequent mention of water in such forms as dew, rain, and snow (cf. vv 60, 64, 68, 70, and 77–78) probably precludes an Egyptian provenance and therefore the psalm's being composed originally in Greek.

2. The Effect of These Additions. Although the original intent of the Jewish editors who first supplied these additions to the fiery furnace incident of the MT is unknown, the effect of these interpolations is quite clear, namely, the spotlight shifts from Nebuchadnezzar and his lavish surroundings to the faith of the martyrs and the greatness of their God. In the MT, for instance, the reader knows more about the feelings of Nebuchadnezzar than those of the heroes themselves. The Add changes all that. The prayer underscores the piety and humility of the martyrs while the narrative and the hymn remind the reader of God's power and majesty.

As for the relative literary merit of the four Adds, if usage or popularity be the criterion for judgment, then the ode and the psalm (but not the prayer) have considerable literary merit; for from the days of the early Church Fathers they figure prominently in the liturgies of both the Eastern and Western churches.

3. Concerning Canonicity. a. Among Jews. There is no clear evidence of the fiery furnace apocryphon's use by Jews prior to the Middle Ages, when it appears in the works of Josippon and Jerahmeel. Whatever the reason(s) for this Add's exclusion from the Hebrew canon as determined by the Jewish Fathers, it cannot have been that the Add was adjudged by them as containing heretical ideas or teachings incompatible with Judaism. Its basic message (i.e., that God works in human history, esp. for those Jews who trust in him and praise him as the Lord of all creation) is compatible with postexilic Judaism in general, and with the canonical book of Daniel in particular. Ideas, phrases, and entire lines in the Add are redolent of older biblical passages, notably in Isaiah, 1 and 2 Chronicles, Nehemiah, and, esp. Psalms.

b. Among Christians. Unfortunately, canonical lists of the Church Fathers, who nearly always regarded the book of Daniel as canonical, do not distinguish between it and its Adds. Nevertheless, the Add under discussion was quoted as Scripture by Justin Martyr (d. 165), Clement of Alexandria (d. before 215), Hippolytus of Rome (170–235), and others (Moore 1977: 50–51). Although Jerome (340?–420) expressed reservations about the Add's canonicity, he did not place it (as he did for "Susanna" and "Bel and the Snake") at the end of his Latin translation of the canonical Daniel. Polychronius, brother of Theodore of Mopsuestia (350?–428), was convinced that the Add was not part of the original text of Daniel. Nonetheless, the overwhelming majority of Church Fathers regarded it as an integral part of the canonical text of Daniel (for such fathers through the 6th century, see Daubney 1906: 76–80 and *HJP²*, 725–27; for an exhaustive list down through the centuries, see Julius 1903).

C. "Susanna"

The story is named after its virtuous heroine, Susanna (Heb *šôšannāh* 'lily'). Framed by two lecherous judges because she had just rejected their adulterous proposal, she would have been executed for adultery but for the divinely inspired intervention of the young Daniel. As the story stands in the Gk texts of Daniel, it is strangely out of place. This is true whether, as in "Θ", it precedes chap. 1 of the canonical text (so also OL, Coptic, Ethiopic, and Arabic versions) or follows the 12 chaps. of the canonical text as in Daniel 13 (as in LXX, Syro-Hexaplar, and Vg).

1. Summary. Among the frequent visitors to the home of Joakim, a wealthy Babylonian Jew in Babylon, were two highly respected judges who had developed a secret passion for Joakim's wife Susanna, the daughter of Hilkiah and a very beautiful and God-fearing woman (vv 1–12). One day these two lechers caught Susanna while she was alone in the garden bathing. They insisted that she have sexual intercourse with them, right then and there, or they would frame her for adultery. Perceiving herself in a no-win situation, she no sooner started screaming for help than one of the elders threw open the garden

gate, and as the household came running in, the two wretches described how Susanna's lover had just escaped! (vv 13–27).

At Susanna's trial the next day the two scoundrels testified against her, saying that they had caught the two lovers in the very act, but that the young man had escaped. Her accusers were so above suspicion that their testimony was taken at face value. And without even allowing Susanna to speak in her own defense, everyone condemned her to death by stoning. But as she was being led away, she prayed out loud, insisting that she had been framed. Whereupon the Lord aroused the holy spirit of the young boy Daniel, who shouted, "I am innocent of the blood of this woman." He then castigated the community for condemning Susanna without first confirming the evidence by cross-examining her accusers (vv 28–48).

At the scene of the "crime," Daniel had the two villains separated so that they could not hear one another's testimony. Then he asked each of them the same question: "Under what tree did you see them being intimate with each other?" They each gave a different answer, thereby confirming the correctness of the charge of wickedness and perjury that earlier Daniel had made against each of them. In accordance with the law of Moses, the wicked judges were punished in the way that they had intended for Susanna: they were stoned to death. From that day on the boy Daniel enjoyed a great reputation among his people (vv 49–64).

Brief though the story is (only 114 lines of Greek in "Θ", as printed in Ziegler 1954), its characters are clearly delineated; the plot is simple and direct, with mounting suspense and a sudden, clear denouement. The story is a skillful admixture of three of the most basic and universal concerns of humanity: sex, death, and God. But unlike some other tales with the same ingredients where a moral is "tacked on" at the end of an otherwise titillating and prurient tale so as to make it more acceptable to the "prudish," here religious concerns pervade the story.

2. The Two Greek Accounts. The preceding summary reflects that of "Θ", which differs at a number of points from the older and less polished LXX version of "Susanna." The reason for such striking differences between the two texts constitutes the central problem of the Add.

When the two Gk texts are printed on the same page (see Ziegler 1954), one does not have to know Greek to see how different they are (the two Gk texts, side-by-side with a German translation of the two texts, may be found in a sleeve in the back of Engel 1985). More specifically, "Θ" has a number of additions, notably, vv 11 (the elders were ashamed of their passion for Susanna), 15–18 (the bath scene in the garden), 20–21 (the elders propositioned Susanna and explained how they could frame her), 24–27 (at Susanna's screams the household rushed in and learned of the alleged crime), 31b (Susanna was shapely), 36b (she had quite deliberately made preparations for her lover), 39 (the lover was too strong to be captured), 41b (the assembly condemned her to death), 46–47 (Daniel dissociated himself from the verdict), 49–50 (after advising resumption of the trial at the scene of the alleged crime, Daniel was invited to sit with the presiding elders), and 63 (all of Susanna's relatives praised God for the trial's outcome). Some of these additions in "Θ" improve the logic of the tale (e.g., 20–21, 36b, 39, 49–50) while others increase the story's drama and tension (e.g., 24–27, 41b); and a few do both (15–18, 46–47). Hebraisms, it should be noted, are far more common in "Θ" than LXX.

In spite of these and other differences in "details of fact" (e.g., the alleged crime occurred "at dawn" in the LXX; "at midday" in "Θ"), the plot remains essentially the same. The principal difference is one of emphasis: Daniel himself is given far greater prominence in "Θ" (e.g., vv 46–47 and 49–50 occur only in "Θ"; cf. also vv 45b and 64 of "Θ" with the LXX). Inasmuch as Daniel is depicted in "Susanna" as a young male, possibly even a child, "Θ" 's placement of the story (i.e., before chap. 1 of the canonical version) seems more logical than the LXX's having it as Daniel 13, where it fits neither chronologically nor typologically, its being a tale, while Daniel 7–12 are visions. The story's placement after the canonical text also attests to its secondary character. To what extent all this may explain the Church's preference for "Θ" over the LXX is unknown.

In terms of content and diction, the differences between the LXX and "Θ" of "Susanna" are sufficiently great to argue for their being separate translations of two Semitic texts. But if so, then the translator of

"Θ" must have had the earlier LXX before him; otherwise, how can one account for their verbatim agreements in the Greek?

3. Original Language. There is no external evidence that the Gk "Susanna" is a translation of a Semitic text. To be sure, Milik (1981) has argued that three exceedingly small scraps from Dead Sea Cave 4 may represent the Aramaic *Vorlage* for the "missing" first five verses of the LXX of "Susanna." But if so, then as Milik himself frankly conceded after his detailed discussion of the reconstructed but still quite fragmentary text, "Not a word or phrase from these scraps of Aramaic text is sufficiently specific to affirm a certain identification" (1981: 357). Had the name of the heroine or even such a key word as "Babylon," "Joakim," or "Daniel" occurred in any of the fragments, Milik's case would have been much stronger. Certainly the title of his French article ("Daniel and Susanna at Qumran?" [Eng]) well expresses the uncertainty, if not the improbability, that these fragments are from "Susanna," let alone that they represent the Aramaic *Vorlage* for vv 1–5 of the LXX of "Susanna."

There is, however, some internal evidence for a Semitic *Vorlage* for "Susanna." A priori, the presence at Qumran of heretofore unknown Aramaic legends about Daniel (Milik 1956) argues for a Semitic *Vorlage* for "Susanna," as does the simple, straightforward character of both the LXX and "Θ". Both texts can be translated into Hebrew much more easily than is the case with acknowledged Gk compositions (e.g., Adds B and E of the Gk Esther). The LXX of "Susanna" has over 50 clauses beginning with *kai* ('and') and a verb, all of which is very reminiscent of the *waw*-consecutive construction of biblical Hebrew (so *APOT* 1: 641). Further evidence of a Semitic *Vorlage* includes the frequent use of such Semitic idioms as *kai egeneto* (Heb *wyhy* 'and it happened' [vv 7, 15, 19, and 28 of "Θ"]), *idou* (Heb *hinneh* 'Behold!' [vv 13 and 44 of LXX; vv 20 and 43 of "Θ"]), the use of an idiom such as "as usual" (lit. "as yesterday and the third day") in v 15; as well as the very frequent use of a pronominal suffix in both the genitive and accusative cases (e.g., vv 30, 63, and *passim*), and the use of the definite article for the vocative (v 42 of "Θ"; v 48). Too often in older commentaries (e.g., Scholz 1892: 148; Daubney 1906: 134–39) the lists of Heb/Aramaisms are exhaustive of the possibilities rather than judiciously selective of probabilities (but see Bludau 1897: 183–85; *APOT* 1: 641–42).

Even more suggestive of a Semitic *Vorlage* are those variants between the LXX and "Θ" which are best explained by regarding them as different translations of the same Semitic text (e.g., vv 23, 53, 54, 55). Then too, there is at least one instance where a very puzzling Gk phrase is best explained by presupposing the misreading of a Semitic *Vorlage:* that the two elders "were wounded over her" in v 10 suggests a misreading of Heb *ḥlh* 'to be sick (with love),' as *ḥll* 'to be wounded' (so Zimmermann 1957–58: 239–40).

Approximately three-fourths of the Heb/Aramaisms in "Susanna" occur only in "Θ". Moreover, since there are no perceptible differences in the translation style between the Greek of "Susanna" and the canonical portions of Daniel, it is probable that the Greek translator of Daniel had in front of him a Semitic text of "Susanna." However, Engel (1985) argues for a Heb/Aramaic *Vorlage* for the LXX but views "Θ" as a revision of the LXX.

In his detailed linguistic analysis Milik (1981) concludes, quite reasonably, that the *Vorlage* of the LXX of "Susanna" was Aramaic, not Hebrew. While, unfortunately, none of his examples are decisive, Milik does give a persuasive answer to what has been a principal argument against "Susanna's" having been composed in anything other than Greek, namely, the paronomasia, or play on words, by Daniel (so Plöger 1973: 671; Nickelsburg 1981: 26) in his response to the two elders in vv 54–55 ("Under a mastic tree [*schinon*] … the angel of God … will immediately cut you in two [*schisei*]") and in vv 58–59 ("Under an evergreen oak [*prinon*] … the angel of God is waiting … to saw you in two [*prisai*]"). In the LXX (in contrast to "Θ") Daniel actually asked each elder *two* questions: in v 54 ("Under what tree and in what part of the garden did you see them with one another?") and in v 58 ("Under what tree and in what part of the garden did you catch them making love?"). Yet each elder answered only the first question: "Under a mastic tree" (v 54), and "Under an evergreen oak" (v 58). Milik (1981) suggests, quite plausibly, that the original answers in the Aramaic *Vorlage* of the LXX were *tḥt ʿrb› bʿrb›* ('Under the poplar in the West') and *tḥt ṣpṣpt› bṣpwn›* ('Under the willow in the North'). In other words, the Greek translator of the LXX

did what other translators, ancient and modern, have done: he chose to create a pun in his own language rather than to translate the Aramaic literally. (For other "translations" of vv 54 and 58, see Ball 1888: 324; *APOT* 1: 650; and Moore 1977: 84, 110–12).

None of the above arguments proves that "Susanna" had a Semitic *Vorlage,* but taken together they do give a reasonable presumption of an Aramaic *Vorlage* for LXX, and a Hebrew one for "Θ"—or at least a "correction" of the latter by a then-current Hebrew text.

4. Genre. Even though quite believable, the story has rarely had advocates for its historicity. Among "modern" scholars, Michaelis (in 1770) was the first to contest its historicity. But twelve hundred years earlier Jerome had reported that a certain Jewish teacher regarded "Susanna" as "the fiction of some Greek" (*Preface to Daniel*).

Certain 19th-century scholars, such as Eichhorn and Jahn, viewed the story as fiction with a moral, although they did not agree as to what that moral is. In the early 19th century, esp. among German scholars, "Susanna" came to be regarded as a *historicized myth,* the heroine being either the virgin goddess Phryne, the Swan Maiden, or the sun goddess (for details of these and other comparable suggestions, see Baumgartner 1926: 259–67; Pfeiffer 1949: 452–53).

With greater justice, Fritzsche (1851: 185) and others viewed "Susanna" as an apocryphal tale featuring the modus operandi and downfall of that infamous pair, Ahab ben Kolaiah and Zedekiah ben Maaseiah, the adulterous false prophets mentioned in Jer 29:21–23 and in the Babylonian Talmud (*Sanh.* 93a; for text, translation, and discussion, see Wurmbrand 1963). Critics of the theory point out that the lechers in "Susanna" were not identified by name and, more important, were judges, not prophets.

Another century-old but still popular interpretation of the story is that "Susanna" was originally a Pharisee polemic of the 1st century B.C., attacking the court procedures and theory of the Sadducees (Brüll 1877). In their interpretation of Deut 19:18–21, the Sadducees were strict constructionists, subscribing to the equivalency principle (i.e., "Your eye shall not pity; it shall be life for life, eye for eye … foot for foot" [v 21]) without consideration as to the intent or motive of the false accuser. By contrast, the great Pharisee layman Simeon ben Shetaḫ, brother-in-law of the Sadducean king Alexander Jannaeus (104–78 B.C.), was well-known for his insistence on the importance of cross-examining witnesses: "Be very searching," he cautioned, "in the examination of witnesses; but be guarded in your words, lest from them [the accusers] learn to lie" (*Pirqe Aboth* 1.10). So strongly did Simeon feel about this matter that—as an object lesson!—he allowed his own son to be executed *after* the youth's accusers had admitted that they had falsely accused him, that is, so that the self-confessed accusers would *have* to be executed because the falsely accused had been executed! Many scholars (e.g., Ball 1888; Marshall, *HDB* 4: 630–32; Oesterley 1914) agreed with Brüll that as the story currently stands, it eloquently underscores two important views of Simeon: (1) the necessity of interrogating witnesses with skepticism and care; and (2) the punishment of false accusers in accordance with their intent, not the accused's actual fate.

Critics of this interpretation point out, quite rightly, that Daniel's own "courtroom" conduct was far from exemplary, for he himself badgered each of the witnesses *before* he had established his guilt by cross-examination (cf. vv 49, 52–53, 56–57; Hammer 1972: 225). Arguably, Daniel himself had divine revelation to help him (so v 45), but presumably other interrogators would not. Moreover, there is an even better explanation for the story: it is a folktale (Pfeiffer 1949: 453–54; Doran 1986: 300).

Huet (1912) showed that in antiquity the folktale theme of "the wise child" who intervenes and corrects an unjust decision was a well-established genre found in such diverse folklore collections as *A Thousand And One Nights, The Tales of Sinbad,* and the Mongolian version of *The Throne of Vikramaditya.* Later, Huet (1917) provided additional examples of "the wise child" motif but also reluctantly conceded that in "Susanna" Daniel may have been, not a child, but a youth (so v 45 of LXX). Baumgartner (1926) supplied more examples of the same genre but later (1929) concluded that originally the story of Susanna was a purely secular tale that combined *two* folk motifs: (1) "the wise judge," who often was a child but need not be; and (2) "the Genoveva" theme, i.e., the chaste wife who is falsely accused, usually by a rejected suitor, but is subsequently vindicated. (For further examples, see Thompson 1957: J 1140–50; K 2111.) Nickelsburg (1984a: 38), however, argues that the story of Susanna "has been influenced by the story of

Joseph and Potiphar's wife" (Genesis 39), with the gender of the hero changed to that of a woman. Finally, Busto Saiz (1982) regards "Susanna" as an example story with the emphasis on the judicial role of Daniel and interprets the story as a midrash inspired by Hos 4:12–15.

Regardless of the origins of "Susanna," later variations of the tale are found in the Samaritan version, where the daughter of Amram, a high priest on Mt. Gerizim, was falsely accused of fornication by two rejected suitors (cf. Gaster 1925: 199–210; Heller 1936); in Josippon's account of Anna (Lévi 1933: 166–71), the wife of the priest Hannaneh in the days of Herod Agrippa II (A.D. 56–100); and in the Falashic version from Ethiopia, where the story's heroine is actually named Susanna (Wurmbrand 1963). Each account has a different hero. In the Samaritan version the heroine's father establishes the villains' perfidy; in Josippon's version, it is Nahman; and in the Falasha version, it is the angel Michael disguised as a mortal.

5. Religious Elements. Even if the original story was secular and intended to be enjoyed for its own intrinsic interest and drama, in the Greek it is thoroughly Judaized. God is mentioned 15 times in just 64 verses. (Only the wicked judges do not mention him.) Susanna herself was God-fearing (v 2), having been instructed in the law of Moses by her religious parents (v 3). Her community regarded adultery as a capital offense (v 41) and abhorred bloodguilt (vv 48b and 50a). Passages of Jewish Scriptures are paraphrased and quoted in vv 5 and 53. So strong was the community's sense of ethnic and religious identity that Daniel could say to the wicked judges: "You offspring of Canaan and not of Judah" (v 56); and "the daughters of Israel … were intimate with you through fear; but a daughter of Judah would not endure your wickedness" (v 57). The community rejoiced in the vindication of the innocent (v 60) and the punishment of the wicked (vv 61–62). In sum, both Susanna and her community were the embodiment of a simple but strong faith in the Lord God of Israel, a noble and needed example for Jews in any time or place.

6. Purpose. "Susanna," however, is not primarily an example story. To be sure, "Susanna," like the stories in Daniel 1–6, features the divine intervention whereby a condemned martyr is saved from certain death, with the category of women now added to that of men and children (MacKenzie 1957: 211–18). So also, the obligation not to commit adultery is put on the same level as not eating pork (Daniel 1) and not worshipping idols (Daniel 3).

Nonetheless, this originally separate and secular tale was evidently prefixed to chap. 1 of the Semitic Daniel to serve as an introduction to the young Daniel. But if so, that effort must be judged as unsuccessful. For one thing, Susanna, not Daniel (but see Doran 1986: 300), is the hero in the LXX (or better, its Semitic *Vorlage*), Daniel not even appearing until v 45, and then as little more than a representative of sensitive and idealistic youth (cf. v 64 of LXX: "Because of this the young are beloved of Jacob—on account of their simplicity. And let us watch over the young that they be courageous sons. For the youth are idealistic, and a spirit of knowledge and understanding will always be in them"). Moreover, the story's physical setting differs in mood and spirit from that of the stories in Daniel 1–6. In "Susanna" the setting is rural, not courtly; and the Jewish community appears to be a contented, independent, and self-governing group, with no evident external oppression or threats to its religious faith or heritage.

Engel (1985: 54–64), however, would take strong exception to much in the preceding two paragraphs, arguing that the LXX of "Susanna," based upon either a Hebrew or Aramaic text (which was composed sometime between 152 and 63 B.C.), was a theological *Lehrerzählung*, that is, a critique of perverted Jewish authorities and institutions; whereas, "Θ" (a revision of the LXX rather than a separate Gk translation and made about 100 years later) *is* an example story featuring God-fearing Susanna.

7. Author, Place, and Date of Composition. The author was undoubtedly a Jew, possibly a Pharisee (Brüll 1877). Unfortunately, little can be added to Pfeiffer's statement (1949: 449): "It is of course impossible to tell where Susanna originated or when." Despite the story's Babylonian setting in v 1 of "Θ" (v 5 of LXX), present-day scholars, primarily on the basis of the social and political situation depicted in the story, prefer a Palestinian provenance, possibly even S Judea, that is, some place far removed from Greek influence (MacKenzie 1957: 218).

The secular tale may have originated in the Persian period, when the Jewish community in Palestine enjoyed a modicum of independence and self-governance and when the Jewish religion was unthreatened by Hellenism. In any event, the terminus ad quem, or lowest date, for "Susanna" is, as scholars from Bludau (1897) to Engel (1985) agree, the date of the LXX translation of Daniel.

8. Concerning Canonicity. a. Among Jews. How did "Susanna" get into the Christian canon when it failed to enter the Jewish one? The old answer was that, having been composed originally in Greek, the Add never even had a chance of being accepted into the Palestinian canon (so Pusey 1886). However, the probability of a Semitic *Vorlage* for "Susanna" argues against this. A more plausible explanation is that the story contradicted a pharisaic or mishnaic Halakah in the Mishnah (Zeitlin 1950: 236; *IDB* 4: 467; MacKenzie 1957: 214), namely, discredited witnesses could not be punished for false witnessing unless evidence from two other witnesses who had not been present at the scene of the "crime" at the time proved that the accusing witnesses had deliberately lied (*Sanh.* V 1).

Even more likely, the story was ultimately rejected because Jews regarded it as an intrusive and clumsy introduction to the canonical book. Not only were "Susanna" 's setting and mood dramatically different from the stories in Daniel 1–6, but Daniel himself was poorly represented, especially in the *Vorlage* of the LXX.

b. Among Christians. The earliest Christian citation of the story as Scripture is by Irenaeus of Lyons (140–?202) in his *contra Haereses* 5:26. Even though reservations about the story were expressed by Julius Africanus (died after 240) in his letter to Origen (185?–254 [for details, see Engel 1985: 17–24]), by the anti-Christian critic Porphyry (233–?304) in his *adversus Christianos*, and by Rufinus (345–410), Christian Church Fathers found ample occasion to refer it (for more details, see *HJP²* 3/2: 725–27); for exhaustive lists, see Julius 1903; also Engel 1985: 24–54 for "modern" commentaries as well).

D. "Bel and the Snake"

"Bel and the Snake" represents two distinct "confrontation narratives" in which the prophet Daniel, a confidant of King Cyrus of Persia (550–530 B.C.), courted his own death by deliberately setting out to disprove the "divinity" of two much revered Babylonian gods: the idol Bel (Akk *Belu* 'He who rules,' i.e., Marduk of Babylon) and a large, living snake. In both stories Daniel's clever use of food proved the undoing of the false gods, that is, Bel could not eat and therefore was not a living god; and because of what the snake *did* eat he died immediately. These brief tales, each of which is only 22 verses long, are designated as Daniel 13 in "Θ"; Daniel 14 in the LXX and Vg.

1. Summary. When Cyrus of Persia was worshipping the Babylonian idol Bel and noticed that his confidant, Daniel, did not, the king asked him why. To Daniel's answer that he worshipped the living God but not man-made idols, the king countered with, "Do you not think that Bel is a living God? Do you not see how much he eats and drinks every day?" But when Daniel insisted that Bel was just clay on the outside and bronze inside, Cyrus summoned the priests of Bel and insisted that the matter be settled immediately (vv 1–9).

So the priests proposed that the usual enormous offerings be sealed within the temple. Then the next morning, depending upon whether the food had been consumed or not, either they or Daniel would be summarily killed. Now unbeknownst to the king, the priests had a secret entrance into the temple through which they and their families regularly came to get the offerings. But unbeknownst to the priests, that night after they had left the temple but before its door was sealed, Daniel had the floor dusted with ashes (vv 10–14). Later that night the priestly families came and, as usual, took all the offerings. The next morning after the sealed door was opened, the king saw the footprints in the dust! Infuriated, the king had all the culprits killed and handed Bel and his temple over to Daniel for destruction (vv 15–22).

The king then challenged Daniel by pointing to a very large snake the Babylonians worshipped and saying, "You cannot deny that this is a living god; so worship him." To justify his blunt refusal, Daniel got the king's permission to prove the snake's mortality. Daniel then fed it a concoction of pitch, fat, and hair, whereupon the snake burst open and died (vv 23–27).

Threatened by irate Babylonians whose god Daniel had killed, the king had Daniel thrown into the lion pit. But even after six days the seven ravenous beasts refused to eat him. At one point an angel of the Lord

grabbed the prophet Habakkuk by the hair of his head and brought him and the stew he was carrying to Babylon to feed the famished Daniel. The meal having been delivered, the angel returned Habakkuk to Judea (vv 28–39). On the seventh day when the king went to the pit to mourn for Daniel, he discovered him alive. After acknowledging Daniel's God as the only true God, the king hauled Daniel up from the pit and tossed in his enemies, who were devoured instantly (vv 40–42).

The preceding summary, while based upon "Θ", is general enough to cover most of the variant "details of fact" in the LXX. The two stories, in the Greek at least, are clear, concise, and conclusive.

2. Genre of the Two Tales. The plot for "Bel," the world's first detective story, is certainly plausible. And whether believable or not, Daniel's being safe in the presence of ravenous lions and a prophet's being transported by the hair of his head do have biblical antecedents (cf. Daniel 6 and Ezek 8:3).

Yet few, if any, scholars argue for the historicity of either tale. For one thing, "Bel" has a couple of historical errors: Cyrus did not "succeed" (v 1) but rather took by force the kingdom of his grandfather, Astyages (cf. Herodotus *Hist.* 1: 130); and more important, classical authors like Herodotus, Strabo, and Arrian agree that it was the Persian king Xerxes I (486–465 B.C.) who destroyed Bel and his temple (not Daniel [v 22 of "Θ"], or Cyrus the Great [the LXX]). Second, both "Bel" and "The Snake" are typologically identical with other unhistorical stories in Daniel 1–6, where Daniel, described in the third person, is always the hero (except in Daniel 3), and the then-reigning king is the other principal. Moreover, it is always Daniel's strong adherence to his faith that is responsible for bringing him into a dangerous situation *and* for saving him from it, with the result that Daniel is rewarded by the king, his enemies are destroyed, and the God of Israel is recognized as the one true God.

Over the past century three quite different genres have been proposed for the two tales, each genre having its present-day proponents. First, around the turn of this century especially, a number of scholars, following Gunkel (1895: 320–23), viewed the Snake narrative as simply *the historization of a myth*, the myth being that most exciting part of Enuma Elish (The Babylonian New Year Creation Epic), where Marduk, the tutelary god of Babylon, kills Tiamat, the primordial goddess of salt water:

> "Stand thou [i.e., Tiamat] up, that I and thou meet in single combat!"
> When Tiamat heard this, she was like one possessed.
> …...
> They joined issue Tiamat and Marduk, wisest of gods.
> They strove in single combat, locked in battle.
> The lord spread out his net to enfold her,
> The Evil Wind, which followed behind, he let loose in her face.
> When Tiamat opened her mouth to consume him,
> He drove in the Evil Wind that she close not her lips.
> As the fierce winds charged her belly,
> Her body was distended and her mouth was wide open.
> He released the arrow, it tore her belly,
> It cut through her insides, splitting the heart.
> Having thus subdued her, he extinguished her life.
> He cast down her carcass to stand upon it.
> After he had slain Tiamat, the leader,
> Her band was shattered (*ANET*^{3}, 67).

After this, Marduk proceeded to fashion from the corpse of Tiamat the universe: the heavens and the earth, the sun and moon and stars—everything except man.

Echoes of this struggle between Marduk and Tiamat, suggest some scholars, are to be heard even in the ingredients Daniel fed the snake in v 27 (i.e., "pitch, fat, and hair"). For example, Aram *wêpi*› 'pitch,' represented an early confusion with Aram *wa*‹*ăpi*› 'south wind' (so *HDB* 1: 267). The patties eaten by the snake represented "barley" (= Aram *s*‹*r*› or *s*‹*rt*›), which in Aramaic can also mean "storm/whirlwind," which, in turn, is cognate with Bab *sâru,* 'wind,' one of the weapons Marduk used to kill Tiamat. As for the deadly ingredient "hair," it represents the Gk translator's misreading of Aram *s*‹*rt*› 'storm/whirlwind,'

as Aram *sʿrtʿ* ‘hair’ (so Zimmermann 1958). A priori, there is no reason why these proposed errors could not have happened just as easily with the Gk translator’s working from a Heb text (Moore 1977: 143).

The Hebrew Bible does indeed have echoes of some such titanic battle between Yahweh and a draconic monster, variously known as Leviathan (Ps 74:14; Isa 27:1), Rahab (Job 9:13; 26:12; Ps 89:10), or Yam (Job 7:12). But critics of this theory have pointed out that Tiamat was envisioned by the Babylonians as a female dragon, not a snake (for details, see *APOT* 1: 653–54); and that while the Neo-Babylonians did have snake worship as part of their religion (Landersdorfer 1913), there is no evidence of their worshipping *living* snakes.

Second, some other scholars have preferred to view “Bel” and “The Snake” as popular or priestly *anecdotes of Haggadah* inspired by Jer 51:34–35, 44:

> “Nebuchadrezzar the king of Babylon has devoured me, he has crushed me; he has made me an empty vessel, he has swallowed me like a monster; he has filled his belly with my delicacies, he has rinsed me out. The violence done to me and to my kinsmen be upon Babylon,” let the inhabitants of Zion say, “My blood be upon the inhabitants of Chaldea,” let Jerusalem say … And I [i.e., God] will punish Bel in Babylon, and take out of his mouth what he has swallowed. The nations shall no longer flow to him; the wall of Babylon has fallen.

Although no extant texts illustrate any intermediate stages in the evolution of “Bel and the Snake” from Jeremiah 51, the process of subsequent midrashic elaboration and embellishment *is* documentable. For example, Daniel’s concoction of “pitch, fat, and hair” (v 27) is described in later Jewish literature as concealing a variety of lethal objects: pointed nails (*B’reshit Rabbah*), iron combs with sharp tines (Josippon), iron hatchets (Chronicles of Jerahmeel), and very hot coals (*Jer. Nedarim* 37d). By contrast, Nickelsburg (1981: 27) suggests that “Bel and the Snake” may be a midrashic treatment of Isaiah 45–46. In any event, for other stories of “Bel and the Snake” in later Jewish literature, see Ginzberg 1909: vols 5 and 6, *passim.*

The third and most recently proposed genre for the two tales is *idol parody*, a motif well illustrated by Isaiah 44 and 46. As “a Daniel confrontation it [i.e., “Bel and the Snake”] sought to ground the rejection of idol worship, typically formulated in the inherited parodies, in the historical act of a well-known hero of the faith in the period … in which it [the idol parody] appeared as a recognized oral genre” (Roth 1975: 43). Roth also maintains that the idol parodies of “Bel” and “The Snake” were written to counteract the appeal of idolatry, and esp. zoolatry, to Egyptian Jews of the 1st century B.C. (cf. Wis 15:18–19; *Let. Aris.* 138). Egypt did indeed have a long history of snake worship; for example, Apophis, the wicked enemy of Re, was depicted as a snake, as was Buto, the snake goddess of Lower Egypt.

Needless to say, such tales were designed for Jews, not gentiles. Any impact on the latter would have been most negative, the gentiles resenting such Jewish pretensions: “the stories were designed to reassure Jews that the pagan religions were absurd and that their own God was superior” (Collins 1981: 128–29). Critics of the idol-parody theory point out that it assumes that “Bel and the Snake” was originally composed in Gk rather than translated from Heb or Aram.

3. Differences between “Θ” and the LXX. The story of Bel is told more effectively in “Θ”. It is better integrated into the canonical book and raises fewer questions in the reader’s mind (cf. vv 1–2 of the Gk versions). Then too, “Θ” has more emotive words (“Daniel *chuckled*” [v 7]; “*Infuriated,* the king” [v 21]), more direct quotations (cf. v 18), and greater specificity in terms of the king’s name (v 1) and the terms of the wager (vv 8–9, 12), and more accurate and precise chronology (cf. vv 15–16). “Θ” also has more Hebraisms, including *kai egeneto* (vv 14, 18, 28) and in v 14 eight *kai* ‘and’ in comparison to the LXX’s three. From an ethical or moral point of view, Daniel is less deliberately ruthless in the prosecution of his enemies (cf. v 21 of “Θ”) yet more successful in that he himself, not the king, destroys Bel and its temple (v 22).

By contrast, “The Snake” is told far more effectively in the LXX. The latter’s disagreement with “Θ” is substantial. Apart from the pronounced verbatim agreement of the two Gk texts in the Habakkuk episode (vv 33–39), all of which is a clear indication of the latter’s having been circulated independently and then of having been added later to one of the Gk accounts and then having been adopted from there by the

other (see Fenz 1970), only vv 23–24 of the two Gk texts of the Add show substantial (i.e., 75 percent) verbatim agreement. "Θ" has the greater number of Hebraisms, but the LXX is the better edited (e.g., "in that place" in v 23) and more simple and precise in its content (e.g., vv 24, 27, 36, and 42).

4. Original Language of the Stories. The best explanation for the literary superiority of "Θ" in "Bel" and of the LXX in "The Snake" is that their Greek reflects differences in their respective Semitic *Vorlagen,* that is, the "Bel" and "The Snake" narratives were originally separate and independent tales in which the "Bel" narrative was more effectively told in the Semitic *Vorlage* of "Θ"; "The Snake" narrative, in the *Vorlage* of the LXX (but see Nickelsburg 1981: 26–27, who also views them as "inextricably interwoven into a single plot—the conversion of Cyrus" [1984a: 39]). That "Θ" has the greater number of Hebraisms in both tales suggests that, as in "Susanna," "Θ" had a Hebrew *Vorlage* while the LXX probably had an Aramaic one. The fact that the only Aramaic narrative of "The Snake" more clearly resembles "Θ" (Gaster 1894–95: 75–94) *may* mean only that it is a medieval translation of "Θ".

5. Concerning Canonicity. If "Bel and the Snake" was originally composed in Gk, then its exclusion from the Jewish canon is quite understandable. But if, as seems more likely, "Bel" and "The Snake" were originally Hebrew/Aramaic compositions, then their exclusion from the Jewish or Palestinian canon is more puzzling—unless, of course, they were added to the book of Daniel *after* its canonization.

In all likelihood, "Bel and the Snake" (whether placed after Daniel 12 [so "Θ"] or after "Susanna" [so the LXX and the Vg]), was added after the composition of the canonical Daniel but before Daniel and its Adds were translated into Gk. However, the reason(s) for "Bel and the Snake" 's being excluded from the older and more venerated text of Daniel is a matter of sheer speculation. Certainly the traditional view (i.e., that the Council of Jamnia [in A.D. 90] rejected the Adds to Daniel) is rapidly losing supporters (Cohen 1987: 186).

Although Christian Church Fathers never expressly say that they consider "Bel and the Snake" as canonical, they evidently did; for a number of the fathers quoted it as if it were Scripture: Irenaeus of Lyons (140–?202) in *Haer.* iv 5,2 and iv 26,3; Clement of Alexandria (d. before 215) in *Stromata* 1:21; Tertullian of Carthage (160?–220) in *de idololatria* 18; Cyprian of Carthage (d. 258) in *ad Fortunatum* 2; and others (for more details, see *HJP²* 3/2: 725–27; for exhaustive list, see Julius 1903). It was always the text of "Θ" that was used.

6. Religious Ideas and Purpose. "Bel and the Snake" was the least quoted of the Adds to Daniel, probably because the Church Fathers found the two stories lacking in literary and/or religious value, a view shared by such modern scholars as Pfeiffer ("Jewish fiction of little literary and no religious significance" [1949: 456]) and Metzger ("the motifs of these yarns, grotesque and preposterous as they appear to us today" [1957: 119]).

Neither "Bel" nor "The Snake" offers much in the way of inspiringly stated religious ideas, only rather prosaic monotheistic affirmations (vv 5, 25b–26). To be sure, the king ended up acknowledging the Lord as the one true God; but without the intrusive Habakkuk incident (vv 33–39; Nickelsburg 1981: 39, n. 24) Daniel, not God, is glorified. In fact, Daniel's praying to God is not even mentioned until five verses from the end of the second story (v 38) and only after Daniel had been in the lions' pit for six days! Evidently the primary purpose of both tales was to ridicule paganism in Jewish eyes, although Nickelsburg (1984a: 40) argues that they were intended to supply "a story about the last of the kings under whom Daniel served according to Dan 6:28."

7. Date and Place of Composition. Like the stories in canonical Daniel, "Bel and the Snake" may date to the 3d century B.C., or, quite possibly, somewhat later. Certainly there is nothing in either narrative to preclude its having originated as haggadic elaborations of Jer 51:34–35, 44, or Isaiah 45–46 sometime during the late Persian period, there being nothing distinctively Gk in either narrative.

It is likely that "Bel and the Snake" was added to the Semitic text of Daniel several decades after 163 B.C., i.e., the date of canonical Daniel. Antiochus VII Sidetes' invasion of Judea and his razing a portion of the walls of Jerusalem in 135 B.C. could have provided an appropriate Sitz im Leben for inserting "Bel and the Snake" into canonical Daniel.

Virtually every major Jewish settlement has been suggested as the place of composition for "Bel and the Snake." Because zoolatry was a temptation for some Egyptian Jews, many scholars, ranging from Fritzsche (1851) to Roth (1975: 42–43), have argued for an Egyptian provenance. But scholars who believe that "Bel" and "The Snake" are Semitic compositions look to either Babylon (Bissell 1880; *EncJud* 4: 412) or Palestine (Brüll 1887; *APOT* 1: 652–64). The discovery of Pseudo-Daniel at Qumran makes a late 2d or early 1st-century B.C. Palestinian provenance for "Bel and the Snake" more likely than ever before (but see *HJP²* 3/2: 724, n. 341).

8. The Greek and Other Ancient Versions. Differing from one another in both style and content, the LXX and "Θ" of "Bel and the Snake" represent separate Gk translations of two different Semitic texts, possibly not even in the same Semitic language (Moore 1977: 139, 146–47). The LXX is the better translation, in that it usually avoids a number of the clumsy Semiticisms of "Θ".

With the exception of the Syro-Hexaplar, which slavishly follows the LXX, all the ancient versions of "Bel and the Snake" were based upon "Θ". The Vg does append to v 42 a doxology: "Then the king said, 'Let all the inhabitants in the whole world fear the God of Daniel because he is the savior, working signs and wonders in the earth, who has delivered Daniel from the lions' pit.' "

CAREY A. MOORE

DANIEL, APOCALYPSE OF. One among several medieval apocalypses (Denis 1970: 309–14) attributed pseudepigraphically to the biblical prophet Daniel or to the Church Father Methodius of Patara. These documents are extant in several different languages, but seem for the most part to have been associated with the Greek world of Byzantium. The subject matter contained in these texts usually centers around the centuries-long series of wars that took place between the Byzantines and the invading Arabs during the period from the 7th through the 9th centuries. However, the document referred to here as the *Apocalypse of Daniel* contains several parallels with substantially older texts. These parallels at least raise the possibility that elements of this particular apocalypse perhaps had a separate, earlier origin than the A.D. 801–2 date of the document as a whole.

The *Apocalypse of Daniel* may be divided into two major sections, each with its own distinctive historical setting and literary character. The first section, consisting of chaps. 1–7, refers to certain major events of the Byzantine-Arab conflicts of the 8th century which culminated in the sole reign of the Byzantine empress Irene (797–802), and the contemporaneous coronation of Charlemagne in the West. These historical events are veiled in secretive language and are related as *ex eventu* prophecy. In the second major section (chaps. 8–14), history abruptly gives way to apocalyptic eschatology, and Byzantine foreign and domestic politics are displaced by the concerns of a newly reconstituted Jewish state ruled from Jerusalem by the antichrist.

Much of the apocalyptic material in *Apoc. Dan.* appears to be related to imagery contained in the NT book of Revelation. It is conceivable that the apocalypse as a whole could have derived its inspiration from the description of the final two bowls of God's wrath in Rev 16:12–21 and the ensuing judgment of the great harlot Babylon in Revelation 17 and 18 (*OTP* 1:759). This possible literary dependence of *Apoc. Dan.* upon the biblical apocalypse is further supported by the existence of numerous parallels in smaller details between these two documents.

But however strong the connection between the book of Revelation and *Apoc. Dan.*, the existence in the latter of apocalyptic elements demonstrably not from Revelation suggests the possibility of other apocalyptic sources underlying it. For example, in 13:8–13 of the present apocalypse, a dragon is portrayed as an enemy of the antichrist. The opposite situation exists in Rev 13:2, 4, 11; and 16:13, where Satan himself appears as a dragon.

In *Apoc. Dan.* 3:12 a Roman emperor is identified cryptically by giving the first letter of his name in Greek. This seems to contradict the method of identifying the antichrist in Rev 13:18, where the sum total of the numerical values of the Greek letters making up his name is given as 666. The method described above as found in the *Apoc. Dan.* is also extensively used in book 5 of the *Sibylline Oracles* 5 to identify a series of Roman emperors. The *Sib. Or.* 3:75–77 also agrees with *Apoc. Dan.* 6:10–11 in presenting a woman as the last ruler before the apppearance of the evil political deceiver who will bring about the end of the world.

There are further indications of possible connections between the *Apoc. Dan.* and other ancient sources. chap. 10 describes the overabundance of the fruits of the earth just before the end of the world. The terminology used in *Apoc. Dan.* 10:3–4 is similar to comparable passages found in *1 En.* 10:19, *2 Bar.* 29:5, and in Papias as referred to in Irenaeus' *Haer.* 5,33,3 (Charles *APOT* 2: 497).

Another possible hint of an underlying source may perhaps be seen in the considerable confusion in the ms tradition of *Apoc. Dan.* 9:25–26 over the three identifying letters on the forehead of the antichrist (Zervos OTP: 756, n. 7; and 768, n. 2d). Each of the three Greek ms witnesses to the text of our apocalypse at this point contains a different set of letters and a different explanation of their meaning. The scribe who wrote the most important of the extant mss of *Apoc. Dan.* (Ms B) appears to have been unfamiliar with the letters that he was attempting to interpret, thus leaving the strong impression that he was working with a separate, possibly even Semitic, source.

Finally, there seems to be substantial evidence to support the hypothesis that chap. 13 of *Apoc. Dan.* has had part of another written source inserted into its text (*OTP* 1: 760–61). Verses 13:8–13 contradict the rest of the chap. both in the tense in which they are written and with regard to the Greek words used in them to describe a rock which is the object of an attempted miracle by the antichrist. It is highly relevant to note here also that 13:8–13 contains the previously mentioned reference to a dragon as an enemy of the antichrist, a concept which is incompatible with the major source of *Apoc. Dan.:* the canonical book of Revelation.

The preceding evidence suggests that *Apoc. Dan.* is not totally dependent upon the NT book of Revelation for its eschatological imagery but contains elements which seem to be associated more with the early Pseudepigrapha. Such a possibility would characterize this particular document as being more than just another medieval apocalypse which is subservient to the traditional concepts found within the confines of the biblical canon. Consequently, *Apoc. Dan.* itself may be viewed as a possible source of substantially earlier apocalyptic material which could have had its origination within the historical and literary milieu which produced both the canonical and intertestamental literature.

_____

A. Introduction

In the book of Daniel, the first six chapters are narratives in the third person. Daniel is introduced as one of the Jewish youths deported to Babylon by King Nebuchadnezzar "in the third year of the reign of Jehoiakim king of Judah" (1:1). He and his friends are trained to serve in the royal court and have many wonderful exploits. Daniel distinguishes himself as an interpreter of dreams and mysterious signs (chaps. 2, 4, and 5), his companions are preserved in the fiery furnace (chap. 3), and he himself emerges unscathed from the lions' den (chap. 6).

In chap. 7 (v 2) the narrative switches to the first person. The following chapters present a series of revelations which Daniel allegedly received and which are explained to him by an angel. In chaps. 7 and 8 the revelation is in the form of symbolic visions, in chap. 9 it is the interpretation of a biblical prophecy, and in chaps. 10–12 it is conveyed in a discourse by an angel. These revelations are eschatological in the sense that they describe a definitive divine intervention in history. The ancient Gk translations contain four noteworthy additions to this text: "The Prayer of Azariah and the Hymn of the Three Young Men" added to chap. 3 and the stories of "Susanna" and "Bel and the Snake."

Daniel presents the interpreter with an exceptional number of introductory problems. Most obvious, perhaps, is the bilingual character of the book: chaps. 1:1–2:4a and 8–12 are in Hebrew, while chaps. 2:4b–7:28 are in Aramaic. The division between the two languages does not coincide with the formal division between the stories (1–6) and the revelations (7–12). Moreover, the book does not proceed in simple historical sequence. Chapters 1–4 are set in the reign of Nebuchadnezzar, in chap. 5 the king is Belshazzar, and in chap. 6 Darius the Mede. Chapters 7 and 8 revert to the reign of Belshazzar, followed in sequence by Darius in chap. 9 and Cyrus of Persia in chap. 10. (The Old Greek translation found in Chester Beatty papyrus Codex 967 avoids this anomaly by placing chaps. 7–8 before chaps. 5–6). Most significant are the numerous glaring historical problems. These begin with the statement in the opening verse that Nebuchadnezzar captured Jerusalem in the third year of Jehoiakim (Jer 25:1 says that the fourth year of Jehoiakim was the first of Nebuchadnezzar). The most famous problems concern the claim that Belshazzar was king of Babylon and that he was succeeded by Darius the Mede. Further, the revelations in chaps. 7–12 seem especially appropriate for the time of Antiochus Epiphanes (168–164 B.C.E.) and have raised serious doubts about the authenticity of the book. (See Bentzen *Daniel* HAT; Porteous *Daniel* OTL.)

B. The Text

Fragments of the Hebrew and Aramaic text have been discovered at Qumran. Fragments of two mss from Cave 1 (1Q Dan^{a,b}) were published in DJD 1:150–52 and Trever 1964–65: 323–44, and another from Cave 6 in DJD 3:114–16. Fragments of five mss from Cave 4 are being prepared for publication by E. C. Ulrich. The Qumran fragments range in date from the late 2d century B.C.E. to the end of the occupation of Qumran. In general, they support the Masoretic Text. The transition from Hebrew to Aramaic at Dan 2:4 is preserved in 1Q Dan^{a}, and fragments of chap. 7 in Aramaic and of chap. 8 in Hebrew are preserved in 4Q Dan^{a} and 4Q Dan^{b}.

The Gk versions have their own set of problems. We are told by Jerome in the preface to his translation of Daniel that "the churches of the Lord Savior do not read the prophet Daniel according to the Seventy Interpreters, but use the edition of Theodotion." Whether Theodotion-Daniel conforms to the

Theodotionic translation of other books is disputed (Hartman and DiLella *Daniel* AB, 81). The OG is now known from Chester Beatty papyrus Codex 967, which is pre-Hexaphlaric, as well from the Hexaphlaric Codex Chisianus, Ms 88, and the Syro-Hexaphlar. The most noteworthy feature of the OG is that it diverges widely from the MT in chaps. 3–6. Since the divergence in these chapters is greater than elsewhere, scholars have speculated that these chapters circulated independently or were based on a different Semitic original (Montgomery *Daniel* ICC, 37). Some scholars have argued that an Aramaic *Vorlage* existed prior to the MT of these chapters (so Charles 1929 and most recently Wills 1986). Others have maintained that the divergences are interpretative in character (so Montgomery Daniel ICC, 37 and most recently Satran 1985). At present there is no consensus on this question, but the existence of a variant Aramaic text of Daniel 3–6 (or at least 4–6) is widely accepted. Another significant variant in the OG occurs at 7:13, where the "one like a son of man" is said to come *as* an Ancient of Days. In this case the variant may be due to theological correction (to avoid the impression of di-theism) or to simple error, but it is unlikely to represent an independent tradition.

C. Authenticity

Apart from the book that bears his name, Daniel does not appear as a historical personality of the exilic period in any biblical book. The name occurs twice in Ezekiel, one time in conjunction with Noah and Job (14:14) and once as a prototype of wisdom (Ezek 28:3: "are you wiser than Daniel?"). Neither passage can have the biblical Daniel stories in mind, but it may be significant that the name was associated with a legendary wise man in the exilic period. The name *Dnil* is also attached to a legendary figure at Ugarit, in the Aqhat legend, where he is, among other things, a judge. (The name means, most probably "my judge is God" or possibly "judge of God"). In *Jub.* 4:20 Daniel is the uncle of Enoch. The fact that the name Daniel was widely associated with a legendary hero may raise some doubts about the historicity of the biblical figure.

Quite apart from the historicity of the figure of Daniel, the authenticity of the book had already been questioned by the 3d century Neoplatonist philosopher Porphyry. We are informed by Jerome that: "Porphyry wrote his twelfth book against the prophecy of Daniel, denying that it was composed by the person to whom it is ascribed in its title, but rather by some individual living in Judaea at the time of that Antiochus who was surnamed Epiphanes; he further alleged that 'Daniel' did not foretell the future so much as he related the past, and lastly that whatever he spoke of up till the time of Antiochus contained authentic history, whereas anything he may have conjectured beyond that point was false, inasmuch as he would not have foreknown the future."

Porphyry's insight was resisted for well over a millennium, but its validity has been widely acknowledged by modern critics, beginning in the 18th century (see Koch 1980: 186–87). Daniel refers to no events later than the time of Epiphanes, and evidently expected the end of history shortly thereafter. Such preoccupation with the Maccabean period is most easily explained if the author lived at that time. The references to the Babylonian period, in contrast, are notoriously confused.

The story of Nebuchadnezzar's madness in Daniel 4 is now known to be derived from a tradition about Nabonidus, the last king of Babylon. The publication of the Nabonidus Chronicle in 1882 revealed that Nabonidus had withdrawn from Babylon for several years to the desert oasis of Tema. Scholars soon suggested that this episode underlay the story of Nebuchadnezzar's banishment in Daniel 4 (see McNamara 1970). Further light was thrown on the sojourn at Tema by the Harran inscriptions, published by Gadd in 1958. The suggestion that the tradition was originally about Nabonidus was dramatically confirmed, however, by the discovery of the Prayer of Nabonidus at Qumran (Milik 1956; Cross 1984). This fragmentary text contains a first person narrative in the name of Nabonidus. The king says that he was smitten with a bad inflammation for seven years in the city of Tema, until a Jewish seer, one of the exiles, explained the situation and reproached the king for idolatry. While the precise literary relationship between this text and Daniel 4 remains in dispute, it it clear that 4QPrNab contains an older form of the tradition and that Daniel's identification of the king as Nebuchadnezzar is secondary.

Another problem of Babylonian history concerns Belshazzar. Inscriptions discovered in the 19th century show that Belshazzar was the son of Nabonidus, not of Nebuchadnezzar. He was in command in Babylon

while his father was absent in Tema, but he was never actually king and could not take the place of the king at the New Year Festival. The modern discovery that Belshazzar was the name of a crown prince has shown that the story in Daniel 5 may draw on old traditions, but the historical confusion suggests that the story comes from some time later than the Babylonian era.

Again, no such figure as Darius the Mede is known to history. Attempts to identify him with Gobryas (Ugbaru), the general of Cyrus who occupied Babylon, have failed to explain why he should be called Darius the Mede. The name Darius is almost certainly derived from Darius I of Persia (522–486), who in fact organized his empire in satrapies (cf. Dan 6:1). In Dan 9:1 Darius is said to be the son of Ahasuerus (Xerxes). In fact, Xerxes I was son of Darius. Darius put down two revolts by Babylonian pretenders, and one of these may have been confused with the original conquest. The designation as a Mede is most probably due to the fact that the author accepted the widespread belief that the Near East had been governed by a sequence of four kingdoms—Babylonia, Media, Persia and Greece (Swain 1940; Flusser 1972). This schema probably originated in Persia, where the Medes had in fact ruled. (The more usual sequence began with Assyria, but the Jewish author substituted Babylon for obvious reasons). Also, in biblical prophecy Medes were to destroy Babylon (Jer 51:11, 28; Isa 13:17–19; 21:2).

All but the most conservative scholars now accept the conclusion that the book of Daniel is not a product of the Babylonian era but reached its present form in the 2d century B.C.E. Daniel is not a historical person but a figure of legend.

D. The Composition of the Book

In the 19th and early 20th centuries critics who dated the book to the Maccabean era also affirmed its unity. This position found its most notable 20th-century advocate in H. H. Rowley. Beginning in the late 19th century, however, the view began to gain ground that the Aramaic section, or part of it, was older than the Hebrew. Discoveries such as 4QPrNab showed that the tales contained older traditions, but this in itself did not decide the question of unity. The crucial argument here is that the tales of Daniel 1–6 do not reflect the persecution of Antiochus Epiphanes, which dominates chaps. 7–12. Rowley argued that "point can be found for every story of the first half of the book in the setting of the Maccabean age" (Rowley 1952: 264–67), but none of these stories *requires* a setting in that period. The kings of Daniel 1–6 cannot be regarded as types of Antiochus Epiphanes; as Montgomery correctly observed, they are "amiable religious minded monarchs" (Montgomery *Daniel* ICC, 89—an exception should be made for Belshazzar). An author of the Maccabean period found these stories relevant to his situation, but they were not composed with that situation in mind.

The precise delineation of the pre-Maccabean stratum is more difficult and is bound up with the problem of the two languages. There is now a widespread consensus that the tales in chaps. 2–6 are pre-Maccabean. Since these stories are now bound together, but without any clear reference to the period of Antiochus Epiphanes, it is probable that they already constituted a collection before that time. (As we have noted above, some scholars suggest that chaps. 3–6 circulated independently, because of the different character of the OG translation of these chaps.). The collection, however, presupposes an introduction such as we find in chap. 1, and so it is likely that chap. 1 was composed in Aramaic as a prologue to the tales. Many German scholars, following G. Hölscher (1919), argue that the core of chap. 7 was also part of the pre-Maccabean Aramaic collection. (So also, Gammie 1976). This view draws support from the fact that chap. 7 is in Aramaic and that chaps. 2–7 exhibit a chiastic structure (2 and 7 contain "four kingdom" prophecies, 3 and 6 are tales of miraculous deliverance, 4 and 5 illustrate divine judgment on two kings). Yet chap. 7 as we have it is clearly from the Maccabean period. Attempts to distinguish an earlier form of the chapter by literary means are inconclusive (see Collins 1984a: 74–78). Moreover, the tone and idiom of chap. 7 are vastly different from those of 2–6 and cannot in any case have originated in the same setting. The most probable division then is between the tales in 1–6 and the revelations in 7–12.

The problem of the two languages remains. Some scholars (Ginsberg 1948; Hartman and DiLella *Daniel*) have argued that the entire book was composed in Aramaic at different times and that chaps. 8–12 were translated for reasons of nationalistic fervor. There is no textual evidence for this theory: the

Qumran fragments show the transitions between the two languages. Besides, it is unclear why only chaps. 8–12 should have been translated. (For discussion of the supposed Aramaisms of chaps. 8–12 see Collins 1977: 15–16). It is more probable that the two languages reflect the history of composition. Chapters 2–6 (and probably chap. 1) were composed in Aramaic and chap. 7 was added in the time of Antiochus Epiphanes. Then either the same author or others of the same circle composed chaps. 8–12 in Hebrew (possibly because of nationalistic fervor). Chapter 1 was either translated from Aramaic or composed in Hebrew in order to form a Hebrew *inclusio* around the Aramaic chapters. The fact that chap. 1 is now in Hebrew and chap. 7 in Aramaic provides an overlap which connects the two halves of the book in an editorial unity. The parallelism of chaps. 2 and 7 also serves this purpose. On the other hand, the division of the book at 7:1 is literarily affirmed by the fact that the dating reverts to the reign of Belshazzar, who had already been succeeded by Darius in chap. 6.

The Hebrew-Aramaic book had probably reached its present form by 164 B.C.E. (the year in which Antiochus Epiphanes died: Daniel 11 gives a mistaken prophecy of his death). The strongest arguments for a later addition to the text concern the prayer in Daniel 9. This is a traditional piece, quite different in style and theology from the remainder of Daniel. Yet it may well have been placed in its present context by the author of Daniel since the contrast helps to clarify the theology of the revelations (Collins 1984a: 90–91). Nonetheless, we know from the Greek version that prayers were inserted into the text of Daniel (chap. 3) and therefore the authenticity of the prayer in chap. 9 is not beyond question.

E. Genre

Daniel is classified with the Major Prophets in theLXX and was regarded as a prophet already in antiquity (Matt 24:15; *Ant* 10.11.7 [266]). Yet in the Hebrew Bible the book of Daniel is found in the Writings, in the fourth place from the end (before Ezra, Nehemiah and Chronicles). The position in the Hebrew Bible reflects the late date of Daniel (after the collection of Prophets had been standardized) but may also reflect an awareness that Daniel does not belong with the Prophets in genre.

Taken as a whole, the book of Daniel is an apocalypse, understood as "a genre of revelatory literature with a narrative framework, in which a revelation is mediated by an other-worldly being to a human recipient, disclosing a transcendent reality, which is both temporal, insofar as it envisages eschatological salvation, and spatial insofar as it involves another, supernatural world" (Collins 1984b: 4). The genre takes its name from the NT book of Revelation. Other Jewish examples of the genre include the various components of *1 Enoch, 4 Ezra, 2 Baruch, 3 Baruch, 2 Enoch* and the *Apocalypse of Abraham.* Daniel is the only full-fledged apocalypse in the Hebrew Bible.

While all apocalypses have some narrative framework, Daniel is exceptional in the fact that it includes a collection of tales which introduce and establish the identity of the apocalyptic visionary. These tales are formally distinct from the apocalyptic visions. Our understanding of their genre is shaped in part by the realization that they are not historically accurate. The insight that the tales are not meant to be history writing, however, does not depend on their inaccuracy, since historiography can contain errors. Rather, it rests on two observations: (1) the tales have stereotypical patterns which are paralleled in the folklore of the world and (2) they frequently introduce marvelous elements, such as the writing on the wall or the transformation of Nebuchadnezzar into a beast. These elements suggest that the purpose of the stories is not to report facts but to arouse awe and wonder. The wonderful aspects of the tales are underlined by occasional doxologies.

The tales may be most appropriately categorized as *legends,* narratives "primarily concerned with the wonderful and aimed at edification" (Collins 1984a: 41). Their genre can be further specified by their fictional setting: they recount adventures at a royal court. As such, they belong to a broader category of court tales of which examples are found in the Greek writers Herodotus and Ktesias and in the internationally popular tale of Ahikar (which was found in Aramaic among the papyri from the Jewish colony at Elephantine in Egypt from the late 5th century B.C.E.). Biblical parallels are found in the stories of Joseph and Esther and less directly, in *3 Ezra* 3. It is noteworthy that all the Jewish examples are set in the Diaspora (including the Greek *3 Maccabees*)—hence the occasional designation "Diaspora novel"

(Meinhold 1975–76). The most satisfactory form-critical category, however, is court legend, as this takes account of the nonbiblical material in a way that "Diaspora novel" does not.

It has become customary to distinguish further within the genre between "tales of court contest" (e.g. Daniel 2) and "tales of court conflict" (Daniel 3, 6; see Humphreys 1973).

In the "conflict" tales the heroes are endangered because of a conspiracy, but are miraculously delivered from certain death. These stories bear considerable similarity to later martyr legends. The "contest" stories describe the rise of the hero from lowly status to an exalted position because of his ability to solve insoluble problems. In the case of Daniel, the peculiar skill lies in the interpretation of dreams and mysteries. The story is given a distinctively religious stamp since he interprets dreams by divine revelation.

The apocalyptic revelations in Daniel 7–12 also contain a number of formally distinct units, allegorical visions in chaps. 7 and 8 and angelic discourses in chaps. 9 and 10–12. The juxtaposition of multiple revelations is a recurring feature of apocalypses—it is also found in *4 Ezra*, *2 Baruch*, the *Similitudes of Enoch*, and the NT book of Revelation. These revelations should be understood as complementary, whether they all come from the hand of a single author or not. (The strongest case for separate authorship can be made in the case of chap. 7 since it is in Aramaic, while 8–12 are in Hebrew, and it appears to be slightly older than the other chapters.)

The symbolic dream visions in Daniel 7 and 8 are a typical form of revelation in "historical" apocalypses (i.e., apocalypses which contain an overview of history in the guise of prophecy, as contrasted with the "journey" apocalypses, such as *1 Enoch* 1–36 or *2 Enoch*, where the visionary is taken on a tour of inaccessible regions, and the emphasis falls on cosmological mysteries; see further Collins 1984b: 5–6). The visions of Daniel 7 and 8 can be viewed as a development of the symbolic visions of the prophets (Niditch 1983). A characteristic feature of the apocalyptic vision is that it requires an angelic interpreter. The interpreting angel is found already in Zechariah 1–6 but the visions of Daniel are much more elaborate than those of Zechariah. The apocalyptic dream visions are also indebted to the tradition of Babylonian dream interpretation. This point is especially significant in Daniel, since the visionary of chaps. 7–12 is cast as a Babylonian dream interpreter in chaps. 2 and 4.

The symbolism of the dream visions is rich in mythological allusion. In chap. 7 Daniel sees "four great beasts come up out of the sea." The description of the beasts is followed by a judgment scene, presided over by an "ancient of days." The beasts are judged, and the last one is destroyed. Then "one like a son of man" appears "with the clouds of heaven" and to him is given the kingdom. The angel's interpretation informs us that the beasts represent four kings or kingdoms and that "the holy ones of the Most High" will receive the kingdom. This interpretation however stops far short of explaining the significance of the vision. There have been many attempts to identify the mythological background of the imagery (see *TDNT* 8:408–20). By far the most satisfactory explanation sees in the vision a reflection of a Canaanite myth, which is known to us from the Ugaritic texts of the 2d millennium B.C.E. In that myth, the high god is El, "father of years," but the hero is the god Baal, "rider of the cloud." Baal is challenged by Yamm or "Sea," but attacks and defeats him (See *ANET*, 129–142). There are, of course, significant differences between Daniel's vision and the Ugaritic myth, e.g., the battle of the myth is replaced by a court scene. Yet the main figures in the vision correspond to those of the myth: the high god on his throne, the quasi-divine figure riding on the clouds (imagery associated with Yahweh in the Psalms) and the sea as a symbol of chaos (see further Collins 1977: 95–106). We do not know how or in what form the old myth reached the author of Daniel, but we do know that Canaanite imagery plays an important role in the poetry of the Hebrew Bible, where Yahweh is said to do battle with sea monsters (e.g., Isa 27:1; 51:9–11; see further Day 1985).

The mythological imagery is crucial to the meaning of Daniel's vision. The kingdoms mentioned in the angel's interpretation are seen as manifestations of primeval chaos. Equally, the righteous Jews are assured of the coming judgment, and of the support of heavenly allies: the "one like a son of man" and the "holy ones." Many scholars (e.g. Hartman and DiLella *Daniel* AB) take the "son of man" figure and the "holy ones" as mere ciphers for the Jewish people, but this interpretation is inadequate. Elsewhere in

Daniel (4:13, 17; 8:13) "holy ones" are angels and angels can also appear in human form (8:15; 9:21; 10:5; 12:6–7). The "one like a son of man" of Daniel 7 should most probably be understood as the archangel Michael, who is explicitly portrayed as the deliverer of Israel in 10:13, 21; and 12:1. Michael takes the place of Baal in the Canaanite myth as a supernatural figure under the supreme God, who overcomes the beasts from the sea. The holy ones are the angelic host, but the faithful Jews, as "the people of the holy ones" (7:27), share in their victory and dominion. (See further Collins 1977: 123–47.)

The symbolic vision in chap. 8 also makes use of an old mythic pattern. It tells how a "little horn," representing a gentile king, rose above the stars of heaven and challenged the Prince of the Host, God himself, but was then cast down. The pattern is familiar from the taunt in Isaiah 14 against "Lucifer, Son of Dawn," who aspired to set his throne "above the stars of God." This myth too can be traced back to the Canaanite myths found at Ugarit, in this case the myth of Ashtar, the Day Star, who aspired to sit on Baal's throne (*ANET*, 140).

The angelic discourse in chap. 9 takes the form of an interpretation of biblical prophecy, specifically of Jeremiah's prophecy that the subjection of Jerusalem would last 70 years. The number is explained by an angel as 70 weeks of years. The division of history into a set number of periods is characteristic of apocalyptic literature; the division into "weeks" is found in the "Apocalypse of Weeks" in *1 En.* 93:1–10; 91:11–17. The reinterpretation of biblical prophecy gave rise to a whole genre of literature in the Dea Sea Scrolls—the Pesher. While the Hebrew term Pesher is not used in Daniel 9, it is used for dream interpretation in Daniel 2 and 4.

The book ends with another angelic discourse in chaps. 10–12. In this case the apparition of an angel, which is reminiscent of the epiphany in Ezekiel 8, is described (chap. 10). The discourse is a thinly veiled account of the history of the Hellenistic era, which is set in the context of a heavenly battle between angelic "princes." At the end, the archangel Michael, "prince" of Israel, will prevail, there will be a resurrection of the dead, and the righteous teachers will shine like the stars (12:3) which, in apocalyptic idiom, means to become companions to the angelic host (*1 En.* 104:2, 4, 6).

The apocalyptic visions are distinguished on the one hand by the supernatural character of their revelation, which is indicated by the angelic interpreter, and on the other by its eschatological content. In each case the visionary looks beyond known history to a definitive judgment of God. The technique of the genre can be clearly seen in chaps. 10–12. As Porphyry already was aware, the "predictions" in chap. 11 are correct down to the time of Antiochus IV Epiphanes, but incorrectly prophesy that he would die in the land of Israel. The conclusion is inescapable that the accurate "prophecies" were written after the fact. The real author lived in the time of Antiochus Epiphanes. By identifying with Daniel in the exilic period, he could convey the impression that all of postexilic history was foretold and predetermined. This impression strengthened the assurance of the real eschatological prophecy with which the discourse concludes.

The revelation is not only presented as a prophecy of Daniel but it is actually given to Daniel by an angel. It therefore claims to provide a heavenly perspective on human history. The crucial insight of the revelation is that there is ongoing warfare among angelic "princes" in heaven. The human struggles on earth are only a reflection of this heavenly warfare. The outcome is finally decided, not by human armies, but by the victory of Michael and by the final judgment.

The final reward of the just is not only political independence or earthly sovereignty, but fellowship with the angels after the resurrection. This is an appropriate finale since Daniel acquires his wisdom from communication with the angels.

The genre of chaps. 7–12, then, is quite distinct from that of chaps. 1–6; but there is also some continuity. One theme of continuity is the revelation of mysteries. Daniel, the dream interpreter of chaps. 2 and 4, becomes himself the dreamer, but his dreams must be interpreted by an angel. The content of Nebuchadnezzar's dream in chap. 2 anticipates chap. 7 in its use of the four-kingdom schema. The final kingdom of chap. 2, however, lacks the angelic associations of chap. 7. It is also remarkable that the king in chap. 2 in no way resents Daniel's prophecy of a coming kingdom set up by God but rather rewards him for it. Such genial relations with a gentile king are no longer envisaged in chaps. 7–12. Finally, the

theme of deliverance from acute danger is prominent in chaps. 3 and 6 and again in chap. 12. The difference is that the older legends describe miraculous deliverance in this life, while the apocalyptic vision anticipates vindication for the martyrs after death.

F. The Setting

The ostensible setting of the book of Daniel is in the Babylonian exile at the courts of Babylonian, Median, and Persian kings. Critical scholarship has established that the book actually comes from the 2d century B.C.E. The tales in chaps. 1–6 are older, and may have had lengthy prehistories, as appears from the cases of Daniel 4 and the Prayer of Nabonidus. In their present form, however, the tales can be no earlier than the Hellenistic age. The four-kingdom schema, which is explicit in chap. 2 and is implied by the introduction of Darius the Mede, requires a date after the rise of the Greek kingdom. The allusion to intermarriage in 2:43 most probably refers to one of the dynastic intermarriages between the Ptolemies and the Seleucids. Since there is no clear allusion to Antiochus Epiphanes, a date in the late 3d or early 2d century B.C.E. is most likely.

The actual setting of the tales is, of necessity, hypothetical. The heroes of the tales are portrayed as courtiers, trained in "the language and letters of the Chaldeans." Their fortunes are closely bound up with good favor of the monarchs they serve. Success is reflected in advancement at court. There is no hint of rebellion. At the same time Daniel and his friends are pious Yahwists who are not prepared to compromise their religion. One purpose of the tales is to suggest that it is possible to gain advancement in the gentile world while remaining faithful. Indeed, the tales contend that religious fidelity is a key to success because of the power of the God of the Jews.

It has been suggested that the tales propose "a lifestyle for the Diaspora" (Humphreys 1973), specifically for upper-class Jews in the E Diaspora. While we cannot assume a direct correlation between the fictional setting of the tales and the actual setting of the authors, the suggestion is plausible. The wisdom of Daniel and his companions is markedly different from that of the Jerusalem wisdom circles represented by Ben Sira. The contrast is most striking in the evaluation of dreams. According to Sirach, one who gives heed to dreams is like one who catches at a shadow and pursues the wind (Sir 34:2; cf. Deut 13:1–5; Jer 29:8). In contrast, Daniel's wisdom is mantic wisdom (Mueller 1972) and is concerned with the interpretation of dreams and omens. There is no doubt that this mantic wisdom is influenced by the model of the Babylonian wise men, although there is also a biblical precedent in the Joseph story. It is certainly *possible* that the tales in Daniel were composed in Jerusalem, which was also subject to a gentile monarch in the Persian and Hellenistic periods. It is not apparent, however, why a Jerusalem author should have set the tales in the Diaspora. It seems more probable that the tales were composed in the E Diaspora, and that their tradents worked in the service of the gentile kings.

The setting of the visions is quite different from that of the tales. Nonetheless, it is likely that there is some form of social continuity between the tradents of the tales and the authors of the visions. In chap. 1 Daniel and his companions are said to be *maskilim* in all wisdom. In chap. 11 the heroes in the time of persecution are also called *maskilim* 'wise teachers.' There is widespread agreement that the author (or authors) of the visions belonged to this group. The common designation *maskilim* may reflect continuity with the mantic wise men of the tales. If so, we must assume that the Danielic circle had returned from the Diaspora to Palestine. Their theology and literary form of expression were then adapted to fit their new situation. This reconstruction must, obviously, remain tentative.

The setting of the visions is the prosecution of the Jews by Antiochus IV Epiphanes (168–164 B.C.E.). Daniel 7 may not yet know of the profanation of the temple (December 167) since it does not clearly reflect that event, although it knows of the suppression of the religious festivals (2 Macc 6:6). The desecrated sanctuary looms large in the other revelations. The author had presumably not heard of the death of Antiochus late in 164 since he predicts that the persecutor would die in the land of Israel (11:45). The duration of the persecution is variously predicted as 3.5 years (7:25), 2300 evenings and mornings (1150 days, [8:14] 1290 days (12:11) and 1335 days. The different figures presumably reflect attempts to adjust the prediction to accommodate the course of events. Since the desecration of the temple had only lasted three years at the time of the reconsecration by Judas Maccabeus in 164 (see 1 Macc 4:52–59), it is

quite possible that the final redaction of Daniel took place after that had happened but did not regard the reconsecration as a satisfactory end to the persecution.

Our primary sources for the history of the persecution are 1 and 2 Maccabees. Other documents, such as the "Animal Apocalypse" in *1 Enoch* 85–90, which were written closer to the events, are of little historical value because of their highly symbolic language. Daniel, however, is a significant historical source, esp. in chap. 11. Daniel "predicts" Antiochus' two campaigns against Egypt and his forced withdrawal by the Romans on the second occasion (11:30). This is followed by the desecration of the temple and suppression of the cult. Then we are told that "he shall seduce with flattery those who violate the covenant; but the people who know their God shall stand firm and take action. And those among the people who are wise shall make many understand, though they shall fall by sword and flame … When they fall, they shall receive a little help, and many shall join themselves to them in flattery, and some of those who are wise shall fall …" (11:32–35). The "wise" (*maskilim*) are singled out in the resurrection to shine like the brightness of the firmament and like the stars forever. There can be little doubt that the author(s) of Daniel identified himself with these *maskilim.*

The books of Maccabees also record the activities of the renegade Jews who violated the covenant and then go on to describe the armed resistance led by the Maccabee brothers. It is uncertain precisely how Daniel should be related to this movement. The reference to "standing firm and taking action" might be read as a reference to armed resistance but nothing that follows supports that interpretation. Jerome already took the "little help" as a reference to the Maccabees. Whether the author regarded the Maccabees as any help is unclear. It is clear that he thought the decisive struggle was taking place in heaven between Michael and the "prince" of Greece. The contribution of the *maskilim* is "to make many understand" and let themselves be purified by enduring the persecution. We are not told the content of their instruction. It is reasonable to assume that it corresponded to the apocalyptic revelations of the book of Daniel itself. The stance of the wise is apparently quietistic. They are not said to fight but to let themselves be killed. A similar stance is found in the *Testament of Moses*, the original form of which dates from the same period (Nickelsburg 1973). The aspiration of the wise martyrs was to shine like the stars and become companions to the angels. Consequently, they could afford to lose their lives.

Scholars have often identified the *maskilim* of Daniel with the Hasidim who are mentioned in the books of Maccabees. In 1 Macc 2:42 we are told that Mattathias and his followers were joined by "a company of Hasideans" (*synagoge Asidaion*) mighty warriors of Israel, every one who offered himself willingly for the law." This follows on a report that a thousand people were slaughtered when they refused to defend themselves on the Sabbath, but these martyrs are not explicitly identified as Hasidim. 1 Macc 7:12–13 says that a company of scribes (*synagoge grammateon*) came to the high priest Alcimus and the general Bacchides to seek peace. The passage continues "and the Hasideans were first among the sons of Israel and they sought peace from them." The Hasideans here are usually thought to be identified with the company of scribes, but the passage is ambiguous. It is also uncertain whether the Hasideans were first in rank or simply took the initiative in seeking peace. Finally in 2 Macc 14:6 Alcimus complains to the Seleucid king that "those of the Jews who are called Hasideans, whose leader is Judas Maccabeus, are keeping up war and stirring up sedition and will not let the kingdom attain tranquillity. These passages provide only meager information about the Hasidim. They were evidently a militant group, who actively supported the Maccabees. Their willingness to make peace with Alcimus does not imply pacifistic inclinations—even Judas made a brief truce with the Seleucids when Alcimus arrived on the scene (2 Maccabees 14). They may have been scribes (1 Macc 7:12–13) but it is not clear how far they were organized—the word "company" (*synagoge*) can certainly denote an ad hoc gathering. Since the one clear piece of information, their militant activism, is counter to the quietistic tendency of Daniel, there is no evident reason why Daniel should be ascribed to this group.

Daniel has also been associated with the founders of the Qumran sect, and it has even been suggested that the author of the visions was none other than the Teacher of Righteousness (Trever 1985). There are indeed important links between Daniel and Qumran (Mertens 1971). Several copies of the canonical book, as well as other Danielic writings, were preserved there. Some of the technical terminology of the sect:

maskil (the spiritual instructor at Qumran) *rabbim* (the "many," general members of the sect) and "seekers of smooth things" (*dwrsy hlqwt*) are all taken or adapted from Daniel 11, and there is also significant continuity between Daniel and the *War Scroll* (von der Osten-Sacken 1969). Yet there is no reason to ascribe Daniel to the Teacher of Righteousness. Other bodies of literature (e.g., the Enochic corpus) and traditions (especially halakic) also influenced the emerging Dead Sea sect. We can only say that Daniel belonged to the general milieu from which the sect emerged.

In all we can paint a limited picture of the piety and interests of the group which produced the book of Daniel. We can say very little, however, about its social location in Judaism and cannot identify it with any known group.

G. Theology

The theology of Daniel is a theology of history. Throughout, the book affirms a God who "does according to his will in the host of heaven and among the inhabitants of the earth" (4:35) and whose kingdom is everlasting (4:3). This God is hidden and mysterious and is known through special revelations to the wise. His control of human affairs may not be immediately obvious but is a matter of a long-term plan. This plan has some deterministic overtones but never denies the freedom of human beings to make their own decisions and comments.

There is also a common dimension to the ethics of both parts of the book. Fidelity to the Mosaic law is a necessity which is established in the first chapter. It requires discipline and a willingness to subordinate personal needs and even to risk life itself. Insofar as those who are faithful to the Mosaic covenant are rewarded, Daniel fits the pattern of convenantal nomism, which E. P. Sanders (1977) has argued is broadly typical of ancient Judaism. Yet the theology of Daniel is not adequately characterized in this way. Throughout the book, Daniel is given special understanding through revelation which is not available on the basis of the Mosaic covenant alone. The heroes of the book are the wise, to whom God has given special knowledge. This special wisdom then enables them to act in the appropriate way.

While Daniel is a wisdom book, as von Rad (1965) argued, it is important to note the difference between this wisdom and the Hebrew proverbial tradition. Biblical wisdom was empirical and inductive. Daniel's wisdom comes by revelation and has appropriately been called "mantic wisdom" because of the importance attached to the interpretation of dreams and mysteries. This mantic wisdom undergoes a development in the second half of the book, where the transcendent nature of the revelation is underlined by the role of the interpreting angel.

The differences between Daniel 1–6 and 7–12 are primarily due to the changed situation and are reflected in the portrayal of the pagan kings. In chaps. 1–6 the monarchs are relatively benign and Jews can advance and prosper under their rule. In chap. 7, however, the gentile powers are portrayed as beasts from the sea, enemies of God, with whom no compromise is possible. The quasi-demonic imagery of beasts, and the opposition of the "princes" of the nations to Michael, reflect an emerging dualism. In Daniel, however, the forces of evil are still closely identified with specific nations. We do not encounter here a force of evil at large, such as Mastema in the roughly contemporary book of *Jubilees* or Belial in the slightly later Dead Sea Scrolls.

The new situation in chaps. 7–12 also causes a significant difference in the way God is thought to act. In chaps. 1–6, most vividly in 3 and 6, the faithful Jews are delivered from mortal danger by miraculous means. In 7–12, most clearly in 11–12, the *maskilim* are offered no such deliverance. Some of them must die. Deliverance comes later with the resurrection of the dead.

The introduction of the notion of resurrection is one of the major contributions of the book of Daniel to Jewish and Christian theology. This is the only clear reference to reward and punishment after death in the Hebrew Bible. Other passages which are sometimes cited as references to resurrection (Isa 26:19; Hos 6:2) are more probably speaking metaphorically of the restoration of the Israelite people. Belief in judgment after death is attested in the "Book of the Watchers" in *1 Enoch*, which is older than the book of Daniel, but Daniel's influence on the subsequent tradition is undeniably greater. The context in Daniel is mythological rather than philosophical: the belief is presented as a revelation, without the support of rational argument. The cogency of the belief in Daniel derives from the underlying trust in divine

retribution. Since the righteous lose their lives in this world, it is reasonable to believe that they will be rewarded hereafter. (In *1 Enoch* 22 the afterlife is not presented as a solution to persecution, so we cannot say that the belief arose only in that context). The idea is not systematically developed in Daniel—"many" of those who sleep in the dust of the earth will arise, not all. The function of the belief is to liberate the righteous from the fear of death. The aspiration to eternal life with the stars or angels also modifies the piety of the book and gives it an otherworldly character.

Another major contribution of the book of Daniel to Jewish and Christian theology concerns the figure of "one like a son of man" in chap. 7. The symbolism of the figure with the entourage of clouds, suggests a divine or quasi-divine being (Emerton 1958: 231–32). As noted above, the most probable reference is to the archangel Michael. In any case, Daniel 7 was influential in the development of the figure of an "exalted angel" in Judaism (Rowland 1982: 94–113). Possibly the earliest reinterpretation of the Danielic figure is found in the Similitudes of Enoch, which probably date from the early or mid-first century C.E. (Collins 1984b: 142–43). There we read of a figure who is referred to as "that Son of Man," "whose face had the appearance of a man, and his face was full of grace like one of the holy angels" (46:1) and who is seated on a throne of glory (62:5). This figure is more than an ordinary angel, since "even before the sun and the constellations were created … his name was named before the Lord of Spirits." He is also called "messiah" (48:10). In *1 En.* 71:14 Enoch is told "you are the Son of Man who was born to righteousness," but the identification is probably secondary (Collins 1984b: 151–53). This tradition reached its culmination in the late (4th or 5th century C.E.) mystical work Sefer Hekalot *(3 Enoch)* where the angel Metatron is "the little Yahweh" greater than all princes and is known by 70 names, one of which is Enoch, son of Jared.

The development of the idea of an exalted angel, a "lesser Yahweh," in Judaism was obviously of significance for the development of christology. Again, Daniel 7 played a crucial role in the development. One of the earliest christological scenarios was that which envisaged Jesus as the Son of Man coming on the clouds of heaven with his angels. It is still disputed whether Jesus used the expression Son of Man in the eschatological sense and if so whether he used it to refer to himself or to another figure. The use of "Son of Man" in the Danielic sense is found primarily in the Synoptic Gospels, although the expression is also used in John and in the Apocalypse. In Rev 14:14 an angel, not Christ, is "seated on a cloud, one like a son of man," perhaps a vestige of the original use of the expression in Daniel to refer to an angel.

H. The Additions to Daniel

The Greek text of Daniel includes four extensive passages which are not found in the MT. Two of these are inserted in chap. 3 in the story of the three young men in the fiery furnace. The first, the prayer of Azariah, is a foreign body here. It is a typical communal confession of sin and petition for mercy, similar to the prayer in Daniel 9. Such prayers are very common in the later books of the OT (Ezra 9, Nehemiah 9) and the apocryphal literature. It is a prayer for all Israel and starts from the premise that affliction is justified punishment for sin. The situation in Daniel 3 calls rather for a prayer for the deliverance of individuals, whose predicament is in no way due to sin but to their fidelity to the law. The Deuteronomistic theology of the prayer (distress follows from sin, deliverance from repentance) also stands in contrast to the theology of Daniel, where distress usually follows from fidelity and calls for perseverance rather than for repentance.

The "Hymn of the Three Young Men" is more appropriate to its content. It is a hymn calling on all creation to bless and praise the Lord (compare Psalm 136). Its message is that God controls all the elements, as illustrated by the fact that the fire did not harm his servants. Both of the additions to Daniel 3 are traditional pieces, probably translated from Hebrew originals. It is impossible to discover the date or circumstances of their composition.

The story of Susanna is found after chap. 12 in the LXX but before chap. 1 in Theodotion. It tells of a beautiful God-fearing Jewish woman, who is falsely accused of adultery by two Jewish elders whom she has rejected. She is saved by the skillful interrogation of the elders by Daniel, who is introduced as a young boy (even in the Old Greek, where the story follows chap. 12). There are no cross-references to the stories of Daniel 1–6, and no suggestion that Daniel was a courtier. Since the setting of a judgment scene

is in accordance with the etymology of the name Daniel, Lebram (1986) has suggested that Susanna, in Aramaic, was the original introduction to the tales of chaps. 2–6. In view of the lack of a court setting, however, it is more likely to be an independent tale. It is set entirely within the bounds of Judaism: all the characters are Jewish. It is a parabolic tale which plays on the favorite biblical theme of reversal of expectations. The venerable elder judges are convicted by a youth, while the woman, who at first is condemned on the mere word of the elders, is vindicated. Again, the provenance of this addition to Daniel is impossible to establish.

The final addition is the story of Bel and the Dragon (or snake). In the LXX it is said to be taken from the prophecy of Habakkuk (who appears in the story). This indicates that the tale once circulated apart from the book of Daniel. In this case there is a point of contact with the Hebrew-Aramaic book: Daniel is thrown into a lions' den after the death of the snake. There does not appear to be any literary dependence on Daniel 6, however. In both stories the king is sympathetic to Daniel, but in "Bel and the Dragon" he is Cyrus the Great, not the unhistorical Darius the Mede. The temple of Bel in Babylon was in fact destroyed by another Persian king, Xerxes I, but he was not motivated by any opposition to idolatry. It may well be that the Bel episode is an elaboration of Jer 51:44: "And I will punish Bel in Babylon, and take out of his mouth what he has swallowed." The motif of the lions' den was presumably associated with Daniel in oral tradition.

Both the episodes of Bel and of the snake are caricatures of idolatry, in the vein already familiar from Isaiah 44. There is no evidence that the Babylonians worshipped live snakes. Animal worship was most prominent in Egypt and polemic against it was common in Hellenistic Jewish literature. The charge that "the king has become a Jew" (v. 28) also suggests a Hellenistic date, when Judaism had come to be perceived as a cult rather than as an ethnic-political entity. One Mesopotamian ruler, Queen Helena of Adiabene, did in fact convert to Judaism in the 1st century C.E.

We know of at least one other Danielic composition from the ancient world which never made its way into the biblical canon. 4QPsDan from Qumran is closely related to Daniel 2. It presents a summary of world history which Daniel recites "before the ministers of the king." One the reconstruction of the editor (Milik 1956) it offered a schema of four kingdoms and an eschatological conclusion, but the text is very fragmentary and it is not certain that 4QPsDan ^{c} is part of the same work as 4QPsDan ^{a} and ^{b}. There are also several medieval apocalypses associated with the name of Daniel (Berger 1976).

For further discussion see Goldingay *Daniel* WBC.

JOHN J. COLLINS

DANNAH (PLACE) [Heb *dannâ* (דַּנָּה)]. A town situated in the S hill country of Judah (Josh 15:49), within the same district as Debir. The only reference to this settlement occurs in the list of towns within the tribal allotment of Judah (Josh 15:21–62). The location of the ancient settlement is unknown.
W. R. KOTTER

DAPHNE (PLACE) [Gk *Daphnē* (Δαφνη)]. According to 2 Macc 4:33, the deposed high priest Onias III took refuge from his opponent, the high priest Menelaus, at Daphne near Antioch. Only after being lured away from this sanctuary could he be assassinated by Adronicus at Menelaus' urging. Strabo notes that a famous temple of Apollo and Artemis encompassing an asylum was located at Daphne, which lay about 5 miles from Antioch (*Geog.* 16.2.6). Josephus notes that both Antony (*JW* 1.12.5 §243) and Herod stayed there (*JW*, 1.14.22 §277 and *Ant* 14.15.11 §451). That Onias, a saintly figure in 2 Maccabees, would have taken refuge there should not be taken as unseemly. There is nothing to suggest that the former high priest indulged in idolatry. Indeed, the pious author of 2 Maccabees saw nothing improper in Onias' flight to Daphne to save his own life. Daphne near Antioch should not be confused with the Daphne located S of Dan on a tributary of the Jordan (Abel *GP*, 303).
M. E. HARDWICK

DARA (PERSON) [Heb *dara*ʿ (דַּרְעַ)]. Var. DARDA. Dara was the son of Zerah and from the tribe of Judah (1 Chr 2:6). Zerah was the son whom Tamar conceived by her father-in-law Judah (Gen 38:30; 1 Chr 2:4). In 1 Kgs 5:11—Eng4:31 he is listed as Darda (Heb *darda*ʿ), one of the sons of Mahol. Together with Ethan, Heman, and Calcol, he is listed as a wise man whose wisdom was excelled only by Solomon's.

There has been much argument concerning the identification of the sons of Zerah in 1 Chr 2:6 with the sons of Mahol in 1 Kgs 5:11—Eng4:31. It is possible that the *benê māḥôl* should be identified with the musical personnel of the temple, the "sons of the choir" (Albright, *ARI*, 123; de Vaux, *AncIsr*, 382). Two of the *benê māḥôl* appear in the titles of Psalms 88 (Heman) and 89 (Ethan).

The fact that these musicians are not listed among the Levites but as descendants of Judah and his Canaanite wife Tamar probably indicates that the names of the *benê māḥôl* reflect the influence of Canaanite musical traditions upon the worship of Israel (Albright, 123). See DARDA (PERSON).
CLAUDE F. MARIOTTINI

DARDA (PERSON) [Heb *darda‘* (דַּרְדַּע)]. Var. DARA. Listed among those wise men in 1 Kgs 5:11—Eng4:31 whose wisdom was surpassed only by Solomon's. In the above reference in 1 Kings, Darda is listed as one of the sons of Mahol. In the parallel reference in 1 Chr 2:6, however, the variant spelling Dara is found, and he is listed as a son of Zerah, the son of Judah.

Some have tried to harmonize the two references by suggesting that Mahol was the actual father, while Zerah was a distant ancestor. Another possibility is that "sons of Mahol" does not refer to physical family but instead to members of the guild of temple musicians (*māḥôl* = dancing).

Although the background of Darda and the others listed is uncertain at present, it is clear that by the time of the writing of Kings these men symbolized the epitome of wisdom. They were likely well-known traditional figures, and the writer of Kings assures his readers that the wisdom of Solomon was greater even than that of these proverbial wise men. See DARA (PERSON).

PHILLIP E. MCMILLION

DARIC [Heb *darkĕmôn* (דַּרְכְּמוֹן)]. See COINAGE.

DARIUS (PERSON) [Heb *dārĕyāweš* (דָּרְיָוֶשׁ)]. The first Achaemenid king of this name, usually called the Great. He ascended the throne in clouded and complicated circumstances in 521 B.C. Son of Vishtaspa, Satrap of Parthia, he belonged to a collateral branch of the Achaemenid family and claimed that he and Cyrus II, (see CYRUS (PERSON)) had a common great-great-grandfather. Darius may have been the commander of the immortal guard during Cambyses' conquest of Egypt.

Our principal source for the troubled times associated with Darius' rise to power is his own, hence prejudiced, great inscription at Bisitun in Iran. Here the new king says Cambyses killed his brother Bardiya before leaving for Egypt but that the people of Persia did not know of this. Then a Magian priest, Gaumata, lied to the people of Persia saying he was Bardiya and in that guise led a rebellion against Cambyses. En route back to Persia from Egypt to crush the rebellion, Cambyses either committed suicide or was accidentally killed. Darius continued on with at least parts of the army that had come from Egypt and, with the assistance of six other strong men, killed Gaumata. Darius was then chosen by the six strong men to be the next king from the Achaemenid house.

The truth of this story of Darius' rise to power has been repeatedly challenged by historians. Whatever the truth in detail, there was clearly a major rebellion against the Achaemenid family. Cambyses apparently had no direct heir, and in crushing the rebellion Darius manipulated affairs so that he became king.

Revolt in Persia triggered widespread rebellion throughout most of the empire and Darius spent the whole of his first year as king putting down these uprisings. The most serious and persistent rebellions were those in Babylon, Media, and Armenia. Displaying great tactical skill as a military commander, Darius with his army was able to keep the several rebels separated and gradually to bring the situation under control by taking on his enemies one at a time. By June of 521 B.C., Darius was firmly in command of a reestablished Achaemenid empire.

There then began a concerted effort at imperial expansion. Sometime after the crushing of the rebellions, but earlier than 513 B.C., parts of N India, including the Punjab and Sind, were conquered by Darius. The great king then marched W about 513 B.C. and campaigned against the Scythians located N of the Danube River and the Black Sea. Campaigns which followed, led by subordinates, brought under Persian control all of the important cities, states, and islands in the N Aegean and around the Bosporus.

Peace was next broken on the European front by the Ionian revolt (499–494 B.C.), in which the Greek cities in Asia Minor attempted, unsuccessfully, to regain independence. The involvement of mainland Greeks in an effort to assist the Ionian cities guaranteed further conflict between Persia and Europe. By ca. 492–491 B.C. Macedonia and Thrace had been added to the Persian Empire and the great king's authority extended as far S in Greece as Mt. Olympus. The Persian defeat by the Athenians at the battle of

Marathon in 490 B.C. temporarily checked westward expansion but did not loosen Persian control of NE Greece.

Darius I was not only an accomplished military commander, but also a shrewd administrator and a monumental builder. Herodotus in his *Persian Wars* provides considerable detail on the great king's reorganization of the empire into 20 provinces or satrapies for purposes of regularizing tax collection and local government (see SATRAP). These basic administrative structures created by Darius served the empire well for approximately the next 200 years. Around 520 B.C. Darius began his grand scheme of construction at Persepolis, the new Achaemenid capital in their homeland, Persia (see PERSEPOLIS). Apparently, for some reason, Darius felt it inappropriate to continue the capital at Pasargadae built by Cyrus, though the slightly more N site did not go out of use. Massive construction works were also undertaken by Darius at the second capital of the empire, Susa, and, we assume, at the third, Ecbatana (Hamadan). Most of what may have been built by him in Babylon, the fourth imperial capital, is lost.

Darius died in November 486 B.C. shortly before the planned second major invasion of Greece and just after the outbreak of a major rebellion in Egypt. His was the first of the great royal Achaemenid tombs set into the rock cliff, Naqsh-i-Rustam, near Persepolis.

T. CUYLER YOUNG, JR.

DARIUS THE MEDE (PERSON) [Aram *dārĕyāweš mādāyā*ʾ (דָּרְיָוֶשׁ מָדָיָא)]. The Median

Darius was a 62-year-old man who, as predicted by Daniel, gained control over the Chaldean kingdom immediately following the death of Belshazzar (Dan 5:28–6:2). His first action as king was to set 120 satraps over the kingdom. On the king's behalf, but against his will, Daniel was put in the den of lions (Dan 6:14–17). Following his deliverance, Daniel prospered under both the Median king's rule and that of Cyrus the Persian (Dan 6:29—Eng6:28). In the first year of this "Darius son of Ahasuerus by birth a Mede," who "was installed over the kingdom of the Chaldeans," Daniel had his famous vision of the 70 weeks of years (Daniel 9). The references in Daniel place this Darius between the reign of Belshazzar and that of the Persian emperor Cyrus (Dan 5:30–6:1; cf. 6:29—Eng6:28; 9:1; cf. 8:1; and 10:1). At no other place in the Bible do we find a Median king named Darius.

A. Historical Difficulty

Both Greek and Babylonian sources clearly demonstrate that the Persian king Cyrus—and not Darius—was the conqueror of Babylon, and the real successor to the last Chaldean king (cf. 2 Chr 36:20). Historically, there was no Median invasion of Babylonia and no Median domination of that area. A Median king Darius is unknown. Consequently, the mysterious reference to Darius in the book of Daniel has posed a severe difficulty for exegetes since early times. Already in the 1st cent. B.C.E. the Greek version of (Proto-) Theodotion had tried to harmonize the biblical and the Greek traditions by substituting an Artaxerxes for Darius in Dan 6:1.

B. Median Rule over Babylonia

From the standpoint of tradition-history, two general conceptions presumably stand behind the Daniel narration. First, and most important for every faithful Israelite, there were the prophetic predictions of the conquest of Babylon by Median troops (Isa 13:17–18; 21:2; Jer 51:1, 27, 28; cf. Graf 1984: 21). For postexilic readers of Daniel these announcements were apparently fulfilled and had to be portrayed as such. Second, there was an extrabiblical pattern of a succession of the four world empires, Assyria, Media, Persia, and Greece, which was widely adhered to in the last centuries B.C.E. (Swain 1940). In order to bring this pattern into conformity with Israelite history, the biblical author simply substituted Babylonia for Assyria. Both of these concepts led the Daniel tradition to the conclusion that at least one Median king must have ruled over Babylonia (and Israel) between the otherwise known Chaldean and Persian kings (i.e., Belshazzar and Cyrus). But why was the name Darius chosen for this Median interregnum?

C. Proposals for Identification

While a number of solutions have been proposed since early times (Rowley 1935), only three of them are worth mentioning:

1. Nabonidus. There is a slight possibility that the king in question was really the last ruler on the throne of Babylon prior to the Persian invasion (for earlier representatives of this opinion see Rowley 1935: 9). As far as the indigenous population of Babylonia was concerned, this king was an alien. The Babylonian Dynastic Prophecy (Grayson 1975a: 25, 33) assigns to him an independent dynasty of Harran, ruling between the last legitimate Babylonian kings and the kings of Elam (Persia). The city of his birthplace, Harran, lies in the N and does not belong to Babylonia, but to Assyria. It may have been dominated by the Medes for some time after 612 B.C.E. (*RLA* 4: 124).

2. The Persian Darius I. Most recent commentators propose a confusion of the conquest of Babylon by Cyrus (539 B.C.E.) (e.g., Rowley 1935: 54–60; Hartmann and DiLella, *Daniel* AB, 36) with the later suppression of two Babylonian rebels, both of whom claimed to be the son of Nabonidus (cf. Behistun inscription; Kent 1953: 120–31). It was this *Persian* Darius who reorganized the state and installed the 20 satrapies (Hdt. 3.89). Darius I is mentioned 16 times in the Bible. In his second year the prophets Haggai and Zechariah were exhorting the people to rebuild the temple, and under the guidance of Zerubbabel and Joshua the work was begun (Hag 1:1, 15; 2:10; Zech 1:1, 7; Ezra 4:24–5:2). The governor of the province Beyond-the-River stopped this activity and wrote a letter to Darius requesting an inquiry. But the king confirmed the decree of Cyrus. So the building activity continued until the house of God was completed in the sixth year of Darius (Ezra 5:3–6:15). However, this identification of Darius I with Darius the Mede is not without its problems.

a. Where Darius I is mentioned in the Bible, his *Persian* provenance is stressed (Ezra 4:5, 24; 6:14; Neh 12:22, also with Darius II). Daniel, however, underlines the *Median* affiliation of the conqueror of Babylon.

b. In the Chronicler's work there is a clear sequence from Cyrus to Darius, king of Persia, who reigns at the time of the dedication of the Second Temple (Ezra 4:5; 5:6–6:14). As the book of Daniel is closely related to the Chronicler's work in many instances (Koch, *Daniel* BKAT, 28–33, 37–40), it is difficult to imagine why the author should have disturbed the chronological sequence of his source.

c. Dan 9:25 mentions a time of 49 years (7 weeks of years), presumably between the beginning of the Exile and the coming of a messiah-*nagîd* (Cyrus or Zerubbabel?) He therefore seems to have reliable knowledge about the end of the exilic period.

d. In his inscriptions Darius I himself indicates his Persian origin: "I am a Persian, son of a Persian" (Kent 1953: 138; cf. 116, 134). His father's name is Vištaspa (Gk Hystaspes), whereas the father's name in Dan 9:1 is Ahasuerus.

3. Gaubaruwa (Akk *Gubaru/Ugbaru,* Gk *Gobryas*). This is the only candidate who fits the otherwise documented historical circumstances. Gaubaruwa was a governor of Gutium who, on behalf of Cyrus and as an old man (Xenophon), seized Babylon and was installed (cf. the passive *hamlak* Dan 9:1) as a vice-regent over Mesopotamia, appointing the governors of the country until his death eight months later (Nabonidus Chronicle, *ANET,* 306–7; Grayson 1975b: 104–11; cf. Whitcomb 1959; Shea 1971–72; Cälmeyer 1977; Koch 1983). The name of his father is never mentioned. He "ruled almost as an independent monarch" (Olmstead 1948: 56). As a man of Gutium, Gaubaruwa surely was no Babylonian. In fact, Gutium in the Babylonian omen literature (replacing an earlier Subartu) signifies the NE quadrant of the known world; in the 1st millenium B.C.E. it was compromised primarily of Media (*RLA* 3: 708–20). The historian Berossos (ca. 280 B.C.E.) identified the old dynasty of Gutium in the Babylonian King List with "tyrants of the Medes" (Burstein 1978: 21–23, especially n. 64). The same identification is made by Daniel. Yet the name "Darius" for Gaubaruwa still remains enigmatic. The old Persian word *Dārayarahu* 'He who holds firm the good' (Kent 1953: 189) is the name of several kings and princes (*RLA* 2: 121–23). Perhaps it was also the throne name for the vice-king Gaubaruwa in Babylonia, whose name was not otherwise documented because of the short time of his reign. For us Gaubaruwa seems to be an obscure figure. But his name and fate are not only documented in cuneiform sources, but are also known to Greek historians (*RLA* 3: 671–2). The statement of "a conflation of confused tradition" (Rowley 1935: 54) regarding Darius the Mede in Daniel therefore seems neither necessary nor probable.

DARKON (PERSON) [Heb *darqôn* (דַּרְקוֹן)]. Head of a family of "sons of Solomon's servants" (see SOLOMON'S SERVANTS) which is listed among those exiles returning from Babylon to Jerusalem and Judah (Ezra 2:56 = Neh 7:58). Mendelsohn (1942: 17) believes this group was merged with the *nĕtînîm* 'temple servants' (see NETHINIM) under Ezra and Nehemiah. Weinberg (1975: 371) holds that the low social rank of these groups, originally composed of craftsmen in royal service before the Exile, in the 6th and 5th centuries resulted in their disappearance after the 5th century B.C. Noth (IPN, 225) derives the name from the Arabic *darkun* 'hard,' understanding it to signify firmness and strength, while Brown, Driver, and Briggs (BDB, 204b) suggest an origination from Arabic *daraqa* 'walk rapidly, hasten' or from Arabic *daraqatun* 'shield.' Blenkinsopp (*Ezra-Nehemiah* OTL, 91) believes the name may have originated as a nickname. Because *D-R-Q* does not produce any Semitic personal names, Zadok (1980: 115) assumes *darqôn* to be the result of some metathesis of *daqrōn* which comes from *D-Q-R* 'bore through, pierce,' which does generate NW Semitic examples (Gröndahl *PTU*, 125). In the list of 1 Esdras 5, the name Lozon (v 33) seems to occupy the position held by Darkon.

DATE PALM. See FLORA.

DATHAN (PERSON) [Heb *dātān* (דָּתָן)]. Son of Eliab, a Reubenite, who with ABIRAM, KORAH, and 250 leaders of Israel conspired against the exclusive leadership of Moses and Aaron in the wilderness (Num 16:1–40). The conspiracy ended when, in the aftermath of a ritual contest with Aaron, the earth "swallowed" the leaders and fire devoured the 250. The name is derived from Akk *datnu* 'strong, heroic.'

The latest postexilic form of the story (P) is reflected also in Num 26:9. There Dathan, together with Abiram and Korah, is swallowed by the earth, and the rest of the conspirators are consumed by fire. However, both Deut 11:6 and Ps 106:16 give evidence of an earlier form belonging to the epic tradition (J) in which the story of Dathan and Abiram has not yet been interwoven with that of Korah. Belonging to the earlier Dathan-Abiram tradition are vv 12–14 (15) and 25–34, minus the note concerning Korah in v 32, plus fragments of vv 1–2, 24. The conspiracy of Korah is a strictly levitical concern directed against the exclusive claims of the Aaronide priesthood. That of Dathan and Abiram is a more directly political conspiracy against the exclusive governing authority of Moses, who would be "prince" (Heb *śar*) over the people (v 13). Whereas the priestly technical term "come near" (Heb *qārab*) is used of the Korah tradition, the Dathan tradition plays upon the verb "come up" (Heb *ʿălah*). While Korah is instructed to "come near," Dathan and Abiram refuse to "come up" (*Qal*) because the Lord only "brought up" (*Hipʿil*) the people of Israel from Egypt to kill them in the wilderness (vv 12–13).

This conspiracy story is one in a cluster of such narratives, including the revolt of Aaron and Miriam against Moses (Numbers 12), and of all the people (Numbers 14). They cluster at this point in the narrative likely to demonstrate the negative impact of the democratization of God's spirit in Numbers 11, and Moses' statement in particular that he wished "that all the Lord's people were prophets, that the Lord would put his spirit upon them" (11:29). The story of Abiram is often understood as a reflection of the loss of prestige by the tribe of Reuben following the period of settlement. See also Budd *Numbers* WBC.

DATHEMA (PLACE) [Gk *Dathema* (Δαθεμα)]. A city in Gilead with a fortress to which Jews fled to escape persecution from the surrounding gentiles (1 Macc 5:9). The Maccabean revolt met with early successes, including retaking the temple in 164 B.C., which led to gentile reprisals. Many Jews in Gilead fled to Dathema for refuge and sent to Judas for help. Leaving Simon in charge in Galilee, Judas and Jonathan set out for Dathema. After three days they encountered Nabateans, who told them of the persecution of Jews in other cities of Galilee, including Bozrah, Bosor-in-Alema, Chaspho, Maked, and Carnaim (see ALEMA). Detouring long enough to defeat the enemy at Bozrah, Judas then marched overnight to Dathema and defeated the army of Timothy there.

The location of Dathema is uncertain. Abel (1923: 516) rejected a traditional association with ʿAthaman and identified the site as Ramatha in the center of Gilead. The difference in the initial letter of the name can be explained from the easy confusion of the Heb letters *dalet* and *reš*. In 2 Macc 12:17 one reads that Judas reached a place called *charaka,* which is often taken as a proper name (Charax) and identified with Dathema.

This identification, however, is by no means certain. Simons (*GTTOT,* 425) separates the two, identifies Charax with the site of Kerak, and identifies Tell Hamad, E of Carnaim, as the possible site for Dathema based on the presence of ancient city walls and its location as a suitable place of refuge. Tell Hamid, however, lies a little over 50 km from Bozrah, quite a distance for an overnight march (1 Macc 5:29). Simons suggests that Judas came first to Charax, did not find Timothy there (2 Macc 12:17–18), divided his forces, and himself took part of his army to Tell Hamad, about 25 km away. The identification of Charax with Kerak, however, has been challenged. Goldstein (*2 Maccabees* AB, 440) argues that the Gk word *charaxa* is an inflected noun (meaning "palisaded camp") and not a proper noun at all. Since all of the proposed identifications of the site of Dathema rest on challenged speculation, one should conclude that the site has not yet been satisfactorily located.

DAVID (PERSON) [Heb *dāwîd* (דָּוִיד)]. Israel's second and greatest king, David rose to power from humble circumstances and amid many difficulties; he captured Jerusalem, established it as his capital, unified the nation, and built an empire that stretched from Egypt to Mesopotamia during a 40-year reign, ca. 1010–970 B.C.E. He was a man of many talents—a shepherd, musician, poet, warrior, politician, administrator—but he is most prominent as the king par excellence, as the standard for all later kings, and as a messianic symbol.

———

A. Name

David's name is rendered *dāwid* or *dāwîd* in Heb (*dauid* or *daueid* in Gk), and it occurs more than 1000 times in the OT, some 59 times in the NT. The name is attested in Old Babylonian (early 2nd millennium B.C.E.: *da-wi-da-nu-um*) and possibly in Moabite (9th cent. B.C.E.: *dwd[h]*).

The term "David" has been suggested as a title, perhaps a throne name, and not a personal name. Impetus for this suggestion has come from 2 Sam 21:19, which credits one "Elhanan" with the killing of Goliath, whereas 1 Samuel 17 has "David" killing him: the former would have been his personal name (Honeyman 1948: 23–24). This creates several problems, however, not least of which is the anomaly of "Elhanan/David" being considered one of his own mighty men (McCarter *1 Samuel* AB, 291; *2 Samuel* AB, 450). (1 Chr 20:5 states that Elhanan killed Lahmi, Goliath's brother. This statement has been seen as a harmonizing attempt [or textual corruption] by the Chronicler [Anderson *2 Samuel* WBC, 255]. It may also indicate textual corruption in 2 Samuel, however [Keil and Delitzsch n.d.: 465–66].)

Another support for seeing "David" as a title has come from a reading from the Mari archives (*dawīdûm*), originally understood as "general" or "commander-in-chief." However, that translation has been proven erroneous; the word is related to Akk *dabdûm*, and means "defeat" (Tadmor 1958: 129–31).

B. Family

David was the youngest of at least eight sons of Jesse of Bethlehem (1 Sam 17:12–14), and he had at least two (half-?) sisters, Abigail and Zeruiah, as well (1 Chr 2:16). His mother's name is unknown, unless it was Nahash (McCarter *2 Samuel* AB, 392, 394). Six of his brothers are named in the genealogy in 1 Chr 2:13–15; one may have died without heirs and thus been omitted in this list. (See also McCarter *1 Samuel* AB, 276.)

David's previous ancestry is found in Ruth 4:18–22 and 1 Chr 2:1–15, as well as in Matt 1:2–6 and Luke 3:31–38. Each of these genealogies shows him as descended from Judah, with an important purpose of showing the continuity of the Judahite line, in keeping with the royal promise to Judah in Gen 49:8–12. His ancestry was partially non-Israelite: Moabite, via Ruth, and Canaanite, via Tamar. Theologically, these inclusions make the point that YHWH was not to be too tightly bound by nationalistic or ethnocentric expectations in his choice of David.

David had eight wives who are named in Scripture, seven of whom bore him children, the other being Michal, Saul's daughter (2 Sam 6:23); the most prominent were Abigail (1 Samuel 25) and Bathsheba (2 Samuel 11–12). He also had many unnamed wives and concubines, who likewise bore him children (1 Chr 3:9; 14:3).

David had 19 sons who are named, along with one daughter, in addition to numerous unnamed sons and daughters (see DAVID, SONS OF). His line continued unbroken among the kings of Judah, and the NT traces this line, via two routes, to Jesus (Matt 1:6–17; Luke 3:23–31). David's prominence as Israel's greatest king and his importance as a theological symbol (see DAVIDIC COVENANT) account for the special interest in his line.

C. Rise to Power

David's story begins with his dramatic rise in fortunes, from humble beginnings as an insignificant shepherd in his father's house to his acclamation as king over all Israel in his own capital city, Jerusalem. Through it all, we see YHWH favoring him and events consistently turning out in his favor (see G.2 below).

1. Samuel's Anointing of David. David is introduced in the Bible with the story of his anointing to be king by the prophet Samuel (1 Sam 16:1–13). The story unfolds dramatically—e.g., David is identified by

name only at the end of the episode—with Samuel's going to Jesse's home in Bethlehem at YHWH's behest and reviewing seven impressive sons, who, nonetheless, were not YHWH's choice, before asking about any other sons. David, the youngest, was called from the fields where he was tending the sheep. He was anointed as king, after which YHWH's spirit came mightily upon him from that day forward.

2. David's Arrival at the Royal Court. At the same time YHWH's spirit was leaving the present king, Saul, and an evil spirit from YHWH was coming upon him (1 Sam 16: 14–23). This spiritual transfer of power symbolized the inevitable political transfer of power as well. This episode brings Saul and David together, and the remainder of 1 Samuel focuses upon David's rise vis-à-vis Saul's decline. David was introduced into Saul's court as one skilled in many areas, including the ability to soothe Saul whenever he was afflicted by the evil spirit. He became armor bearer and musician to Saul, presumably at Gibeah, Saul's hometown (15:34; 22:6).

3. David and Goliath. We see David soon with an opportunity to demonstrate his military capabilities in the lengthy story of his encounter with Goliath (1 Sam 17:1–18:5). This is a complex story, with many difficulties, textual and otherwise (Klein *1 Samuel* WBC, 168–83; Barthélemy et al. 1986). The story in the MT presents a conflict between the Philistines and Israel at the valley of Elah, near Gath. The Philistines were represented by one "Goliath," of Gath (17:4, 23), a giant of a man who challenged Israel to send out a warrior to engage him in single combat; the winner of this contest of champions ostensibly would determine the overall victor (17:1–10). The Israelites' fear in the face of this challenge was put to shame by the fearlessness of the young shepherd boy David, who appeared on the scene from the fields with provisions for his brothers (17:11–30).

News of David reached Saul, who summoned him and sent him out against the Philistine warrior. We see David confronting the giant with nothing but stones and a sling, but nevertheless prevailing over him (17:31–50). Despite the apparent ground rules for the champion conflict, the Israelites pursued the Philistines W to Gath and Ekron (17:51–54). Saul, then, who earlier had known David in the context of the court (16:17–23), now inquired about his pedigree (17:55–58). David's success provided the basis for Saul's and the people's further trust of him, and, significantly, for Jonathan—who was a successful warrior in his own right (13:3; 14:1–15)—to declare his loyalty to David, as well, even to the point of giving David his armor (18:1–5).

4. Threats to David. Following David's success over Goliath and his further rise in fortunes, we see Jonathan and Michal, two of Saul's children, "loving" David (18:1, 3, 20). Saul could not go this far, however; indeed, his jealousy was soon aroused, and thus began his long hatred and pursuit of David (1 Sam 18:6–21:1—Eng20:42). He was particularly infuriated by the popular women's taunt that compared him unfavorably with David:

> Saul has slain his thousands,
> but David his ten thousands
> (18:7; also in 21:12 [—Eng 21:11] and 29:5).

This taunt first appears after David technically had killed only one enemy—Goliath—but it reflects the rout of the Philistines and the popular attitudes that arose after that incident (cf. 18:16). Indeed, David's fortunes waxed as Saul's jealousy increased and his fortunes declined (18:9–16; Fokkelmann 1986). This was made even more evident by Saul's plots against David, by Saul's hoping the Philistines would kill David, and by Saul's use of his own daughters, Merab and Michal, as pawns in his struggle (18:17–30). Contrary to Saul's expectations, David succeeded even further, and all Israel "loved" him (18:28). Thus Saul feared and hated him all the more, while David's fortunes continued to rise (18:29–30).

Saul became obsessed with killing David and endeavored by various means to do so. Saul's daughter (now David's wife) Michal, however, helped David escape once (19:11–17), and his son Jonathan also allied himself with David (18:1–4; 19:1–7; 20:1–21:1—Eng 20:42; 23:16–18). The themes of Jonathan's love for David and the covenant between the two are prominent here, and they form the basis later for several of King David's acts of kindness to Jonathan's son. They also dramatically highlight the tenuous nature of Saul's hold on the throne—and its bankruptcy—since his own son, the presumed heir apparent, allied himself with YHWH's chosen heir apparent against his own father.

Finally, despite Michal's and Jonathan's help, David was forced to flee from Jerusalem permanently.

5. David the Fugitive. A lengthy account ensues, recounting the details of David's flight from Saul and his service as a mercenary for the Philistines (1 Sam 21:2 [Eng 21:1]–30:31). In each episode, David's character and his fortunes emerge enhanced. The stage is indeed set for David to assume his place as God's chosen king after Saul's death in 1 Samuel 31.

David first fled to Nob, a Benjaminite city near Gibeah and Jerusalem (Isa 10:32; Neh 11:31–32) and the center of religious activity after the destruction of Shiloh (cf. 14:3; Jer 7:14). Here he obtained provisions and Goliath's sword (via a deception) from Ahimelech, the priest. The worthiness of his person and his cause are highlighted by the priest's making available to him the holy Bread of the Presence, which normally was to be reserved for the priests (Lev 24:8–9). (A seemingly innocuous notice about Doeg the Edomite's presence in 21:8—Eng 21:7 later is shown to be rather ominous, since Doeg came to function as Saul's spy and then slaughtered the priests at Nob on Saul's behalf [22:6–19].)

Following this incident, David fled to Gath, in Philistine territory, where he certainly would have been safe from Saul. However, his reputation as an adversary of the Philistines had preceded him, and he was forced to flee (21:11–16—Eng 21:10–15). At Adullam, NE of Gath, he gathered around him—from among the marginal and disaffected members of society—the nucleus of what would become a formidable fighting force (22:1–2). He crossed into Moab to place his parents into the temporary care of the Moabite king (22:3–5). There his descent from the Moabite Ruth could only have helped him.

When he returned to Judah, Saul heard from Doeg of Ahimelech's aid to David and enlisted Doeg—Saul's personal bodyguards having refused to do so—to kill the 85 priests from Nob and their households (22:6–19). Abiathar, one of Ahimelech's sons, escaped, however, and joined David (22:20–23).

Next, David heard of Philistines' harassing Keilah, a Judahite town E of Gath, and he defeated them with YHWH's help, freeing Keilah (23:1–5). David learned from YHWH that, despite their rescue, the men of Keilah planned to give him and his 600 men into Saul's hand, so he fled once again, this time into the Wilderness of Ziph, SE of Keilah (23:6–14).

Here Jonathan met David, renewed their covenant, and reassured him (23:15–18). The men of Ziph, like those from Keilah earlier, plotted to give David up to Saul; thus he was forced to flee again, S into the Wilderness of Maon, just ahead of Saul and his men. Saul was diverted from his pursuit by a report that Philistines had raided the land, and David descended SE to the strongholds of En-Gedi, near the Dead Sea (23:19–24:1—Eng 23:19–29).

We now encounter the first of two related episodes in which David had Saul's life in his hands but chose to spare it (24:2–23—Eng 24:1–22; cf. 26:1–25). In this one Saul returned to the chase reinforced with 3000 chosen men. When Saul entered a cave near En-Gedi to relieve himself, one in which David was hiding, David refused to take advantage of the situation, displaying a respect for the office of the anointed king (24:7, 11—Eng 24:6, 10); he himself, of course, would one day occupy that office. Upon David's disclosure to Saul of this, Saul repented—for the time being—of his pursuit of David, affirmed David's position as YHWH's chosen, and returned home (24:9–23—Eng 24:8–22).

A notice of Samuel's death and burial follows (25:1a), and then David resumed his wanderings, going into the Wilderness of Paran (25:1b). Here, in Maon, he met yet another man who would not help him in his flight, one Nabal, whose character lived up to the meaning of his name ("fool"). Nabal was rich, but he refused to provision David's men in spite of the latter's consideration of his shepherds; and only the intercession of Nabal's wife Abigail spared him from David's retribution since, unlike her husband, she was aware of David's special favor from YHWH (25:28–31). Fittingly, Nabal then died on his own, and David took Abigail as his wife, as well as Ahinoam of Jezreel. In the meantime Saul had given his daughter Michal as a wife to another man (25:42–44), as he already had done with Merab (18:19).

A second incident where David spared Saul's life follows (26:1–25). Its similarities to the first have prompted many to see them as variants of the same story (Klein *1 Samuel* WBC, 236–38). However, it does have a character of its own, and it serves to reinforce the picture given of David's fine character and his awareness of the significance of YHWH's anointed one (26:11, 16, 23). In this episode David encounters Saul asleep, rather than in a cave, and Saul again "repents" of pursuing David.

The last stage that we see of David's life as a fugitive from Saul was one in which he was able to consolidate even further his own position and following, thus facilitating his accession to power following Saul's death (chaps. 27–30). Despite Saul's occasional friendliness, David still feared for his life, so he went over to Achish, king of Gath, with whom he had had earlier contact (27:1–4; cf. 21:11–16—Eng 21:10–15). Achish gave him Ziklag as a city from which he could conduct raids, and David stayed there for 16 months. During this time, he curried favor with his Philistine overlord by conducting many raids, passing them off as raids against the Philistines' enemies in Judah, his own land; in fact, he was raiding to the S, against various desert bands, including Amalekites. These raids would naturally win him the loyalty of those living in Judah itself.

David's position was such that Achish would have taken him into battle against Israel and Saul himself had he not been overruled by the rest of the Philistine coalition because of their suspicions concerning David's loyalties (28:1–2; 29:1–11). This incident had the effect of removing David from any responsibility for Saul's death, which resulted in the ensuing battle (chap. 31). In the meantime David did further battle with the Amalekites (chap. 30), who had been raiding in Judah and had taken much booty and David's two wives. He recovered these and distributed the spoils throughout Judah, further demonstrating his military prowess and strengthening his position in Judah.

6. The Death of Saul. David's respect for the office of king was again demonstrated when he received the report of Saul's and Jonathan's deaths (1 Sam 31:1–2 Sam 1:27). The news was brought him by a self-serving Amalekite who attempted to ingratiate himself with David by claiming to have killed Saul. Instead, David had the Amalekite killed for his lack of respect for the royal office (2 Sam 1:1–16). David's lament (1:17–27) over the deaths of Saul and Jonathan is a model of grief and was recorded in the poetic "Book of Jashar" (1:18; cf. Josh 10:12–13; 1 Kgs 8:12–13 [LXX]).

7. Judah's Anointing of David. David now was able to return to Judah; and, in a public ceremony, he was anointed as king by the men of Judah at Hebron (2 Sam 2:1–4a), where he reigned 7.5 years (2:11). He immediately reached out to the men of Jabesh-Gilead, in N Transjordan (2:4b–7), a region that was claimed by Ish-bosheth, Saul's son (2:9). David could not pretend to the kingship of all Israel and Judah yet, however, because of the claims of his rival (2:8–4:12).

8. A Rival King. Ish-bosheth was installed as king over the N by Abner, commander of Saul's army, and ruled over Israel for two years (2:8–10). Chapters 2–4 reflect the natural rivalry that existed between Israel and Judah; the narrative is couched in terms of the rivalries between the houses of Saul and David (e.g., 3:1, 6). The kingdom had not yet been divided, yet "Israel" is referred to several times in contrast to "Judah" (e.g., 2:9–10; 3:10, 19, 37; 4:1), reflecting the very real divisions that existed throughout the nation's history. It was a testimony to David's personal magnetism and abilities, as well as to YHWH's favor upon him, that a unified kingdom was able to exist as it did under him.

In these chapters (2 Sam 2:8–4:12), the rivalry is played out especially through Abner, Saul's commander, and Joab, David's general: David's involvement is limited until Abner's death. First, in a deadly serious contest (McCarter *2 Samuel* AB, 95, 98), David's men handed Abner's men an initial defeat; and then Abner killed one of Joab's brothers, Asahel (2:12–23). Joab eventually killed Abner for this (3:26–30) despite the facts that he and Abner had declared a truce (2:24–32) and that Abner had had friendly contacts with David (3:12–21). David mourned Abner's death (3:31–39), in a manner reminiscent of his mourning Saul's death; this—and more—pleased the people (3:36). Ish-bosheth then was murdered, eliminating all effective rivalry to David's claim to the throne (chap. 4). David again mourned and he had the murderers executed, again displaying the concern for fairness in combat exhibited earlier. The way was now clear for David to assume sole power over a united Israel.

9. All Israel's Anointing of David. David was anointed for a third time, also at Hebron, this time over all Israel and Judah (2 Sam 5:1–5). The language of acclamation (*shepherd, prince, king*) is all part of standard vocabulary pertaining to royalty. The reference to him as *shepherd,* however, cannot help but recall the first reference to him, as an obscure shepherd, as well (1 Samuel 16). "How the lowly has risen!" Soon after he was to take Jerusalem, and he reigned there for 33 years, for a total reign of 40 years.

10. David's Capture of Jerusalem. The story of David's rise to power (2 Sam 5:6–10) climaxes with his capture of the city that was to serve as the nation's capital throughout its later history (see DAVID, CITY OF; JERUSALEM). Jerusalem afforded him numerous advantages. It was centrally located between Judah and the N tribes and was not strongly identified with any tribe: it had been included in the tribal allotment of Benjamin (Josh 18:28), but it appeared as part of the borders of the tribe of Judah (Josh 15:8), and it was included in the list of cities the Judahites did not conquer (15:63). Thus it could well play the role of a "neutral" capital. It was an old, well-established, walled Jebusite city, strategically located in the inland hill country. David easily could have drawn on its established bureaucracies in running the city (Mendenhall 1975; Herion and Hill 1986), although Mendenhall has drastically overstated the case for David as a cynical and Canaanized despot.

The method of David's capture of the city is not entirely clear. The explanation that the route of capture was up through the water shaft discovered by Charles Warren in 1867 (see 5:8) has lost much of its earlier cachet (McCarter *2 Samuel* 136–40; Anderson *2 Samuel* WBC, 81–85; but cf. DAVID, CITY OF).

The story of David's rise ends with the note that his present exalted position was due to "YHWH, the God of hosts" (5:10).

D. Consolidation of Power

The zenith of David's story now follows. Things went well for him militarily, administratively, and especially spiritually. It is telling, however, that this portion of his life receives such brief treatment.

1. Material Successes–I (2 Sam 5:11–25). There is little break in thought here from the comment in 5:10, for we see David being favored by God and man (5:11–12) and becoming a prolific father (5:13–16). Furthermore, he had his first true military successes against the Philistines; both came by means of YHWH's fighting on his behalf (5:17–25).

2. Spiritual Successes (2 Sam 6:1–7:29). David's religious sensibilities are shown here via his desires to bring the exiled ark back to Jerusalem and to build a suitable house for it. The account of the ark's return concludes several stories about its fortunes (1 Sam 4:1–7:1), usually collectively referred to as the "Ark Narrative." In this account, David is seen as somewhat insensitive to strict religious conventions regarding the ark (cf. Num 4:15), but nevertheless well-intentioned and enthusiastic. The ark eventually was brought to the City of David amid much celebration (2 Sam 6:5, 12–19). David's wife Michal was embarrassed by his vigorous celebrations, and she ended up barren as a result (6:16, 20–23), effectively eliminating the possibility that a descendant of Saul would have any hereditary claim to David's throne.

David's fortunes reached their peak with the significant royal-grant covenant that YHWH made with him (2 Samuel 7), assuring him that he himself would have a descendant on the throne in perpetuity (see DAVIDIC COVENANT; Kaiser 1974, 1989). It came in response to David's desire to build YHWH a house; YHWH instead promised David a sure "house" (i.e., dynasty) forever and assured him, using the language of divine adoption (McCarter *2 Samuel* AB, 207; Anderson *2 Samuel* WBC, 122), that his son would be YHWH's son (cf. Pss 2:7; 89:27–28—Eng 89:26–27). David's response was a prayer of gratitude (7:18–29). This chapter has aptly been called "the theological highlight of the Books of Samuel … if not of the Deuteronomistic History as a whole" (Anderson, 112), because of its significant content and its importance in later texts.

3. Material Successes–II (2 Sam 8:1–18). Following this theological highlight, we have a rather mundane catalog of David's further military victories, over Philistines and Moabites (8:1–2), Arameans (8:3–8), Edomites (8:13–14), and others (8:12), and of his acclaim by the king of Hamath (8:9–12). Its function is to show further that YHWH was with David and that he was an effective warrior and ruler (8:6b, 14b–15). The extent of David's kingdom was impressive: it reached the Mediterranean in the W, the N Sinai desert in the S, much of Transjordan in the E, and it approached the Euphrates in the N (cf. 24:5–7).

In connection with David's effectiveness as a ruler, the chapter ends with a list of David's chief administrative officials (8:16–18). Among these are Zadok and Ahimelech, who served as David's priests. (Later we see Zadok and Abiathar in this capacity [20:25; cf. McCarter *2 Samuel* AB, 253–57; Keil and Delitzsch n.d.: 365–67].) David's sons also were "priests" (8:18).

E. Decline

The rest of the story of David concerns events in which he was largely a victim or a bystander. After an auspicious beginning, he fell into great sin, following which numerous troubles beset him (see G.2 below).

1. David and Mephibosheth. The early promises to Jonathan were now fulfilled: David sought to show kindness to a descendant of Saul's for the sake of his covenant with Jonathan (2 Sam 9:1–13; cf. 1 Sam 20:14–17, etc.). That his concern was more than merely a personal one for Jonathan is borne out by the several references to the "house of Saul." Ziba, Saul's servant, who later would prove to be somewhat devious in his dealings, introduced David to the lame (and loyal) Mephibosheth, who would not have been a major threat to his throne (but cf. 16:3), and David took him in.

2. The Ammonite War–I. David had a series of hostile encounters with an Ammonite-Aramean coalition (2 Sam 10:1–19; cf. 12:26–31 and the summary in 8:3–8). We see him initiating a friendly encounter with the Ammonite king, but being rebuffed (10:1–5), after which he sent an army against the Ammonites, who by this time had enlisted Aramean help. His general Joab's victory was followed by another attempt—also unsuccessful—by the coalition to defeat Israel (10:6–19). The account serves to show David making peace with the Arameans (10:19) and to set the stage for the story of his great sins (cf. 11:1).

3. David and Bathsheba. The "Bathsheba Affair" (2 Sam 11:1–12:25; McCarter *2 Samuel* AB, 177) forms a critical turning point in David's life. Prior to this, he prospered greatly; afterward, his personal fortunes were greatly diminished.

For reasons unknown, David did not go with his army to do further battle with the Ammonites (11:1). His presence in Jerusalem afforded him an opportunity to notice Bathsheba bathing and to desire her. He sent for her and consummated his desire, after which she conceived (11:2–5). To cover his actions he sent for her husband, Uriah, who had been with the army; however, Uriah refused to enter his own house while his compatriots and the ark were away engaged in battle, so David arranged to have him killed (thereby achieving some personal satisfaction perhaps, but still not solving his problem of paternity) (11:6–25). David then took Bathsheba as his wife, but YHWH was displeased, and sent Nathan the prophet to confront him. Nathan did so, via a cleverly contrived story that trapped David into admitting his own guilt (12:1–15a). Included in Nathan's oracle was a sentence upon David (12:10–12), one that was fulfilled in several ways after this. The son born to Bathsheba died because of David's sin (12:15b–23), but a grace note was struck for David and Bathsheba in the birth of another son, who was named "Solomon" (meaning "peaceable") and "Jedidiah" (meaning "beloved of YHWH") (12:24–25).

4. The Ammonite War–II. After this (or in the meantime), Joab captured Rabbah, the Ammonite capital, and David came out to take it officially and to subdue the Ammonites, who thereafter did not pose a threat to Israel (2 Sam 12:26–31).

5. Two Rebellious Sons. From the perspective of succession struggles, the next episodes (2 Sam 13:1–19:1—Eng18:33) serve to clarify the picture somewhat, since two of David's oldest sons—Amnon and Absalom—are killed here. From the perspective of the story of David himself, however, these episodes show him to be "under the curse," the keynotes of which are struck in chaps. 10–12, esp. 12:10–12 (Carlson 1964: 129–259). He is a relatively passive figure throughout.

First, David's oldest son AMNON raped his half-sister Tamar (13:1–22). In retaliation for this, ABSALOM, David's third son, killed Amnon and then fled to Geshur, the home of his mother Maacah, E of the Sea of Galilee, where he stayed for three years (13:23–39; cf. 3:3). At this point, David did little to influence events; he mainly reacted to them (12:21, 37, 39), mourning the loss of these two sons.

Absalom finally was brought back through the efforts of Joab, David's general and nephew, who recruited a wise woman from Tekoa to masquerade as a bereaved mother whose remaining son's life was threatened (14:1–24). When David's compassion caused him to intercede, she pointed out to him that Absalom's lot was the same as her son's. Acknowledging her point, David restored Absalom from exile but did not allow him to come into his presence for two years (14:24, 28). Father and son finally were reconciled after some persistence on Absalom's part (14:29–33).

Soon afterward, however, Absalom began an active campaign of subversion against his father (15:1–12). He conspired to be made king at Hebron, his birthplace and the place of his father's acclamation as king and early reign over Judah and all Israel. His star rose steadily in Israel: this good fortune included the defection to his side of Ahithophel, David's counselor (15:12).

David was forced to flee from Jerusalem, along with most of his household and the warriors loyal to him (15:13–16:14). During the flight, a sad one (15:23, 30), David did work (rather effectively, as it turned out) to subvert Absalom's rebellion. He allowed Ittai, leader of 600 men from Gath, to stay with him (15:19–23); Ittai was one of the three generals who then led the successful battle against Absalom (18:2). He directed the priests Zadok and Abiathar to return with the ark to Jerusalem (15:24–29); their presence there would later help him (15:35–36, etc.). He asked YHWH to render the defector Ahithophel's counsel against him ineffective (15:31); this prayer was answered, and Ahithophel hanged himself (16:20–17:23). He met Hushai and enlisted his help as a spy and counterinfluence to Athithophel (15:32–37); Hushai proved to be the answer to his prayer (16:15–17:23). He also met Ziba, Saul's servant, who attempted to ingratiate himself with David, and one Shimei, who cursed him as he fled (16:1–14). David dealt graciously with both (cf. also 19:17–31—Eng19:16–30).

Following David's departure, Absalom entered Jerusalem (16:15). Ahithophel advised him to consolidate his position as king by taking his father's concubines, which he did (16:20–23). He also counseled a selective strike that would kill only David (17:1–4). To counter Ahithophel's advice, David's agent Hushai advised a large-scale mobilization instead, and Absalom took this advice, which prompted Ahithophel to hang himself (17:5–14, 23). YHWH's hand could be seen in this, since Ahithophel's had been good counsel (17:14): the delay in mobilization allowed Hushai to send word to David about Absalom's plans, via the two priests' sons, thus setting the stage for the military confrontation (17:15–22).

The confrontation took place across the Jordan in the dense forest of Ephraim in Gilead. Absalom's forces, under Amasa, were no match for David's seasoned followers, under Joab, Abishai, and Ittai, and many were lost to the sword or to the forest (18:1–8). Absalom himself was killed by Joab, and word of his death was brought to David (18:9–32); the moving climax of the story is reached abruptly in David's reaction to his son's death and his poignant lament (19:1—Eng18:33).

6. David's Restoration. Immediately following Absalom's death (2 Sam 19:2 [Eng 19:1]–20:26), there was a power vacuum in Jerusalem and some confusion over David's proper role in a renewed Israel since he had, in effect, been deposed as king by his son. The situation was aggravated by David's prolonged preoccupation with Absalom's death, rather than with his loyal followers; after a sharp rebuke by Joab, David arose to take his rightful place in the gate at Mahanaim (19:2–9a—Eng 19:1–8a).

North-south tensions that had been visible earlier (chaps. 2–5) now resurfaced. To fill the power vacuum in Israel, David courted the elders of his own tribe, Judah, and was accepted by them as king upon his return to Cisjordan. He also courted Amasa, Absalom's general, to the exclusion of his own general, Joab (19:9b–16—Eng19:8b–15).

This appointment by David of Amasa as commander of his army was typical of the magnanimity and of the forgive-and-forget attitude that are presented in connection with David's return. David also forgave Shimei, who had cursed him earlier, and he assured Mephibosheth of his favor despite questions that had arisen about his loyalties (19:17–31—Eng19:16–30). Even Ziba, Saul's servant, retained David's favor despite his deception (19:30—Eng19:29; cf. 16:1–4). David also invited Barzillai, who had helped him when he was in flight (17:27–29), to join him in Jerusalem; the feeble Barzillai sent his son instead (19:32–41—Eng19:31–40).

While David had been acclaimed in Judah, the men of Israel felt they had not been properly included in his return (19:42–44—Eng19:41–43). Their discontent formed the basis for the brief success of the revolt against David by one Sheba, a Benjaminite (20:1–22). The Israelites responded to his call to withdraw from David, while David finally returned to Jerusalem. David then sent out two of his generals, Amasa and Abishai, to counter this new rebellion. Amasa was killed by Joab, whom he had replaced as general,

and then Joab led the pursuit of Sheba, who was killed by the citizens of Abel of Beth-maacah, at the advice of a wise woman there.

David's restoration to power was complete with the return of Joab to Jerusalem (20:22d), and a second list of his administrative officials follows this notice (20:23–26; cf. 8:16–18).

7. David's Last Deeds. David's position as a theological symbol is reemphasized in the final chapters of 2 Samuel (2 Sam 21:1–24:25; Childs *IOTS*, 273–77). First, we have the story of David's execution of seven of Saul's sons, but he was not to be held responsible for this, since it was due to the bloodguilt of Saul. As for David, we see him sparing Mephibosheth (cf. chap. 9) and recovering the remains of Saul and Jonathan for proper burial (21:1–14).

Next, we have a list of David's heroes, who were involved in four Philistine wars (21:15–22). His military prowess here is downplayed; indeed, in his last battle (21:15–17) his weakness is particularly evident.

This weakness forms an appropriate lead-in to his poetic praise in chap. 22, where YHWH receives the credit for David's victories. The prose introduction (22:1) includes "all his enemies" (and not just Saul) as ones from whom YHWH delivered him, rendering appropriate the psalm's inclusion here, with other accounts of the end of his life. The psalm closes (22:51) with a reference to the all-important Davidic covenant.

Another poem follows in which we also see a theocentric emphasis: the "testament" of David (23:1–7). Here David, the "sweet psalmist of Israel," also is deemed the "anointed of the God of Jacob" (23:1), and the everlasting Davidic covenant is once again emphasized (23:5). The poem also speaks of the ideal ruler, of which David was the prototype (cf. Psalms 1–2).

Another list of David's heroes follows (23:8–39). The list ends, significantly, with Uriah, whom David had killed; this abrupt reminder of a major blot on David's record serves effectively to introduce another episode in which he also sinned (chap. 24), especially since the parallel list of his heroes in 1 Chr 11:26–47 occurs in a different context and adds some 16 additional names after Uriah's.

Another story now follows (24:1–25) in which David, responding to a kindling of YHWH's wrath, numbered the people in an apparent gesture of lack of faith. The punishment—which David was allowed to choose—was a great plague upon the people. David then purchased the land that ultimately would serve as the site of the temple, and he offered sacrifices there that averted YHWH's anger. The books of Samuel end with a note of YHWH's graciousness for the sake of the land (24:25; cf. 21:14).

8. Two Contentious Sons. David's final decline and demise were accompanied by a somewhat unseemly struggle for succession between Adonijah, his oldest surviving son, and Solomon, Bathsheba's favorite (1 Kgs 1:1–2:12). The feeble condition of David (1:1–4, 15) prompted Adonijah to claim the throne and have himself acclaimed as king (1:5–10). His boldness was partially due to David's failure as a parent (1:6; cf. the similar comment about David and Amnon in the versions of 2 Sam 13:21 [Ulrich 1978: 84–85]). Adonijah's actions prompted Nathan and Bathsheba, who were among those excluded from his celebrations (cf. 1:8–10), to champion Solomon's cause (1:11–27) even to the point of deceiving David (1:13; cf. 1:30). David placed his imprimatur upon Solomon along with instructions for his installation as king (1:28–37). Solomon was anointed and Adonijah disposed of (1:38–53) after which David gave Solomon his final charge (2:1–4) and instructions for disposition of various characters previously associated with David (2:5–9). David was buried in the city that bore his name after having reigned 40 years, and he was succeeded by his son Solomon (2:10–12).

F. A Man after God's Own Heart

Taken in toto, the biblical pictures of David are overwhelmingly positive. As a "historical" person he accomplished much and was greatly favored despite his flaws. As a theological symbol he was the godly king par excellence.

1. David in the Former Prophets. The books of 1 and 2 Samuel contain the most detailed "biographical" information about David. He is shown rising to the throne of Israel from humble beginnings as a shepherd, and then select portions of his life while he was king follow, until his death.

The "reporting" displays close attention to detail and people, contains much dialogue and insight into people's mental processes, and is a masterpiece of literary composition.

In general, the image of David portrayed here is one of a talented and (more importantly) divinely chosen and favored figure who rises to power almost in spite of himself, who is the recipient of an important divine promise, but who then subverts much of his own accomplishment through his sin, after which his life is a series of troubles. A clear message here is that YHWH (and David's trust in YHWH) are behind his rise to kingship and that YHWH's covenant with David will not be derailed by David's flaws. He is a "flawed but favored" character (Bowman fc.); and this favor is the true key to whatever success he has, a point that especially is reiterated in subsequent texts. In 1 and 2 Kings David is important as the father of the Judahite dynasty, as the recipient of the divine promise, and as the standard for the righteous kings; significantly, his status as a warrior is downplayed (Gerbrandt 1986: 158–73).

2. David in Chronicles. The books of 1 and 2 Chronicles have "Davidism" (North 1963: 376–81; cf. Howard 1988: 26–30) as a major motif with David as the central character in 1 Chronicles. After an extensive genealogical section (chaps. 1–9) that highlights the interest in Judah, in the Davidic dynasty, and in the institution by David of centralized worship at Jerusalem and the temple, the book quickly dispenses with Saul (chap. 10) in order to highlight David's reign (chaps. 11–29). David now is presented as completely flawless and as very much concerned with religious matters.

Much of 1 Chronicles parallels the accounts in 1–2 Samuel, but it has its own selective omissions and additions and its own distinctive slant. Specifically, 1 Chronicles omits the entire story of David's rise to power (see C above), except for a cursory look at Saul (chap. 10), the list of his sons (3:1–4), his anointing at Hebron (11:1–3), and his capture of Jerusalem (11:4–9). Most of the material related to his consolidation of power is included, but almost all of the story of his decline is missing (including the story of his sins related to Bathsheba), except for his Ammonite war (19:1–20:3) and some of the material from the Samuel "Appendix" (2 Samuel 21–24).

1 Chronicles does provide us with some significant, new information concerning David not found elsewhere. Siginificant additions include an expanded listing of David's supporters (chap. 12); an extended psalm (16:4–42); and details of David's preparations for building the temple, of levitical and priestly responsibilities, of instructions for musicians, gatekeepers, keepers of the treasuries, officers, judges, and other officials, and of David's last words to Solomon and the people, in which he encouraged them particularly in building the temple and in following their God (22:2–29:22a).

The picture of David that emerges in 1 Chronicles is one of a true "man after God's own heart" (cf. 1 Sam 13:14; Acts 13:22). His devotion to God, especially as expressed through his preparations for the future temple and everything associated with it and his place as God's favored king, the head of the Judahite (and messianic) dynasty, are important elements in the book. The notice of his death shows him to have had a full, honorable, and honored life (1 Chr 29:28, 30).

3. David in the Latter Prophets, the Writings, and the NT. Elsewhere in the Bible, David is important not so much as a "historical" character, but rather as a model for godly kings and especially as a symbol of Israel's monarchy and of YHWH's favor upon the nation (see DAVIDIC COVENANT; MESSIAH).

For example, in the Latter Prophets, David and his kingship take on eschatological significance; they appear as symbols of YHWH's favor in the past and present, but most especially in the future. In the Psalter David appears in the superscriptions of almost half the psalms; 14 of these tie in their psalms with incidents in David's life. (In the LXX some 14 additional psalms are attributed to him, and 11QPss[a], col. 27 states that he authored 4050 psalms.) The importance of the royal psalms in the Psalter—including their placement (Wilson 1986)—also points to the significance of David and the Davidic kingship. In the NT, David is significant as the ancestor of Jesus, who is the "son of David" and the Davidic king par excellence.

G. Sources and Methods for the Study of David

1. Literary Sources Identified in the Bible. The primary biblical sources for our knowledge of David are the books of 1 and 2 Samuel and 1 Chronicles. The Bible also mentions documents that no longer

exist in which information about David was contained: the "Book of Jashar" (2 Sam 1:18), the "Chronicles of Samuel the Seer," the "Chronicles of Nathan the Prophet," and the "Chronicles of Gad the Seer" (1 Chr 29:29).

Modern textual criticism has added much to the study of David, particularly in 1 and 2 Samuel, where there are marked variations at many points (*NHT;* Ulrich 1978; McCarter *1 Samuel* AB, 5–11). In addition, the recent understanding of the Chronicler's stance as an exegete of his sources in Samuel and Kings also has helped in the study of David (Ackroyd 1977; Sailhamer 1989).

2. Literary Sources Not Identified in the Bible. Modern scholars have identified various hypothetical sources within the biblical texts for the accounts of David's life. One approach divides the texts (at least in 1 Samuel) into intertwined strands, attributed to different authors with different styles and perspectives (Wellhausen 1871); but it is not as common today as previously.

The dominant approach in this century has identified two major "documents" in 1 and 2 Samuel related to David and generally known as the "History of David's Rise" or "David's Rise to Power" (1 Samuel 16–2 Samuel 5) and the "Succession [or "Accession"] Narrative" (2 Samuel 9–20, 1 Kings 1–2). While larger documents have been proposed—such as Campbell's "Prophetic Record" (1986), Noth's "Deuteronomistic History" *(NDH),* and Freedman's "Primary History" (*IDBSup,* 226–28)—the two primary Davidic documents are seen as having been incorporated into these largely undisturbed.

The "History of David's Rise" was first named in 1926 by Rost (1980; cf. Lemche 1978; McCarter *1 Samuel* AB), and its purpose has been seen to legitimate David's kingship by reporting on his rise to power in Jerusalem from humble beginnings as a shepherd boy, or by functioning as an "apology," a defense against various charges that David illegitimately usurped power from Saul. Although generally analyzed as political propaganda, its essential "historical" orientation usually has been accepted.

Positive evaluations such as this particularly have applied to the second document, the "Succession Narrative" (also called the "Court History of David") (Rost 1982; Whybray 1968). It has been analyzed as a review of the question of the succession to David's throne generally or as a Solomonic apologetic specifically. While its political or other agendas have been stressed, its "historical" character has been praised as perhaps the closest example in the Hebrew Bible of "objective" historiography, most likely written by a close observer of the court. Even this is now questioned, however (Gunn 1978; Hagan 1979; Whitelam 1984; Ackerman 1990). Nevertheless, its general historical orientation and its delightful literary artistry are not seriously questioned.

3. Literary Approaches. While the approaches just mentioned are, strictly speaking, "literary," a third approach has recently arisen that focuses upon the received or final forms of the texts, rather than upon hypothetical "documents" that may have existed prior to the texts' final writing or redaction. Here, the approaches vary widely, ranging from *structuralist* or *formalist* treatments that are primarily descriptive of literary techniques (Fokkelmann 1981, 1986; Garsiel 1985) or that go beyond this to identify larger narrative purposes or agendas (Gunn 1978, 1980; Polzin 1989; Bowman fc.) to *poststructuralist* or *deconstructionist* treatments that see meaning as indeterminate (whether intentionally so or not) in any text (Miscall 1983: 47–143; 1986; Gunn 1989; cf. Jobling 1978: 4–25).

4. Archaeological/Historical Approaches. Archaeology has provided another, albeit limited, avenue by which to study David. Here, the contribution is generally to provide an understanding of the various contexts—historical, political, economic, sociological—in which he lived. David became king at the beginning of the Iron II Age (ca. 1000–586 B.C.E.), which encompassed the golden age of Israelite life and culture. It represented a resurgence of building activities and political expansion, after the relative "dark age" of Iron I (ca. 1200–1000 B.C.E.). David himself initiated several building projects in Jerusalem (2 Sam 5:9, 11), but only limited data have come from excavations there, including wall fragments and a few miscellaneous loose objects, such as ceramic chalices and a portion of a cultic stand (see DAVID, CITY OF). Elsewhere in Israel, the data are similarly limited. Some impressive building projects, particularly at Megiddo and Beersheba, may have come from that time (Aharoni 1982: 192–224); but their dating is disputed (cf. *EAEHL* 3: 830–56). Distribution patterns of pottery from the period are more productive,

tending to correlate with the biblical data concerning David's military and governmental expansion (Rast 1989).

On the international scene the time of David was one in which the major empires of Mesopotamia and Egypt were relatively quiet. Thus, David was able to extend the borders and influence of Israel as far as he did. He established marriage alliances with several small kingdoms, and he had good relations with Tyre. Otherwise, his international relations were adversarial, especially with the Philistines, about whom a fair amount is now known (Dothan 1982; Brug 1985; cf. Ishida 1982 on the international scene in general).

Closely related to strictly archaeological approaches are various "historical" approaches. These tend to be biographical in nature, generally combining the literary approaches mentioned in G.2–3 with any illumination given by archaeology (*BHI,* 191–211; McCarter 1986; Merrill 1987: 223–84). However, many scholars are skeptical about the possibility of ever recovering a true picture of the "historical" David (Soggin 1984: 41–68; Miller and Hayes *HAIJ,* 149–88).

5. Other Approaches. The literary approaches mentioned in G.3 have been dominant in the 1980s, but another characteristic of the decade has been the wide diversification—even explosion—of interests in all directions. This is evidenced by the use of insights from many other disciplines (not just literature) in biblical studies with much overlap among many of these. Currently, sociological (Brueggemann 1985; Flanagan 1988; cf. Gottwald 1986), feminist (Laffey 1988: 108–28), and political/ideological (Rosenberg 1986: 99–199) approaches are among the most popular in the study of David. Most of these are "reader-oriented" approaches, in which concerns of the reader(s) participate in determining meaning (Gunn 1987). David has been a continuing focus of interest from other perspectives, as well (Frontain and Wojcik 1980; Weisfeld 1983: 149–279; Petersen 1985).

H. Assessment

Evaluations of the historical David necessarily depend upon evaluation of the reliability of the written sources in which he is presented. At the very least it can be said that this was an extraordinary individual to have stimulated as much historical and theological reflection as he did.

As he is presented in the Bible, David was ideally suited to the tasks of kingship that came to him. His popular following, his victories over the Philistines and others, and his establishment of a powerful kingdom show him to have been a shrewd military strategist and motivator. His successful courting of the factions in Israel and Judah, and his forging of a united Israel that retained its identity for close to 80 years, showed his political skills; and his descendants were able to retain their position on the throne in Jerusalem for centuries afterward. Administratively, his establishment of the military, civil, and religious bureaucracies displayed yet another dimension of his talents.

David's skills as a poet, musician, and sponsor of music were renowned as well. His compositions in 2 Samuel and the Davidic psalms demonstrate a poetic genius. His sponsorship of, and involvement in, religious celebrations in connection with the ark show his musical talents and interests. We even read of "instruments of David" that he created or that were somehow associated with him (2 Chr 29:26; Neh 12:36; cf. Amos 6:5).

In addition, David displayed a fine religious sensitivity for the most part. Certainly the Davidic psalms demonstrate this, although the actual composition of all of them by David is disputed. Even outside the Psalter, however, David's relationship with his God, his concern for others' welfare, his ready repentance when confronted with his sin, and his concerns for the religious matters pertaining to the temple and the cult all evidence this as well.

Ultimately, however, David's lasting significance lay in his position as YHWH's chosen king for Israel and as the father of the royal dynasty that YHWH chose to bless. He occupied a midpoint between his great ancestor Abraham and his great descendant Jesus. The promises made to David stood in continuity with those to Abraham, and they pointed to a messianic ideal of great promise for the world, an ideal that, so Christians have affirmed, found its expression in Jesus, the Christ.

DAVID M. HOWARD, JR.

DAVID'S CHAMPIONS. 2 Sam 23:8–39 (= 1 Chr 11:10–47) contains a list of the heroic warriors who served under David. The Hebrew term *gibbôrîm* (RSV "mighty men" after LXX *dunatoi*) is the usual designation of these fighters, who, like the Achaian warriors who fought at Troy, had distinguished themselves in single combat. The names of these warriors and the accounts of their exploits are included primarily in these two lists. The anecdotes in 2 Sam 21:15–22 are also to be mentioned, where four of these champions—Abishai, Sibbecai the Hushathite, Elhanan the Bethlehemite, and Jonathan, the son of Shimei, David's brother—are credited with slaying the last of the descendants of the Rephaim in Gath (contra McCarter [*2 Samuel* AB, 449–50], who interprets these folkloric figures as the "votaries of Rapha," apparently rejecting the traditional assumption that these persons were giants; that they were, however, is precisely the understanding of the text, which includes Goliath of Gath [see 1 Sam 17:4–7], attributes to Ishbi-benob a spear which weighed 300 shekels of bronze, and describes another as "a man of great stature, who had six fingers on each hand, and six toes on each foot, twenty-four in number" [2 Sam 21:20]).

A list of David's monthly levies in 1 Chronicles 27 names heroes (drawn mostly from the list in 1 Chronicles 11) as officers over monthly levies of 24,000 men each (288,000 per year!). 1 Chronicles 27, however, is probably an idealistic projection onto the history of David's reign using the list in 1 Chronicles 11 as a source (Williamson [*1 and 2 Chronicles* NCBC, 174–75] reaches a similar conclusion). Anachronisms and exaggerations in the list make this fact clear. For instance, the naming of Asahel in 1 Chr 27:7 would place the list in the time of David's reign in Hebron. Yet it is plain from all other sources that David relied in his early career not on a plentiful source of monthly levies for his military strength, but on a private army of retainers of disparate social and ethnic origin (see 1 Sam 22:1–2; 2 Samuel 23 = 1 Chronicles 11). The private army seems to have been a key feature of his later years as well (see esp. 2 Samuel 18, 20). Moreover, it is questionable whether tiny Judah, or even Israel and Judah, could at any time have fielded an army of this size. At the height of Israelite power under the dynasty of Omri, Ahab of Israel led a contingent of 2000 chariots and 10,000 foot soldiers into battle at Qarqar, where the W alliance stopped the Assyrians in 853 B.C. (*ANET,* 279). Even more telling, the great Athenian expedition against Syracuse in the late 5th century B.C., which the historian Thucydides considered the largest ever fielded by a Hellenic city, comprised no more than 5000 native Attican troops, not counting auxiliaries. While many of the lists in the books of Chronicles contain valuable historical information, it would appear that the list of David's officers in 1 Chronicles 27, and the figures for, and even the idea of, monthly levies have been projected onto David's reign in accordance with the Chronicler's program of presenting the Davidic monarchy as an ideal state.

The Lists

	2 Sam 23:8–39	1 Chr 11:10–41
I.	Josheb-basshebeth, a Tahchemonite, chief of the *šālišî*	Jashobeam, the son of a Hachmonite, chief of the *šālišîm*
	Eleazar, the son of Dodo, the son of an Ahohite	Eleazor, the son of Dodo the Ahohite
	Shammah, the son of Agee, the Hararite	[Ommited through haplography; the deeds of Eleazor and Shammah have been combined in a single episode.]

	The anonynous three.	The anonymous three.
	Abishai, the brother of Joab, the son of Zeruiah	Abishi, the brother of Joab, the son of Zeruiah (see 2 Sam 21:15–17: credited with killing Ishbi-benob, a decendant of the Rephaim)
	Benaiah, the son of Jehoiada	Benaiah, the son of Jehoiada
II.	Asahel, the brother of Joab	Asahel, the brother of Joab
	Elhanan, the son of Dodo of Bethlehem	Elhanan, the son of Dodo, from Bethleham (see 2 Sam 21:19, which credits a Bethlehemite by a similar name with slaying Goliath of Gath)
	[Shammah the Harodite] (var. Hararite; Vg: *arari*)	[Shammoth the Harorite]
	Elika the Harodite	[ommited through homoeoteleuton]
	Helez the [Paltite]	Helez the [Pelonite]
	Ira, the son of Ikkesh of Tekoa	Ira, the son of Ikkesh of Tekoa
	Abiezer the Anathothite	Abiezer the Anothothite
	[Mebunnai] the Hushathite (corruption of Sibbecia?)	[Sibbecai] the Hushathite (see 2 Sam 21:18: credited with killing Saph, a decendant of the Rephaim)
	[Ṣalmon] the Ahohite	[ʿIlai] the Ahohite (corruption of Ṣilai = Ṣalmon?
	Maharai the Nitophatite	Maharai the Nitophatite
	Ḥeleb, the son of Baʿanah the Nitophatite	Ḥeled, the son of Baʿanah the Nitophatite
	Ittai, the son of Ribai, from Gibeah of the Benjaminites	Ittai, the son of Ribai, from Gibeah of the Benjaminites
	Benaiah, a Pirathonite	Benaiah, the Pirathonite
	[Hidai] from the streams of Gaʿash	[Hurai] from the streams of Gaʿash
	[ʾAbi-ʿAlbon] the Arbathite	[ʾAbi-ʾel] the Arbathite
	Azmaweth the [Barḥunite]	Azmaweth the [Baḥarumite]
	Eliahba the Shaʿalbonite	Eliahba the Shaʿalbonite
	The sons of [Jashen]	The sons of [Hashem the Gizonite]
	Jonathan [pc Gk mss add *huios*]	Jonathan, the son of [Shageh] …
	[Shammah] the Hararite	… the Hararite
	Ahiʾam, the son of [Sharar the Ararite]	Ahiʾam, the son of [Shakar the Hararite]
	ʾElipelet, the son of ʾAḥasbai,	[ʾElîpal, the son of ʾŬr]
	[the son of the Maʿakatite]	Heper the [Mekeratite]
	[ʾEliʿam, the son of ʾAḥitopel] the [Gilonite]	[ʾAhijah] the [Pilonite]
	[Ḥeṣraw] the Carmelite	[Ḥeṣrô] the Carmelite
	[Paʿarai the ʾArbite] (pc mss: ʾArkite)	[Naʿarai, the son of ʾEzbai]
	[Yigʾal, the son] of Nathan [of Zobah]	[Yôʾel, the brother] of Nathan
	[Bani the Gadite]	[Mibḥar the son of Hagri] (or: the son of a Hagrite)

Zelek the Ammonite	Zelek the Ammonite
Naharai the Beerothite, the armor-bearer of Joab, the son of Zeruiah	Naharai the Beerothite, the armor-bearer of Joab, the son of Zeruiah
Ira the Ithrite	Ira the Ithrite
Gareb the Ithrite	Gareb the Ithrite
Uriah the Hittite	Uriah the Hittite

Additional Names in 1 Chr 11:41b–47

Zabad, the son of Ahlai Abina, the son of Sjiza the Reubenite, a chief of the Reubenites
Hanan, the Maacathite Joshaphat the Matanite [fr. Matanayim?]
Uziyya the Ashterathite Shama and Jeiel
the sons of Hotham, the Aroerite
Jediael, the son of Shimri, and Joha his brother, the Tizite
Eliel the Mahavite [read the Mahanite, or the Mahanaymite?]
Jeribai and Joshaviah, the sons of Elnaʿam
Ithmah the Moabite
Eliel and Obed and Ja-asiel from Zobah

2 Sam 23:8–39 and 1 Chr 11:10–47 exhibit a similar bipartite structure. The first section (2 Sam 23:8–23 = 1 Chr 11:10–25) details the exploits of three of David's most distinguished warriors—Josheb-basshebeth (= 1 Chr 11:11: Jashobeam), Eleazar the son of Dodo, and Shammah the son of Agee, the Hararite—then lists a feat by three anonymous heroes, and concludes with the deeds of two others: Abishai and Benaiah. The second section (2 Sam 23:24–39 = 1 Chr 11:26–41 [1 Chr 11:42–47 contains the names of warriors not listed in 2 Samuel]) is a list of the remaining warriors, widely accepted as "the thirty" since the work of Karl Elliger (1935) and taken up in the major translations (see RSV, JB, NEB). A cursory reading of these lists would therefore seem to yield a simple structure based on the juxtaposition of "the three" with "the thirty."

Yet this interpretation is not the only possibility. Another, raised by Thenius (1864) and recently revived by Mastin (1979) and Naʾaman (1988), is that the Heb term *šĕlōšîm* ('thirty') should here be read *šālîšîm* (the meaning of which will be discussed below). Not only does neither list testify to 30 names (2 Samuel 23 contains 32, not counting the unnamed sons of Jashen; 1 Chronicles 11 has 46, also omitting various unnumbered groups), the reading *šālišî/šālišîm* appears in variant mss. The MT designates Josheb-basshebeth as *rōʾš haššālišî*—"chief of the *šālîšîm*" (the use of *haššālišî/hšlyšy* probably reflects a collective gentilic derivative of *šālîš/šālîšîm*)—in 2 Sam 23:8, and in 1 Chr 11:11 the Qere of the corresponding Ketib *hšlwšym* is *haššālišîm*, thus testifying to a muted tradition in which *šālîšîm* was read instead of *šĕlōšîm*. The same phenomenon is repeated in 1 Chr 12:19—Eng12:18. Such an obscure reading is probably original to the text. It is at any rate far easier to explain how such a reading could be standardized in terms of the related terms, "the three, the thirty," than to explain how *šālîš/šālišî/šālišîm* were introduced into the clear schema that now structures the lists. The Lucianic reading (*tōn triōn* = Heb *haššĕlōšâ*) preferred by McCarter (*2 Samuel* AB, 489) in 2 Sam 23:8 almost certainly reflects a harmonization of the problematic reading *haššālišî* (in other mss, the Ketib is *hšlyšy*) in terms of the final schema, "the three, the thirty." The similar suggestion by Williamson (*1 and 2 Chronicles* NCBC, 102) that "the three" (*haššĕlōšâ*) should be preferred on the basis of context is no different. Indeed, it was precisely on the basis of *context* that ancient scribes frequently attempted to harmonize problematic readings. Neither Williamson nor McCarter deals with the fact that enigmatic yet consistent variants such as *haššālišî* and the Ketib *hšlyšy* in 2 Sam 23:8 and the Qere *haššālišîm* (Ketib *hšlwšym*) in 1 Chr 11:11 did not arise irrationally within an accurate, consistent textual tradition. Rather, the reverse is true: earlier, difficult readings often were suppressed in later versions in favor of simpler, more easily understood ones, according to which the later textual tradition was then standardized. Thus, the difficult *šālîš/šālišî/šālišîm* should be the preferred reading in 2 Sam 23:8 = 1 Chr 11:11. Further references in these passages to "the

thirty" (*haššĕlōšîm;* e.g., 2 Sam 23:13, 23; 1 Chr 11:15, 25) should be interpreted as representing the *šālîšîm,* since the term "the thirty" most likely represents a harmonization of the enigmatic *šālišîm* and its other forms (now preserved in only isolated instances: 2 Sam 23:8; 1 Chr 11:11; 12:19—Eng12:18).

The question remains, who were the *šālišîm*? Thenius had argued that these were the king's principal retainers. Later, the term *šālîš* was taken as designating the "third man in the chariot" (see Mastin 1979 for bibliography). Rabin (1963) traced the term to the Hittite *šalli[š]*, meaning "great, powerful," a derivation which would go far in explaining certain instances of the word (esp. Exod 14:7; 15:4), as well as the apparent parallel with the Heb *gibbôr* in 1 Chr 11:26 (= 2 Sam 23:24). Rabin's explanation also accords well with Thenius' earlier interpretation. Mastin (1979) and Na›aman (1988) also go back to Thenius. However, where Thenius had seen retainers, Mastin and Na›aman find "officers of the third rank" (after the king and commander of the army). While this explanation has gained in popularity, other instances of the term *šālîš/šālišî* make this meaning unlikely. Solomon's lists of officials name the *šālišîm* as a separate category alongside the officers (*śārîm*; 1 Kgs 9:22). In 2 Kgs 10:25 the *šālišîm* are twice grouped with the *rāṣîm*, or runners ordered by Jehu to exterminate the worshippers of Baal. Similarly, Jehu ordered his *šālîš* to cast the body of the slain Jehoram on the ground of Naboth's vineyard (2 Kgs 9:25). These *šālîšîm* do not seem to have had primarily command responsibilities: that is, they are not depicted as officers. Instead, they appear to have belonged to a special class of warrior attached directly to the king (see Thenius) who carried out special assignments for him.

All of the anecdotes about the *šālîšîm* in 2 Samuel 23 fit this definition. The term *šālîš* in this context, and its apparent association with "three," as with the initial three *šālišîm*—Josheb-basshebeth, Eleazar, and Shammah—and the three anonymous warriors who broke through the Philistine line at Bethlehem to draw water from the well there for David, may be derived from the division of these warriors into three-man squads. Such a division in the Israelite army would have been in contrast to the usual divisions of tens, fifties, hundreds, and thousands. The structure of the lists in 2 Samuel 23 and 1 Chronicles 11 would preserve the memory of these squads, naming first "the three," beginning with Josheb-basshebeth, the "chief of the *šālišî*," then giving the exploits of three anonymous *šālîšîm* and of two more of their number (Abishai and Benaiah) who attained important posts in the Davidic court. Finally, the remaining *šālîšîm* (not *šĕlōšîm*) who served under David are listed (2 Sam 23:24–39 = 1 Chr 11:26–41, 42–47). To sum up, David's champions comprised a special cadre of warriors, organized into three-man squads, who were attached directly to the king, and who carried out special assignments for him.

When the *šālîšîm* became a formal division within David's army is unclear, though the presence of Asahel suggests a fairly early date. Informally, a collection of heroic warriors, who later became *šālîšîm*, probably began to assemble around David when he was a fugitive from Saul, and perhaps even earlier, when David was a condottiere commanding his own troop of men in Saul's service (see 1 Sam 18:5–7). Others, including members of his family, joined David after he had fled from the court of Saul and was hiding in the cave of Adullam (1 Sam 22:1–2). The sons of Zeruiah, David's nephews, who became the leading military figures of his reign, are portrayed as accompanying David during his pursuit by Saul (Abishai: 1 Sam 26:6–12) and during the long war between the house of David and the house of Saul (during which Asahel was killed; 2 Sam 2:8–3:1). Still others distinguished themselves during the Philistine wars; indeed, most of the deeds recounted about David's champions derive from this period. Benaiah, the son of Jehoiada, on the other hand, was a latecomer to the group. David made him commander of the *mišma‹â* (RSV: bodyguard, from the [explanatory?] Lucianic reading *tēn phulakēn autou*; *mišma‹â* may also refer to those "obedient," or answering directly to the king; perhaps the Cherethites and Pelethites [2 Sam 20:23b]), probably late in his reign, and he was a key player in the coup which brought Solomon to the throne. In return for this service, Solomon set Benaiah over the army in Joab's place (2 Kgs 2:35).

Besides family members and Israelite followers, David's champions included a significant number of non-Israelites. Best known of these is Uriah the Hittite; others included Eliphelet, the son of Ahasbai of Maacah (in S Syria), Igal, the son of Nathan of Zobah (also in S Syria), and Zelek the Ammonite (see 2 Sam 10:1–2 for David's early ties to the Ammonite court). From 1 Chronicles 11 come Hanan, son of

Maacah, Shama and Jeiel, the sons of Hotham the Aroerite (from Aroer in Moab), Ithmah the Moabite (note David's ties to the royal house of Moab during his exile from Saul's court: 1 Sam 22:3–4), and Eliel, Obed, and Jaasiel from Zobah (RSV Mezobaite, which simply means "the one from Zobah"). These foreign nationals were most likely "soldiers of fortune" who had attached themselves to David during his service under Saul and had stood by him out of personal loyalty during his years as a fugitive. Their loyalty would have been rewarded with lands and spoil when David ascended the thrones, first of Judah, and later of Israel, and conquered the smaller nations on Israel's borders. The N Israelites who served under David would also have reaped these benefits. The crucial point is that these champions, from disparate backgrounds, were attached to David by a bond of personal loyalty that withstood the vicissitudes of his career and led to personal reward. They were, in this sense, loyalists as well as mercenaries.

After David had been crowned in Judah, these champions were probably organized into the cadres which came to be known as the *šālîšîm*. As such they did not comprise a royal bodyguard, but a trusted body of retainers who carried out special assignments for the king. At the same time, they served with the militia in war (see 2 Samuel 11) and may have been set along the battle line to stiffen the resistance of the levies, who had proved notably unreliable in pitched battle (e.g., Saul and his men were forced to make a last stand after the flight of the Israelite militia from the field at Gilboa; 1 Sam 31:1–7). David took to heart the hard lessons of Saul's demise: throughout his reign he relied on his professional troops and loyal retainers to secure both the peace of the kingdom and his throne.

DAVID, CITY OF (PLACE) [Heb *ʿîr* (עִיר) *dāwîd* (דָּוִיד)].

A term appearing in the OT which refers both to the Jebusite "Stronghold of Zion" (*mĕṣudat ṣîyyôn*), captured, occupied, and renamed by David (2 Sam 5:6–9), and to the burial ground in which at least nine Judean kings were interred (e.g., David, 1 Kgs 2:10). In modern usage it is largely a historical-geographical term denoting that part of Jerusalem inhabited during the time of David. See also JERUSALEM (PLACE).

A. Name

The term "City of David" appears in the OT 43 times bearing at least three connotations. Firstly, it denotes the Jebusite "Stronghold of Zion" (*mĕṣudat ṣîyyôn*), which David captured (2 Sam 5:7 = 1 Chr 11:5), occupied (2 Sam 5:9 = 1 Chr 11:7, 8:11) and renamed *ʿîr dāwîd*. In this connotation the term also denotes the compound to which David conveyed the ark of the covenant (2 Sam 6:10 = 1 Chr 13:13; 2 Sam 6:12, 16 = 1 Chr 15:29) and that in which the ark was housed prior to the completion of Solomon's temple (1 Kgs 3:1; 8:1 = 2 Chr 5:2; 1 Kgs 9:24 = 2 Chr 8:11). In addition, this compound was that which Solomon occupied and renovated prior to the construction of his new abode (1 Kgs 11:27).

Secondly, the term denotes the location of a burial ground used to inter kings of the Davidic dynasty. The books of Kings and Chronicles clearly state that these Judean kings were buried in the City of David: David (1 Kgs 2:10), Solomon (1 Kgs 11:43 = 2 Chr 9:31), Rehoboam (1 Kgs 14:31 = 2 Chr 12:16), Abijam (1 Kgs 15:8 = 2 Chr 13:23—Eng14:1), Asa (1 Kgs 15:24 = 2 Chr 16:14), Jehoshaphat (1 Kgs 22:51[—Eng22:50] = 2 Chr 21:1), Jehoram (2 Kgs 8:24 = 2 Chr 21:20), Joash (2 Kgs 12:22[—Eng12:21] = 2 Chr 24:25), and Jotham (2 Kgs 15:38 = 2 Chr 27:9). Although other kings are also said to have been buried in the City of David, the books of Kings and Chronicles preserve variant traditions concerning each of these additional kings. Thus while 2 Kgs 9:28 indicates that Ahaziah was buried in the City of David, 2 Chr 22:9 implies that he was buried somewhere in the kingdom of Israel. According to 2 Kgs 14:20 Amaziah was buried in the City of David, while the MT of 2 Chr 25:28 records only that he was buried "in the city of Judah." Similarly, 2 Kgs 15:7 states that Azariah was buried in the City of David, while 2 Chr 26:23 calls his place of rest "the burial field which belonged to the kings." In 2 Kgs 16:20 Ahaz was buried in the City of David, while 2 Chr 28:27 indicates just the opposite—"they buried him in the city, in Jerusalem, for they did not bring him into the tombs of the kings of Israel." Additionally, the priest Jehoiada was also buried in the City of David (2 Chr 24:16). The cemetery of "the City of David" appears to have been synonymous with "the tombs of the kings of Israel" (2 Chr 28:27) and, in the time of Hezekiah, with "the tombs of the sons of David" (2 Chr 32:33). By the time of Nehemiah, however, the City of David (Neh 3:15) and "sepulchers of David" (Neh 3:16) appear to have been two distinct entities (cf. also 2 Chr 21:20; 24:25).

Thirdly, by the time of Nehemiah, and perhaps as early as the reign of Hezekiah, the term "City of David" was also used in the general sense to denote the oldest area within Jerusalem, i.e., the SE hill (2 Chr 32:5, 30; 33:14; Isa 22:9; Neh 3:15; 12:37).

Josephus later equated the "City of David" with the entire city of Jerusalem (*Ant* 7.3.2 §65–67). This equation caused him, mistakenly, to locate the citadel of David on the city's high, strategically advantageous W hill, known in his day as the "Upper City" (*JW* 5.4.1 §137). Josephus' identification of the W hill passed into Christian tradition, with both the Pilgrim of Bordeaux (Bernard 1891: 22–23) and Eusebius (Klostermann 1904: 74) calling it "the Mount of Zion" (see Simons 1952: 35–59). Modern

research into the historical geography of Jerusalem began therefore with the presumption that the original City of David lay on the city's W hill. Archaeological excavation, however, has demonstrated that the Davidic city was situated below the Temple Mount on the S spur of the lower, E hill. Hence within the scope of this discussion, "City of David" is used in the broad sense, as a historical-geographical term denoting that part of the E ridge shown by archaeological excavation to have been occupied during the time of David.

B. Topography

The City of David is the long, narrow, triangular-shaped ridge that stretches S of the Temple Mount. Its E boundary is formed by the Kidron Valley, which separates it from the Mount of Olives. Its W and S boundaries are formed by a once-steep valley called only *haggay (,)* 'the valley' in the OT but known to Josephus as the Tyropoean, or Cheesemakers' valley (*JW* 5.4.1 §140). This central valley divides ancient Jerusalem's E and W ridges and converges with the Kidron Valley at the City of David's S apex. The width of the City of David's N base, which rests against the Temple Mount, is 220 m; its length from there to its S apex is 630 m; the level area along its crest comprises approximately 49 dunams; its decrease in height from N to S is approximately 80 m. Of the hills in its immediate vicinity, the City of David is situated on the lowest (Ps 125:2).

The City of David's only perennial source of water, the Gihon Spring, lies at the foot of its E slope, on the edge of the Kidron Valley. Because the Gihon was the only defendable spring in the area, its location determined that of the initial settlements in Jerusalem, and from earliest times the city expanded along the E slope in proximity to it.

Geographically, the City of David is located in the central hill country. Geologically, it is a tilting block composed of two types of limestone, the soft, porous *meleke,* and the hard, nonporous *mizzi ahmar* (Gil and Shiloh 1982: 33). The bedrock along its E slope rises at an angle of approximately 25 degrees. The ascent is punctuated by steep escarpments. In antiquity these escarpments were largely exposed but today are covered with deep deposits of archaeological debris that have created a 45 degree slope.

The archaeological composition of the site conforms to a pattern common in the central hill country where buildings were generally constructed of stone rather than mudbrick. Because ancient builders at these sites often excavated to bedrock in order to secure both firm foundations and building stones, they prevented the eventual buildup of superimposed archaeological strata characteristic of tell sites. Consequently, the best preserved structures at these sites tend to be the last ones constructed, with earlier remains being preserved only when exploited or avoided by later builders. The City of David provides a unique opportunity for investigating the remains of ancient Jerusalem because the last city built along its E slope was destroyed at the end of the Iron Age by the Babylonians (586 B.C.E.). The topography of the area is therefore largely responsible for the nature of the archaeological evidence described herein.

C. History of Excavation

Modern archaeological investigations of the City of David began in 1838, when Edward Robinson traversed Hezekiah's Tunnel. The largest and most recent excavations conducted there were directed by Kathleen M. Kenyon from 1961 to 1967 and by Yigal Shiloh from 1978 to 1985. Although these last two projects provide the basis for the current understanding of the City of David's development, many other archaeologists have also excavated the site: E. Robinson and E. Smith (1838); C. Wilson (1864–65); C. W. Warren (1867–70); Ch. Clermont-Ganneau (1873); H. Guthe (1881); C. Schick (1880–1901); E. W. G. Masterman (1901); F. J. Bliss and A. C. Dickie (1894–97); M. Parker and L. H. Vincent (1909–11); R. Weill (1913–14, 1923–24); R. A. S. Macalister and J. G. Duncan (1923–25); J. W. Crowfoot and G. M. Fitzgerald (1927–28); N Avigad (1945–47); D. Ussishkin (1968); B. Mazar, M. Ben-Dov, and E. Mazar (1968–87); and D. Adan-Bayewitz (1977). For a plan showing the areas of these investigations, see Shiloh (1984a: fig. 3). It is possible to reconstruct the stratigraphy and chronology of the City of David on the basis of Shiloh's 1978–83 excavations (see Table 1).

D. History of Settlement

1. Neolithic-Chalcolithic Ages. Artifacts which may date to the Neolithic Age include a single shard bearing an incised band with a herringbone pattern like that typical of the "Yarmukian culture," and a flint arrowhead. Shards ascribed to the Chalcolithic Age were recovered from natural depressions in the bedrock. Although most of these shards were found mixed with others from the EB, an uncontaminated layer of Chalcolithic material was found in area B, at the foot of the E slope.

2. Early Bronze Age. The earliest architectural remains date to the EB. They are rectangular, broadroom structures with benches lining the interior walls. Built on and against the bedrock slope, these structures were preserved beneath the MB II fortification wall and associated structures at the E edge of area E1 (Shiloh 1984a: 11–12, 25; 1985b: 303, pl. 36c). Although some pottery found in association with these structures may be dated to the EB I, shards belonging to the EB II–III were also present. Consequently, the exact date of the construction and use of these EB buildings has yet to be established. Similarly planned broadroom structures, known as the "Arad-type house," are well-known from other EB sites (Aharoni 1982: 64).

EB pottery has also been found on the bedrock atop the City of David's hillcrest (Macalister and Duncan 1926: 177, fig. 186) and along its W slope (Crowfoot and Fitzgerald 1929: 66, pl. 11:11, 22). EB

tombs have been cleared along the upper reaches of the E slope (see below F.1; Vincent 1911: 24–30) and, possibly, at its foot (Kenyon 1963: 11).

3. Early Bronze Age IV. The City of David has no clear evidence of a settlement from the late 3d millennium B.C.E. Rock-cut "shaft tombs" typical of this period have been excavated on the Mount of Olives, and Gonen (1985) has suggested that some of the caves and cisterns on the Temple Mount may have originated as similar EB IV tombs.

4. Middle Bronze Age II. MB II Jerusalem is mentioned in the Egyptian Execration Texts (B. Mazar 1982) and is also represented by several phases of occupational remains, the earliest of which are associated with a massive fortification wall (Kenyon 1974: 82–84; Shiloh 1984a: 3, 12, 26). Several tombs have also been found on the Mount of Olives (see below F.1).

The first phase of the MB II occupation witnessed the construction of a fortification wall built of cyclopean limestone boulders. Standing partially atop some EB structures, this wall skirts a steep scarp about midway between the hillcrest and the Gihon Spring. During its initial phase the wall was approximately 3 m thick (Shiloh 1984a: 12; Kenyon 1974: 83), but buttressing was later added to its inner face and living surfaces were laid up to it (Shiloh 1984a: 12).

Kenyon (1974: 83) cleared 12.5 m of this wall and noted the presence of two angular turns, which she initially interpreted as the corner of a gate tower (Kenyon 1967b: 30). She later concluded that they indicated the presence of a succession of offsets and insets (Kenyon 1974: 84). Shiloh (1984a: 52) uncovered an additional 30 m of this wall and identified a second "offset" or jog in the wall line similar to that exposed by Kenyon. An additional segment of this wall appears to have been unearthed by Parker above Warren's Shaft (see below E.2) and between those segments subsequently exposed by Kenyon and Shiloh (Vincent 1911: 29, pl. 6; Reich 1987a: 163–64; Steiner 1988). Kenyon (1974: 83) and Shiloh (1984a: 26) both ascribe the wall's construction to the 18th century B.C.E., but portions of it became part of a later fortification system built during the Iron Age II (Shiloh 1984a: 26). No clear sign of either the wall's N or W course has been revealed, and Kenyon's (1974: 89–94) claimed reconstruction is based on negative evidence.

Fragmentary remains of MB II structures and floors have been found at the upper, W end of trench A beneath a series of substructural terraces ascribed to the LB II (Kenyon 1974: 94, but see below D.5). Shiloh (1984a: 12; 1985a: 66, pl. 12B), who located them at several points along the E slope in areas E1 and E3, found floors bearing ceramic vessels, including one which yielded an assortment of carved bone inlays and pieces of gold leaf. MB II pottery recovered from the hillcrest (Macalister and Duncan 1926: 177–78, pl. XVIII) and from fissures in the bedrock immediately S of the Temple Mount (B. Mazar 1971: 23) could possibly indicate the extent of settlement during this period.

5. Late Bronze Age. Architectural remains from the LB are known only from the upper part of the E slope. The earliest of these are fragments of two poorly preserved rooms belonging to a structure built on the bedrock and tentatively dated to the LB I, ca. 15th century B.C.E. This building, located in the NW corner of Shiloh's area G, may be contemporary with a fragmentary structure which Kenyon (1974: 94) found farther to the S and which she dated to the MB II (see D.4).

Evidence for Jerusalem's status as an Egyptian satellite during the Amarna period, LB IIA, is witnessed by six letters from the city's king, Abdi-heba, discovered in the Amarna archive (Na'aman 1975: 88–104; B. Mazar 1982: 3–5). Although archaeological remains ascribable to this period have been retrieved from nearby tomb deposits (see below F.1), none has been found within the City of David.

6. Late Bronze Age II/Iron Age I. Substantial remains of the transitional period between the LB II and the Iron I belong to a massive stone structure of undefined boundaries built along the upper reaches of the E slope in the 13th–12th century B.C.E. See Fig. DAV.01. Macalister and Duncan (1926: 51–55, 57–61, plan facing p. 49, pls. II, V, XXIV); Kenyon (1974: 95–97, 100–103, pl. 31–34), and Shiloh (1984a: 16, 26, 54–58) each unearthed sections of this structure, which is formed of two component parts: a substructure and a superstructure.

The substructure is composed of a series of interlocking terraces formed by N-S "spine" walls and closely spaced, E-W "rib" walls which, together, created rows of rectangular compartments. These, in

turn, were filled with loosely packed boulders topped by layers of compact soil. To date, segments of two, and possibly three, substructural terraces have been revealed, descending from the E edge of the hillcrest towards the Kidron Valley for a distance of ca. 20 m (Shiloh 1984a: 16).

The substructural terraces were capped by a stone-built superstructure itself composed of two parts: a rubble core and a stepped mantle. The rubble core served as an interface, keying the mantle to the substructure. The mantle was constructed of partially dressed, dentiform limestone blocks laid like roof tiles in a series of overlapping courses rising from E to W in a stepped fashion toward the hillcrest.

Macalister and Duncan (1926: 51–55, plan facing p. 49) revealed the mantle's uppermost courses and interpreted them as the "Jebusite Rampart." Kenyon, who questioned Macalister and Duncan's early date for the structure, dismantled a stone buildup which she mistakenly believed to be its S continuation (Kenyon 1962: 79). On the basis of this removal, Kenyon (1962: 81; 1963: 14–15) concluded that the stepped stone mantle's upper courses could not predate the Iron Age II. Kenyon's excavations farther downslope in trench A and Shiloh's excavations in area G, however, each revealed an additional number of stepped mantle courses, which lay under Iron Age II buildings (Kenyon 1962: pl. 22B; Shiloh 1984a: 17, 56–57, fig. 22).

Kenyon (1974: 95, 103) and Shiloh (1984a: 16–17, 26–27) both interpreted the substructural and superstructural components as independent architectural units, dating to the LB II and Iron Age II, respectively. Although they each based their dates for the substructural compartments on the ceramic evidence found within them, Kenyon probably, and Shiloh definitely, dated the superstructural mantle on the basis of the pottery recovered from soil layers *covering* it (Shiloh 1984a: 17, 27). Pottery recovered from a probe in which a rectangular section of the mantle's lower courses was removed, however, was identical to the pottery recovered from the substructural fills dating to the 13th–12th century B.C.E. The "stepped stone structure" therefore appears to have been contemporary with the substructural compartments, and these two features are best interpreted as a single architectural unit.

Kenyon (1974: 95, 100) interpreted the substructural compartments as platforms intended to provide level surfaces on which to construct "civilized" buildings along the City of David's E slope. Shiloh (1984a: 16, 26), in contrast, interpreted them as a means for expanding the level of the hillcrest, atop which he located the Canaanite "Citadel of Zion." Kenyon (1974: 101–3) and Shiloh (1984a: 17, 27) both interpreted the stepped stone mantle as a buttress added to the original substructural fill sometime during the 10th century B.C.E. The substructure and superstructure could, however, be recognized as two features of a single architectural unit constructed at the end of the LB, ca. the 13th–12th century B.C.E.

LB II pottery has been located at the N end of the hillcrest (Macalister and Duncan 1926: 33, 74; Kenyon 1965: 12, pl. IXB; 1974: 94, pl. 77) and on the midslope in area E1 (Shiloh 1984a: 12, 26), and LB II tombs have been excavated on the Mount of Olives (see below).

Sparse archaeological evidence of Iron Age IB–C has been found in areas B, D1, and E1 (Shiloh 1984a: 26–27). To date, however, archaeological data useful for illuminating the status of Jerusalem during the emergence of Israel have yet to be found.

7. Iron Age. The Iron Age II is the period of Jerusalem's preeminence as the capital of both the United Monarchy and the S kingdom of Judah. Archaeologically, it is the period best represented, because the last city to have been built along its E slope was that destroyed by the Babylonians in 586 B.C.E.

a. 10th Century B.C.E. Early in the 10th century B.C.E. David captured the Jebusite Citadel of Zion and made it his capital (2 Sam 5:6–9). The OT account of Jerusalem's transformation from a Jebusite city-state to the Israelite capital names and describes various constructions that were either incorporated, rebuilt, or added to the city in the 10th century, including the temple, the royal precinct, and the *millôʾ*. Although each of these features has been discussed at length in numerous treatments, none of them has been conclusively identified with any archaeological remains.

Macalister and Duncan (1926: 49–65, plan facing p. 49) revealed a fortification wall and tower standing at the E edge of the hillcrest above the Gihon Spring which they dated to the time of David and Solomon. Kenyon (1974: 192), however, recovered archaeological evidence indicating that the tower actually dated to the Hellenistic period, ca. 2d century B.C.E.

Remains from the 10th century B.C.E. have been located both by Kenyon (1974: 100–103, 114–16) in trench A and areas H and M and by Shiloh (1984a: 4, 27; fc.) in areas B, D1, E1, and G. Slightly N of the fortification wall found by Macalister and Duncan, Kenyon (1974: 114–15) unearthed a wall fragment which she dated to the 10th century. Identifying this wall fragment as part of a casemate fortification wall similar to those at Gezer, Hazor, and Megiddo, which are popularly attributed to Solomon (Yadin 1970), Kenyon interpreted it as evidence for the expansion northward to the Temple Mount (Kenyon 1974: 92). This interpretation led Shiloh (1984a: 27) to interpret the stepped stone structure in area G to its S as the SE corner of the royal compound erected in Jerusalem in the 10th century B.C.E. This structure, Shiloh maintained, had been built over the terraced foundations of the Canaanite citadel at that time. Subsequent evaluation of both the architectural and ceramic evidence from area G, however, indicates that the stepped stone structure and the stone and soil filled compartments beneath it are actually two components of a single architectural unit constructed in the 13th–12th century B.C.E. (see above D.6). In area G therefore the 10th century is represented solely by the fragmentary remains of structures and soil fills found *covering* the lower courses of the stepped stone structure (Shiloh 1984a: 17, 27; fc.). Among the 10th century small finds are a small area (E1) containing clay installations, two ceramic chalices, and the lower half of a fenestrated cultic stand (Shiloh 1984a: 12).

b. 9th–8th Centuries B.C.E. The remains ascribed to the 9th century consist of a large architectural unit and soil fills found in areas E1 and G respectively (Shiloh 1984a: 4).

During the 8th century B.C.E., however, the city expanded greatly. Possibly fueled by the arrival of Israelite refugees fleeing the Assyrian conquest of the N kingdom of Israel in 721 B.C.E. (Broshi 1974) and by Judahites possibly displaced during the course of upheavals along the Judah-Philistia border, the city's growth appears to have peaked during the reign of Hezekiah.

Sections of a massive fortification wall ascribed to the 8th century were found by Kenyon (1974: 130–31, 146, pl. 43; Steiner 1986), who cleared ca. 30 m of its length at the E end of trench A, and by Shiloh (1984a: 28; 1984b: 57; fc.), who unearthed an additional 120 m. This wall, which was preserved in places to a height of 3 m, was constructed in a jagged, sawtooth line reaching 5 m in width (Shiloh 1984a: 12–13). Standing near the middle of the E slope above a vertical escarpment, it followed virtually the same course as its MB II predecessor and, in places, incorporated remnants of the older wall (Shiloh 1984a: 28).

Both Kenyon (1965: 11; 1966: pl. 25B; 1967a: pl. 13A; 1974: 144, pl. 63) and Shiloh (1984a: 9; 1984b: 57) revealed outside and abutting the city wall the remains of a 2–3 m wide cobbled pavement revetted by a retaining wall. Kenyon traced this extramural street along the entire 30 m length of the Iron Age II city wall, which she exposed (Steiner 1986), and Shiloh traced its remains further. Presumably, this extramural passage ran the entire length of the city wall and formed a component part of the fortification system.

Shiloh (1984a: 10, 12–13, 28) found that the fortification wall supported a system of structurally integrated buildings linked by a stepped alleyway equipped with a drainage channel emptying into the Kidron Valley via a small rectangular opening built into the city wall (Shiloh 1984a: 53). An important structure for understanding both the building technology and the relative stratigraphy of the Iron Age II on the E slope is the "Lower Terrace House," also called the "House of *mḥmm*," excavated in area E1 (Shiloh 1984a: 13). Integrated with the fortification wall to the E, the structure had three parallel rooms, each of which was built on a successively higher level, following the rise in the bedrock (Shiloh 1984a: pl. 22:1). Like the fortification wall, it served throughout the final three phases of the Iron Age II, each phase being represented by a floor bearing a chronologically indicative assemblage of ceramic vessels (Shiloh 1984a: pl. 22:2). The label "House of *mḥmm*" derives from the Hebrew inscription *lmḥmm ṣl* incised on a storage jar recovered from the middle floor and ascribed to stratum 11, ca. 7th century B.C.E. (Shiloh 1984a: 13).

A number of structures dating to the 8th century B.C.E. were found in areas B, D1, D2, and E2 (Shiloh 1984a: 7, 9–10, 28–29; 1984b: 57). Unlike the "House of *mḥmm*," however, these structures were founded on the lower slopes of the bedrock, *outside* the fortification wall. Because 8th-century pottery was found in and around these buildings, their abandonment may have coincided with the Assyrian siege of 701.

The excavations in the Jewish Quarter of the Old City, N and W of the City of David revealed an additional segment of the 8th-century fortification wall, which has been attributed to Hezekiah (Avigad 1983: 46–49). Avigad's discovery at the N edge of the W hill ended the "maximalist-minimalist" controversy over the size of the Iron Age II city (Simons 1952: 226–81; Broshi 1974; Geva 1979; Avigad 1983: 27–31, 46–60). Moreover, Avigad found that this wall segment had been constructed over the remains of an earlier structure, also dated to the 8th century B.C.E. The archaeological evidence from the Jewish Quarter, as well as from other excavated areas on the W hill, such as the Citadel near the Jaffa Gate (Johns 1950: 129, fig. 6; Amiran and Eitan 1970: 9–10, 16; Geva 1983: 56–58; Solar and Sivan 1984: 48) and the Armenian Garden (Bahat and Broshi 1975: 56; Tushingham 1985: 9–24) appears to indicate that the entire W hill was occupied during the 8th century, first as an unwalled settlement, and later as part of the expanded, fortified city.

The W and S lines of the fortification wall which enclosed the W hill were reconstructed by Geva (1979: 87) and Avigad (1983: 58), both of whom located it along roughly the same line as that followed by the "First Wall" described by Josephus (*JW* 5.4.2.142–45). According to this reconstruction the wall enclosing the W hill continued W from the Jewish Quarter to the Citadel, turned S following the crest above the Hinnom Valley, crossed the mouth of the Tyropoeon Valley at the City of David's S apex, and joined the city wall unearthed by Kenyon and Shiloh. Thus, the S end of the Tyropoeon Valley, which houses the Pool of Shiloah (i.e., the reservoir to which Hezekiah's Tunnel [see E.4] conducted water from the Gihon Spring) was brought within the bounds of the fortified city. The archaeological evidence deriving from the 8th century B.C.E. in Jerusalem may be compared with Isaiah's description of the emergency measures adopted by Hezekiah in the face of the Assyrian siege of Jerusalem (Isa 22:9–11).

c. 7th–6th Centuries B.C.E. Most intramural areas excavated within the City of David have produced evidence for occupation at the end of the Iron Age II. Four prominent structures, however, are particularly significant for elucidating both the material culture and the intensity of the 586 B.C.E. Babylonian destruction. These are the "Ashlar House," excavated in area E1, and the "House of Ahiel," the "Burnt Room," and the "Bulla House," excavated in area G (Shiloh 1984a: 13–14, 17–19, 28–29, 53, 61; fig. 25).

The "Ashlar House" is a large (13 × 13 m) structure spreading across two terraces located in the upper reaches of area E1. Its.8 m thick walls (preserved in places to a height of 3 m) were built of roughly dressed, rectangular blocks of limestone and well-dressed ashlars situated in places bearing the most structural stress. Although its entire floor plan was not revealed, Shiloh believed that it followed the so-called four-room, or pillared-house plan, ubiquitous throughout the monarchic period (Shiloh 1970; 1973; 1984a: 14, 18). Its large size, its raised topographical position, and its quality of construction led Shiloh (1984a: 14) to identify it as a public structure. The ceramic and stratigraphical evidence indicated that the "Ashlar House" was constructed in stratum 11, ca. 7th century B.C.E. and destroyed in stratum 10 at the end of the Iron Age II.

The "House of Ahiel" is an 8 × 8 m, four-room, or pillared house, situated along the higher of two structural terraces in area G. See Figs. DAV.01 and DAV.02. Its name derives from the discovery there of a storage jar fragment bearing a Hebrew ink inscription containing the personal name *ʾḥyʾl*. Portions of the structure had already been excavated by Kenyon (1974: 162–65). The walls were of roughly dressed fieldstones and ashlars strategically placed at stress points such as corners and doorjambs. Two stone monoliths and two built piers supported the first floor ceiling and divided the central courtyard from the two side chambers. An external staircase led either to an upper story or to a higher terrace.

Attached to the N wall of the "House of Ahiel" was a three-room addition housing a storeroom with over 40 ceramic vessels, almost all of them storage jars. The floor of a small room (1.4 × 1.4 m) adjoining the storeroom was plastered with a thick layer of lime. Embedded in one side of the floor was a limestone toilet seat beneath which lay a plaster-lined cesspit (Shiloh 1984a: 19, pl. 31:1). Similar limestone toilet seats have also been found in Iron Age II structures excavated by Shiloh (1984a: 10–11, pl. 16:2) in area E3 (in situ) and by Kenyon (1967a: pl. 13B) in square AXXIV (ex situ) and, perhaps, in debris cleared by Parker (Vincent 1911: 29).

An alleyway separated the addition to the "House of Ahiel" from the building containing the "Burnt Room" (see Figs. DAV.01 and DAV.02; Shiloh 1984a: 18–19, pl. 32:2). An external staircase built of ashlars abutted the S wall of this building and led to an upper story (Shiloh 1984a: pl. 31:2). The rectangular "Burnt Room" was the S, ground floor room in a building which was only partially excavated. Evidence for the second story was provided by both the position of the landing atop the external staircase and the corresponding ledge in its W wall, 2.5 m above the floor, along which were found the carbonized remains of ceiling beams similar to those recovered from the top of a monolith in the room's N wall.

The "Burnt Room" earned its name from the thick (.9 m) layer of carbonized debris found covering its lime-plaster floor. Among the charred remains were pieces of burnt wood, including fragments that had been carved in motifs identical to those known from ornamental Iron Age ivories (Shiloh 1984a: 19, pl. 34:1; 1985c: 139). Although most of these wood samples appear to have derived from local species, some of the finely carved pieces were of boxwood (*Buxus* gen.), a nonindigenous species native to Cyprus, N Syria, and S Turkey (Shiloh 1984a: 19, 34 n. 81; 1985c: 139–41; Meiggs 1982: 279–83).

East of the "House of Ahiel," on the next, lower terrace, lay the "Bulla House" (Fig. DAV.02), named after the cache of 51 clay sealings found in its NW corner (Shiloh 1984a: 18–19; 1986). Since only a narrow strip (1 × 7–8 m) at the structure's W edge was excavated, little can be said about its plan. Its W wall, however, served both as the building's exterior boundary and as the support wall for the upper terrace of structures. As in the "Burnt Room," a thick (.7 m) layer of charred debris covered its plaster floor. Forty-nine of the 51 bullae recovered from the floor of the house were well preserved, primarily because they were fired in the conflagration which destroyed the building. The bullae bear oval seal impressions averaging 12 × 10 mm. Their reverse sides bear impressions of the warp and weft of the papyrus documents they sealed, as well as, in most cases, the impressions of the string used to tie the rolled papyrus prior to its sealing. Four bullae have only graphic representations, while 45 are inscribed with the Hebrew formula, "belonging to x, son of y," commonly appearing on personal seals; the other two are too fragmentary to interpret.

The corpus includes 51 personal names, all of which are known in the Hebrew onomasticon. Two of the precise combinations of name and patronymic, moreover, are cautiously identified with biblical personages (Shiloh 1984a: 20; 1986: 33; Schneider 1988). These two are Gemariah ben Shaphan (*gmryhw (b)n špn;* bulla no. 2; Shiloh 1984a: 20, pl. 35:3; 1986: 28, fig. 8:1, pl. 6:13); and Azariah ben Hilkiah (*ʿzryhw bn ḥlqyhw*; bulla no. 27; Shiloh 1984a: 19, 61, fig. 26; 1986: 28–29, fig. 8:6). Gemariah son of Shaphan, a *śar* in the royal court of Jehoiakim, appears four times in the book of Jeremiah (36:9–12, 25–26); Azariah son of Hilkiah, a priest, is named in two priestly genealogical lists (1 Chr 5:39—Eng6:13; 9:10–11) and in the list of Ezra's forebears (Ezra 7:1; Schneider 1988: 140). Moreover, a seal of unknown provenance bearing the name Azariah ben Hilkiah (Avigad 1970: 307) may also be linked to the historical personage of that name. See GEMARIAH (PERSON); AZARIAH (PERSON). Shiloh (1984a: 20; 1986: 37) viewed the multiplicity of ostensibly unrelated names appearing in the bullae corpus as indicative of the public nature of the archive housed in this building.

More than 20 ceramic vessels (Shiloh 1986: 24, fig. 6), a group of stone weights, and four soft limestone stands (Shiloh 1986: 22–23, 26, pl. 6:A; Herzog 1987; Prag 1987: 122–23) were found in proximity to the bullae. These finds, like those recovered from the "House of Ahiel" and the "Burnt Room," all date to the final phase of the Iron Age II.

In her square AXVIII, located just below the E edge of the summit and immediately N of area G, Kenyon (1963: 16; pl. VIIIB) also discovered remains of collapsed Iron Age II structures deriving from the 586 B.C.E. destruction. These remains included ashlar stones and a Proto-Aeolic capital such as those associated with ashlar masonry (Shiloh 1979b). Additional ashlar blocks were also found in the adjacent area G. Although the exact location of the monumental ashlar structure to which these materials belonged is uncertain, it most likely stood either on the hillcrest or on the terrace of structures immediately beneath it.

The massiveness of Jerusalem's destruction by the Babylonians is evidenced not only by the thick layers of charred debris unearthed in structures such as the "Burnt Room" and the "Bulla House," but also

by the deep accumulation of collapsed building stones found covering the entire E slope (Kenyon 1962: pl. 21B; 1974: 170, pl. 71; Shiloh 1984a: 29). The biblical descriptions of the city's destruction (2 Kgs 25:8–10; Jer 39:18; 2 Chr 36:18–19) complement the archaeological evidence, and the 586 B.C.E. date is documented in the historical sources (Malamat 1968). Moreover, the ceramic evidence from the destruction level uncovered along much of the City of David's E slope is identical to the corpus of pottery typifying the final phase of the Iron Age II at other Judahite sites, e.g., Lachish stratum II, Ein Gedi stratum V, Arad stratum VI, and Ramat Rahel stratum Va.

8. Persian Period. Following the Persian conquest of Babylonia in the late 6th century B.C.E., the Judean exiles received permission to return to Jerusalem and rebuild their temple (Ezra 1:1–4; 6:2–5). Although reconstruction initially focused on the temple itself (Ezra 3:8–10), the City of David and its fortifications were eventually rebuilt.

Apparently due to the massiveness of the stone collapse covering the City of David's E slope, new structures were not built there (Kenyon 1974: 182; Shiloh, fc.). Immediately below the hillcrest, however, the "Ashlar House" in area E1 was partially reused (DeGroot, fc. b). In addition, sloping layers of limestone chips revetted by flimsy walls have also been found along the E slope of the City of David in areas D1, D2, and E1. These stone chips may be interpreted as refuse originating from a stone quarry located atop the hillcrest (Shiloh 1984a: 29).

The line of the fortification wall built under Nehemiah's direction has not yet been traced with certainty, for no correlation exists between the landmarks listed in his description (Neh 3:1–32) and the archaeological remains. Nevertheless, the biblical description clearly indicates that large portions of the old wall were repaired rather than built anew (Tsafrir 1973; Williamson 1985). The repaired portions are commonly identified with the W line of the pre-8th-century B.C.E. fortifications (Kenyon 1974: 182–83; Tsafrir 1973) the position of which may be indicated by the gateway unearthed by Crowfoot and Fitzgerald (1929: 12–23) along the City of David's W slope. Because Nehemiah described the ruins along the E slope as impassable (Neh 2:12–14), the earlier wall line located at the midslope is thought to have been abandoned in favor of a new line running along the E edge of the hillcrest. A short segment of fortification wall excavated there by Macalister and Duncan (1926: 49–50, plan facing p. 49, pl. V) and reinvestigated by Kenyon (1974: 92, 183, pls. 77, 79) and by Shiloh (1985a: 67) was identified by Kenyon (1974: 183–84) as "Nehemiah's Wall." Built of roughly dressed limestone blocks laid in successively receding courses atop a steep escarpment, this wall fragment was clearly the earliest component in the fortification line in this particular area of the hillcrest (Shiloh 1985a: 67; Kenyon 1974: 183). Kenyon's ascription of it to the Persian period was based on her discovery of "a series of midden tip-lines" containing pottery attributable to the 5th–3d centuries B.C.E., "lapping up against" the lower courses of its E, *outer* face (Kenyon 1974: 183). Although this wall may have served during the Persian period, both its manner of construction and Kenyon's discovery of LB deposits on the bedrock in area P, close to its inner face (Kenyon 1974: 92), suggest that it may actually have originated much earlier.

Sandwiched stratigraphically between the stone collapse of the 586 B.C.E. destruction and strata dating to the early Hellenistic and Hasmonean periods, the Persian period layers in the City of David have yielded a varied ceramic assemblage, including storage jar handles and body shards bearing several types of stamp seal impressions (Ariel and Shoham, fc.). The well-stratified deposits of the Persian period discovered in the City of David stand in sharp contrast to the absence of comparable stratigraphy from other excavated areas of Jerusalem. The archaeological evidence therefore suggests that Jerusalem's occupation during this time centered on the SE hill, i.e., the City of David.

9. Hellenistic Period. Historically this period has two major subdivisons: the early Hellenistic period, which began with the conquest of Alexander the Great in 332 B.C.E. and ended with the Maccabean revolt in the mid-2d century B.C.E., and the Hasmonean period, which began with the Jewish revolt and ended with Jerusalem's fall to the Roman general Pompey in 63 B.C.E. (Gafni 1984: 1–17). Archaeologically, the early Hellenistic period, during which Jerusalem attained the status of a Greek *polis* named Antiochia, is poorly known. The Hasmonean period, however, during which Jerusalem served as the capital of an independent Jewish state, is represented on both the E and W hills of Jerusalem.

Archaeological evidence of the early Hellenistic period includes part of a structure uncovered just below the hillcrest in area E1 which had been destroyed in a conflagration (DeGroot, fc. b). Additional evidence of the period comes from a large corpus of ceramic handles deriving from imported E Greek amphorae (the majority of which are from Rhodes with a few from Kos, Chios, and Knidos) bearing stamp seal impressions ranging in date from the late 4th to the early 1st centuries B.C.E., but clustering between 260–150 B.C.E. (Ariel, fc.). Although most of these stamped handles derive from post-Hellenistic stratigraphic contexts, the large number of them from the City of David, in contrast to the small number recovered from other excavated areas of Jerusalem, suggests that the City of David remained the center of occupation during the early Hellenistic period.

Following the establishment of the Hasmonean dynasty in the mid-2d century B.C.E., Jerusalem experienced a period of expansion, during which the populated area spread from its ancient nucleus in the City of David to the W hill. Subsequently, the City of David became the "Lower City," while the W hill became the "Upper City." During this period, the defensive system described by Josephus as the "First Wall" was erected (*JW* 5.4.2 §142–45). Although the N and W lines of this defensive wall largely followed the course of its Iron Age II predecessor, and in places even incorporated it (Geva 1979), its E line presumably followed the course established during the Persian period, skirting the crest atop the E slope of the City of David. Large segments of this wall line have been investigated by Clermont-Ganneau (1899: 296), Guthe (1882: pl. IV), Bliss and Dickie (1898: 126–31, 315), Macalister and Duncan (1926: 49–74), Weill (1920: pl. III), Kenyon (1974: 191–93), and Shiloh (1984a: 30, 40–41). In addition, the remains of a sloping glacis uncovered in area G (Shiloh 1984a: 20–21, 30) may also have been constructed during the 2d century B.C.E. Although the direct relationship between the glacis and the "First Wall" had been obscured by earlier excavators, Shiloh (1984a: 63) projected its continuation to the base of the fortification wall skirting the upper edge of the E slope.

Farther S, in areas D1, D2, E1, and E3, the E slope was covered by a series of stepped, agricultural terraces, formed of single-faced, dry-built, stone walls securing layers of soil fill. These terraces were apparently linked by stone-built stairways.

10. Roman Period. Like the previous period the Roman period may be divided historically into two unequal halves: the early Roman period, beginning with Pompey's campaign in 63 B.C.E. and ending with the Roman destruction of Jerusalem in 70 C.E., and the late Roman period, beginning with the end of the Jewish revolt and ending with the opening of the Byzantine period during the reign of Constantine the Great in the 4th century C.E. (Gafni 1984: 17–31; Safrai 1976: 307–56).

The archaeological evidence for the early Roman period in the City of David, or "Lower City," is largely the same as that described in relation to the Hasmonean period. The line of the city wall running along the crest above the E slope remained unchanged, and alternating, uniform layers of compact soil and pebbles were added to the glacis in area G. Similarly, the soil-filled terraces farther S, along the E slope were maintained and supplemented throughout the period.

The addition of a vaulted ceiling above the entrance chamber to Warren's Shaft and of a subterranean passageway with a gabled ceiling leading to the vaulted chamber suggested to Shiloh (1981: 35, 39; 1984a: 24) that this water system continued in use despite the fact that it lay outside the line of the city's fortification wall (see below). The reservoirs at the S end of the Tyropoeon Valley also continued to function and appear to have been supplemented by a pool close to the floor of the Kidron Valley (Adan 1979).

Although by the early Roman period the focus of the city's life had clearly shifted to the W hill or "Upper City," the City of David appears to have been the site of an early synagogue. While excavating a cistern on the hillcrest above area D1, Weill (1920: 186; 1947: pl. XXVa) found a Gk inscription commemorating the construction of a synagogue by Theodotos, whose father and grandfather were identified as synagogue leaders. Dated epigraphically to the Herodian period (Roth-Gerson 1987: 76–86), this inscription provides tangible evidence for the existence of a synagogue in Jerusalem prior to the end of the Second Temple period.

Sometime after the Roman destruction in 70 C.E., tons of debris originating on the hillcrest were dumped down the E slope, destroying and completely covering the soil-filled terraces. These dumps were found preserved to a depth of several meters (Shiloh 1984a: 30). The deposition of debris along this slope inhibited any further construction and determined its appearance from that time forward.

During the late Roman period when Jerusalem was rebuilt as the Roman city of Aelia Capitolina, the City of David was thought to have served mainly as a stone quarry (Kenyon 1974: 31–32, 263–64). Ceramic roof tiles stamped with the insignia of the Roman Tenth Legion *Fretensis* have, however, been recovered from excavations at the N end of the hillcrest (Macalister and Duncan 1926: 167–68; Crowfoot and Fitzgerald 1929: 76–77, pl. XIII: 13). Nevertheless, the focus of activity during this period lay farther N and W, and the City of David remained largely unoccupied until, perhaps, the late 3d or early 4th century C.E. (Kenyon 1974: 263; Geva 1984: 253). Bliss and Dickie (1898: 225), however, found a colonnade erected around the Pool of Shiloah which some thought may have served as the Tetranymphon, one of the bath complexes built in Aelia and mentioned in the *Chronicon Paschale* (see Vincent and Abel 1926: 860–61; Avi-Yonah 1976: 612; B. Mazar 1975: 236).

E. Subterranean Water Supply Systems

1. Gihon Spring. Ancient Jerusalem's only perennial source of water lies in a cave located in the Kidron Valley, beyond the bounds of the fortified city. The Gihon does not maintain a constant flow; it is a syphon type, karstic spring, fed by groundwater that bursts forth through cracks in the cave's floor at intermittent periods. This geological phenomenon is reflected in the spring's name, which derives from the Hebrew root *gyḥ* "to gush." The frequency with which the Gihon gushed depended both on the season of the year and the annual amount of rainfall. Gushes could last for as long as 30–40 minutes at intervals varying from 4–6 hours during the winter and 8–10 hours during the summer. In unusually dry years, however, the water might burst forth as infrequently as once a day, or even less. Hecker (1957: 193) estimated the flow to vary from 200–1200 m^3 per day.

Water from the Gihon could be drawn either from the spring cave or from a small pool which was cut in the bedrock close to it (Vincent 1911: 6; Hecker 1957: 193). In addition, three subterranean systems were devised to capture, store, distribute, and protect its waters. These three water systems are known as Warren's Shaft, the Shiloah Channel, and Hezekiah's Tunnel. Although the absolute chronology of the systems is difficult to determine, their relative chronology is fairly well established (Vincent 1911: 31; Shiloh 1984a: 23; 1987: 219).

2. Warren's Shaft. See Fig. DAV.03. Jerusalem's earliest strategic subterranean water system is Warren's Shaft, discovered by Charles Warren in 1867 (Wilson and Warren 1871: 248–55). It was cleared initially by the Parker expedition (Vincent 1911: 11–16), recleared by Shiloh (1981; 1984a: 21–22, 68–69; 1987: 215–17), and surveyed geologically by Gil (Gil and Shiloh 1982). The system has five major components: an entrance area, an "abortive" shaft, a cavernous tunnel, a vertical shaft, and a feeder tunnel linking the Gihon to the bottom of the vertical shaft.

The entrance into the system is located on the City of David's E slope, within the bounds of the MB II and Iron Age II city walls, but beyond the walls of the postexilic periods. The entrance area consists of rock-hewn chamber and two secondary features: a barrel-vaulted ceiling and a gabled passageway (Vincent 1911: 11; Shiloh 1981: 31–35; 1984a: 23) leading from the hillside into the entrance chamber. Because the barrel vault is an architectural feature unknown prior to the postexilic period, these two features appear to have been added to the original entrance sometime after the Iron Age II (Shiloh 1981: 35–36; 1984a: 24; 1987: 215, 220).

In the floor of the entrance chamber lies the mouth of the "abortive" shaft, a narrow, 20-meter-deep, irregularly shaped depression which has not been exposed since the Parker expedition. Vincent (1911: 13) thought that the depression represented an abortive attempt to reach the water table by sinking a vertical shaft from the entrance chamber. The endeavor was abandoned, he believed, when an impenetrable vein of rock was reached. As a result of their hydro-geological survey, however, Gil and Shiloh (1982: 34) suggested that this depression actually represents a natural, karstic sinkhole.

A rectangular opening cut through the entrance chamber's N wall opens into a cavernous tunnel consisting of an upper, sloping part and a lower, horizontal part which range from 2–2.3 m in width and from 2–6 m in height. See Fig. DAV.04. This 36 m long, curved tunnel descends 14 m through the bedrock until it reaches the top of an irregularly shaped vertical shaft the average diameter of which is 0.6 m. At a depth of ca. 12.3 m, the shaft intersects a feeder tunnel, which carries water from the Gihon Spring for a distance of 22 m (Shiloh 1981: 32; 1984a: 21, 68–69; 1987: 230–31). People reaching the top of the vertical shaft via the underground tunnel could therefore draw water up through the shaft as if from a well. Excavations below the level at which the vertical shaft meets the feeder tunnel revealed that the shaft descended an additional 3 m which were devoid of toolmarks (Gil and Shiloh 1982: 32, 34; Shiloh 1984a: 21, 69; 1987: 215, 217).

That the water system's final shape resulted from tooling is clearly evidenced by the chisel marks and lamp niches on the walls of the cavernous tunnel. Nonetheless, anomalies pertaining to the tunnel's excessively long, curved path, by which it traverses 36 m to connect points which are linearly only 19 m apart, its irregular dimensions, the exceedingly steep (33 degree) gradient of its upper, W part, and the vertical shaft's apparently unnecessary 3 m continuation below the level of the feeder tunnel were addressed by the hydro-geological survey (Gil and Shiloh 1982).

Gil detected the presence of natural encrustations adhering to the walls of the vertical shaft and cavernous tunnel. The absolute age of one crust sample subjected to carbon 14 analysis proved to be greater than the dating capability of the technique, i.e., 38,000 years B.P. (Gil and Shiloh 1982: 34). Gil and Shiloh concluded, therefore, that both the vertical and "abortive" shafts are natural karstic sinkholes, or solution shafts, and that the cavernous tunnel is the enlargement of a natural solution conduit. The engineers who designed Warren's Shaft successfully integrated a network of natural and artificial components in a manner which allowed Jerusalem's residents to draw water from the Gihon Spring without leaving the protected confines of the city.

Although Warren's Shaft is chronologically the earliest *strategic* water system, its absolute date is still debated. Birch (1878: 179; 1885: 62) and Vincent (1911: 33–37; 1912: 141–61) identified it with the *ṣinnôr* (2 Sam 5:6–10), mentioned in David's successful conquest of Jebus and associated with the exploits of Joab (1 Chr 11:4–7). Such an identification, which requires a pre-Davidic date for the water system, has, however, been rejected on various grounds by most scholars (Albright 1922; Yadin 1963: 267–70; Braslavi 1970; B. Mazar 1982: 9; Aharoni 1982: 235; Shiloh 1981: 39; 1984a: 23; 1987: 219–20). Because no stratigraphical or other archaeological evidence useful for dating its construction has been recovered, any date proffered must rely on historical logic and analogy to other subterranean water systems. On that basis, Shiloh (1981: 39; 1984a: 23–24; 1987: 219–20) concluded that Warren's Shaft was contemporary with similar underground water systems at Megiddo and Hazor, both of which have been dated stratigraphically to the 9th century B.C.E. (Shiloh 1987: 204–9). The discovery that Warren's Shaft incorporates a number of natural geological phenomena, all of which existed long before David's conquest of Jerusalem suggests, however, that the question of its relationship to the biblical *ṣinnôr* should be reassessed. Moreover, as similar subterranean water systems were operative in Mycenaean Greece as early as the 13th century B.C.E. (Mylonas 1966: 15, 31–33, 40–43), the possibility that the technology for constructing such systems was introduced into the Levant during the LB or early Iron Age should not be summarily rejected.

3. Shiloah (or Siloam) Channel. This water system is thought to be either contemporary with or slightly later in date than Warren's Shaft (Vincent 1911: 31; Hecker 1957: 196; Shiloh 1984a: 23; 1987: 219). Parts of it have been explored by Schick (1886), Bliss and Dickie (1898: 115, pl. XIII), Masterman (1902), Parker (Vincent 1911: 6–8), Weill (1947: 57–96), and Shiloh (1979a: 168–70; 1984a: 23–24; 1987: 218). Although less than half of its estimated 400 m length has been investigated, the water system is known to vary in width from 0.4–0.6 m and in height from 1.4–2.75 m (Vincent 1911: 8; Hecker 1957: 194–95; Shiloh 1987: 230–31). Unlike the other two water systems connected to the Gihon Spring, both of which are entirely subterranean, the Shiloah Channel is a composite system, consisting partly of a

narrow, rock-hewn tunnel, and partly of a rock-hewn and stone-capped channel. A number of windowlike apertures pierce its E side and an additional number of openings penetrate its roof.

The Shiloah Channel appears to have served three purposes: (1) it carried water from the Gihon downhill along the E slope of the City of David to a reservoir at the S end of the Tyropoeon Valley, generally identified with modern Birket el-Hamra (Simons 1952: 189–90; Wilkinson 1978: 118); (2) it released water into agricultural plots located in the Kidron Valley through the windowlike openings in its E wall; and (3) it gathered runoff water from upslope through the openings in its roof. Because the course it followed lay outside the city's fortifications, it was not a strategic system. Indeed, the construction of Hezekiah's Tunnel prior to the Assyrian siege of 701 B.C.E. superseded and partially cancelled the Shiloah Channel, both by blocking it and by changing the direction in which water flowed through its S end (channel IV; Weill 1947: 70–71; Simons 1952: 187–88; Shiloh 1984a: 23–24; 1987: 218). The Shiloah Channel must, therefore, predate Hezekiah's Tunnel, and may be identified with "the waters of Shiloah that flow gently" (Isa 8:6).

4. Hezekiah's Tunnel. See Figs. DAV.03 and DAV.04, and Fig. JER.09. The third, and chronologically latest, water system, Hezekiah's Tunnel, carries water from the Gihon Spring to a reservoir located in the S reaches of the Tyropoeon Valley. This water system consists of three component parts: a sinuous, rock-cut tunnel; a reservoir; and a so-called overflow channel.

The tunnel was cut through the bedrock by two teams working toward each other from opposite directions. Toolmarks visible on its walls indicate both the direction in which the tunnel was cut and the point at which the teams met. The minute,.3-meter difference in level between the tunnel's starting point and its present outlet in the Tyropoeon Valley was originally measured by Conder (1882: 129) and reaffirmed by Shiloh (1984a: 23; 1987: 230–31).

The N segment of Hezekiah's Tunnel incorporates the feeder tunnel joining the Gihon Spring to the base of Warren's Shaft. Shortly before reaching the shaft, however, the tunnel makes a 90 degree turn to the W and meanders along a sinuous course, traversing 553 m to link two points located only 320 m apart. Although the tunnel's width varies only slightly, from.58–.65 m, its height is extremely irregular, ranging from 1.5–5.0 m (Shiloh 1987: 230–31).

Today the tunnel empties into a small reservoir called Birket es-Silwan, also known as the Pool of Shiloah or Siloam, which is located close to the S end of the Tyropoeon Valley. Excavations conducted within the vicinity of Birket es-Silwan and Birket el-Hamra to its S by Guthe (1881; 1882: 52–133, pl. II), Bliss and Dickie (1898: 154–55), and Kenyon (1974: 246–47) have yielded evidence of reservoirs which were in use during the early and late Roman periods and, probably, during the Byzantine period. Despite the fact that no physical remains of earlier reservoirs have yet been found there, those Iron Age reservoirs associated with the water systems are best located or restored in the same vicinity.

Beyond Birket es-Silwan, a rock-cut canal known as channel IV carries water in an easterly direction, around the S tip of the City of David, towards the Kidron Valley. At its S extremity this canal incorporated the S end of the Shiloah Channel (or channel II) and reversed the flow of water through it. Its excavator, Weill (1947: 65–73), believed that channel IV represented a later addition to Hezekiah's Tunnel. Kenyon (1974: 159) and Ussishkin (1976), however, suggested identifying it as the final segment of Hezekiah's Tunnel which, they believed, emptied in the vicinity of the Kidron rather than the Tyropoeon Valley. Although the construction date of this "overflow channel" has not been conclusively determined, channel IV appears to have conveyed water from the Pool of Shiloah to the area of the Kidron Valley either for purposes of irrigation or for storage in an additional reservoir (Shiloh 1984a: 23; 1987: 219). The channel IV system underwent various changes over the course of time, yet seems to have remained in use until it was blocked by a stone wall tentatively dated to the Middle Ages (post-Ayyubid period; DeGroot fc. a).

The ascription of this water system to the time of Hezekiah, late 8th century B.C.E., is based primarily on biblical evidence. Hezekiah's efforts to prepare Jerusalem for an Assyrian siege by bringing the waters of the Gihon within the fortified area of the city is acclaimed in both the OT (2 Kgs 20:20; Isa 22:11; 2 Chr 32:2–4, 30) and the Apocrypha (Sir 48:17). On this basis the incised, lapidary Hebrew inscription

describing the process of hewing the tunnel and found on the wall near its present-day outlet, serves as a chronological indicator for other paleo-Hebrew inscriptions.

The tunnel's sinuous shape, the variability of its height, and the way in which separate teams of tunnelers working toward each other managed to meet have been the subject of considerable debate. The various theories can be divided into three main groups: (1) that proposed by Conder (1882: 128) and advocated by Hecker (1957: 195–97), which proposed that the tunnelers followed a relatively soft, easily quarried stratum in the bedrock; (2) that suggested by Clermont-Ganneau (1897, 1898), who attributed the tunnel's winding course to the tunnelers' desire to avoid disturbing the tombs of the Davidic dynasty; and (3) that initially proposed by Sulley (1929: 124) and subsequently adopted by Amiran (1975: 77–78) and Issar (1976: 133), who believed that the tunnelers followed a natural subterranean conduit, perhaps connoted by the word *zdh* in the Hebrew inscription found in the tunnel.

The results of the hydro-geological survey of the City of David published by Gil and Shiloh (1982) substantiate the theory advocated by Sulley, Amiran, and Issar. Geologist Gil concluded that the sinuous tunnel, cut entirely within the hard, *mizzi ahmar* stone, is most probably an enlargement of a preexisting natural solution conduit which originally carried water towards the Gihon Spring. The original level of the natural conduit, according to Gil and Shiloh (1982: 34), is evidenced by the varied heights of the tunnel's ceiling which reflect the downcutting required to reverse the water flow from the direction of the spring to the direction of the reservoir. The meeting of the two teams of tunnelers was thus ensured by their following the line of a preexisting channel.

During the Second Temple period the Gihon Spring ceased to serve as the primary source of water in Jerusalem. The increased demand for water during this period was met by the construction of aqueducts designed to convey water to Jerusalem from springs located S of Bethlehem (A. Mazar 1975, 1984). Hezekiah's Tunnel and the Pool of Shiloah, however, continued to function throughout the Second Temple period, and Shiloh (1984a: 24) believed that Warren's Shaft may also have remained in use. Although the true location of the Gihon Spring was long thought to have been forgotten during this time (Simons 1952: 48; Hecker 1957: 198), Reich (1987b) has shown that this may not have been the case.

F. Burial Grounds

1. Bronze Age. The earliest tombs found on the City of David hill date to the EB I. Caves containing multiple burials and line-painted pottery were cleared on the upper reaches of the E slope by the Parker expedition. The best example of these tombs was Cave 3, which contained a number of disturbed human skeletons (Vincent 1911: 24–30). Although the EB I burial caves in the City of David are located slightly N of the area in which Shiloh (1984a: 25; 1984b: 303) found evidence for EB occupation, burial within occupied areas of settlement was not unusual during this period. The caves' location, therefore, does not necessarily indicate the limits of the contemporary occupation.

Unlike their earlier EB predecessors, EB IV tombs have only been found across the Kidron Valley, on the Mount of Olives (Wilson and Warren 1871: 475; Sa'ad 1964; Kenyon 1966: 74–75; 1974: 80–81). Like contemporary tombs from other sites (Kenyon 1979: 12–39), these tombs are entered through round, vertical shafts with openings in their sides leading to burial chambers containing disarticulated bones. In addition to these Mount of Olives tombs, Gonen (1985) has suggested identifying some of the caves and cisterns located on the Temple Mount as tombs from this period.

Although no published evidence exists for burial within the City of David proper during either the MB II or the LB, tombs dating to these periods have been found on the Mount of Olives. A tomb excavated by Saller (1964) on the grounds of the Dominus Flevit Church, on the W slope of the Mount of Olives, consisted of two rock-cut, lobe-shaped burial chambers separated by a stone ridge. Because the tomb's ceiling had collapsed prior to excavation, the location of the original entrance was not determined. Nonetheless, morphologically, the tomb is comparable to the "bilobate tomb" type found at other sites (Petrie 1930: pls. XVII–XVIII; Stiebing 1971). More than 2000 objects, including both local and imported vessels spanning the MB II–LB II, were recovered from this tomb, indicating that it was used over a long period of time. A tomb from the E slope of the Mount of Olives described by Loffreda (1974) similarly appears to have been used continuously from the MB II to the LB II.

2. Iron Age. Rock-cut and cist tombs dating to the Iron Age II have been found around the perimeter of Jerusalem's E and W hills (Rahmani 1981: 231–34; Broshi, Barkai, and Gibson 1983). None, however, has been conclusively identified within the City of David, as burial within the occupied area of the city was not permitted during this period (Rahmani 1981: 232). Nevertheless, the OT indicates the existence of a cemetery equated with the term "City of David," in which kings and at least one priest were buried (see A above).

a. "Tombs of the Davidic Dynasty." Clermont-Ganneau (1897, 1898), theorizing that the S curve in Hezekiah's Tunnel was designed to avoid contact with the royal tombs of the Davidic dynasty, suggested locating them in the S part of the City of David. Excavating on the S hillcrest in 1913–14, Weill (1920: 157–73, pls. V, XVII–XIX) thus identified two narrow, rock-cut galleries as the royal tombs. The best preserved of these galleries is a 16-meter-long tunnel ending in a trough which Weill believed had originally contained a sarcophagus. Although many authors accepted Weill's identification, scholarly consensus has rejected it on the grounds that no chronological evidence has been found linking these rock cuttings to the Iron Age (Simons 1952: 221; Yeivin 1948: 45; Kenyon 1974: 156). Moreover, typologically, no such tomb plan is known from the Iron Age (see Ussishkin 1986: 260).

b. The Silwan Tombs. At least three types of finely quarried Iron Age tombs have been surveyed in Silwan on the E side of the Kidron Valley, facing the City of David (Avigad 1947; 1953; 1954: 18–36; Ussishkin 1970, 1986). These include tombs with straight ceilings, tombs with gabled ceilings, and "monolithic" tombs.

The tombs with straight ceilings (Ussishkin 1970: 38–39; 1986: 233–36) are comprised of two or three rectangular burial chambers arranged in a straight line, one behind the other. They are entered through large openings cut in the vertical face of the bedrock scarp. Burials were placed either on rock benches or in simple troughs lining the chamber walls.

The tombs with gabled ceilings (Ussishkin 1970: 35–38; 1986: 229–33) had a single rectangular chamber with a deep trough hewed into one of the sidewalls. In the bottom of each trough was a ledge at one end in which one or two headrests were carved. Narrow ledges running around the upper sides of the troughs indicate that they were covered with stone slabs. Noting differences in length exhibited by the troughs, Ussishkin (1970: 38; 1986: 238) concluded that the tombs were cut to order prior to the owners' deaths.

Three "monolithic" tombs (Ussishkin 1970: 39–44; 1986: 236–37), in which both the burial chamber and the monument's outer shape were hewed out of the bedrock so as to resemble a stone building, have also been found in Silwan. The most familiar of these tombs is that known as the "Tomb of Pharaoh's Daughter," located at the N end of Silwan. This rectangular tomb is freestanding on three sides but remains attached to the bedrock on the fourth. Its nickname derives from its Egyptian cornice and its pyramidal roof, which is today almost completely missing. An entrance in its W face led to a rectangular burial chamber with a rock-cut shelf running along the wall (Ussishkin 1970: 40; 1986: 47–63). A recessed panel above the entrance bears traces of a paleo-Hebrew inscription of which only two letters survive.

Each of the other two "monolithic" tombs in Silwan also bore Hebrew inscriptions, incised in sunken panels cut into their facades. One of these had two burial chambers side by side, and bore two inscriptions, which were discovered by Clermont-Ganneau (1899: 305–13). The two inscriptions were subsequently deciphered by Avigad (1953: 137–52; 1955: 163–66) and republished by Ussishkin (1975: 64; 1986: 220–26). The tomb is known as the "Tomb of the Royal Steward," because its owner, whose name, apart from the theophoric suffix *ywh*, has not been preserved, bore the title "He who is over the House" or "the Steward of the House." This title or a form thereof occurs eight times in the Hebrew Bible (e.g., Gen 41:1; 1 Kgs 16:9; Isa 22:15; 36:3). Although Clermont-Ganneau (1899: 309) also noted the location of the third "monolithic" tomb, the accompanying inscription was discovered and published by Reifenberg (1948) and reexamined by Ussishkin (1975: 64–65; 1986: 217–20).

The "monolithic" tombs and the tombs with gabled ceilings found in the Silwan necropolis are without parallel in the rest of Jerusalem. Although the Silwan tombs were found emptied of their original

contents, their ascription to the Iron Age II is supported by the text and paleography of the Hebrew inscriptions, by the quarrying technique, and by the comparative corpus of Iron Age tombs both inside and outside of Israel (Ussishkin 1970: 44–46; 1986: 279–87).

G. Size and Population

Despite the numerous excavations conducted in Jerusalem over the last century and a half, the city's boundaries in many periods of its history remain ill defined and controversial. Nevertheless, estimates of its size and extent can be postulated for most major historical periods. Quantitative estimates of the city's geographical area in each of these periods have been published by Broshi (1978), whose data were updated by Shiloh (1984a: 3, 72).

The occupied area of pre-Davidic Jerusalem is estimated to have been close to 60 dunams: 49 dunams along the hillcrest and 11 on the E slope. The inclusion of the Temple Mount during the United Monarchy is thought to have added ca. 100 dunams to the city's overall size. Following the settlement of the W hill and its inclusion within the fortification wall in the 8th century B.C.E., the city's area increased again by ca. 460 dunams (Shiloh 1984a: 3) for a total of some 620 dunams. During the Persian period the city shrank to ca. 149 dunams (assuming that it encompassed only the Temple Mount and the City of David's hillcrest). However, during the course of the Hasmonean period, the city once again expanded to the W hill, reaching its preexilic peak of ca. 620 dunams. Experiencing additional periods of growth during the reign of Herod, who increased the area of the Temple Mount to ca. 145 dunams in the 1st century B.C.E., as well as in the period immediately preceding the Great Revolt, Jerusalem reached its maximum extent of ca. 1705 dunams around the year 66 C.E. The city then decreased in size during the Late Roman period. By the time of Justinian's reign, however, in the mid-6th century C.E., it is thought to have grown again to approximately 1200 dunams (Broshi 1978: 12).

No consensus exists regarding the size of Jerusalem's population (Wilkinson 1974; Broshi 1978; Stager 1975: 242–45; 1982: 121). This situation derives primarily from the lack of scholarly consensus concerning the methodology by which the size of ancient populations can best be determined (see Shiloh 1980: 26–27). Several studies, however, have found a tentative correlation between a settlement's physical size and the size of its population (Broshi 1978; Marfoe 1980: 317–21; Shiloh 1980; Broshi and Gophna 1984). According to these studies therefore the size of a settlement's population may be estimated by multiplying the overall inhabited area by a density coefficient representing the number of inhabitants per unit of area. Because density coefficients ranging from 20 (Stager 1982: 121) to 114 persons per dunam (Wilkinson 1974: 50) have been proposed for ancient Jerusalem, the following summary chart provides both low and high estimates of the ancient city's population using somewhat more moderate coefficient figures of 25 and 40 as advocated by Broshi and Gophna (1984: 42; 1986: 74) and Shiloh (1980: 30) respectively. Nonetheless, the chart remains oversimplified by virtue of the fact that it fails to consider several issues, including the extent of occupation on the City of David's W slope during the Bronze and early Iron Ages, the extent of the extramural population in any period, and the extent to which the area allocated to the Temple Mount was actually inhabited in any given period.

The Size and Population of Jerusalem During Major Historical Periods

		Area	**Population**
Period	(in dunams)	Low	High
Bronze Age	60	1,500	2,400
Solomonic	160	4,000	6,400
Hezekiahan (ca. 700 B.C.E.)	620	15,500	24,800
Persian	150	3,750	6,000
Hasmonean	620	15,500	24,800
Herodian	770*	19,250	30,800

Eve of Roman destruction	1560*	39,000	62,400
Late Byzantine	1055*	26,375	42,200

*Does not include area of Temple Mount.

DAVID TARLER
JANE M. CAHILL

DAVID, SONS OF. David had 19 sons and one daughter who are named in Scripture. All were born to his wives. In addition, he had numerous unnamed sons and daughters born to wives and concubines (2 Sam 3:2–5; 5:13–16). Of these only four sons—Amnon, Absalom, Adonijah, and Solomon—and one daughter—Tamar—are known in any detail. Solomon is the most prominent of these, since he succeeded David on the throne of Israel; and his descendants carried on the family line as the Judahite kings. Matthew's genealogy traces Jesus' ancestry through Solomon, while Luke's does so through Nathan. These six children—the most prominent—were among the eldest: all were born in Hebron, or in Jerusalem to Bathshua (Bathsheba).

Ironically, given the importance and prestige afforded David in most of the Scriptures, the accounts of his sons mainly show how poorly they turned out. This is seen as a direct consequence of David's great sins in committing adultery and murder (2 Samuel 11–12). Nathan's sentence foretold the troubles that would ensue (12:9–12, 14). From this point on, David appears as a relatively passive and tragic figure.

Amnon (David's firstborn) and Tamar appear together in a grim story in 2 Samuel 13, where Amnon brutally rapes his sister. Absalom, his brother, then conspires to kill Amnon in revenge.

Absalom (David's third son) figures prominently in David's life (2 Samuel 13–18), since he murdered David's firstborn and especially since he rebelled against his father. He forced his father to flee for his life

from Jerusalem, and he then announced his consolidation of power by going in to David's concubines in full view of all Israel. Eventually he was killed in battle by David's general, Joab.

Adonijah (David's fourth son) was the oldest living son at the end of David's life, and he seized power briefly in a short-lived kingship (1 Kings 1–2). David—enfeebled, senile, and having lost effective control of his children—was passively growing old; and factions of officials and others built up around Adonijah and Solomon. It was only after personal appeals on Solomon's behalf by his mother Bathsheba and by Nathan the prophet that Solomon was sanctioned as the chosen heir to the throne. Solomon spared Adonijah's life initially, but he eventually felt threatened by him and had him executed after David's death.

Solomon, the tenth son of David in the lists preserved, was David's successor to the throne (1 Kings 1–11). He was blessed with incomparable wisdom by YHWH, and he initially followed YHWH. He built the temple and an ornate palace for himself and succeeded in gathering riches and in establishing an international reputation. YHWH established a conditional covenant with him (9:1–9), but, in the end, Solomon's heart, under the influence of his foreign wives, turned away from his God. As a result, the kingdom was divided, and his son Rehoboam was made king over the S remnant, Judah.

The rest of David's sons are known only from four genealogical lists and a few references elsewhere. The table below serves to highlight their relationships with each other.

SONS BORN IN HEBRON

2 Sam 3:2–5	**1 Chr 3:1–4**
1. AMNON (mother, Ahinoam)	1. AMNON (mother, Ahinoam)
2. CHILEAB (mother, Abigail)	2. DANIEL (mother, Abigail)
3. ABSALOM (mother, Maacah)	3. ABSALOM (mother, Maacah)
4. ADONIJAH (mother, Haggith)	4. ADONIJAH (mother, Haggith)
5. SHEPHATIAH (mother, Abital)	5. SHEPHATIAH (mother, Abital)
6. ITHREAM (mother, Eglah)	6. ITHREAM (mother, Eglah)

SONS BORN IN JERUSALEM

2 Sam 5:13–16	**1 Chr 3:5–9**	**1 Chr 14:3–7**
	Mother: Bathshua (Bathsheba)	
7. SHAMMUA	7. SHIMEA	7. SHAMMUA
8. SHOBAB	8. SHOBAB	8. SHOBAB
9. NATHAN	9. NATHAN	9. NATHAN
10. SOLOMON	10. SOLOMON	10. SOLOMON
	Unnamed Mothers (Wives of David)	
11. IBHAR	11. IBHAR	11. IBHAR
12. ELISHUA	12. ELISHAMA	12. ELISHUA
13. ———	13. ELIPHELET	13. ELPELET
14. ———	14. NOGAH	14. NOGAH
15. NEPHEG	15. NEPHEG	15. NEPHEG
16. JAPHIA	16. JAPHIA	16. JAPHIA
17. ELISHAMA	17. ELISHAMA	17. ELISHAMA
18. ELIADA	18. ELIADA	18. BEELIADA
19. ELIPHELET	19. ELIPHELET	19. ELIPHELET

20. ——— 20. TAMAR 20. ———

The lists are almost identical, both with respect to forms of names and orders of listings. Eight differences appear, at nos. 2, 7, 12, 13 (2), 14, 18, 20. Of these, five are either variant spellings, alternate names, or scribal slips: 2. Chileab/Daniel; 7. Shammua/Shimea; 12. Elishua/Elishama; 13. Eliphelet/Elpelet; 18. Eliada/Beeliada. The other three are omissions. Of these, two undoubtedly are scribal slips, as well; the names Eliphelet and Nogah likely appeared in the original mss of Samuel, as well. The last difference—the inclusion of Tamar in 1 Chronicles 3—represents an original contribution by the Chronicler at this point, based on knowledge he had from elsewhere in his sources, mainly 2 Samuel 13.

The natural presumption is that these lists are given in the correct birth order. Indeed, the sons born during David's 7 years in Hebron are given first in the two places they are listed, and then they are followed by those born during David's ensuing 33 years in Jerusalem. However, of the four sons born to Bathsheba, Solomon is listed last in all three lists; whereas, it would appear from the narrative texts (2 Samuel 12; 1 Kings 1) that he was her firstborn of David (excluding the son that died: 2 Sam 12:15–18).

The first list is of David's sons born at Hebron (2 Sam 3:2–5). It names six sons and their six mothers. It is impossible to know anything of any earlier existence it may have had, but its appearance here serves to highlight the comment in 3:1 about the ascendancy of David's house vis-à-vis Saul's (see McCarter *2 Samuel* 102).

The second list is of David's sons born in Jerusalem (2 Sam 5:13–16). It mentions concubines and wives and sons and daughters and names 11 sons without naming their mothers. Its occurrence here naturally fits the narrative context, since David's capture of Jerusalem and consolidation of power have just been mentioned (5:1–12). The OG traditions add at the end of v 16 a list of 13 names that is not found in the MT. This list essentially duplicates the one just completed in vv 14b –16a, but it adds the two names that are missing (found in the Chronicles lists), and it has different forms for almost every name (some radically so).

The third list is the most comprehensive, and it combines the two Samuel lists, briefly adding to them (1 Chr 3:1–9). It is only here that Bathshua (= Bathsheba) is named as mother of four of David's sons, as well as of Tamar. It adds two names—Eliphelet and Nogah—that are not found in the MT of the Samuel list. Its larger context is the genealogies that introduce the books of Chronicles (chaps. 1–9). It appears as part of a large genealogy of Judah (2:3–4:23), immediately preceded by a list of descendants of Caleb and Jerahmeel, sons of Hezron, who was a grandson of Judah (2:18–55). It picks up from the list of David's ancestors in 2:3–17, and it is immediately followed by a list of Solomon's descendants (3:10–24).

The fourth list is essentially identical to the third in terms of the sons included, but it omits numerous other details found in that list. Its narrative setting is similar to the second list's, as it occurs in a context of David's consolidation of power after his capture of Jerusalem. However, the Chronicler adds material between this list and the actual account of the capture of Jerusalem (11:4–9) that appears elsewhere (or not at all) in 2 Samuel: lists of David's heroes (11:10–47; cf. 2 Sam 23:8–39) and supporters (chap. 12; missing in 2 Samuel), and the account of the ark's removal from Kiriath-jearim to the house of Obed-edom (chap. 13; cf. 2 Sam 6:1–11). Despite these differences, this Chronicles list functions in the same way that the Samuel list does: they both show YHWH's blessing on David through the proliferation of his family, a blessing that is found in the preceding and following narrative texts, as well.

DAVID M. HOWARD, JR.

DAVIDIC COVENANT. In Ps 89:4 the Lord says, "I have made a covenant with my chosen one, I have sworn to David, my servant." Among the "last words of David," we find, "He has made with me an everlasting covenant" (2 Sam 23:5). The Davidic covenant refers to God's promise to David, the king, to preserve his dynasty forever.

A. Historical Questions

The Hebrew people, having fled Egypt and, under Moses' leadership, entered into covenant with Yahweh at Sinai, took possession of the land of Canaan about the year 1200 B.C.E. For approximately the next 200 years they formed a loose organization of tribes united in their faith and worship of Yahweh. Gradually, things began to change.

1. Emergence of Monarchy. Kingship emerged in Israel as a response to two kinds of problems, external and internal. Externally, the continuing threat posed by the Philistines, a non-Semitic people living along the W plain and expanding more and more into the Israelite territory in the central hill country, pointed to the need for a stronger government and defense. In addition, internal pressures (e.g., population growth, economic, agricultural, political factors) pushed the Israelites in the same direction (Coote and Whitelam 1986). The people asked for a king (1 Sam 8:1–9), and, despite warnings (1 Sam 8:10–18), persisted in their demands (1 Sam 8:19–22). Saul was anointed king first (1 Samuel 9–10) but was later replaced by David (1 Sam 16:1–13), who progressively consolidated his power, conquered Jerusalem, and established his rule there.

2. Ideology of Kingship. About the year 1000 B.C.E., the period of the Monarchy had begun. This represented not only a major political reorganization but also a serious religious crisis (1 Sam 8:6–8). What exactly was the problem? Kingship certainly was not an Israelite innovation. It was an old institution in the ANE and with it came its own ideological beliefs. A whole religious mythology was associated with kingship.

A conflict existed in the world of the gods between the god of life, creation, and order (in Canaan, Baal; in Babylon, Marduk) and the god of chaos and destruction, usually represented as a sea monster (in Canaan, Yam = The Sea; in Babylon, Tiamat = The Deeps). In the struggle between the two (repeated regularly, perhaps annually), the god of order and creation is victorious and then is proclaimed king. He builds a palace in which to dwell and celebrate his victory. Creation is "in order" once again (McCurley 1983: 12–71). The earthly king stood in a special relation to the king-god, one often described as "father-son." If the king was a healthy and good king, society and creation were in order; if he was a poor king or was ill and unable to exercise kingly functions, then chaos threatened. A special responsibility in this regard was the concern to maintain justice in the realm. Injustice is a form of disorder, of chaos, and flows from the failure of kingship. H. H. Schmidt has maintained (1968) that *ṣĕdāqâ*, often translated "justice," in fact means "world order." This concern of the king for justice was a commonplace in the ANE (Lohfink 1987: 18–23; Whitelam 1979: 17–37). As the god's earthly representative, the king was basically the custodian and guardian of the stability of the cosmos. When the Israelites took over the political form of kingship, a real danger existed that they would take over the mythology along with it. They would then truly be "a nation like all the rest" (1 Sam 8:5, 20).

B. Davidic Covenant

1. Davidic Theology. The problem posed by the introduction of monarchy into Israel was how this new institution was to be related to the older religious traditions, especially that of the Mosaic covenant between Yahweh and the people (see MOSAIC COVENANT). A new idea of covenant developed: God had made a special covenant with David. The so-called oracle of Nathan (2 Sam 7:8–16) is considered the charter of the Davidic covenant. Closely related to this is Psalm 89 (Ishida 1977: 81–117).

As David enjoyed a period of rest after the struggles that brought him to the throne, he contemplated building a house, a temple, for Yahweh. The prophet Nathan came to him with a message from the Lord. Several points are worth noting. (1) The oracle was delivered through a prophet, a spokesman for Yahweh, so the prophet's words would be recognized as authoritative. This was a point of continuity with the older tradition. (2) The oracle makes very clear that the source of David's position and authority is only Yahweh, the God of Israel, who had led the Israelites out of Egypt and established a covenant at Sinai. And it is Yahweh alone who chooses, appoints, and raises up to kingship (2 Sam 7:8b–12). (3) Yahweh promises David two things, land and dynasty. David had wanted to build a house for God; God will, rather, build a house for David. The Hebrew word for house (*bêt*) can refer to a building or family. The latter verses (12–16) of the oracle develop the theme of dynasty. (4) The "father-son" imagery familiar from ANE kingship is used (v 14; Pss 89:27–28—Eng 26–27; 2:7–8). The king is not divine but is raised up above the common person in his relationship to God (Weinfeld *IDBSup,* 190–91). (5) The king does not have absolute authority; he is under Yahweh and is expected to obey the covenant obligations. This is a serious requirement; failure will bring on punishment (v 14b; Ps 89:31–33—Eng 30–32). (6) Failure, however, will not terminate the covenant. Yahweh is committed to David and his dynasty; the covenant is an eternal one which cannot be broken (vv 15–16; Ps 89:4–5, 21–22, 29–30, 34–38—Eng 3–4, 20–21, 28–29, 33–37); it is rooted in Yahweh's promise and fidelity (Ps 89:3—Eng 2). Sin will bring punishment, but the last word is with God's grace.

Two further aspects of the Davidic covenant, not explicit in 2 Samuel 7, can be added. (7) The stability of David's throne is rooted in the order of creation: "… as long as the sun before me. Like the moon, it shall be established forever" (Ps 89:37–38—Eng 36–37). The activity of the king is related to cosmic stability. Psalm 89:10–15—Eng 9–14 depict Yahweh as establishing creation through a victory over Sea and Rahab (another name for the sea monster); in v 26—Eng 25, the king is shown as sharing this activity. (8) The responsibility of the king in this regard is spelled out in the two concepts of justice (*ṣĕdāqâ*) in the realm, and peace (*šālôm*) within and without. It has been noted that names connected with Jerusalem and the monarchy are often derived from these roots (e.g., Melchizedek (Gen 14:18); Adonizedek (Josh 10:1); Zadok (1 Kgs 1:8, 32); Solomon (2 Sam 12:24); and Absalom (2 Sam 13:1; Humphreys 1979: 59–60). Psalm 72 is a virtual summary of Davidic royal theology: the king's justice derives from God (v 1); his rule is rooted in the cosmos (vv 5–7) and also effects fertility (life) of the soil (vv 6, 16); he is related to other nations round about (vv 8–11) for whom he is a source of blessing (v 17); he is the protector of the poor and the helpless (vv 12–14).

2. Model of Royal Grant. The type of covenant represented here has parallels elsewhere in the ANE. These have been described as "covenants of royal grant" (Weinfeld 1970; *TDOT* 1: 270–72; Mullen 1983) and are attested in the Hittite and Syro-Palestinian areas. See also COVENANT. They were gifts (often land and dynasty) bestowed by a king upon individuals who had loyally served their masters. Parallels to the Davidic covenant in form and vocabulary are striking.

C. Related Ideas

While the number of texts which explicitly treat it are relatively few, the Davidic covenant is intimately connected, even intertwined, with a number of other important ideas. Three are particularly significant. (1) *Zion:* David had wanted to build a house (temple) for Yahweh; Yahweh said, "No, but I will build a house (dynasty) for you." It is no surprise then to see a connection between the traditions about David and those about Mt. Zion and the temple. Yahweh, the great king, has chosen Zion for a dwelling place; Zion is then the sacred mountain where earth and heaven meet. The temple there is the focus of the order and stability of creation (Roberts 1982; McCurley 1983: 149–60; Levenson 1988: 78–99; Ollenburger 1987). (2) *Creation:* Yahweh subdues the forces of chaos and destruction and brings about an ordered universe (Ps 89:1–15—Eng 1–14); the anointed king shares in this task (Ps 89:26—Eng 25). Thus the role of the Davidic king, while deriving from Yahweh and focusing on Israel, operates within a much wider horizon: all people and all of creation are involved (Anderson 1984). (3) *Wisdom:* The connection of the king with wisdom was a commonplace in the ANE. The king was to rule wisely (Kalugila 1980). The great patron of wisdom in Israel was, appropriately, King Solomon (e.g., 1 Kgs 3:4–15). A number of Israel's wisdom

works were attributed to Solomon (Proverbs, Song of Songs, Qoheleth), and it is not uncommon to find references to kings and ruling in this literature (e.g., Prov 8:15–19; 29:14; 31:1–9).

Each of these three themes (Zion, creation, wisdom) is independent and has its own history. However, the figure of the king appears in each in an important way. In light of this, the role of the king can be summarized: the Davidic king, as Yahweh's representative, by ruling wisely is guardian of the cosmic and social order (justice and peace). As these themes interact and overlap, one can describe them as presenting a theology of blessing within the Bible (Westermann 1982: 85–117).

D. Influence on Southern Traditions

Another area where the importance of the Davidic covenant can be noted is in its influence on the pentateuchal traditions, which have their roots in Jerusalem with its court and temple, namely, the Yahwist (J) and the priestly (P) writers. Several points of contact can be noted. (1) It is only these two traditions that appear in the primeval history, that is, which situate Israel's narrative traditions squarely within a cosmic context. (2) The human role in creation is described in royal terms. Humans, men and women, share in God's royal dominion (Gen 1:26–28); the creation of Adam and Eve, who share responsibility for the Garden (Brueggemann 1970), is described in royal phrases: taken from the dust (Brueggemann 1972) and receiving the breath of life (Wifal 1974). (3) The stories of the Yahwist's primeval history (Adam and Eve, Cain and Abel, Flood, Tower of Babel) all show a similar development: humans sin, punishment follows, the last word is one of Yahweh's grace (Clines 1978: 61–79). This is exactly the pattern of the Davidic covenant (2 Sam 7:14–15). (4) The covenant with Abraham (in both J—Gen 15:7–20—and P—Gen 17:1–8) is, like the Davidic covenant, a promissory covenant rooted in Yahweh's choice and fidelity and entails the promise of land and offspring (Weinfeld *TDOT* 1: 270–72). Likewise, the covenant with Abraham (as also with Noah, Caleb, and Phineas) is an everlasting covenant (Gen 17:7; 9:16; Num 14:24; 25:13; Cross *CMHE,* 261–63). (5) The promises to Abraham involve not only Israel, but all nations as well (Gen 12:3b; Ps 72:17). In fact, the patriarchs are shown to bring blessing, in various ways, to the nations round about them, nations which in fact had been subdued by David (2 Samuel 8; Wolff 1982: 55–63).

E. Relation to the Mosaic Covenant

The Davidic covenant stands in obvious contrast with the Mosaic covenant. Whereas the latter is made with all the people and is dependent on their obedience for its perdurability, the former is rooted in God's faithful promise and is unconditional. In the latter, God is known primarily through historical experiences; in the former, through creation. How are these tensions to be handled (McCarthy 1972: 45–52, 80–85; Levenson 1985: 187–217)?

The Mosaic covenant is the basic covenant which gives Israel its distinct identity. No text in the OT suggests that this covenant is ever replaced by the Davidic. The two covenants cannot be contrasted on the basis of covenant obligations; the king, too, is expected to be a faithful Yahwist and to obey the covenant commandments, especially in their concern for justice (2 Sam 7:14; Ps 89:32–33—Eng 31–32). The Davidic covenant is a further development and specification that took place within certain circles in Jerusalem. Attempts to localize the two traditions (the Mosaic covenant flourished in the N, the Davidic in the S) seem oversimplified (Levenson 1985: 192–200). Some texts do suggest that attempts were made to bring the Davidic in line with the Mosaic by making its promises conditional (e.g., 1 Kgs 2:4; 8:25; 9:4–5; Ps 132:12), but this was not carried out consistently (Weinfeld *IDBSup,* 191).

Both covenants were accepted in Israel and appear in the canon of Scripture; responsible exegesis must do justice to this fact. It is better to view the two not as contradictory but as complementary. For example, the Mosaic covenant has an inherent particularism or sectarianism; the Davidic is more universal, even cosmic in scope (Levenson 1985: 207–8). How is the tension between king and people to be addressed? Deuteronomy, with its overriding Mosaic concerns, admits kingship but stresses that the king is simply one of the people, "one of your kinsmen" (Deut 18:14–20); the Davidic maintains, as it were, a high view of kingship, but "democratizes" it by raising up into it not only all Israel, but all human beings (Gen 1:26–28; Levenson 1988: 112–16). The Mosaic covenant, with its stress on history and morality, calls Israel to be serious about its covenant life; the covenant is one of human obligation and is precarious. The Davidic

covenant stresses creation and the constancy of God; this is a covenant of divine commitment that assures Israel that even though it sins, God's promises can be trusted (Freedman 1964). As R. E. Brown has said, "… while the Covenants of Divine Commitment gave Israel an undying hope, the Covenant of Human Obligation gave Israel a conscience" (1965: 115).

F. The Prophets

When the kings failed to rule as true representatives of Yahweh and abused their position and power, the prophets were not intimidated. They addressed squarely the problems they saw. While most of the prophets spoke more out of the Mosaic traditions, the Davidic traditions are not absent. Perhaps the prophet who embodies these the most is Isaiah (Tucker 1985: 332–33, 334). However, in prophetic texts which look to a hope beyond the coming punishment, the Davidic theology occupies a prominent place (e.g.,Isa 8:23–9:6; 11:1–9; Amos 9:11; Mic 5:2–5; Jer 17:24–27; 23:5–6; 30:8–9; 33:14–26). Since the Hebrew word for anointed king is messiah, the Davidic covenant plays a central, even crucial role in the development of OT messianic expectation.

G. The New Testament

The Davidic covenant is of central importance in the faith of the NT. Jesus preaches the arrival of the kingdom of God, a kingdom marked by justice and peace. In himself, he is the son "descended from David according to the flesh" (Rom 1:3). When Christians acknowledge in faith that Jesus is Christ (= Messiah = anointed king), they are affirming that in Jesus the Davidic covenant has reached its culmination and highest fulfillment.

A. The Rite in Leviticus 16

The Day of Atonement is attested only in the Priestly legislation (= P) of the Pentateuch. P's main discussion is in Leviticus 16, which lists the prescriptions for the occasion. As chap. 16 now stands, the ritual is an annual sanctuary purgation ritual occurring on the tenth day of the seventh month (Lev 16:29, 34). The prescriptions contain two main expiatory or purgative rites: the purification of the sanctuary and some of its sanctums with blood from priestly and communal *ḥaṭṭāʾt* (purgation) sacrifices (vv 3–19), and the dispatch of the scapegoat, which bears the people's sins (vv 20–22). For details pertaining to the following discussion of these rituals, see in particular J. Milgrom (1983: 67–95; *Leviticus* AB on Leviticus 16; Wright 1987: 15–86, 129–59).

1. Purification of the Sanctuary and Sanctums. The purification of the sanctuary and sanctums reflects P's carefully conceived system of ritual practice. The cleansing is achieved by a combination of blood sprinkling and daubing in the three main locales of the sanctuary, beginning with the most sacred and ending with the least sacred (see HOLINESS (OT)). The blood manipulations in each locale, while differing in manner and order, appear in pairs with each pair including a sevenfold sprinkling of blood: (a) In the adytum (the most holy room of the tent) blood is sprinkled once on the front of the E side of the *kappōret* (the cover of the ark) and then seven times in front of it (Lev 16:14–16b). (b) The shrine (the outer room of the tent), the text says, was treated similarly (v 16b). This probably presumes the blood manipulation in Lev 4:5–7a, 16–18a, where purgation offering blood is sprinkled toward the veil seven times (apparently not touching it) and then placed on the four horns of the incense altar (cf. Exod 30:10). (c) Outside the tent, blood is placed on the horns of the burnt-offering altar and then sprinkled on it seven times (Lev 16:18–19).

The systematic character of this ritual is made more apparent when the blood manipulations are viewed as discrete acts. The blood of the priests' and the blood of the people's purgation offerings are apparently manipulated separately in the adytum and shrine (Lev 16:14–16), but the bloods of the two animals are presumably mixed before application to the outer altar and are applied together (cf. vv 18–19). The total of each separate act of sprinkling and application to an altar horn is forty-nine, the square of the number seven. The latter number is generally expressive of completeness and wholeness. The seven-times-seven sprinkling thus represents the thoroughness of the rite's effects (see NUMBERS AND COUNTING).

The place where blood is manipulated also reflects the conception of the holiness of the portable sanctuary reflected in other prescriptions. The blood manipulations in the adytum and shrine purify not only the furniture pieces to which they are applied, but also the rooms generally. The sevenfold sprinklings occur in the air space of the rooms and fall on the floor. Outside the tent, however, blood is applied only to the burnt-offering altar and not to the court. This demonstrates the lesser holiness of the sanctuary court vis-à-vis the outer altar and tent and also the higher holiness of the outer altar, which is somewhat less than, but comparable to, that of the other sanctums to which blood is applied—see HOLINESS (OT).

The sanctuary purification rites are part of the larger system of *ḥaṭṭāʾt* sacrifices. The purpose of *ḥaṭṭāʾt* sacrifices generally is to remove impurity from the sanctuary and its sanctums. The purgative effect is clearly stated for the *ḥaṭṭāʾt* sacrifices on the Day of Atonement (Lev 16:16, 19). The verb *ḥiṭṭēʾ*, a privative *Piʿel* meaning "purify," is used to describe the effect of this sacrifice elsewhere (Exod 29:36; Lev 8:15; Ezek 43:20, 22, 23; 45:18). This verb, in fact, is evidence that the noun *ḥaṭṭāʾt* is to be properly understood as a privative *Piʿel* noun meaning "purgation-offering" rather than "sin-offering" or the like. The blood acts like a detergent and removes the impurity that affects the sanctums. This removal renders the entire offering, including the carcass, impure and it in turn may pollute others (cf. Lev 16:27–28). This impurity, however, does not seem to become effective until after the carcass leaves the sanctuary precincts (*m. Yoma* 6:7; *Zebaḥ.* 12:6). This observation would apply only to *ḥaṭṭāʾt* sacrifices the blood of which is used in the sanctuary or to those which are brought for the benefit of the priests themselves. Only the carcasses of these *ḥaṭṭāʾt* sacrifices are burned outside the camp. The *ḥaṭṭāʾt* sacrifices of individuals, the blood of which is used at only the outer altar, can be eaten by priests inside the sanctuary court (cf. Lev 6:17–20; 10:16–20; see UNCLEAN AND CLEAN (OT)).

The blood of the *ḥaṭṭāʾt* offering is only applied to holy furniture or sprinkled in the rooms of the tent (Exod 29:12; Lev 4:6–7, 17–18, 25, 30, 34; 5:9; 8:15; 9:9; cf. Ezek 43:20; 45:18): it is never applied to a person. The effect the offering has for a person is indirect and is described by the verb *kipper* plus the prepositions *ʿal* or *bĕʿad*. The verb has a general meaning of "appease; propitiate; expiate" and when used with the purgation offering has more the notion of "purify" though the other meanings can be present (e.g., Lev 16:16, 20, 33; cf. vv 18, 27, 32 see UNCLEAN AND CLEAN; Milgrom 1983: 67–84; *Leviticus*; cf. Levine 1974: 55–77; Janowski 1982 *passim*). When the verb and prepositions are used with a person, the expression means the purification or expiation performed on the sanctum is done "on behalf of" that person (e.g., Lev 16:6, 11, 17, 24, 30, 34). P uses the verb *kipper* mainly to describe the effect of purgation offerings. This led to designating this ritual occasion, where these offerings figure so prominently, as *yôm (hak)kippurîm*, "the day of expiation/purification" (Lev 23:27–28 [LXX *hēmera exilasmou*]; 25:9 [LXX: *tē hēmera tou hilasmou*]; cf. Exod 30:10; Num 29:11).

That *ḥaṭṭāʾt* sacrifices purify the sanctums on behalf of persons reveals the human factor in the dynamics of the sacrifice: it is people who cause the impurity in the sanctuary; that is, when they sin or suffer severe impurity, the sanctuary is soiled. People do not have to be in the sanctuary area for this pollution to occur; it occurs aerially. This pollution follows a graded scheme according to the gravity of the impure situation. The more severe the sin or impure situation, the more extensively the sanctuary is polluted. Permissive tolerance of severe impurities and inadvertent sins committed by individuals pollute only the outer altar (cf. Lev 4:22–35). Sins by the community in concert or by the high priest pollute the incense altar and the shrine (4:2–21). Intentional sins and presumably other unrectified sins and impurities pollute the adytum and the *kappōret* and implicitly the ark. This is evidenced by the term *pišʿêhem* 'their crimes' in Lev 16:16a, which seems to refer to brazen, deliberate sins (cf. Num 15:30–31) and which, together with impurities, is the express evil removed from the adytum. In view of this scheme of pollution, the purpose of the Day of Atonement ritual becomes lucid: while throughout the year the impurity of individual or community sins may be purged as they arise (Leviticus 4), once a year a special rite must be performed that cleanses the sanctuary of impurity from deliberate sins and from any other lingering impurity not yet rectified. The implication following from this is that were the sanctuary left sullied by these impurities, God's presence, which manifests itself in the tent, could not dwell there and would leave (cf. Ezekiel 8–11).

The sanctuary purification is a very dangerous chore, so special precautions must be taken. If these were not observed, the officiator would perish (Lev 16:2, 13). An indication of the chapter's concern about the danger of what is holy is the linkage of the chapter with Lev 10:1–7, which recounts the death of two of Aaron's sons who encroached on the sanctuary (cf. 16:1). Part of the reason why Leviticus 16 refers back to this episode is to underscore the care with which sanctuary service must be performed. Since the Day of Atonement purification is the most comprehensive and intensive of all *ḥaṭṭāʾt* rituals, the strictest rules apply. Only the high priest, the holiest human, may enter the adytum. He wears special holy clothing (vv

4, 32), different from what he normally wears. He is to bathe his entire body before officiating (v 4; cf. the Samaritan and LXX). In other cases of sanctuary service, priests only need to wash their hands and feet (Exod 30:18–21; 40:30–32; cf. 2 Chr 4:6). After the *ḥaṭṭāʾt* and scapegoat rites the high priest bathes again, presumably to desanctify after working in the adytum (Lev 16:24). He then changes to his regular high priestly clothing to finish the ritual (vv 23–24). When entering the adytum, he must offer special holy incense, which probably includes an ingredient to cause a thick cloud of smoke to cover the *kappōret* (vv 12–13; cf. v 2). This is to hide the sanctum so that he will not die. On the danger of what is holy, see HOLINESS (OT).

2. The Scapegoat Rite. At the beginning of the rite two goats brought by the people were distinguished by lot, one for the Lord and one for Azazel, an attenuated demonic figure living in the wilderness perhaps representing in the present text more a geographical locale than an active supernatural figure (Lev 16:8–10, 26; see AZAZEL). The goat designated for the Lord is offered as a *ḥaṭṭāʾt* sacrifice, as seen above; the one designated for Azazel is the scapegoat, which bears the people's sins to the wilderness to Azazel. The scapegoat ritual follows directly after the purgation with *ḥaṭṭāʾt* sacrifices (v 20). To transfer the sins to the goat, the high priest places his two hands on the head of the animal and confesses over it the Israelites' transgressions (v 21; see HANDS, LAYING ON OF (OT)). The goat is then sent out to a remote land (*ʾereṣ gĕzērâ*) in the wilderness (vv 21–22).

Though the purpose of the rite is to banish the people's sins, it is not unrelated to the purgation with *ḥaṭṭāʾt* sacrifices. As already noted, sins and impurity have an intimate connection; the former cause the latter in the sanctuary. Carrying sins to the wilderness removes the cause of impurity to an innocuous locale. The impurity-sin connection is found also in the fact that the scapegoat, though bearing sins, pollutes the person who dispatches it (v 26). The relationship of the scapegoat rite to the foregoing is also seen in its denomination, together with the slaughtered goat, as a *ḥaṭṭāʾt* (v 5). The Priestly legislation has placed both goats into a complementary relationship. Despite this denomination, the scapegoat is not really an offering according to the Priestly context of sacrifice attested elsewhere. It is merely a vehicle for carrying impurity away from the temple and the people's habitation.

3. Self-Denial and Rest. The first part of Leviticus 16 deals with prescriptions pertaining to the sanctuary and priesthood; the last part (vv 29–31) deals with the people's obligations. These chiastically arranged prescriptions require self-denial (Heb *ʿinnâ nepeš*) and complete cessation from work. The former requirement mainly denotes fasting, but perhaps also abstention from other physical pleasures such as anointing and sexual intercourse is intended too (cf. Num 30:14; Dan 10:3, 12; 2 Sam 12:16–20; *m. Yoma* 8:1; Heb 9:10). The requirement of complete rest is found only elsewhere with the Sabbath. Other holidays that have prescriptions of rest only require cessation of laborious work (see HOLINESS (OT)). While the people have certain obligations on this day, there is no requirement in any of the legislation that they appear at the sanctuary. Presumably they remain at their homes abstaining from work and pleasures while the priesthood purifies the sanctuary. The rules for fasting and rest are repeated in 23:26–32; Num 29:7 (see FAST, FASTING).

4. Miscellaneous Sacrificial Elements. After the *ḥaṭṭāʾt* and scapegoat rites the high priest changes his clothes and offers a burnt offering for the priestly household and one for the people (Lev 16:24b, cf. vv 3, 5). If the text indicates the actual order of the rite, the fat pieces of the *ḥaṭṭāʾt* sacrifices are then burned on the altar (v 25; cf. the rule in *m. Zebaḥ.*10:2) and the *ḥaṭṭāʾt* carcasses are taken outside the camp and burned (v 27). The Mishnah keeps these particular acts in the order listed in the Bible (*m. Yoma* 6:6–7; *m. Zebaḥ.*10:2), but the *Temple Scroll* puts them between the blood rites in the sanctuary and the scapegoat rite (11QTemple 26:6–10; 27:3–5). Numbers 29:8–11 lists other offerings to be brought on this holiday: a bull, ram, and seven one-year-old lambs for burnt offerings with their accompanying cereal offerings, a goat for a *ḥaṭṭāʾt* in addition to the other *ḥaṭṭāʾt* animals, plus the daily burnt offering with its accompanying cereal offerings and libations. One controversy growing out of these prescriptions is whether the burnt-offering ram prescribed in this list is the same as the ram of the people in Lev 16:5 or whether it is in addition to it (see 11QTemple 25:12–16; Philo *Leg All* I.187–88; Josephus *Ant* 3.10.3 §§240–43; *Sipra,* Aḥare Mot, Par. 2:2; *b. Yoma* 70b). Lev 16:25b ascribes to the burnt offerings of the

people and priests an expiatory function (cf. Lev 1:4). This may implicitly apply to the extra burnt offerings listed in Numbers 29 as well. Thus all of the animal offerings on the day serve the general purpose of expiation and purification.

B. Near Eastern Parallels

Purification and elimination rites similar to those in the biblical Day of Atonement ritual are well attested in the religious literature of the ANE. For a full discussion, see Wright (1987: 31–74 and *passim*).

Parallels to the *ḥaṭṭāʾt* ritual include the purification of the cella of the god Nabû on the fifth day of the Babylonian New Year Festival (the *akītu* festival; see Wright 1987: 62–65). A ram is decapitated and its carcass is wiped on the temple to remove the impurity. The wiping is described with the verb *kuppuru*, cognate with Heb *kipper*. The ram carcass and its head are then discarded in the river. This disposal removes the impurity that has been collected in the carcass of the ram. Those who discard the carcass and head are apparently impure; they may not enter the city Babylon until Nabû leaves. The Hittite ritual of Ulippi is more similar to the biblical *ḥaṭṭāʾt* rite since it uses blood as a ritual detergent. When a new temple is being purified and dedicated for a god, the last rite performed is slaughtering a sheep and smearing its blood on the god's statue, the wall of the edifice, and cultic utensils. The text explicitly says this application renders the god and its temple pure. The sheep is then burned up (perhaps in the temple building); it is not to be eaten (Kronasser 1963: 30–33, iv 35–41). The similarities to the biblical *ḥaṭṭāʾt* are patent, particularly with respect to the animal the blood of which is used inside the sanctuary and which cannot be eaten by the priests: animals, sometimes their blood, are used to remove impurity from a sanctuary. The carcasses become impure and must be discarded; they cannot be eaten.

Rites similar to the scapegoat include the Hittite rituals of Huwarlu and Ambazzi (Wright 1987: 57–60). These are the closest examples to the biblical scapegoat rite in that they use live animals as bearers of the evil and lack the motif of substitution, where the carrier of evil suffers in place of the human sufferers. Substitution is lacking in the biblical scapegoat rite. In the Huwarlu ritual, a dog is waved over the king and queen and inside the palace. The "old woman" officiator recites an incantation expressing the hope that the dog will carry away evil and utters a "magical word," ending with the words: "Wherever the gods have designated it, there let him [the dog] carry it [the evil]." The live dog is then taken away and apparently let loose. In the Ambazzi ritual the woman officiator wraps tin on a bowstring and then puts the string on the right hand and feet of those suffering evil. She then removes the string and puts it on a mouse with the request: "Let this mouse take it [the evil] to the high mountains, the deep valleys (and) the distant ways." The god Alawaimi is called on to drive the mouse away. Mesopotamian literature does not have a clear example where a live animal bears evil away from sufferers, but it does have elimination rituals that are otherwise conceptually similar to the biblical scapegoat ritual. A good example is from the Utukkī Lemnūti series (Wright 1987: 65–67). Ea instructs Marduk, his son, how to cure a person plagued by demons and accompanying diseases. Marduk is to bring a goat into some sort of contact with the patient. An incantation adjures the evil to leave the man and go to the underworld. The skin of the goat is removed from the man and thrown into the street, a place where polluted items are often discarded. In the Shurpu ritual series (Wright 1987: 68–69) Marduk, again, is commanded to take loaves of bread on a skewer and wipe with it a patient who has been seized by a "curse." The patient is also to spit on the skewer. After an incantation the materials are taken out to the open country and placed near a bush. A request follows for the Lady of the Open Country and Plain to receive the patient's curse and that his illness be transferred to the "vermin of the ground." Finally, a ritual similar to the scapegoat may be attested in Ugaritic literature. A model lung contains a list of sacrifices ending with a ritual in which, if the translation of the crucial words is correct, a goat apparently carrying evil connected with an attack on Ugarit or a plague is driven into a remote locale (*KTU* 1.127: 29–31; Aartun 1976; 1980: 91–92; Janowski 1982: 214–15; Loretz 1985: 35–49; cf. Dietrich and Loretz 1969: 171–72; Tarragon 1980: 41).

C. The Development of the Biblical Rite

Consideration of these extrabiblical rituals, of other elimination rites in the Bible, and of literary- and tradition-critical evidence from biblical passages dealing with the Day of Atonement has generated different explanations of the development of the Day of Atonement prescriptions. The evidence is

susceptible to various interpretations depending upon one's methodological or theoretical framework and emphasis. A speculative reconstruction based on recent scholarship is offered here (see Milgrom *Leviticus* AB; Knohl 1987: 86–92; Wright 1987: 16–30, 72–74, 78–80; Aartun 1980).

The analysis begins with the present text of Leviticus 16 and moves backwards. This chapter is clearly a composite work. Most critics argue that vv 29–34a are an addition to the first part of the chapter. Reading the first part of the chapter without these verses has led to the generally accepted conclusion that the fixed date of the rite, the tenth day of the seventh month, did not apply originally. Either the ritual was performed annually on another date, or it was an emergency purification rite performed when necessary. The latter interpretation is suggested by the connection of Leviticus 16 with Leviticus 10 (cf. 16:1). Aaron's two sons had just polluted the sanctuary by their encroachment; hence it required immediate purification. God's wrath was aroused; and presumably to prevent further destruction, purification of the sanctuary was necessary. Emergency appeasement rites for arresting divine wrath are not unknown to the Priestly literature (Num 17:9–15). It is likely that the biblical designation *yôm (hak)kippurîm* 'day of expiation,' which points to a particular fixed occasion, arose after the fixing of the date.

Leviticus 23:26–32 and Num 29:7–11, which reflect the text of Leviticus 16 that contains vv 29–34a, are probably composite themselves. The holiday they name for the tenth day of the seventh month may have originally not included the expiation ritual in Lev 16:1–28. Later the ritual was associated with this date because the day was part of—perhaps the last day of—the fall new year period, which began on the first day of the seventh month (cf. Lev 23:23–25; Num 29:1–6; the cultic calendar elsewhere lists multiday holidays where the first and last days are more important than intervening days). Leviticus 25:9 clearly shows the tenth day with the Day of Atonement to be connected with the new year ceremonial (cf. Ezek 40:1). The new year was a proper occasion for sanctuary purification. Ezekiel prescribes a threefold sanctuary purification for the first and seventh day of the first month in the spring, another new year in Israel (Ezek 45:18–20; perhaps this is a ritual to balance the Day of Atonement rite in the seventh month, which he does not explicitly mention; cf. the LXX on v 20). Recall also the purification of Nabû's cella in the Babylonian new year rite, noted above.

While it may be argued on the basis of separating Lev 16:29–34a from the rest of the chapter that self-affliction which includes fasting was not originally associated with the ritual, fasting is often associated with crises elsewhere in the Bible (Judg 20:26; 1 Sam 7:6; 14:24; Joel 1:14; Esth 4:3; Ezra 8:21–23; etc.). It may be that an original day of abstention on the tenth day of the seventh month helped attract the purification rite to it since it too was accompanied by self-denial. As for cessation from work, this may have been originally associated with an emergency rite, but it seems its specific formulation derives from the rite's insertion into the fixed cultic calendar.

Literary-critical criteria do not give hints about the development of Lev 16:1–28 adequate to lead to an understanding of the character of the ritual before its attachment to the fixed fall date. It would seem that various ritual elements were added together, perhaps over time, to arrive at the rite described in these verses. To speculate about the development requires comparison of ritual practices in other places of the priestly writings. The discussion here is limited to the development of *ḥaṭṭā᾽t* and scapegoat rites. Since these two rites form discrete ceremonies, one may surmise that they existed independently and were joined together to form the present ritual. This is supported by the difference in evils they remove (Lev 16:16, 19, 21–22; impurity versus sins) and by the existence elsewhere in P of *ḥaṭṭā᾽t* sacrifices without a scapegoat element. But a comparison with the rite for purification from *sāra᾽at* (so-called leprosy; see LEPROSY) suggests a different development (cf. Lev 14:2–7, 48–53). In this rite two animals—birds—are used to purify a person or a house. One bird is killed to obtain blood to serve as a ritual detergent; the other bird carries away the impurity that the blood removes. This may suggest that what lies behind Lev 16:1–28 is a ritual where two animals, perhaps the two goats, were used, one providing blood for purification and the second carrying away the evil the blood of the first animal had removed. To compose the original stage of the text such a two-goat rite would have been combined with a *ḥaṭṭā᾽t* bull rite which consequently led to designating the two-goat rite a *ḥaṭṭā᾽t* offering (in contrast, the *sāra᾽at* bird rite was never drawn into the *ḥaṭṭā᾽t* system). The bull would have been designated for the benefit of the priests

and the goat for that of the people. The portion of the rite where blood is manipulated in the sanctuary was given the purpose of removing impurity in accord with the *ḥaṭṭāʾt* system. The release of the goat was given the goal of removing sins, the cause of impurities.

What the two-goat rite may have been like prior to its adoption as a sanctuary cleansing rite can only be guessed. The nonbiblical rituals give some hints. The two-goat rite may not have been connected with a sanctuary at all but with purification of individuals or their houses or other property, like the Hittite and Ambazzi rituals. The evils removed might have been much more like those in nonbiblical rites: sorcery, slander, demonic attack, sickness, and so forth, rather than impurity in the priestly sense. The goat sent out to the wilderness could have functioned merely as a carrier of the evil or, as other Near Eastern rituals show, an offering to an offending demon. The obscure figure Azazel could have been an original element in the ritual actively functioning as a custodian of evil or as an attacking demon needing appeasement (see AZAZEL).

Some have argued that the scapegoat element of the ritual derives from a N Syrian (Hittite-Hurrian) origin (Kümmel 1968: 318; Janowski 1982: 213–15; Loretz 1985: 40–41). From there it spread to Ugarit (hence *KTU* 1.127) and Canaan (hence Leviticus 16) and westward to Greece (appearing in pharmakos rituals; cf. Burkert 1979: 39–77). Other biblical ritual elements seem to have a N Syrian origin or connections with Hittite ritual practice, for example, the burnt offering (see Kümmel 1967: 23–24) and the gesture of hand placement (see HANDS, LAYING ON OF (OT)). Though caution must be used in determining genetic relationships (see Moyer 1983: 19–21, 37–38), there is good reason for looking into Hittite-Hurrian ritual for some of the influences upon Israelite ritual practice (cf. Weinfeld 1983: 102–3).

D. The Day of Atonement in Later Literature

Because the Day of Atonement embodies the central concerns of priestly religion and sacrificial worship, its treatment and reflexes in postbiblical literature are extensive. For example, the Mishnah devotes an entire tractate (*Yoma,* lit. ‘The Day’) to the ceremony and prescriptions. Additional details, perhaps reflecting Second Temple practice, are found about the priests’ and people’s roles and how the ceremony is to be precisely performed. The *Temple Scroll* (11QTemple 25:10–27:10) reworks and conflates many of the rules found in different places of the Pentateuch into a succinct new law written in the tone of biblical prescription. By its rearrangement of text and with careful additions, it solves for its readers some of the difficulties of the biblical text and, as it seems, engages in a polemic with ritual practice at Jerusalem later reflected in rabbinic documents. The NT calls the day “The Fast” (*hē nēsteia,* Acts 27:9). The main reflex of the ritual is in Hebrews, where the writer metaphorically describes Jesus’ work of salvation as a Day of Atonement ceremony performed in heaven (cf. Hebrews 6–9). Jesus is the high priest of the heavenly sanctuary, who entered into the adytum with his own blood to achieve eternal redemption for the people. See also, for example, Sir 50:5–21; *Jub.* 5:17–18; 34:18–19; *Ps-Philo* 13:6; Philo *Leg All* II.52, 55–56; *Spec Leg* I.72, 186–88; 2.195.

DAY OF CHRIST. Use of the term "Day of Christ," together with synonymous and related expressions in the NT, indicates that the early Christian communities expected that Jesus would soon return as Lord or Christ (= Messiah). His return would mark the beginning of the time or day of judgment, after which the faithful would inherit the kingdom of God. Most scholars maintain that Jesus himself expected to come again either as the Christ or as the supernatural Son of Man at the time of the coming of the kingdom of God. Some scholars urge that Jesus proclaimed the kingdom of God had already come or been "realized" in connection with his own ministry or activity and that he did not expect any significant future eschatological occurrences. Others propose that it was the early Church that first came to believe that some eschatological events had already been realized in connection with Jesus' ministry or his death and resurrection. The majority of scholars agree that the early Christian communities looked for Jesus' return as the Christ or Lord in the (then) near future.

A. The Term Itself

The term "day of Christ" occurs only twice in the NT: in Phil 1:10 and 2:16. Mowinckel (1956: 302–4) suggests that it derived from certain intertestamental terms, most notably, "the day of the Messiah." Similar and evidently synonymous expressions appear elsewhere in Paul's letters: "the day of Jesus Christ" (Phil 1:6); "the Day of our Lord Jesus Christ" (1 Cor 1:8); and "the day of the Lord Jesus" (1 Cor 5:5; 2 Cor 1:14). These passages refer to a future time when, Paul hoped, the recipients of his letters would be found pure and blameless. Implicitly, Paul expected the day of Christ to be the time when Christ would return and Christians (if not the whole world) would be judged. In the meantime he urged his readers to live faithfully and righteously so that he might be proud of them and, implicitly, so that they would be found acceptable on that day and inherit the kingdom of God or enter the heavenly commonwealth.

B. Related Expressions in Pauline Writings and Hebrews

The same pattern of understanding is borne out in other Pauline passages containing variations on the term "day of Christ": "the day of the Lord," also "that day," simply "the day," and "the day of judgment." The names Christ or Jesus do not appear in these expressions, but frequently the contexts indicate that Paul was thinking of Christ's or Jesus' coming on the "day" referred to. Paul's letters contain numerous indications that he hoped and expected that Christ would come during his own lifetime and the lifetime of

at least some to whom he was writing, e.g., 1 Cor 15:50–52; 16:22b; Phil 3:20–21; 1 Thess 2:19; 3:13; 4:13–17; 5:23.

1. The Day of the Lord. In three of the passages cited above (section A), Paul refers to Jesus as "the Lord" or "our lord" (Gk *kurios*). In the other two instances where Paul (or a secondary Pauline writer) refers simply to "the day of the Lord" (1 Thess 5:2; 2 Thess 2:2), the preceding verses in each context indicate the writer was thinking of the coming of Jesus (1 Thess 4:13–17; 2 Thess 2:1). The saying in 1 Thess 5:2 compares the day of the Lord to the coming of a "thief in the night," pointing to its sudden and unexpected arrival and also to the destructive consequences for those unprepared for it (1 Thess 5:3–4). The saying parallels particularly the Matthean version of Jesus' parable about the coming of the Son of Man and the importance of readiness (Matt 24:42–44 = Luke 12:39–40). The comparison of the coming of the day or of Jesus to that of a "thief in the night" reverberates in later NT writings as well (2 Pet 3:10; Rev 3:3; 16:15). The writer of 2 Thess 2:2 insists that this "day of the Lord" has not yet come, contrary to the beliefs of some excited people. All these Pauline passages refer to the future coming of this day, understood as within the lifetime of some of those to whom he was writing.

2. That Day. When Paul writes about "that day," he evidently means the day of the Lord, i.e., the day of Christ. In 1 Thess 5:4 "that day" clearly refers back to the future and sudden arrival of the "day of the Lord" in 5:2. Similarly, references to "that day" in 2 Thess 1:10 and 2:3 relate back to earlier passages that look for the coming of the Lord Jesus (2 Thess 1:7–9; 2:1–2). These passages in 2 Thessalonians are distinctive: one anticipates that the coming of the Lord Jesus is to be accompanied by "mighty angels in flaming fire, inflicting vengeance" on nonbelievers and the disobedient (2 Thess 1:7–8); the other cautions that before "that day" can come, "the rebellion" and "the man of lawlessness" must come first (2:3–4; cf. 1 John 2:18). The author of 2 Timothy also uses the term "that day" to designate the future time when Christians who are found worthy will be recompensed: 2 Tim 1:12, 18; 4:8. The last of these passages identifies the Lord (Gk *kurios*) as the one who will be "the righteous judge" on that day; an earlier passage (4:1) indicates that this judge would be "Christ Jesus."

3. The Day; the Day of Judgment. Twice Paul uses the term "the day," each time with reference to the expected time of judgment (Rom 2:16; 1 Cor 3:13). The former passage, in contrast to 2 Tim 4:8, names "Christ Jesus" as the *agent* at the judgment, but God as the judge. In the latter, Paul does not mention a judge but says that "the day" itself will disclose "each man's work." Rom 2:5 looks for "the day of wrath," the time of God's judgment. Other verses in the same context indicate that Paul visualizes God as the one who will judge (Rom 2:2–13). The same expectation evidently is expressed in Heb 10:25, 30–31.

C. Related Expressions in the Synoptic Gospels and Acts

The Synoptic Gospels do not employ the expressions "day of Christ," or "day of the Lord Jesus," or "day of the Lord," but contain many passages that suggest related meanings. In some, Jesus refers to his own future activity "on that day," and he speaks of the "day(s) of the Son of Man," and of "the day" or "that day" when the kingdom of God or the central figure in a parable about the kingdom of God would come. Jesus refers to his own future activity in two Matthean passages, one of which is paralleled in Mark. In Matt 7:22 he says that "on that day" many will tell *him* that they have invoked his name, and, implicitly, that they desire to enter the kingdom. Here Jesus expects to be judge in the day of judgment. In Matt 26:29 (= Mark 14:25), "that day" seems to refer to that time when new conditions of life will dawn in the future kingdom of God; then, Jesus tells his followers, he will again drink wine, this time in the kingdom of God. Various other synoptic sayings about "the day" or "that day" anticipate either the future coming of the kingdom of God or future conditions there: Matt 25:13 (see Matt 25:1); Luke 21:34 (see Luke 21:31; cf. Luke 17:20–31).

Some synoptic passages refer to "the day" (or "days") in which the Son of Man will come. The expression "that day" in Matt 24:36 = Mark 13:32 clearly refers to the coming of the Son of Man (see Matt 24:26–33; Mark 13:24–29). The coming of the Son of Man is contrasted here with the premature and false claims to have found "the Christ" (Matt 24:23–25 = Mark 13:21–23). Moreover, a further saying in this context appears to identify the expected Son of Man as "your Lord" (Matt 24:42–44). These passages imply that the coming of the Son of Man on "that day" will mark the time of judgment. (Cf. Matt 25:31–

46, which portrays the Son of Man as judge [and "king"] but does not mention "day.") The same understanding is expressed in several Lukan passages concerning the future appearance of the Son of Man, most notably, Luke 17:22–35; 21:34–36. See references to "the day(s)" or "that day" in Luke 17:22, 24, 26, 30, 31; 21:34; cf. "that night" in 17:34.

In Acts 17:31 Luke writes that Paul warned the Athenians that God would judge the world by "a man" on "a day" that God had fixed. Luke's Paul identifies this "man" as the one God had raised from the dead—necessarily meaning Jesus. This usage may suggest cognizance of Paul's characterization of the risen Jesus as "the last man," and "the man of heaven" (1 Cor 15:45–49). It may also represent a slight modification of the synoptic traditions that characterize the coming judge as the Son of Man.

D. Expressions in the Fourth Gospel, Catholic Epistles, and Revelation

John's gospel identifies Jesus as the Christ, but does not use the expression "day of Christ." In several Johannine passages, however, Jesus refers to his actions on a future "day." A series of verses in John 6 promise that Jesus will raise certain persons "at the last day" (John 6:39, 40, 44, 54; cf. 11:24; 12:48). The Johannine Jesus also promises to return to and be with his followers in or on "that day": John 14:18–20; 16:22–23, 26. In John 8:56 Jesus speaks of "my day," apparently referring to his current presence among his contemporaries.

The catholic letters and Revelation do not refer to the "day of Christ" specifically, but nearly all appear to look for Jesus' return in the near future, using various similar phrases to express this. James 5:7–9 promises that the coming of the Lord is near, indeed, that the "judge" is about to appear. 1 Peter looks for the coming "day of visitation" (2:12), and warns that Christ (or God) is "ready to judge the living and the dead" (4:5), and that "the end of all things is at hand" (4:7). 2 Peter is cognizant of the delay of the Parousia hitherto (3:3–9), but hints that "the day of the Lord" might now come like a thief at any time (3:10). The writer uses two other related terms to denote this future time: "the day of God" (2 Pet 3:12) and "the day of eternity" (3:18). 1 John urges contemporaries to believe that their time is the "last hour" (2:18) of the old world and to look for the appearing of God (3:2) and the "day of judgment" (4:17). The author of Jude anticipates "the judgment of the great day" and considered his own days to bear the marks of "the last time" (vv 17–19).

The book of Revelation also refers to "the great day"—"the great day of God the Almighty" (Rev 16:14). Implicitly, this is also the day when Jesus will come; the next verse contains the parenthetical commentary, "Lo, I am coming like a thief!" Jesus seems to be the speaker here, as in much of Revelation, through "his angel" (see Rev 1:1; 22:16). Throughout, the author of Revelation assured his late 1st century readers that Jesus was coming soon. See also Rev 6:17, which refers to the coming great day of wrath. Like the writers of 1 and 2 Peter, the writer of Revelation evidently expected that both Jesus and God would soon be revealed. Like Paul (1 Cor 16:22b), the author of Revelation concludes with a prayer for Jesus' coming as Lord (Rev 22:20b); evidently, prayer for Jesus' coming was replacing the earlier petition for the coming of the kingdom of God (Matt 6:10; Luke 11:2).

E. Modern Scholarly Opinion

Traditional Christianity has always maintained that Jesus himself expected to return at *some* future time as the Christ or Son of Man. Near the beginning of the 20th century, the eschatological school represented by Weiss (1985: 114–29) and Schweitzer (1985) precipitated a major crisis in NT theology by proposing that the biblical evidence showed that Jesus expected to return with the coming of the kingdom of God—a world-transforming, supernatural event—in the then *near* future. But he did not so return, nor did the kingdom of God come. Was Jesus therefore mistaken? Rather than so conclude, a few interpreters undertook to contend that Jesus believed that all or virtually all of the anticipated eschatological events had *already* occurred or been "realized" somehow in connection with his own appearance and ministry. Dodd (1961) is the most notable proponent of this idea; see also Robinson (1957) and Perrin (1976). "Realized eschatology" has been severely criticized, however, most recently by Sullivan (1988). Several interpreters tilt strongly in the direction of realized eschatology, maintaining that in some—though not very significant—way, Jesus also anticipated a future fulfillment or "consummation" of some kind (e.g., Perrin [1963: 185–202; 1976: 194–204] and Käsemann [1969]). The great majority of NT scholars have

subscribed to a mediating position, affirming that Jesus understood both that he had already come as Messiah (and that the kingdom of God had thereby come also), *and* that he and the kingdom would come again in the near, or possibly more remote future. Various mediating positions are reviewed in Hiers (1970: 15–20) and Epp (1987: 35–52).

Many interpreters acknowledge indications in the gospels that Jesus recognized certain occurrences as signs that the kingdom of God or other eschatological phenomena—including his own appearance as the Christ—had begun to be manifested. Achtemeier (1983) has proposed that these texts largely derive from the Christian community's eventual efforts to reconcile the earlier, imminent expectation with the fact that history continued, i.e., that the community modified or added texts to show that some of these expectations *had* been fulfilled. Allison (1985), on the other hand, contends that such modifications or additions were based upon the disciples' taking seriously Jesus' belief that the kingdom of God would come after he had completed his mission in Jerusalem; thus the disciples *perceived* certain events associated with Jesus' death and resurrection as instances of realized eschatology.

In his later work, Schweitzer (1968: 103–8; 148–53) continued to insist that Jesus had expected the whole pattern of eschatological events to occur in the (then) near future. A number of interpreters agree, e.g., Koch (1972), Hiers (1981), Allison (1985). See Sullivan (1988: 61, n. 42). Some scholars, however, urge that while Jesus expected to come again in the future, this expectation can readily be extended to the more distant future and so remain a vital hope for latter-day believers. Thus Cullmann (1964: 81–93) proposes that while Jesus expected the Parousia to occur within the generation of his contemporaries, that "error in perspective" was "corrected" within the NT itself (2 Pet 3:8) and was of little theological importance in the NT Church in view of the revelation that had already occurred in Christ. Buzzard (1988: 13–62) urges that Jesus' message of the future coming of the Messiah can and should be central to the faith of modern Christianity. Sauer's pastorally oriented study (1981: 58–73) likewise implies that Jesus' and the NT churches' Parousia expectation can be detached from their imminent expectation and so rendered valid and vital for contemporary Christian faith. See also De Haan (1944). These last two writers utilize the popular nonbiblical term "the Rapture" to characterize the future resurrection and elevation of the faithful into the heavens. (Cf. 1 Thess 4:13–17.) Conzelmann (1961: 98–136) urges that Luke intended to handle the problem of the delay of the Parousia by showing that Jesus understood that its occurrence was "still far away." Mattill (1979) effectively challenges Conzelmann's contention. It appears more likely that Luke was attempting to explain why the Parousia had not yet occurred and was not intending to show that it would not occur until some remote future time. See Hiers (1973).

Modern scholars agree that the early churches expected Jesus to come or be revealed as the Christ or Son of Man. Tödt (1965) suggests that whereas Jesus himself had proclaimed that those who followed him and his teaching would be vindicated by the supernatural Son of Man—who was, implicitly, someone other than himself—the presynoptic Christian communities concluded, after Easter, that Jesus was the one who would come as Son of Man. Other interpreters emphasize the Christian communities' experience or understanding that salvation had already occurred through Jesus' incarnation or death and resurrection and imply that the NT churches' future expectations were or are of little consequence. Thus hold Schmithals (1975: 151–71) and, of course, Rudolf Bultmann. Bultmann proposed that the future expectations of both Jesus and the early communities should be understood to refer to the ever-recurring "crisis of decision" confronting believers regarding the "meaning of existence." Others consider the NT churches' hope for the future as central to both early and subsequent Christian faith. Thus holds Minear (1954, 1981); but see Käsemann's (1964) disparaging treatment of 2 Peter.

F. Summary

Nearly all NT writers looked for the "day of Christ" or its equivalent in the near future. Then Jesus would return as Son of Man or Messiah, and as Lord. He, or God, would judge the living and the dead; and those found righteous would enter into the kingdom of God or era and realm of transformed existence. Modern scholars disagree as to whether Jesus himself expected to come again at some future time. Nearly all agree, however, that the early Christian communities expected Jesus to come or be revealed in the near future. Some suggest that this expectation has little place in contemporary faith and

that the decisive events have already occurred. Others consider this future expectation the central feature of Christian hope.

RICHARD H. HIERS

DAY OF JUDGMENT. Generally this term refers to that time in the future when God or some divinely authorized agent would intervene in history, condemning the unrighteous and vindicating the faithful and obedient. In earlier biblical and intertestamental texts, it is usually nations which will be judged, while in later, particularly NT texts, more attention is devoted to the prospective judgment of individuals. Modern scholars have tended to avoid or neglect this topic. Synonymous terms, appearing mainly in popular literature, include the "great" or "last" judgment. Although a few OT formulations approximate it (e.g., Isa 34:8; Jer 51:52; Mal 3:5–6), the term "day of judgment" does not appear in the OT as such. It does occur several times in the OT Apocrypha (e.g., 2 Esdr 7:38, 102, 104, 113; 12:34; Jdt 16:17) and Pseudepigrapha (e.g., *1 En.* 22:11; *T. Levi* 3:2–3) and seven or eight times in the NT (Matt 10:15; 11:22, 24; 12:36; Mark 6:11 [variant reading]; 2 Pet 2:9; 3:7; 1 John 4:17; cf. 2 Tim 4:8; Heb 10:25–27; Jude 6). In addition, the noun "judgment" and various forms of the verb "to judge" occur in numerous OT, intertestamental, and NT contexts with substantially similar meanings.

_____

A. OTand Intertestamental Usages

Often, expressions like "that day" refer to the future time when God or Yahweh would act in judgment against foreign nations, Israel, Judah, or the Jewish people (see DAY OF THE LORD). A similar meaning is indicated frequently, even though no particular terms are used, in, e.g., Hos 11:5–7; 13:7–16; Amos 8:2–3; 9:1–4; Dan 12:1–3. A few instances relate to Yahweh's past acts of judgment against Israel: Ezek 20:36; 23:10; 36:19. Hosea 5:11–12 seems to say that Ephraim was then being judged; but the context (vv 9, 14) points to future punishment. In most cases references to Yahweh's judging or judgment look to the future. A few texts state that—from the speaker's or writer's standpoint—judgment would take place soon, e.g., Ezek 7:3, 8. In intertestamental apocalyptic and NT writings it is generally understood that the day of judgment will mark the transition between the present age and the age to come. See esp. 2 Esdr 7:113–14; *2 En.* 65:6–11; Matt 25:31–46.

1. Agents of Judgment. Usually Yahweh is represented as the one who will do the judging, e.g., Pss 58:11; 96:10, 13; Eccl 11:9; 12:14; Isa 33:22; Ezek 11:8–11; Mal 3:5. Pseudepigraphic texts also commonly expect God to be the judge, e.g., *T. Benj.* 10:8–10; *1 En.* 91:7, but sometimes name other figures in this connection, e.g., "the Son of Man" or "Elect One" (*1 En.* 45–55), a "new priest" (*T. Levi* 18:2), "the Son of God" (*Apoc. El.* 5:30–31), or Christ (*L.A.E.* 51:9). See also citations in *OTP* 2: 971. Some passages in Ezekiel refer to the prophet himself ("Son of Man") as the one who will judge by declaring YHWH's word against Israel, e.g., Ezek 20:4; 22:2. Isaiah 11:1–4 suggests that a Davidic messiah will judge. In Daniel's vision "the court" would "sit in judgment" (Dan 7:10, 26). Perhaps the seer was thinking of the "heavenly council" (see, e.g., Job 1:6–12; Tob 3:16–17).

2. Recipients of Judgment. Prophetic oracles against foreign nations often speak of Yahweh's pending judgment against other nations, e.g., against the Ammonites (Ezek 21:28–30), Babylon (Jer 51:9, 52), Edom (Isa 34:5; Ezek 35:11), Egypt (Ezek 30:14, 19), and Moab (Jer 48:21–25). Joel 3:2, 11–12, and Jdt 16:17 refer to Yahweh's judgment against all nations—at least all that have oppressed Israel (cf. Zech 14:2–3, 12). Ezekiel expected Yahweh to bring the quasi-cosmic Gog to judgment: Ezek 38:21–22. Daniel 7:26 promised, in a likely reference to Antiochus Epiphanes, that the last of the beast's horns, i.e., gentile kings, would be judged. Most inclusively, Isa 66:16 and Jer 25:31 look for Yahweh's judgment against "all flesh." A few oracles declare that Yahweh ultimately will judge *for* gentile nations: for Moab (Jer 48:47; cf. Isa 16:4–5), for other nations (Jer 12:14–15; 46:26; 49:6, 39), or for "many" nations (Isa 2:4 = Mic 4:3; cf. Isa 19:19–25).

Most frequently, the prophetic oracles of judgment are directed against the nations Israel or Judah. Such oracles are generally said to characterize classical prophetism, which condemned these nations for breaking their covenant with Yahweh by turning to other gods and failing to do justice and mercy in dealing with the poor, fatherless, widowed, and oppressed. Such oracles appear typically in Hosea (e.g., 5:11–12; 6:5), Amos (7:4; 8:4–14), Isaiah (1:2–9; 5:1–30), Micah (2:1–4; 3:9–12), Jeremiah (2:33–35; 5:1–9), and Ezekiel (7:2–27; 24:3–14).

Individual Judahites or Jews will be judged for their own offenses. Interpreters commonly say that the idea of individual accountability (sometimes misleadingly designated "individualism") first appeared in Jeremiah and Ezekiel. Several oracles to this effect are found in their writings, e.g., Jer 17:5–11; 31:29–30; Ezek 18:1–32; 33:17–20. Jeremiah pronounced Yahweh's judgment against particular individuals or groups: e.g., Jer 22:13–19; 23:1–2, 9–40; 28:15–16. Yet Amos and Hosea earlier had singled out certain groups or individuals for special punishment, e.g., Amos 4:1–3; 6:4–7; 7:17; Hos 4:4–6; 5:1. Isaiah, too, proclaimed Yahweh's judgment against individuals for their particular offenses, e.g., 1:28; 3:10–11, 13–15, 16–26; 10:1–4.

Postexilic and intertestamental traditions focus almost exclusively on the future judgment of individuals. The Wisdom of Solomon differs from traditional wisdom (which held that the righteous are

rewarded and the wicked punished in this life) by promising that the righteous who die will live forever with God, while the ungodly perish without hope (Wis 3:1–5:23). Isaiah 66:24 looks for the perpetual torment of the wicked, who will be subjected to fire and worm(s); cf. Jdt 16:17. The prospect of perpetual torment is also held before the wicked in *4 Maccabees* (e.g., 9:8–9; 12:12). Several passages in *4 Maccabees* anticipate that the righteous dead, at least those martyred for keeping Jewish tradition, will immediately enjoy immortality with God or the patriarchs (e.g., 17:12; 18:23). See also *3 En.* 43:1–3; 44:7; and 1QS 3:13–4:26. In *T. Ab.* (recension A) the souls of the dead are to be judged 3 times before entering their final places of reward or punishment.

Various biblical and intertestamental apocalyptic texts link future judgment with the resurrection of the dead. In some cases judgment is not mentioned, but it is implicit in the respective destinies to be accorded the righteous and the wicked. Thus, according to Dan 12:2, some of the dead will be raised to everlasting life, but others to "shame and everlasting contempt." See also 2 Macc 7:9, 14, 23; 12:44; 14:46, which look for resurrection to eternal life but do not mention intervening judgment. 2 Esdras and *1 Enoch*, on the other hand, apparently expected a time of judgment to follow the resurrection of the dead: 2 Esdr 7:32–44; *1 En.* 51:1–5 (but see *1 En.* 22:2–13, which refers to the future judgment of the "spirits of the souls of the dead").

According to *T. Levi* 3:3 Belial and "the spirits of deceit" or "error" also are to be punished on the day of judgment. Cf. *T. Levi* 18:12, which states that the "new priest" will "bind" Belial and give his followers power to "trample on" evil or wicked spirits. Apostate angels would be judged also, e.g., *1 En.* 90:24–27; *2 En.* 7:1–2.

B. NT Usages

In the NT the day or time of judgment is generally associated with the future coming or Parousia of the Son of Man, the resurrection of the dead, and entrance into the kingdom of God.

1. Agents of Judgment. Several synoptic passages suggest that the coming Son of Man will be judge, e.g., Mark 13:26–27; Matt 25:31–46; Luke 21:36. Later NT traditions frequently name Jesus Christ as the one who will judge, e.g., Acts 10:42; 17:31; 2 Cor 5:10; 2 Tim 4:1. The coming of Jesus as judge is sometimes described as "the Day of Christ" or "the Day of the Lord," e.g., Phil 1:10; 1 Thess 5:2. See DAY OF CHRIST. Certain texts assign "the Twelve" or "the saints" (faithful Christians) a share in the task of judging "Israel" (Matt 19:28; Luke 22:30), the Church (1 Cor 5:12), the world (1 Cor 6:2), or even angels (1 Cor 6:3). Nevertheless, God himself is frequently represented as the one who will judge: Matt 18:35; John 8:50; Rom 2:2–11; 3:6; 14:10 (cf. 2 Cor 5:10); Heb 10:30–31; 1 Pet 1:17; 2:23; Rev 18:8. A few Pauline passages suggest that God and Jesus will both take part in judging: Rom 2:16; 1 Cor 4:5. In John 12:48 Jesus warns that the word he has spoken will be his hearers' judge "on the last day."

2. Recipients of Judgment. Those whom Jesus addressed in the synoptic sayings were mainly Jews, since few gentiles seem to have been present and Christianity had not yet emerged as a separate community of faith. These sayings warned his contemporaries that individuals (e.g., Matt 5:22; 12:36) and unresponsive towns (e.g., Matt 10:15; Luke 10:14) stood in peril of condemnation at the time of judgment. Later NT traditions warned individual Christians that they would be judged, e.g., 2 Tim 4:8; Heb 4:1–12; Jas 5:7–11; 1 Pet 1:13–17. Several texts imply that all persons are to be judged: Rom 2:2–16; 1 Cor 6:2; Heb 4:13; Jude 14–15 (quoting *1 En.* 1:9). The wicked (e.g., Heb 13:4) and enemies or persecutors of Christians (e.g., 2 Thess 1:5–10; Rev 6:10; 19:1–3) are singled out for special retribution. Angels, too, are to be judged: 1 Cor 6:3; 2 Pet 2:4; Jude 6.

Not only the living, but the dead also will be judged. Several synoptic texts intimate that the dead of earlier times will be raised and then judged, e.g., Matt 10:15; 12:41–42; cf. John 5:25–29. Some texts, however, say that both the living and the dead will be judged (Acts 10:42; 2 Tim 4:1; 1 Pet 4:5), and others refer simply to the judgment of the dead (1 Pet 4:6; Rev 11:18; 20:12–13), as if the dead would be judged but not raised. Luke 14:14 says that the righteous will be raised, without mention of judgment (cf. Dan 12:2). In the parable of the Rich Man and Lazarus (Luke 16:19–31), after each dies, he enters his apparently final place of habitation without first being raised or judged.

3. Time of the Judgment. Most NT references to judgment look for this event in the future (e.g., Matt 25:31–46; Acts 24:25; Rom 2:5; 14:10; 1 Cor 4:5; 2 Pet 3:7; 1 John 4:17), some explicitly in the near future (e.g., Heb 10:25; Jas 5:9; 1 Pet 4:5, 17). A few texts suggest that judgment has already taken place or been pronounced: John 16:8–11; 1 Cor 5:3–4; Rev 19:2. Some others represent judgment as present, either in connection with the presence of Jesus (e.g., John 3:19; 5:30; 9:39), or as "now" (then) imminent: John 12:31; Rev 14:6–7.

C. Modern Scholarly Opinion

Numerous biblical texts, particularly in the NT, refer to the coming day or time of judgment. Nevertheless, little scholarly attention has been devoted to this topic, in contrast, for example, to closely related topics like the coming of the Son of Man and the kingdom of God. One suspects that modern scholars prefer to deal with more congenial subjects. So suggest Brandon (1967: 56–75, 98–135), who provides an excellent review of NT and subsequent Christian traditions concerning the judgment of the dead, and Fairhurst (1970). Scholarly squeamishness is articulated occasionally, e.g., by Dalton (1968: 7): "God is primarily a God who loves, a God who saves. Hence any eschatological statement set in the context of future judgment must take into account the inadequacy of this context and must allow for this inadequacy if conclusions unworthy of God are to be avoided."

Only those willing to acknowledge as significant the eschatological orientation within apocalyptic Judaism, Jesus' teaching, and the NT churches are prepared to recognize the nature and importance of their beliefs and expectations concerning the coming time or day of judgment. Among those who do are Weiss (1985: 96–101), Schweitzer (1985: 54–56, 124–27), Burrows (1946: 203–15; 1977: 218–34), Hiers (1973: 28–36; 1981: 19–61), and Milikowsky (1988). On the idea of judgment by fire in the OT and intertestamental literature, see Gaster (1981: 649–51). A few scholars who take the position that Jesus did to some extent proclaim or embody the presence of the kingdom of God also undertake to examine his message of coming eschatological judgment. Among them are Jeremias (1963: 162–88; 1971: 122–58), Manson (1951: 269–77), Kümmel (1957: 43–48), and Hooker (1967: 148–73).

Proponents of "realized eschatology" do not ordinarly find any NT passages suggesting that Jesus looked for a future day of judgment. Glasson (1982: 528–39) urges that faithful followers of Jesus would not have to face the last judgment and cautions against a literal reading of the NT judgment passages. Instead, he concludes, "The Judgment should be regarded as a pictorial representation of a transcendent reality" (Glasson 1982: 538). Perrin (1974: 47, 300) went so far as to suggest that all gospel sayings that anticipate a future judgment are inauthentic, i.e., originated in the concerns of the early Palestinian church. Though Bultmann sometimes acknowledged that Jesus expected a future time of judgment, both he and the so-called post-Bultmannians urged that the real meaning of Jesus' eschatological preaching was that human beings continually face an existential "crisis of decision." Proponents of the recent "theology of hope," such as Moltmann and Pannenberg, tended to ignore the biblical expectation of prospective adverse judgment or condemnation.

DAY OF THE LORD. "The Day of the Lord" (= "the Day of Yahweh") is a central feature of the prophets' message to their contemporaries. This phrase and such closely related expressions as "the day of the anger of Yahweh," or "Yahweh has a day," occur over two dozen times in prophetic books (most frequently in Isaiah, Joel, and Zephaniah), and once in Lamentations (2:22). Similar terms, particularly "that day," "the day of," and "the day when," appear nearly 200 times in the prophets, occasionally in Lamentations, and twice in Psalms (Pss 110:5; 137:7). These terms often are used interchangeably with the fuller expressions or in contexts that refer specifically to one or the other of them, e.g., Isa 2:12–22 (see vv 12, 17, 20); Jer 46:10; Ezek 7:5–27 (see vv 7, 10, 12, 19); and Ezek 30:2–3. In most instances, the same ranges of meaning are suggested.

———

A. Yahweh's Judgment against Foreign Nations

A few scattered passages seem to refer to Yahweh's previous acts of judgment against foreign nations. "The day of Midian" (Isa 9:4) refers to the Midianites' earlier defeat. Most other such expressions refer to Yahweh's future punishment of various nations, e.g., Jer 50:31 (to Babylon, "your day has come"); Ezek 21:29 (the "day of the Ammonites"); Ezek 26:18; 27:27 ("day of the fall" or "ruin" of Tyre); Ezek 32:10 (to Egypt, "the day of your downfall").

Most of the prophetic books contain oracles against foreign nations. The "Day of Yahweh" and similar expressions frequently appear in these oracles. Commentators generally agree that in Amos' time "the Day of Yahweh" popularly was thought to mean the time when Yahweh would vindicate Israel by defeating its enemies. See the expressions "day of battle" and "day of the whirlwind" in Amos' denunciation of the Ammonites (1:14). In contrast, Amos warns his Israelite hearers that "the Day of Yahweh" will not be what they wanted (Amos 5:18, 20. See part B, below.). Several later prophets declared that the Day of Yahweh would be one of disaster for certain other nations, namely, Egypt (Isa 19:16; 20:6; Jer 46:10, 21; Ezek 30:9, 18), Edom (Isa 34:8; 63:4; Jer 49:22), Ethiopia (Ezek 30:9), Babylon (Isa 47:9; Jer 50:27, 30, 31; 51:2), the Ammonites (Ezek 21:29), Damascus (Jer 49:26), Moab (Jer 48:41), the Philistines (Jer 47:4), and Tyre (Isa 23:15). A few prophetic texts suggest that "that day" will be one of judgment against many or even all nations: Isa 24:21 ("the kings of the earth"; cf. Ps 110:5–6), Jer 25:33 (see 25:30–32 for context), Ezek 30:2–5 (particularly Arabia, Egypt, and other African nations), Joel 3:14 (see 3:11–12 for context), and Obadiah 15–16. The Ezekiel and Obadiah passages warned that the day was "near." Zechariah declared that "on that day" Yahweh would destroy all the nations opposed to Jerusalem (Zech 12:3–9; 14:12–13). See also Ezek 38:17–39:8 as to the fate in store for Gog and Magog.

Zephaniah proclaimed more broadly that YHWH would destroy "all the inhabitants of the earth" on the day of his wrath (Zeph 1:7–18). According to Isa 2:12–17 Yahweh's "day" will be a time of judgment not only against the pride of men, but against "all that is proud and lofty." The author of Isa 13:6–13 declared that the whole world would be punished for its evil on the Day of Yahweh which was then "near." The Isaiah Apocalypse announced that "on that day" Yahweh would even punish the cosmic powers (Isa 24:21–22), and the quasi-cosmic sea monsters (Isa 27:1).

B. Yahweh's Judgment against Israel, Judah, or the Jewish People

Yahweh's past judgment (on "the day of his anger") is emphasized in Lamentations, with reference to the events marking the end of the S kingdom of Judah and the beginning of the Exile (Lam 1:12; 2:1, 21–22). Compare Obad 11–14 and Ps 137:7, where "the day" of Judah or Jerusalem signifies the same events, which, however, are not viewed as Yahweh's judgment, but only as evil deeds perpetrated by their enemies. Isaiah 22:1–14 may also refer to an already experienced "day" of Yahweh's judgment. Ezekiel 21:25 states that "the day" of a prince of Israel "has come," but the context suggests that his punishment had yet to occur.

Characteristically, the classical prophets warned their contemporaries in Israel and Judah that "the Day of Yahweh" would soon come upon them in the form of cosmic or meteorological catastrophes or of powerful enemy armies which would bring Yahweh's judgment against them for breaking the covenant requirements of the law. Thus Amos warned Israel that the day of Yahweh would be "darkness, and not light" (Amos 5:18, 20; cf. Joel 2:1–2). The prophets point to Yahweh as the one who will ultimately cause the coming disasters as judgment against his people; most of them refer to "the Day of Yahweh" (or equivalent terms) in this connection. Examples include Amos 2:13–16; 3:14; 8:3, 9; Hos 1:4–5; 5:9; Isa 3:18–4:1; 7:18–20, 23; 10:3; 22:5; Mic 2:4; Jer 17:16–18 ("the day of disaster," "the day of evil"); 18:17 ("the day of their calamity"); 39:16; Ezek 7:7–12, 19; 13:5; 24:25–27; 38:14–19; Zeph 1:7–18; 2:1–3; Joel 1:15; 2:1–2, 11, 31; Mal 4:1, 5. Second Isaiah, Obadiah, Jonah, and Nahum, which looked only for Yahweh's blessings on Israel or Judah or for disaster for other nations, do not include this usage.

In general, the preexilic prophets proclaimed that God would punish Israel or Judah through oppression by other nations; e.g., Hos 11:5; Amos 3:9–11; Isa 5:26–30. After the Exile, when the nations Israel and Judah had ceased to exist, prophets looked for Yahweh's judgment against the Jewish people in one of two forms: "natural" disasters, such as plagues, drought, and crop failure, or "supernatural" demonic hordes, as in Hag 1:5–6; 2:14–19; Mal 3:9–12; Joel 2:1–11.

Some texts indicate belief that the Day of Yahweh was near: Ezek 7:7, 12; 22:4; Joel 2:1; 3:14; Zeph 1:7. A few others state that the day "comes" or "is coming," implicitly in the near future—e.g., Ezek 7:10; 39:8 and Mal 4:1. Malachi 3:1–2 warns that Yahweh's "messenger" is coming and warns of "the day of his coming," when he would cause the priests to offer right offerings. None of the prophetic texts, however, that look for the "Day of Yahweh" as a time of judgment against Israel, Judah, or the Jewish people refers to the "coming" of a messiah or of Yahweh himself in connection with it.

C. Future Deliverance or Blessing for Israel, Judah, Other Nations and All Creation

Some 60 occurrences of "the Day of Yahweh" and similar expressions refer to the future time when Yahweh would reestablish the fortunes of Israel/Judah or the Jewish people. A few, particularly in Isaiah, look for the redemption of other nations as well: Isa 2:2–4 (= Mic 4:1–3); 11:10; 19:18–25; 25:6–9; Zech 2:11.

Relatively few of these texts explicitly mention a future messiah or Davidic king: Isa 11:10; Jer 23:5–6; 30:8–9; 33:15–16; Hag 2:23; Zech 3:8–10; Amos 9:11; cf. Hos 1:11. (Some messianic passages do not refer to the Day of Yahweh or related terms, e.g., Isa 9:6–7; Ezek 34:23–24; 37:24–25; Zech 6:9–13; 9:9–10.) More typical are texts that look for Yahweh himself to act (Mal 3:17; 4:3), manifest his glory (Isa 2:11, 17, 19; Ezek 39:13), and rule as king over a restored Israel (Mic 4:6–7) or over all the earth (Isa 2:2–4 = Mic 4:1–3; Obad 21; Zech 2:11; 14:9) on that day.

On or in anticipation of that new day, according to Isaiah, those who had been sick or disabled would be restored to full health: Isa 29:18–19; 30:26; cf. Mic 4:6–7. Then all will enjoy the preternatural abundance of milk, honey, fruit, and produce (Isa 4:2; 7:21–22; 25:6–9; 30:23–24; Joel 3:18; Amos 9:13–15). Every man shall sit with his neighbor under his own vine and fig tree (Mic 4:4; Zech 3:10); peace will obtain throughout all creation (Hos 2:18; Isa 11:1–10; cf. Ezek 34:25–28); and all Israel (Isa 10:20; 52:6; Ezek 39:22), if not all nations (Isa 19:19–25; cf. Ezek 38:23), will know that Yahweh is God. In that day exiled Jews will return (Isa 11:11–12; 27:12–13; Jer 27:22), and Jerusalem and the Jewish people will experience God's special favor (Isa 12:1–4; 28:5–6; 30:26; Jer 31:1–6; Ezek 36:33–36; Zeph 3:11–20; Zech 9:16–17; 14:1; Mal 3:17).

D. Day of the Lord in the NT

This and similar terms often occur in NT contexts referring to the future appearance of Jesus. In reading the Greek OT (or LXX), Jews and early Christians very likely rendered the OT expression "Day of Yahweh" as "Day of the Lord." Early Christian leaders likely took over the OT expression but now understood it to refer to Jesus' return as their Lord, as the Christ, or as the supernatural Son of Man. See DAY OF CHRIST and DAY OF JUDGMENT.

E. Scholarly Literature

For many years OT scholars have accepted the view that Israelites up to the time of Amos regarded the Day of Yahweh as that time when Yahweh would deliver Israel by punishing foreign nations and that Amos radically altered this understanding by proclaiming that on that day Yahweh would also punish Israel for all her offenses (Amos 1:1–3:2). See Bright (1955: 60–70).

Not all agree as to the nature of Israelite beliefs concerning the Day of Yahweh before the time of Amos, and at least two books (Nahum and Obadiah) attributed to prophets well after the time of Amos consist entirely of oracles against foreign nations. There is wide agreement, however, that for most of the prophets, the Day of Yahweh meant that time in the relatively near future when Yahweh would punish not only his people's enemies, but also his people (Israel, Judah, or the Jewish people) for breaking the covenant. Then, either through a new Davidic king or messiah or by acting directly, Yahweh would establish his own rule or kingdom over all the earth. See Robinson (1946: 135–47); Baab (1949: 156–97); and Jacob (1958: 319–21). See, generally, Muilenburg (1961: 128–50); Heschel (1962: 159–94); and Hiers (1988).

There have been a variety of other suggestions, however, particularly as to the origins of biblical traditions concerning the Day of Yahweh. Mowinckel (1956: 143–54) urged that the prophetic expectation of a coming Day of Yahweh derived from a cultic New Year Festival which celebrated Yahweh's enthronement as king and gave expression to hope for the beginning of a new era of blessing. Others, following von Rad (1959), have concluded that the Day of Yahweh represented Yahweh as "Holy Warrior" who had overwhelmed Israel's enemies in battle in the past, and would do so again. Thus Hanson (1975: 354–401) interprets Zechariah 12–14 as the work of a visionary group which looked for Yahweh to punish particularly the Jerusalem temple hierarchy, deliver the faithful from foreign hordes, and renew the order of nature. Everson (1974), on the other hand, finds that the Day of Yahweh passages do not justify any of the theories as to the origin of the expression. He observes that several of these passages refer to different historical events. On that basis he concludes that the prophets likewise looked for separate future events of divine judgment or deliverance and that interpreters therefore should refer to the prophets' beliefs concerning the Days rather than to a single Day of Yahweh.

RICHARD H. HIERS

DAY OF YAHWEH [Heb *yôm yhwh* (יוֹם יהוה)]. An expression found in the following OT passages: Isa 13:6, 9; Ezek 13:5; Joel 1:15; 2:1, 11; 3:4; 4:14; Amos 5:18–20 (three times); Obad 15; Zeph 1:7, 14; Mal 3:23. There occur also the related expressions *yôm lyhwh* 'a day of Yahweh' (Isa 2:12; Ezek 30:3; Zech 14:1); *yôm nĕqāmâ* 'a day of retribution' (Jer 46:10); *yôm nāqām lyhwh* 'Yahweh's day

of retribution' (Isa 34:8); *yôm ʿebrat yhwh* 'the day of Yahweh's wrath' (Ezek 7:19; Zeph 1:18); *yôm ʾap yhwh* 'the day of Yahweh's anger' (Zeph 2:3; cf. Lam 2:22); and *yôm zebaḥ yhwh* 'the day of Yahweh's feast' (Zeph 1:8). There is also the phrase, "My Lord Yahweh of hosts has a day of tumult and din and confusion" (Isa 22:5).

Some scholars would insist on restricting any investigation of the meaning of the Day of Yahweh to these passages; and G. von Rad has even proposed eliminating some of them, arguing that "they do not provide the interpreter with any sure exegetical basis" (von Rad 1959: 97). But it is not really possible to ignore any of these passages. In addition, the prophetic books contain many references to the phrase *bayyôm hahû*ʾ 'on that day.' Furthermore, there are other passages (e.g., in the oracles against the nations) which may well be linked to the concept of the Day of Yahweh. R. H. Charles included Nahum in his discussion of the Day of Yahweh, and subsequent study of the text of Nahum seems to support this view (Charles 1913; Gray 1974: 19–20, 32; Cathcart 1975: 72–76).

A. Earlier Scholarship: The Eschatological Problem

In 1899 Charles gave the *Jowett Lectures* on "Hebrew, Jewish and Christian eschatology from pre-prophetic times till the close of the New Testament Canon" (Charles 1913). He believed that there existed already before Amos a popular expectation of the Day of Yahweh, an expectation that the day would be one of judgment against Israel's enemies. The Day of Yahweh was understood by Charles to be "a day of battle," a view that was to influence much subsequent scholarship on the concept. "This conception is related to the people as a whole, and not to the individual. It means essentially the day on which Yahweh manifests Himself in victory over his foes" (Charles 1913: 86–87). It is evident from the title of Charles' lectures that he understood eschatological hopes to be part of the Day of Yahweh concept from the beginning; however, he may have been mistaken, since eschatology *proper* arose in the Exile at the earliest and since the eschatological aspect of the Day of Yahweh belongs to late prophecy.

In 1901 J. M. P. Smith also understood the *popular* conception of the Day of Yahweh as a great day of battle, with Yahweh leading the armies of Israel to an overwhelming victory over their enemies. However, he believed that Amos then transformed the concept into the day of Israel's humiliation and punishment by Yahweh; the preexilic concept as reflected in Amos and Zephaniah is a day of battle and judgment against *both* Israel and her enemies. The righteousness of Yahweh demands corresponding righteousness from his people and the need for reform on their part (Smith 1901: 505–33).

Yet another scholar at this time was proposing the existence of eschatological elements in preexilic prophecy. Gressmann rejected as inadequate the view of Charles and Smith that the Day of Yahweh was a day of battle, storm, and slaughter; rather, he emphasized the cosmic frame of reference of the day, which showed its eschatological character (Gressmann 1905: 143). Gressmann believed that Israelite eschatology was borrowed from an already-developed foreign (Babylonian) eschatology, an assumption he took from Gunkel. Inspired by Gressmann's work, S. Mowinckel proposed in 1917 that the Israelite New Year Festival was the enthronement festival of Yahweh (Mowinckel 1917: 13–79). However, he differed from Gressmann, and from others before him, by rejecting the existence of a preprophetic eschatology. For him the Day of Yahweh originally means the day of Yahweh's manifestation in the cult at the New Year Festival. Eschatology and the eschatological significance of the Day of Yahweh have their ultimate source in the autumn festival, but strictly they belong to later prophecy (Mowinckel 1956: 127–33). In 1948 L. Cerny rejected outright any dependence of the origin of the Day of Yahweh on the kingship of Yahweh and on God's annual re-enthronement as king during the New Year Festival. He argued that the real meaning of the day was a day of divine decree, but he tended to overemphasize the disastrous nature of the day (Cerny 1948: 73–77).

B. Von Rad and His Critics

Although the concept of the Day of Yahweh has often been investigated, surprisingly there has not been any major study of it in recent times. For example, the German commentator on the prophets H. W. Wolff (*Joel and Amos*, Hermeneia) and the English commentator L. C. Allen (*Joel, Obadiah, Jonah, Micah* NICOT) are content simply to refer to the brief 1959 study by von Rad. As already mentioned, von Rad urges caution in the admission of evidence for the study of the concept. He is convinced that "the Day of

Yahweh encompasses a pure event of war, the rise of Yahweh against his enemies, his battle and his victory" (von Rad 1959: 103). He pays particular attention to Isaiah 13 and 34, Ezekiel 7, and Joel 2, but criticizes those scholars who take Amos 5:18 as the starting point; for in his view this text is "not sufficiently unequivocal to be used as a suitable starting point for the examination" (1959: 98). But if Amos 5:18 is somewhat difficult to interpret, it cannot be conveniently ignored. Perhaps even more serious is von Rad's view that Isa 2:12ff. "does not amount to more than an allusion" to the Day of Yahweh (1959: 105). To claim that there is no support in the Day of Yahweh texts for any association of the enthronement of Yahweh with the concept of the Day of Yahweh and yet to omit any proper discussion of Isa 2:12ff. seems suspicious. Thus von Rad excludes from his investigation the two oldest witnesses to the concept. Also problematic is his claim that the origin of the concept is to be found in the Holy War tradition. What do we know about Holy War in early Israel? The Deuteronomistic sources are scarcely sufficient for informing us about it. Von Rad's claim that "the entire material for this imagery which surrounds the concept of the Day of Yahweh is of old-Israelite origin" (1959: 104) is not convincing. An examination of von Rad's study shows that he tends to dismiss elements which might contaminate his "pure event of war." In point of fact, a good part of all the Day-of-Yahweh texts has no reference to an event of war (Schunck 1969: 16).

One of the severest critics of von Rad's position, J. Gray, has argued effectively that the Day of Yahweh "signified essentially the moment of the epiphany as King, which was the highlight of the autumn festival" (Gray 1974: 16). With this view Gray is following in the tradition of Mowinckel and J. Pedersen among others. Utilizing evidence gathered from Canaanite sources, and esp. the Baal myth from Ugarit, Gray stresses the importance of *mišpāṭ*, i.e., "the imposition of the effective rule of Yahweh as king, the main theme of the liturgy of the autumn festival with its ultimate origins in the Canaanite festival at the same seasonal crisis" (1974: 14). Furthermore, Gray argues that Yahweh's conflict with the enemies of Israel, the *Völkerkampfmythus,* is the "historification in Israel of the cosmic conflict to sustain the effective Kingship of Yahweh in the liturgy of the autumn festival" (1974: 34). Thus those features of the Day of Yahweh texts which von Rad attempts to trace back to early Israelite tradition of the wars of Yahweh are in fact to be linked with this particularization of the cosmic conflict. In Gray's view there developed later an association of the autumn festival with covenant, and he is ready to accept the full eschatological development of the Day of Yahweh in later prophetic circles.

F. M. Cross, in his study of Israelite religion (*CMHE*), believes that the views of Mowinckel and von Rad on the Day of Yahweh are not incompatible, but complementary. Cross and his student P. D. Miller are both influenced to some extent by von Rad's work on the Holy War, but Cross in particular chides von Rad for not dealing with either the origins of the Holy War in ancient Israel or the mythological elements in it. He says von Rad "fails to perceive, therefore, the reutilization of some of these mythological elements in the royal cult, in prophecy, and above all in the apocalyptic development of the concept of the Divine Warrior" (*CMHE*, 89). Despite this criticism of von Rad, it is clear that Cross and Miller take the view that the origins of the Day of Yahweh are in the Holy War traditions of ancient Israel but as these traditions were carried through the royal cult. Although Cross and his students have made a considerable contribution by their studies of the Divine Warrior and Holy War motifs, they have not yet produced a systematic study of the Day of Yahweh texts.

If there was eventually an association of the autumn festival with covenant, then serious consideration should be given to the view of F. C. Fensham, who sees the Day of Yahweh as the day when the blessings and curses of the covenant were to come into effect (Fensham 1967: 96). Whether the Day of Yahweh was a day directed against foreign enemies (e.g., Babylon or Edom), or against an unfaithful Israel, in all cases it was a day on which Yahweh punished the guilty. Yahweh is not only king and warrior, but also judge (Cathcart 1975: 75).

Whatever position is adopted concerning the Day of Yahweh, it seems necessary to distinguish between a primary day—one of intervention by Yahweh with limited effect—and a secondary day—one of universal cosmic judgment. The developed, eschatological Day of Yahweh is secondary. But granted that there is an organic continuity between prophetic preaching and apocalyptic eschatology, then there should

be no problem in accepting this distinction. Finally, two principles laid down by Y. Hoffmann should guide further research: (1) the investigation should start with Amos 5:18–20; and (2) we must not draw conclusions about an earlier text from a later one (Hoffmann 1981: 38–39).

DEAD SEA. See SALT SEA (PLACE).

DEAD SEA SCROLLS. The name given to deposits of ancient texts written in Hebrew, Aramaic, or Greek, on papyrus or leather, that since 1947 have been discovered near the W shore of the Dead Sea. This label is used in both a narrow and a broad sense. The narrow definition is restricted to mss found in 11 caves in the vicinity of Khirbet Qumran. The broad usage includes documents found at Masada, Wādî Murabba‹at, Naḥal Ḥever, Naḥal Ṣe›elim, and Naḥal Mishmar. In this review we will focus primarily upon the Qumran scrolls and will refer to the others only when they are relevant to the discussion. See also WADI MURABBAAT.

A. Discovery and Publication

The initial find, in 1947, consisted of seven rolls of leather from Cave 1. The eleventh cave was discovered in 1956. Only Caves 1 and 11 have produced relatively intact mss. The largest find, however, was in Cave 4 in 1952, which yielded thousands of fragments from more than 500 mss. The larger, relatively intact scrolls were published promptly—three by M. Burrows for the American School of Oriental Research (the Isaiah scroll, 1Q Isa[a], and a commentary on Habakkuk in 1950; and the *Rule of the Community,* then called the *Manual of Discipline,* in 1951, all now reprinted, Cross et al. 1974), and four by the Hebrew University (the *War Scroll, Hodayot,* and a fragmentary scroll of Isaiah, 1Q Isa[b], in 1954 [see Sukenik 1955], and the *Genesis Apocryphon* in 1956 [Avigad and Yadin]). Beginning in 1955 the series *Discoveries in the Judaean Desert* from Oxford University Press (DJD) became the main vehicle for publication of the fragmentary material. DJD 1 (1955) contained the fragments from Cave 1; DJD 2 (1961) contained the Murabba‘at fragments; DJD 3 (1962) the material from the "minor caves" 2, 3, and 5–10, including the *Copper Scroll* from Cave 3 and the Aramaic "New Jerusalem" text from Cave 5; DJD 4 (1965) is devoted to a single scroll, the Psalms scroll from Cave 11; DJD 5 (1968) contains a batch of material from Cave 4 edited by J. M. Allegro (but note the book length review by J. Strugnell in *RQ* 7: 163–276); DJD 6 (1977) contains another batch of Cave 4 material edited by J. T. Milik; DJD 7 (1982) yet more material from the same cave edited by M. Baillet; and DJD 8 (1990) contains the Greek Scroll of the Minor Prophets from Naḥal Ḥever (8 Hev XII gr) edited by E. Tov in collaboration with R. A. Kraft. A number of mss have received preliminary publication in scholarly journals (notably 11QMelch by van der Woude in *OTS* 14: 354–73), but there have also been major critical editions outside the DJD series: the *Targum of Job* from Cave 11 (ed. van der Ploeg and van der Woude 1971), the Aramaic fragments of *1 Enoch* from Cave 4 (ed. Milik 1976), the *Songs of Sabbath Sacrifice* (ed. Newsom 1985), the Paleo-Hebrew Leviticus Scroll (ed. Freedman and Matthews 1985), a collection of noncanonical Psalms (4Q 380–81, ed. Schuller 1986), and the fragments of Daniel (Ulrich 1987, 1989). At the time of writing, the publication of the "halakic letter" 4QMMT is awaited in *Revue de Qumran.* The latest discovery from Qumran is the so-called *Temple Scroll* (11Q Temple), which was acquired by Y. Yadin in 1967. His edition was published by the Israel Exploration Society in 1977. Much of the material from Cave 4 still awaits publication. (For an inventory of publications up to the mid-seventies, see Fitzmyer 1975, revised and updated edition currently in press).

B. Provenance of the Scrolls

These documents are usually thought to constitute the library of an Essene community (see ESSENES) which inhabited the site of Qumran and whose way of life is described in the *Rule of the Community* from Cave 1 (1QS). The scrolls come from approximately the same period as the settlement the ruins of which stand at Qumran. The date of the settlement is fixed on archaeological grounds as extending from the mid-2d century B.C.E. to 68 C.E. (de Vaux). The scrolls can be dated paleographically from the mid-3d century B.C.E. to the third quarter of the 1st century C.E. (Cross 1961). Paleography provides a relative chronology based on the development of handwriting style. Fixed points of reference are provided by dated documents from the 1st and 2d centuries C.E. (e.g., the Bar Kokhba letters from Murabba‘at and Naḥal Ḥever) and by the fact that some documents were discovered in situ (e.g., a fragment of the *Songs of Sabbath Sacrifice* was discovered at Masada and must have been placed there before the Roman siege). The presence of documents which are older than the Qumran settlement is not surprising since we should expect that the settlers would bring some documents with them. Golb has observed the peculiar lack of original documents such as letters and legal deeds in the Qumran finds (in contrast to those of Murabba‘at and Naḥal Ḥever). He has attempted to explain this fact by the hypothesis that the library did not belong to a community on the site, but to the Jerusalem temple, and had been hidden in the desert before the

onslaught of the Romans. He fails, however, to account for the community described in 1QS or for Pliny's location of an Essene settlement between Jericho and En-gedi to the W of the Dead Sea. It is conceivable that the Qumran community, because of its peculiar religious nature, did not keep deeds and records. It is also possible that such documents were hidden separately and have not yet been discovered. The association of the library with a religious settlement at Qumran remains overwhelmingly probable.

C. Community Rule Books

The documents which describe the way of life of the community provide a crucial vantage point from which to view the nature of the library. Two main books of regulations have been found at Qumran: the *Rule of the Community* and the so-called *Damascus Document* (CD). See also COMMUNITY, RULE OF THE (1QS); DAMASCUS RULE (CD); and ZADOKITE FRAGMENTS (DAMASCUS DOCUMENT).

1. The *Rule of the Community.* This book of regulation is extant in 12 copies ranging from about 100 B.C.E. to the Herodian period. An almost intact ms (1QS) was discovered in Cave 1 and was one of the first scrolls published (Burrows). Two fragments from Cave 5 covering 1QS 2:4–7, 12–14 have been published in DJD 3 (180–81) by Milik. Ten copies from Cave 4 are still unpublished, but Milik has listed the significant variants in a book review in *RB* 67: 410–16. The date of 1QS is usually put at 100–75 B.C.E., but Milik claims that the oldest ms of the work is the unpublished 4QS^{e}.

The *Rule* is composed of a number of distinct literary units. There is a general statement of the purpose of the community in 1:1–15. The rite of covenant renewal is described in 1:16–3:12 and the instruction on the two spirits follows in 3:13–4:26. Introduced by 1QS 5:1 ("And this is the rule for the members of the community") is a collection of regulations which runs to the end of col. 9. This section is quite probably composite. Formally, at least, we may distinguish the community rules in 5:1–6:23; the penal code in 6:24–7:25; instructions for a specific subgroup in 6:1–9:11 and for the *maśkîl* or instructor in 9:12–26. The last two columns of the scroll are taken up with a number of hymnic passages (10:1–8; 10:9–11:2a; 11:2b–15a; 11:15b–22).

The purpose of the community is set forth clearly in col. 5: "to be converted from all evil … to separate themselves from the congregation of perverse men … under the authority of the sons of Zadok, the priests who keep the covenant, and under the authority of the majority of the members of the community." The regulations for admission to the community bear strong, though not perfect, resemblance to the description of the Essenes in Josephus (importance of oaths, multiyear process of admission, some provision for communal property, reference to a common meal). The penal code reveals strict discipline even in minor matters (interrupting another, laughing loudly) and providing for the irrevocable excommunication of anyone who turned apostate after ten years membership.

The most difficult problem in the collection of communal regulations concerns the relation between the special subgroup in col. 8 and the community described in cols. 5–7. Vermes notes that "these three priests and twelve men are referred to nowhere else" and leaves open three possible interpretations: "whether they formed the nucleus of the sect as a whole, or the minimum quorum of the sect's leadership symbolizing the twelve tribes and the three Levitical clans, or a special elite within the Council designated elsewhere 'the Foundations of the Community' " (Vermes 1981: 91–92). In 1959 E. F. Sutcliffe suggested that they were "the first fifteen members of the Qumran Community." This suggestion has been taken up by Murphy-O'Connor, who finds in 8:1–16a + 9:3–10:8a the oldest nucleus of the *Community Rule*—a "manifesto" proposing the exodus to Qumran, possibly composed by the Teacher of Righteousness (Murphy-O'Connor (1969: 531). This is certainly a straightforward way to interpret 1QS 8:13: "and when these become a community in Israel … they shall be separated from the midst of the habitation of the men of perversity to go into the desert to prepare the way of 'Him' …" The likelihood that cols. 8–9 contain material from a stage different from that of cols. 5–7 is enhanced by the difference in views of authority in the community. In 9:7 "the sons of Aaron alone shall command in matters of justice and property and … in every decision concerning the members of the Community." By contrast, in 5:2 the community is under the authority of the sons of Zadok and under the authority of the majority of the members of the community. Murphy-O'Connor has plausibly suggested that this change is related to the expansion of the community in the archaeological phase 1b (about 100 B.C.E). He goes on to posit four stages in the

evolution of the *Rule:* (1) the "manifesto"; (2) 1QS 8:10b–12a; 8:16b–9:2 ("penal legislation for a small community); (3) 1QS 5:1–13a; 6:8b–7:25 (reformulation for expanded community); and (4) 1QS 1–4; 5:13b–6:8a; 10:9–11:22 (material from various sources of a hortatory and theoretical nature; Murphy-O'Connor 1977: 114; Pouilly 1976).

This reconstruction is attractive and at least the distinction between stages 1 and 3 is well founded, but some observations are in order. (1) In view of the paleographical evidence, the evolution of the document must have been complete close to 100 B.C.E. There cannot have been a great lapse in time between stages 3 and 4. (2) It is noteworthy that part of Murphy-O'Connor's original nucleus (1QS 8:17–9:11) is missing from the oldest ms, 4QS^{e} (Milik 1959: 123). The omission may, of course, be accidental, but nonetheless it calls for a reservation. (3) The special group of 12 men and 3 priests are said in 8:11 to be set apart as holy within the council of the community. If this passage was part of the original manifesto (Murphy-O'Connor 1969) it would seem to imply that the members of the pioneer community in the desert were selected from a larger community. Their departure does not appear to be the result of any schism in the movement. If this passage belongs to a later, second stage (Murphy-O'Connor 1977; Pouilly, 1976), it would seem to imply that such a select group continued to function within the community as Vermes proposed. (4) The diverse elements assigned to stage 4 by Murphy-O'Connor were not necessarily the latest compositions.

The treatise on the two spirits is indeed a self-contained piece which was not necessarily composed for its present context. Even if it was only integrated into the *Rule of the Community* in the final stage of its composition, it could still be older, and indeed may have a literary history of its own (von der Osten-Sacken 1969: 167). It is one of the most striking passages in all of the scrolls insofar as it attests a cosmic dualism far beyond anything in the OT. The sovereignty of God is safeguarded, but "He allotted unto man two spirits that he should walk in them until the time of His visitation" (3:18). All the righteous are in the hands of the Prince of Light, while the wicked are ruled by the Prince of Darkness. God has allotted these spirits in equal parts until the final judgment. There is a general consensus that this dualism shows some measure of Persian influence, but the channels through which this influence came about remain unclear.

The place of the treatise on the two spirits in the evolution of 1QS is important for our overall view of the theology of the community. As the document now stands, it is strongly dualistic, not only because of the passage on the two spirits, but also because the covenantal ceremony is permeated with dualism. (It is prescribed for "all the time of the dominion of Belial," 2:19). By contrast there is no reference to "two spirits" or to "Belial" in the supposedly original "manifesto." Yet it would be hasty to think that dualism was a secondary development in the Qumran community. The manifesto does not expound doctrinal beliefs, and it is certainly compatible with a dualistic view of the world: the exodus to the desert is intended as separation "from the habitation of the men of perversity." The instructor (*maśkîl*) is to "weigh the sons of righteousness according to their spirits" (9:14) and not rebuke the men of the pit but conceal the maxims of the law from them (9:16–17). There is at least an ethical dualism here, and a metaphysical dualism may already be implied. The treatise on the two spirits itself can scarcely be later than 100 B.C.E. (The suggestion that it is the work of the Teacher of Righteousness cannot be substantiated, even if it cannot be refuted either.)

2. The *Damascus Document.* The other major sectarian rule, the *Damascus Document* (CD), was already discovered in the Cairo Genizah at the turn of the century (Schechter 1910). Its relation to the Qumran scrolls is shown not only by its style and terminology but by the fact that fragments of seven mss have been found at Qumran. Of these only two have been published: 5Q12 (= CD 9:7–9 in DJD 3: 181) and 6Q15 (= CD 4:19–21; 5:13–14; 5:18–6:2; 6:20–7:1, plus a fragment not in the Genizah text, DJD 3: 128–31). The oldest fragment, 4QD^{a}, is dated by Milik to the first half of the 1st century B.C.E. (Milik 1972: 135, where he cites a passage. At present the fragments of CD have been entrusted to J. M. Baumgarten for publication).

There are two mss of CD from the Cairo Genizah: Ms A (10th century) contains cols. 1–16 on 8 sheets while Ms B (12th century) contains cols. 19–20 on 1 sheet. Columns 7 and 8 overlap with 19 and 20, but with important variants, and the last part of col. 20 has no parallel. According to Milik, the unpublished

fragments from Cave 4 show that cols. 15 and 16 should precede col. 9 directly. They also show major omissions in the Genizah mss at the beginning, middle (after col. 8), and end of the document. The outline of the work, then is as follows: (1) introduction [4Q] (2) the admonition, which consists largely of historical review but contains some laws and warnings (Ms A 1–8 and B 19–20); and (3) the laws (4Q, Ms A 15–16, 9–14, final columns from 4Q). The 4Q material at the beginning of the laws reputedly contains laws, mostly dealing with purity. The final columns contain a penal code and a liturgy for renewal of the covenant (Milik 1959: 151–52; 1972: 135; his placement of the legal fragments is questioned by Dimant 1984: 497, who relies on analogies with Deuteronomy).

In view of the overlap between CD 7–8 and CD 19–20, it is clear that the document has a redactional history. The most elaborate reconstruction has been worked out by Murphy-O'Connor, who sees CD as "a compilation of diverse documents which enjoyed an independent existence before being assembled into the present text" (1977: 121). He regards the laws (CD 9–16) as "legislation for a Diaspora community;" CD 2:14–6:1 as a "missionary document" to win Palestinian Jewish converts; CD 6:11–8:3 as an exhortation addressed to Essenes; 8:3–18 as a critique of the ruling class in Judea. He also finds an "appeal for fidelity" in cols. 19–20 (19:33–20:1b; 20:8b–13; 20:17b–22). This analysis of CD is closely bound up with Murphy-O'Connor's theory that the Essenes originated in Babylon and that the designation *šby yśr*ʿ*l* (CD 6:5, usually understood as "penitents of Israel") should be taken as "returnees." A different though related analysis has been offered by P. R. Davies, who accepts the basic unity of the admonition in cols. 1–8, but places it in the Babylonian Exile. Cols. 19–20 are viewed as part of a "Qumran redaction," which also involves glosses in col. 1–8. This latter theory, however, requires some textual surgery, esp. in CD 1, which presupposes the career of the Teacher of Righteousness (whom Davies, like most scholars, regards as the founder of the Qumran settlement).

Others besides Murphy-O'Connor regard the laws in CD 9–16 as a separate composition (e.g., Stegemann 1971: 21, 128). Against this, however, Milik claims that the Qumran fragments present the two sections as a continuous text (1959: 38–39). A few important threads link both parts of CD—e.g., reference to those who "live in camps" (7:6; 12:22), and the phrase "Aaron and Israel" (1:7; 12:23–31). The argument that the laws were designed for a Diaspora setting is based on the presence of a few laws regulating relations with Gentiles (e.g., 12:7–9). There were Gentiles in Palestine, however, and the law that the Sabbath not be celebrated in the vicinity of Gentiles (11:14) would be difficult to observe in the Diaspora. In the case of the admonition, Davies has made a strong case for the substantial unity of cols. 1–8, while cols. 19–20 necessarily reflect some redactional activity. The attempts to date any part of CD before the establishment of the Qumran community are, at best, inconclusive (see White 1987).

Whereas the rule in 1QS was designed for a quasi-monastic community (the *yāḥad*), CD provides rules for "the assembly of the towns of Israel" (12:19) and for "the assembly of the camps" (12:23). The most obvious difference is that those who "live in camps according to the rule of the land … take a wife and beget children" (CD 7:6–7), a possibility not envisaged in 1QS. The laws of CD presuppose an environment where members of the covenant come in contact with strangers and with Gentiles. They are required to contribute only two days wages a month to the common fund (CD 14:13). (1QS 1:11–12 required that members bring all their possessions into the community, but the penalties in the *Rule* presuppose that they still had some private property.) CD also legislates on the subject of temple worship (6:12) and sending offerings to the temple (11:18–22). While the interpretation of these passages is debated, they do not seem to preclude all contact with the temple and may be reconciled with the (equally problematic) statement of Josephus on the Essenes (*Ant* 18.1.5 §§18–19). There is also legislation for conduct "in the city of the sanctuary" (12:1–2).

The circumstances envisaged in CD are clearly different from those envisaged in 1QS. Yet there is general agreement that both documents pertain to the same movement or sect. The affinity between them may be illustrated by the regulations for gatherings of ten:

> "in every place where there are ten persons of the Council of the Community, let there not lack among them a man who is a priest. And let them sit before him, each according to his rank … and in the place where the ten are, let there not lack a man who studies the Law night and day …" (1QS 6:3–6).

"and where there are ten of them, let there not lack a man who is a priest learned in the Book of Meditation; they shall all obey his orders" (CD 13:2–3).

Both rules, then, provide for priestly leadership, although CD 13 (the constitution of the camps) allows that the priest may be replaced by a Levite who is more competent.

Both rules also provide for another authority figure, the "overseer" (*mebaqqēr,* 1QS 6:12; CD 13:7; 14:8). In CD 13:5–6, in the rule for the camps, the overseer is clearly distinguished from the priest. There is also an overseer of all the camps (CD 14:9), who is again distinguished from "the priest who enrolls the congregation" (14:7). In 1QS the "overseer" is probably to be identified with the *paqîd* (1QS 6:14) and the *maśkîl* (1QS 3, 9). According to CD 14 the overseer is supposed to have mastered all the secrets of men; in 1QS 3 the *maśkîl* is charged to instruct the sons of light concerning the spirits. A difference in community structure appears in the fact that in 1QS much authority is vested in the Council of the Rabbim ("Many"). There is no mention of a council in CD and the Rabbim have a more passive role; however, the term *Rabbim* is an important link between the two rules. Also, the fact that the community in CD is said to come from Aaron and Israel (1:7) parallels the division of 1QS between "the house of holiness for Aaron" and "the house of community for Israel" (1QS 9:6). Both documents refer to messiahs of Aaron and Israel. Both show a similar preoccupation with purity and holiness. Both documents attach central importance to a covenant, which is interpreted in a dualistic context. The main theological difference is that CD contains no systematic exposition of dualistic doctrine like the treatise on the two spirits in 1QS, although CD 2:2–13 parallels 1QS 3:15–4:26 in some other respects. (The contrast between Belial and the Prince of Lights appears at CD 5:18, but some have regarded this passage as redactional [Murphy-O'Connor; Duhaime 1987]). The apparent omission of the doctrine in CD may be due to any of a number of factors: the full doctrinal exposition may have been reserved for the members of the Qumran *yāḥad*; it may have been presupposed in CD, or the two documents may come from different points in the evolution of the sect. In the latter case, however, the interval cannot have been great, since both documents had reached their extant form by the beginning of the 1st century B.C.E.

Vermes has offered the best explanation for the relationship between the two rule books: they reflect the two orders of Essenes mentioned by Josephus (1981: 106–9). He further suggests that the "assembly of all the camps" (CD 14:3) took place at Qumran and that the "overseer" of the camps was the same person as the "overseer" of the *yāḥad* in 1QS. These suggestions cannot be verified, but the view that the two rules relate to complementary aspects of the life of the sect is very probable.

The "rule for all the congregation of Israel at the end of days" (1QSa), which was appended to 1QS (see DJD 1:107), confirms the overarching unity of the two branches of the sect, since it, like CD, provides for women and children, although the regulations for the council of the community and for the common meal are more similar to 1QS. Further, 1QSa specifies the stages through which a youth advanced in the sect and also legislates for the exclusion from the assembly of people smitten with impurity.

D. Biblical Texts

In view of the importance attached to the study of the Law (1QS 6:6–8), it is not surprising that biblical texts figure prominently in the library. All the books of the traditional Hebrew canon have been found, with the exception of the Book of Esther. The oldest mss date back to the end of the 3d century (4Q Sam^{b}, 4Q Jer^{a}, 4Q Ex^{b}). All are much older than any witnesses to the biblical text previously known. They have provided important new evidence for the development of both text and canon. See TEXTUAL CRITICISM (OT).

The antiquity of the traditional Masoretic Text type was confirmed by the Isaiah scrolls from Cave 1 (1Q Isa^{a} and 1Q Isa^{b}). See also ISAIAH SCROLL (1QIsa). Fragments of Samuel from Cave 4, however, provided the Heb prototype for LXX readings which differed from the MT; and the Exodus scroll in paleo-Hebrew from Cave 4 attested a text type similar to that found in the Samaritan Pentateuch (see now Sanderson 1986). W. F. Albright proposed in 1955 that three recensions of the Bible developed, in Babylonia (MT), in Palestine (Samaritan), and in Egypt (LXX). This theory was developed and refined by F. M. Cross, who concluded that the "Egyptian" LXX tradition was also at home in Palestine and that the developments were not controlled by recensional activity. Cross's theory has been taken up by his

students (Ulrich and others). Others (Talmon, Tov), however, resist the distinction of text types and argue for a more variegated transmission of the text in the Second Temple period. The paleo-Hebrew Leviticus scroll from Cave 11 lends some support to their position since it cannot be clearly aligned with any one text type. The Qumran evidence has, however, established that diverse forms of the Heb text were current down to the 1st century C.E.

The evidence on the canon is likewise controversial. The canonicity of the Pentateuch is not in doubt. Five pentateuchal mss are written in paleo-Hebrew script, a distinction also accorded to the book of Job. (The book of Hagu or Meditation, CD 10:4–6; 13:2; 14:7–8, is probably the Torah itself, but it has also been identified with the *Temple Scroll*). Formal commentaries or "pesharim" have been found for the Psalms and for the prophetic books of Isaiah, Hosea, Micah, Nahum, Zephaniah and Habakkuk. Various biblical books are quoted with the formulas "it is written" (Exodus in 1QS 5:17; Isaiah in 1QS 8:14; Hosea in CD 1:13; Deuteronomy in CD 5:2; Numbers in CD 7:19; Nahum in CD 9:5; Proverbs in CD 11:20–21), or "He said," or "it said" (Micah in CD 4:20; Amos in CD 7:14–16), or "God said" (Deuteronomy in CD 8:9–10). At other times we read that God spoke "by the hand of the prophet Ezekiel" (CD 3:20) or of Isaiah (CD 4:13) or again, without reference to God, that "Moses said" (CD 5:8) or "Isaiah said" (CD 6:8). The *Florilegium* (4Q174) strings together quotations from Exodus, Amos, Isaiah, Ezekiel and Psalms to interpret 2 Samuel 7. The second column cites Daniel in the same manner as the first cited Isaiah and Ezekiel: "As it is written in the Book of Daniel the prophet."

These citations support the general correspondence of the sect's canon with the later Hebrew Bible, but some qualifications are in order. Not all the Writings are cited formally and so we cannot be sure of their status. Moreover, CD cites the *Apocryphon of Levi* (4:15 "of which Levi son of Jacob spoke") and *Jubilees* (16:3: "it is strictly defined in the Book of the Divisions of the Times …"). Neither quotation necessarily implies canonical status, but "Levi spoke" is comparable to "Isaiah said." It is uncertain whether there was a clear distinction at Qumran between the Kethubim and other authoritative writings.

The main debate about the canon at Qumran has centered on the Psalms scroll of Cave 11 (DJD 4). This scroll contains most of the last third of the Psalter but in an unconventional arrangement. It also includes a poem identical with 2 Sam 23:1–7 ("the last words of David") and several apocryphal psalms: Psalm 151 (a variant of the corresponding psalm in the Greek Psalter), Psalms 154–155 which are also extant in Syriac, and a poem related to Sir 51:13–19, 30). There are also three psalms which were previously unknown: a "Plea for Deliverance," "Apostrophe to Zion," and "Hymn to the Creator." There is also a prose catalogue of David's compositions. This, however, is not the last item on the scroll: it is followed by Pss 140:1–5, 134:1–3 and Psalm 151.

The editor (J. A. Sanders) has argued that the Psalms Scroll was considered a portion of the Davidic Psalter. The inclusion of "the last words of David," and the prose catalogue, and the concluding position of the Davidic Psalm 151 are taken as evidence that the entire collection was thought to be Davidic. No distinction is made between canonical and noncanonical psalms. Others (most notably P. W. Skehan) have argued to the contrary that the 11Q scroll was a liturgical collection with no implications for canonicity. It is not clear, however, why a liturgical collection should include a catalogue of David's works; and, in any case, the inclusion of apocryphal psalms in a predominantly canonical collection, with no apparent distinction, is remarkable. The evidence is not conclusive (cf. Wilson 1985), but again it leaves a question as to whether the Kethubim were clearly distinguished from other authoritative writings at Qumran.

E. Biblical Interpretation

The Qumran sect had its own distinctive method of biblical exegesis (Fishbane 1988). This is most fully displayed in the continuous commentaries or pesharim on individual books, but it can also be seen in thematic pesharim which string together passages from different books (11QMelch, *Florilegium*) and in isolated interpretations of particular passages which occur in other works.

1. Continuous Pesharim. The continuous pesharim on prophetic books and psalms are extant in single mss. No copies of any of them have been found. For this reason, some scholars have proposed that they are autographs, but there is evidence that at least some of them contain copying errors (Horgan 1979: 3–

4). The mss are dated variously to the late Hasmonean and Herodian periods and so are later than those of 1QS and CD. Moreover, the Pesher on Nahum clearly refers to events in the 1st century B.C.E. (Horgan 1979: 161). It is possible, of course, that some of the commentaries are older than this or that they draw on oral tradition. The pesher style of interpretation is already evident in CD.

The underlying presupposition of this exegesis is clearly stated in the Pesher on Habakkuk, col. 7: "and God told Habakkuk to write down the things that are going to come upon the last generation, but the fulfillment of the end-time he did not make known to him … the interpretation of it concerns the Teacher of Righteousness to whom God made known all the mysteries of the words of his servant the prophets." In short, prophecy was not to be interpreted in its historical context but was assumed to refer to "the last generation." Scripture was a mysterious code and required further revelation for its true interpretation. Since the pesharim refer to some events in the 1st century B.C.E. which can scarcely have been known to the original Teacher, the task of interpretation was presumably attached to the office of interpreter of the law.

The pesharim follow a basic pattern: citation of a short passage, followed by the interpretation. The interpretation is introduced by a formula (e.g., "its interpretation concerns …") The procedure is atomistic, without necessary regard for context. The interpretation often concerns the history of the sect, and much of the interest of the pesharim derives from the light they shed on its origins (see further below).

The continuous pesharim have a strongly eschatological orientation (e.g., 1QpHab 7:7–8: "The final period will be prolonged and will exceed everything spoken by the prophets, for the mysteries of God are marvellous"; or 4QpPs ^{a} 2:7–10: at the end of forty years the wicked will perish and the poor will inherit the earth). This orientation is even more strongly evident in the thematic pesharim.

2. Thematic Pesharim. 11QMelchizedek has survived only in fragments of a single ms from the Herodian period. Nine of 14 fragments were arranged by the editor. There were originally three columns. Only the second can be reconstructed intelligibly. Here Lev 25:13 (the year of the jubilee) provides the point of departure and is interpreted with the aid of other biblical texts—e.g., it is identified with the year of favor in Isa 61:2. This in turn is said to be Melchizedek's year of favor, and he is identified with the *ʾelohîm* ('god') of Ps 82:1. Melchizedek is said to exact the vengeance of El's judgments (cf. Isa 61:2) on Belial and his spirits. See MELCHIZEDEK (11QMelch).

A similar midrashic technique is evident in the *Florilegium*, of which two fragmentary columns have survived (DJD 5:53–57). 2 Samuel 10–11 is understood to refer to "the house … at the end of days" which is alluded to in Exod 15:17–18. 2 Sam 7:11–12 ("Yahweh declares that he will build you a house") is interpreted to refer to the Davidic messiah, with the aid of Amos 9:11. Ps 1:1 is interpreted through quotations of Isa 8:11 and Ezekiel (the quotation is lost). The technique of interpreting Scripture by citing other scriptural passages departs from the normal practice of the continuous pesharim, but 11QMelch and 4QFlor use the typical formulas *pišrô ʿal* ("its interpretation, or pesher, concerns") or *pešer haddābār* ("the interpretation of the passage"). The *Florilegium* also uses the term *midrash* for its interpretation. See FLORILEGIUM (4QFlor).

Another thematic Pesher from Cave 4, the Catena (DJD 5:67–75) is very fragmentary. It describes the circumstances of the sect in dualistic terms, by interpreting a string of biblical passages. The fragmentary "Words of Consolation" (4Q*176*); DJD 5: 60–67) also consists of a string of biblical passages, but these may have been part of a larger composition. Finally the work which is introduced as a "Pesher on the Periods" (4Q*180*; DJD 5: 75–77) does not appear to be a work of biblical interpretation but a treatise on the periods of history and on Azazel and his followers. In view of the fragmentary nature of the ms, however, it is possible that it contained a thematic pesher using a number of biblical passages (col. 2 apparently contains an interpretation of Gen 18:1–2, 19:1; see Dimant 1979: 83).

In other documents, such as the Rule books, biblical quotations are often worked into the text, introduced by a phrase like "as it is written" (cf. the famous quotation from Isaiah 40 in 1QS 8:14). While CD is a veritable tissue of biblical quotations and allusions, in some cases there is more direct interpretation. Amos 5:27 is quoted in CD 7:14 and interpreted with the aid of Amos 9:11 and Num

24:17. While the word *pesher* is not used, the technique is similar, e.g., "the books of the law are the hut of the king" and "the star is the seeker of the Law" (compare CD 4:1–4; 6:3–6). The term *pesher* is used in CD 4:14, where the "terror and pit and snare" in Isa 24:17 are interpreted as the three nets of Belial. The basic style of interpretation in all these pesharim is allegorical in the sense that one thing is asserted to mean something else. The interpretation of Scripture at Qumran is similar to the interpretation of dreams and mysteries in the book of Daniel, where the Aramaic cognate *pšr* is used. The ultimate roots of this style of interpretation must be sought in the dream interpretation of the ANE.

3. Other Use of Biblical Material. Two other forms of biblical interpretation in the Qumran library should be noted: *Testimonia* and biblical paraphrases. 4Q*175* preserves almost intact a collection of biblical passages: Deut 5:28–29 + 18:18–19 (the prophet like Moses); Num 24:15–17 (the star and the scepter); Deut 33:8–11 (blessing of Levi by Moses), and a quotation from the apocryphal *Psalms of Joshua,* which includes Josh 6:26. (On the *Psalms of Joshua,* see Newsom 1988). See also JOSHUA, PSALMS of (4Q*378–379*). There is no commentary, but the collection evidently provides the basis for the messianic expectations of the sect. (Compare 1QS 9:11 "until the coming of the prophet and the anointed of Aaron and Israel"; the "man of Belial" may be a kind of antichrist [antimessiah], or an enemy of the sect [the Wicked Priest] or both.) This document has been labelled *Testimonia* by analogy with the collections of quotations which have long been posited in early Christianity (see Fitzmyer 1974). Another instance of a messianic proof text is found in 4Q Patriarchal Blessings, which cites Gen 49:10 ("The scepter shall not depart from the tribe of Judah …") and relates it to the coming of "the Messiah of Righteousness," the "branch of David." See also TESTIMONIA (4QTestim).

Several compositions found at Qumran come under the heading of biblical paraphrase. These include: the *Targum of Job* from Cave 11, which is generally a faithful rendition with only a few theological alterations, e.g., the substitution of "angels of God" for "sons of God" at 30:4–5 (Milik also claims to have identified a *Targum of Leviticus,* but it is very fragmentary, DJD 6:87); the *Genesis Apocryphon,* which is a looser midrashic elaboration of Genesis; the book of *Jubilees,* which retells the story of Gen 1:1–Exod 15:22 with strong halakic interest; and the "prophetic words of Moses" from Cave 1, a farewell speech which draws primarily on Deuteronomy but also shows some influence from Leviticus. These latter compositions are among several Moses Pseudepigrapha found at Qumran. "Ordinances," 4Q*159*, is a reinterpretation of various pentateuchal Laws. Other fragments of Moses Pseudepigrapha from Cave 4 have not yet been published. Apparently related to *1Q29* (DJD 1:130–32) are 4Q*376* + 6Q*408*, which deal with a priestly liturgy (Strugnell in Schiffman 1990). The status of these Moses Pseudepigrapha is uncertain: they may have been regarded as authoritative texts in their own right rather than as biblical interpretation. The issue here is most vividly illustrated by the *Temple Scroll,* which is largely composed of biblical paraphrase but may have been regarded as a Torah in its own right (see below). Moreover, it is not clear that any of the biblical paraphrases were composed at Qumran. *Jubilees* is generally assumed to be an older composition, and some of the others may be also. See also GENESIS APOCRYPHON (1QapGen); JOB, TARGUMS OF (11QtgJob); JUBILEES, BOOK OF.

Biblical paraphrase also plays a part in 4QEzekiel, a fragmentary work which has only recently come to light. According to the editors, "The subject matter on the one hand is based on the prophecies of canonical Ezekiel and, on the other hand, it presents historical surveys of the kind found in historical apocalypses. Most of the extant fragments contain dialogues between God and the Prophet, including occasionally also references to the Patriarchs and to King David and King Solomon. From the dialogue between God and the prophet, it appears that the narrative is pseudepigraphically located in the time of Ezekiel; it therefore refers in the past to events that occurred before Ezekiel's time, and in the future to events after the prophet's time" (Strugnell and Dimant 1988: 48). The editors also find analogies with *4 Ezra*.

F. Halakic Works

1. 4QMMT. It is evident from CD that halakic issues played a major role in the separation of the sect from the rest of Judaism. In CD 3:13–15 is the claim that God revealed to the righteous "the hidden things in which all Israel strayed" and specific mention is made of the cultic calendar. In CD 5 is found the

complaint that "they" (the opponents of the sect) defile the sanctuary and violate marriage laws. The importance of these considerations is now confirmed by 4QMMT, which is identified by its editors as "a letter from a leader of the Qumran sect (possibly the Teacher of Righteousness himself) to the leader of its opponents" (Qimron and Strugnell 1985: 400). This letter or manifesto sets out the points at which the sect differed from its opponents. According to the preliminary report, these points fall into three categories: the cultic calendar, ritual purity (esp. in connection with the temple and sacrificial cult), and laws on marital status. In 4QMMT it is specifically stated that such halakic differences were the reason for the separation of the sect from the rest of Judaism. See also MIQSAT MAʿASE HATORAH (4QMMT).

2. The *Temple Scroll.* Perhaps the most important halakic document discovered at Qumran is the *Temple Scroll.* See also TEMPLE SCROLL (11QT). The scroll, acquired by Yadin in 1967 (for the story of the acquisition see Yadin 1985: 8–55), is the longest of all the Qumran scrolls, extending for nearly 9 m. It is divided into 67 columns, of which the first is missing and the last is almost completely blank (there is nothing on the preserved portion of the column). This ms was the work of two scribes, both from the Herodian period. Fragments of other copies have been found in Cave 4. Yadin identifies the earliest copy as Rockefeller 43.366 and dates it "not later than the reign of John Hyrcanus (135–104 B.C.E.), or the beginning of the reign of Alexander Jannaeus (103–76)." Strugnell, however, denies that these fragments belong to the *Temple Scroll.* Instead they belong to "a Pentateuch with frequent non-biblical additions" which either influenced or was influenced by the *Temple Scroll* (letter cited by Wacholder 1983: 206). There are, however, unpublished fragments of the *Temple Scroll* from Cave 4 which date no later than the beginning of the 1st century (Strugnell, oral communication; the letter cited by Wacholder puts the date about 150 B.C.E.).

Since the beginning of the scroll is lost, we do not know how it was presented. Most of the extant scroll is written in the first person and the speaker is God himself. The addressee is Moses, as can be seen from the reference to "Aaron your brother" (44:5). The revelation deals with the following topics:

Col. 2	the covenant relationship
Cols. 3–12	the temple building and altar
Cols. 13–29	feasts and sacrifices
Cols. 30–44	the temple courts
Cols. 45–47	the sanctity of the holy city
Cols. 48–51:10	purity laws
Cols. 51:11–56:11	various laws on legal procedure, sacrifices, and idolatry
Cols. 56:12–59	the law of the king
Cols. 60–67	diverse laws on cult officials, prophets, military affairs, family, and sexual matters

These laws often correspond, even verbally, with the biblical laws, esp. those of Deuteronomy, but they also contain much additional material. The biblical formulations are often translated into the first person, e.g., "the place which the Lord will choose" becomes "the place in which I will put my name." The first person usage is not maintained consistently, however; the first extant column (col. 2) refers to God in the third person. Cols. 13–29 also use the third person, except that the conclusion in chap. 29 reverts to the first person. The third person is also used in the purity laws of 48–51:10, but again the conclusion (51:5b–10) reverts to the first person. Wilson and Wills (1982) have made a strong case that the variation is due not to lapses of attentiveness by the scribe but to the combination of sources, since the variation in person can be correlated with the variation between singular and plural address.

The prominence of the first person usage for divine speech highlights the problem of the nature of the *Temple Scroll*. If the document was accepted as a revelation from God, its status can hardly have been less than that of canonical Scripture. The divine name in the *Temple Scroll* is written in the square script, according to the practice in biblical books (e.g., Isaiah). In the pesharim or commentaries, in contrast, the divine name is written in paleo-Hebrew script so that it stands out from its context. Yadin (1985: 68) sees

here evidence that the *Temple Scroll* enjoyed the status of Scripture at Qumran. Wacholder goes farther and argues that the author of the *Temple Scroll* "set out to rival Moses, hoping to succeed where his predecessor had failed" (Wacholder 1983: 228) and that the scroll was the Torah of the Qumran community. On the other hand, if the scroll had such fundamental importance, it is surprising that it is not referred to more clearly in other Qumran writings.

Yadin has suggested several possible allusions in the other scrolls. The "Book of Hagu" or "Hagi" (the "Book of Meditation") is mentioned as an authoritative document in CD (10:4–6; 13:2–3; 14:6–8) and 1QSa (1:6–8). In each case someone is required to be learned in that book. It is associated with "the Constitutions of the Covenant" (CD 10:4–6 cf. 1QSa 1:6–8) and "the Judgments of the Law" (CD 14:6–8). The name is derived from Josh 1:8 ("This book of the law shall not depart out of your mouth, but you shall meditate on it day and night"). Yadin (1983, 1: 394) points out that the law of Moses is often called Torath Moshe, but this does not preclude the possibility that the "Book of Hagu" is another name for the Mosaic code. The evidence is simply inconclusive. A second possibility concerns the "sealed book of the law" in CD 4:20–51. The point at issue is the law of Deut 17:17, "he shall not multiply wives for himself," which is construed to prohibit marrying another woman while the first is alive. King David, however, is excused, because he had not read the "sealed book of the law" which was in the ark and which was not opened from the death of Joshua to the rise of Zadok. Yadin, tentatively, and Wacholder, at length, identify Zadok here as the founder of the sect and suppose that the book in question was the *Temple Scroll.* In this case, however, it makes far better sense to identify Zadok as the high priest of Solomon (see VanderKam 1984) and to suppose that the reference is to a temporary concealment of the law of Moses. Finally, Yadin refers to two fragmentary passages in the commentaries. The pesher on Ps 37:32–33 tells of a plot by the Wicked Priest against the Teacher of Righteousness "and the Law which he sent to him." This obscure passage is more likely to refer to 4QMMT than to the *Temple Scroll.* A very fragmentary passage in the Catena refers to *seper hattôrâ šēnît.* Yadin emends the text to *hašēnît* and translates "the book of the second law" (so also Allegro 1985). In view of the fragmentary nature of the text, the interpretation is most uncertain. Even if we suppose that the "Book of Hagu" is the *Temple Scroll,* the references are sparse and certainly do not support the idea that it in any way replaced the law of Moses. It may have enjoyed canonical status, but it was not the Torah of Qumran.

The question of the status of the scroll is bound up with the question of date and of its sectarian character or lack thereof. Yadin dated the scroll to "the reign of John Hyrcanus or shortly earlier" (Yadin 1983, 1: 390). He argued that the statutes of the king were relevant to the Hasmonean era in a way they had not been earlier. Column 34 deals with the rings used to fasten animals in the slaughterhouse. According to Talmudic tradition the rings were introduced by John Hyrcanus. Yadin allows that the scroll may have influenced Hyrcanus rather than reflect an established custom. He also mentions the death penalty of hanging alive as possibly relevant to the dating. Hengel, Charlesworth, and others have rightly noted that the statutes of the king and the use of hanging or crucifixion point rather to the reign of Alexander Jannaeus (103–76). The statutes would certainly have had pointed relevance in the time of Alexander Jannaeus, who used the title king, employed mercenaries, and was said to have crucified 800 Jews while he caroused with his mistresses. Nonetheless, the possibility cannot be ruled out that the statutes were developed as an elaboration and updating of the Deuteronomic law of the king and that their polemical relevance was secondary. The paleographic evidence would seem to require that at least some parts or sources of the scroll go back to the 2d century (and possibly earlier). The arguments both of Yadin and of Hengel/Charlesworth for a Hasmonean date rely heavily on the statutes of the king and do not exclude the possibility that much of the scroll may be older.

Yadin saw the scroll as an Essene composition, which confirmed the identification of the Qumran sect. He pointed to the affinities of the scroll with CD and the book of *Jubilees.* More specifically, he suggested that the "Feast of Oil" (Col. 22:14–16) explains Josephus' statement that the Essenes considered oil defiling (*JW* 2.8.3 §123) and that the provision for a latrine outside the temple city was also a distinctively Essene feature (cf. *JW* 2.8.9 §147–48); but ultimately he found "the draconic nature of all the laws in the scroll pertaining to matters of purity and to the holiness of the Temple" to be "the

determining factor of identification" (1983, 1: 399). The weakness of these arguments can be seen from the parallel with *Jubilees,* which is not usually considered a strictly sectarian work, although, like the *Temple Scroll,* it adheres to the 364-day calendar and is greatly concerned with purity. The Feast of Oil is in fact incompatible with Josephus' actual statement unless we posit a misunderstanding. Provision for a latrine outside the city is rooted in Deut 23:12–14. The scroll is conspicuous for the lack of reference to a distinct community structure, a *yāḥad,* or a new covenant. It also lacks the most distinctive theological themes of the Qumran scrolls, such as cosmic dualism or the role of Belial. Accordingly, some scholars (Schiffman, Stegemann) deny that the scroll is a sectarian composition and see it as part of the older heritage of the sect, like the book of *Jubilees.* Particularly noteworthy is Schiffman's observation (1983: 17) that the derivation of law in the scroll is fundamentally different from what we find in other Qumran documents: "whereas the other texts from Qumran see the extrabiblical material as derived from inspired biblical exegesis, the author of the *Temple Scroll* sees it as inherent in the biblical text." While there are some striking points of affinity with the laws of CD (e.g., TS 45:7–12; CD 12:1–2, on the prohibition of sexual intercourse in the temple city), these are likely to attest a common tradition rather than common authorship. The *Temple Scroll* certainly originated in priestly circles, but it lacks the explicitly polemical character of the sectarian scrolls.

The *Temple Scroll* is primarily concerned to outline an ideal temple and system of purity laws. It does not, however, describe an eschatological or messianic temple: it is "the temple on which I will settle my glory until the day of blessing on which I will create my temple and establish it for myself for all times" (29:8–10). It is, then, a reformist proposal which lays claim to divine authority, but it may be representative of circles from which the sect emerged rather than of the sect itself.

G. Hymnic and Liturgical Works

1. Nonsectarian Works. We have already noted the Psalms scroll from Cave 11, which includes psalms which are not part of the traditional canon. Some scholars see this scroll as a liturgical collection. Regardless of their canonicity, there is no reason to think that any of the psalms in the scroll were composed at Qumran or are specifically sectarian. A collection of non-Davidic Psalms from Cave 4, published by Schuller (1986), also lacks distinctive sectarian traits. Another traditional, nonsectarian prayer is found in "The Words of the Heavenly Luminaries" (4Q*504–6*; DJD 7:137–75), of which three copies survive, one from about 150 B.C.E. This is a communal prayer for deliverance, based on the covenant relationship, of a type similar to the confessions of sin in Nehemiah 9, Daniel 9, etc. See also WORDS OF THE LUMINARIES (4QDibHam). Several other liturgical works have survived in very fragmentary form. These include daily prayers (4Q*503,* DJD 7: 105–36), which seem to presuppose the solar, 364 day calendar; prayers for the festivals (4Q*508–9*; DJD 7: 177–215, also *1Q34*); a ritual for purification (4Q*512*; DJD 7: 262–86); lamentations (4Q*501*; DJD 7: 79–80; 4Q*179,* DJD 5: 75–77); and a collection of blessings which have been construed by Baillet as a ritual (4Q*502*; DJD 7: 81–105). In view of the fragmentary nature of these texts, their ultimate provenance is uncertain.

2. Thanksgiving Hymns (1QH). There are also hymnic and liturgical works which are clearly sectarian compositions. The most important of these is the collection of thanksgiving hymns or *Hodayot.* See also THANKSGIVING HYMNS (1QH). An extensive though poorly preserved ms from Cave 1 was among the earliest scrolls published. This ms dates from the Herodian period. (Two additional fragments can be found in DJD 1: 136–38.) There are also six unpublished mss from Cave 4 of which the oldest dates to about 100 B.C.E. (see Dimant 1984: 523; Lichtenberger 1980: 28) and other fragments in the same style which do not correspond to any known section of the *Hodayot*. A new edition, including the 4Q data, is being prepared by Stegemann and Strugnell. The Cave 4 fragments reportedly complement 1QH at several points and show that the order of the hymns was variable. Whereas 18 columns were reconstructed in the first edition, Lichtenberger (1980: 29) refers to 24 in the light of Stegemann's work and says that most of the fragments have now been placed.

The great majority of the units begin with the declaration "… give thanks to you, O Adonai"—hence the designation "thanksgiving hymns." There are some exceptions, however: 10:14 begins "blessed are you, O Adonai" (cf. 5:20 where "I give you thanks" is erased; 11:27, 32–33) and the opening verses of several

hymns are lost. Cols. 1 and 10:1–12 are hymns of praise to the Creator rather than of thanksgiving for deliverance. Even within the psalms of individual thanksgiving it has become customary to distinguish a number which attest to an exceptionally strong authorial personality. These hymns are characterized by personalized accounts of the distress and affliction of an individual and by the claim to be recipient or mediator of revelation (so Kuhn 1966: 22; Lichtenberger 1980: 29) and are thought to be the work of the Teacher of Righteousness. Other psalms of individual thanksgiving are thought to be "hymns of the community." The "Teacher hymns," according to Kuhn, are 2:1–19; 4:5–5:4; 5:5–19; 5:20–6:36; 7:6–25; 8:4–40. G. Jeremias, who does not make the theme of revelation a criterion, also includes 2:31–39 and 3:1–18 and extends the hymn which begins with 5:20 to 7:5. The distinction between Teacher hymns and community hymns is not universally accepted and there is disagreement about the classification of some hymns (e.g., Becker [1964] would include 2:20–30). Lichtenberger (1980: 65) remarks that not all the Teacher's works were necessarily stamped with his own personality to the same degree. Yet Jeremias (1963: 172–73) has documented significant differences in linguistic usage between the Teacher hymns and other psalms. If the Teacher was not the author of these hymns, we would have to posit some powerful personality who is otherwise unknown. The distinction of a group of Teacher hymns, then, while hypothetical, has much to commend it.

Because of their poetic nature the hymns do not give much factual information about the career of the Teacher, but they do make clear that he was driven out "like a bird from its nest" (4:9) and that he encountered opposition not only from outsiders but also from "all who joined my assembly" (5:20). The cause of dissension was evidently his claim to be entrusted with a mystery. (Compare the Pesher on Habakkuk 7:4–5, which says that God revealed the mysteries of the prophets to the Teacher).

While the "Hymns of the Community" are not as vivid in their imagery as those of the Teacher, they share the same major theological themes. These include a strong deterministic sense of the omnipotence of God and the unworthiness of humanity, e.g., col. 1, cf. 4:28–33; the importance of the covenant (evidently the sectarian understanding thereof; e.g., 2:22; 4:5); and the idea that membership in the sectarian community involves fellowship with the angels or holy ones, e.g., 3:21–23; 6:13–14.

While there is no exposition of dualism like that of the treatise on the two spirits in 1QS, there is a clear moral dualism throughout. This is most vividly expressed in the simile of the two pregnancies in 3:1–18 (which Jeremias reckons a Teacher hymn): the first issues in the birth of a messianic "wonderful counsellor," the second in the "asp" or "wickedness" (the ambiguity of the term is intentional). "Belial" occurs several times in the *Hodayot*, but it is unclear whether it is used as a proper name in its biblical sense of "worthlessness" (von der Osten-Sacken 1969: 73–76). At least in 1QH3: 29, 32 the reference is to a satanic figure, and cosmic dualism is implied.

We do not know whether the *Hodayot* were ever recited in public. A few liturgical texts contain instructions for their use. The Benedictions (1QSb) were originally appended to the *Rule of the Community* (see DJD 1:118–30). They are introduced as "words of blessing for the *maśkîl*" (i.e., to be recited by him). Blessings are provided for "those who fear God … and hold fast to his covenant" (the community), the chief priest (the title is missing but is inferred from the blessing), "the sons of Zadok, the priests," and for "the Prince of the Congregation … that he may restore the kingdom of his people forever." In light of the eschatological overtones of the latter blessing, the editors suggest that the chief priest and prince in question are the messiahs of Aaron and Israel respectively. Like 1QSa, 1QSb then, is intended for "the end of days."

Two other liturgical fragments have eschatological overtones. It is alleged by Milik (1972) that 4Q*280* belongs to a document on purities (4QTeharot). In 4Q*280:1–2* is a curse on Melchiresa which is related to the curse on the lot of Belial in 1QS2. In 4Q*286*, which is part of 4QBerakot, a collection of blessings and curses, is contained a curse on Belial and his guilty lot. By analogy with 1QS, we might suppose that such curses were recited in a covenant renewal ceremony (Milik 1972: 136).

3. Angelic Liturgy (4QShirShabb). A remarkable liturgical text, 4QShirShabb (the Angelic Liturgy), is preserved in fragmentary form in eight mss from Cave 4 (4Q*400–7*) ranging in date from late Hasmonean to early Herodian. The end of another scroll was found in Cave 11, and another fragment in

later Herodian script was found as Masada. The work consists of 13 sections, one for each of the first 13 sabbaths of the year. They evidently presuppose the 52 week, 364 day calendar, but no songs for further sabbaths have been found, despite the number of mss. The individual songs begin with the heading *lĕmaśkîl*, which may indicate either authorship or the person intended to use them. At Qumran *maśkîl* was a technical term for the master or overseer. (The word *maśkîl* is used in biblical psalms without the initial *lamed* to indicate a type of song.)

These songs call on the angels to praise God, describe the angelic priesthood, and the heavenly temple, and its sabbath worship. The climactic seventh (middle) song begins with a series of seven calls to the angels. Then the heavenly temple, with all its parts, is summoned to join in the praise. There appears to be a brief description of the divine throne, and the song concludes with the praise uttered by the *markābôt*, "chariots." The 12th song, in 4Q*405*, also contains a description of the *merkābâ*, "throne of glory," in terms heavily dependent on Ezekiel. According to Newsom (1985: 37) it is "highly likely" that 4Q*401* should be restored to yield two references to Melchizedek, one of which calls him "a priest in the council of God." The reference to the council seems to presuppose the exegesis of Psalm 82 in 11QMelch but adds the element of priesthood. 4Q*401* also contains several references to war in heaven and to the mustering of angelic hosts (Newsom 1985: 8).

Newsom (1985: 17) reasonably suggests that this composition is intended to evoke within a human community "a sense of being in the heavenly sanctuary and in the presence of angelic priests and worshippers" (cf. the first person plural forms in (4Q*400*). Only the 13th song refers explicitly to sacrifices, so it is not clear that they were envisaged as accompaniment to heavenly sacrifices, but they may have been recited at the time of the sabbath sacrifices.

There is a lack of references in 4QShirShabb to the *yāḥad* or any form of community structure which would mark it as clearly sectarian. Nonetheless, 4QShirShabb was evidently congenial to the Qumran community and throws light on the fellowship with the angels which we have seen in the *Hodayot.* It is also related to 4QBerakot, which contains praise of God and the heavenly temple as well as curses on Belial and refers explicitly to the council of the community. In view of the use of *maśkîl* and of the probable dependence on 11QMelch, it is likely that 4QShirShabb was composed at Qumran, but it is still possible that it is an older document from circles such as those that produced *Jubilees.* See also SONGS OF THE SABBATH SACRIFICE (4QShirShabb).

4. Other Works. Yet another collection of hymns associated with a maskil is found in 4Q*510–11* (DJD 7:215–62). Here the author refers to himself as a *maśkîl* (4Q*510* v 4). These hymns are intended to praise God and terrify all evil spirits (including "bastards" and Lilith).

Liturgical texts of a different kind are also announced by Milik (1959: 41). These are *Mišmarôt,* "courses," in which the rota of the priestly families' service in the temple is given in detail according to the solar calendar and is also synchronized with the lunar calendar. Fragments of calendrical texts have also been found (e.g., 6Q17).

H. Eschatological, Apocalyptic, and Related Texts

1. The War Scroll (1QM). We have repeatedly noted the eschatological orientation of works from all categories of literature at Qumran—e.g., the rule for the end of days (1QSa), eschatological midrashic works such as 11QMelch, and liturgical texts such as the Benedictions. The most elaborate and distinctive eschatological composition is the *War Scroll.* See also WAR RULE (1QM). The introductory heading is unfortunately lost. It is usually supposed that the scroll was designated as a *serek,* "rule"—cf. 1QM 3:12; 4:9; 5:3; 9:10. The main text is provided by 1QM, which preserves most of 19 cols., including the beginning but not the end. (Two small fragments are published in DJD 1:135–36 as *1Q33*.) Fragments of six mss (4Q*491–97*) have been found in Cave 4 (DJD 7:12–68). A seventh ms, previously identified as part of the *War Scroll,* is now categorized as a related document (DJD 7:69).

The opening column of the scroll lists the adversaries (Sons of Light/sons of Levi, Judah, and Benjamin against Sons of Darkness/army of Belial-troops of Edom, Moab, Ammon, Philistia, and "the Kittim of Asshur") and outlines the day of battle (the forces of light and darkness shall each prevail in three lots and in the seventh lot God will subdue Belial). Column 2 sets out regulations for a war of 40 years duration.

Columns 3–9 contain directions for deployment of troops and descriptions of trumpets and banners. In cols. 10–14 there are prayers for various occasions in the war. Columns 15–19 describe the battle against the Kittim apparently in seven lots (lots 3 and 4 are mentioned at the bottom of col. 17, but the following lines are lost).

While a few scholars accepted the essential unity of 1QM (Yadin 1962; Carmignac 1958), most have assumed a literary history. The eschatological battle in col. 1 takes place in one day and in seven lots. This outline is elaborated in cols. 15–19. Column 2, in contrast, describes a 40-year war and, moreover, lacks the contrast of light and darkness and the references to Belial which dominate col. 1. There are also duplications between different parts of the scroll. The hymn in col. 12 ("Arise, O mighty one …") is repeated in col. 19. The battle order of cols. 1 and 15–19 is at least partially reflected in cols. 7–9 (von der Osten-Sacken 1969: 52). These and other observations have led scholars to formulate contrasting theories. Von der Osten-Sacken sees cols. 1, 15–19 as the original nucleus, and dates it to the mid-2d century B.C.E. because of its affinities with Daniel. P. R. Davies, in contrast, sees cols. 2–9 as a compilation from the Hasmonean period of traditions from the Maccabean wars, while 15–19 reached its final form (seven phases of battle, Kittim) only in the Roman period (after 63 B.C.E.). He regards col. 1 as a preface supplied by the final redactor. At one extreme L. Rost argued that 1QM was written before the establishment of the Qumran community, since it lacks reference to a separate community and uses the word *yāḥad* in a nontechnical sense. At the other extreme Vermes and Davies put the final redaction in the 1st century C.E. Yadin argued for a Roman date on the basis of military tactics, but his conclusions are disputed.

The source-critical arguments are of somewhat dubious merit. Since the *War Scroll* is arranged thematically (directions for deployment, prayers, description of the battle), some duplication is natural. Even the contrast between the one day of battle in col. 1 and the 40-year war in col. 2 does not involve logical incompatibility, although at least in this case different traditions are being utilized. While cols. 2–9 are less obviously dualistic than 1, 15–19 (Davies 1977), dualistic terminology is, nonetheless, interspersed in these cols. too ("Sons of Darkness" in 3:7, 9; Belial in 4:2). New light has been shed on the development of the *War Scroll* by the fragments from Cave 4. Two mss (4Q*493* and *496*) are dated paleographically before the middle of the 1st century B.C.E. The first of these does not correspond to any known section of 1QM but is clearly part of the same work. The other contains fragments of cols. 1–4. This early attestation of both cols. 1 and 2 would seem to preclude a dating of the final redaction to the Christian era, or even to the Roman period. Another ms, 4Q*491*, presents a recension which is significantly different from that of 1QM. C. H. Hunzinger (1957) had published part of this ms as an "older form" of the scroll. This is disputed by Baillet (DJD 7:12). It includes some passages unattested in 1QM, most notably a hymnic passage in the first person where the speaker boasts that he is reckoned with the angels (or gods) and speaks of a throne of power in the council of the gods. Baillet suggests that the speaker was the archangel Michael. On the evidence of this ms it would seem that different recensions of the scroll were copied in the Herodian period and that its literary history did not follow a neat logical progression. The closest conceptual parallels are found in works like Daniel and 1QS which date to the 2d century. The expressions "Kittim of Asshur" and "Kittim in Egypt" in col. 1 can plausibly be identified with the Seleucids and Ptolemies rather than with the Romans (on the range of "Kittim" see Yadin 1962: 24–25). The sectarian origin of the scroll is open to question in view of the lack of reference to a new covenant or community. Yet the dualism of light and darkness is not attested in Judaism outside the scrolls. Reference to the "Prince of the Congregation" in 5:1 and the citation of Balaam's oracle in chap. 12 constitute parallels with CD 7:19–20. Since 1QM 7:3–4 specifically bars young boys and women from the battle, the scroll seems to presuppose that there were such people in the community (cf. 1QSa), and hence it seems that the scroll was not designed only for a celibate settlement.

The *Rule of the Community* promises not to lay hands on the men of the pit until the day of vengeance (1QS 10:19). It is quite possible that the *War Scroll* was intended precisely for that day. It was not, however, a realistic guide to warfare and is primarily concerned with matters of ritual and purity. The impracticality of the regulations is shown by the fact that "the men of the *serek*" (i.e., the fighters) are 40

to 50 years old, while those who guard the arms and prepare the provisions are 25 to 30 (7:1–3). Great attention is paid to the role of the priests. The purity of the camp was required because "holy angels are with their hosts" (7:6; cf. 12:7–8). Ultimately their hope was that God would raise among the angels the authority of Michael and the dominion of Israel among all flesh (17:7). Like the book of Daniel, the influence of which it shows at many points, the scroll relied on divine and angelic aid rather than on military power.

2. Other Texts. The *War Scroll* is perhaps the most obvious example of the affinity of the newly discovered scrolls with the apocalypses. The apocalypses which make up *1 Enoch* are found in several (Aramaic) copies at Qumran, (with the exception of the Similitudes, *1 Enoch* 37–71). Some of these copies are older than the Qumran community (see Milik 1976). Fragments of a related work, "the Book of Giants" is also found there, and fragments of a "book of Noah" and (possibly) of Lamech have been found in Cave 1 (DJD 1:84–87). In addition to the canonical book of Daniel, a number of related "Danielic" writings have been found. Milik (1956) has published fragments of the *Prayer of Nabonidus* (4QPrNab), which may have been a source for Daniel 4, and of 4QpsDaniel ar, which apparently contained a review of history from the Flood followed by a prediction with an eschatological conclusion. See NABONIDUS, PRAYER OF (4QPrNab). He also mentions a document which includes one or more visions. The visionary encounters four trees, of which the first identifies itself as Babylon. Milik speculates that they represent four kingdoms. Another unpublished composition, 4Q*243*, has been labelled 4QPsDan A, although it is not clearly related to Daniel at all. This latter text is noteworthy for mention of one who will be called "Son of God." Milik thinks the reference is to a Seleucid king, but Fitzmyer thinks rather of a Jewish messianic figure (Fitzmyer 1979: 92). Other apocalyptic or related pseudepigrapha include *Jubilees* (several copies), an Aramaic *Apocryphon of Levi*, and fragments related to some of the *Testaments of the 12 Patriarchs*, including a Heb parallel to the *Testament of Naphtali*, relating the genealogy of Bilhah.

Despite the evident interest in apocalypses and related texts at Qumran, the library has yielded no example of an apocalypse which was previously unknown and is likely to have been composed within the sect. There are, however, a few fragmentary works whose genre is uncertain but which may be apocalypses. The most important of these is 4QAmram (Milik 1972; Kobelski 1981: 24–36). This Aramaic document is introduced as "a copy of the book of the words of the vision of Amram son of Qahat, son of Levi: everything that he made known to his sons and that he commanded them on the day of his death …" It is then a testament rather than an apocalypse, but it contains a report of a dream vision in which Amram saw two supernatural beings contesting over him. One of these was called Melchiresa, who rules over darkness. The other rules over light. If Milik has reconstructed the text correctly, each figure had three names: the first called Belial, Prince of Darkness, Melchiresa, and the second called Michael, Prince of Light, Melchizedek. It is then an exceptionally full statement of the dualistic mythology which underlies 11QMelch and the opposition of light and darkness in 1QS and 1QM.

The exceptional importance of the document comes from its early date—early or mid 2d century B.C.E. It is likely then to have been composed before the foundation of the Qumran community, although the dualism of light and darkness is only attested in ancient Judaism in the Qumran scrolls.

Another quasi-apocalyptic Aramaic text is the Description of the New Jerusalem (*1Q32; 2Q24; 5Q15;* there are further fragments from Caves 4 and 11; see DJD 3:184–93). This is a vision of the ideal city in which the visionary is guided by an angel. The literary prototype is clearly Ezekiel 40–48. Another unpublished work attributed to Ezekiel will reportedly be published by Strugnell under the sigla 4Q*384–90*. Milik (1976: 254) refers to it as an "Apocalypse of Ten Jubilees." It evidently bears some resemblance to 11QMelch and to the Pesher on the Periods, but its literary form is as yet uncertain. The Book of Mysteries (*1Q27*, also composed of fragments from Cave 4), speaks of "the mystery to come" and proceeds to give the signs that these things will come to pass. A fragmentary text from Cave 4 reports a vision of Samuel which shows some affinity with Daniel (God will raise up a rock and a kingdom which people of all lands will know). A very fragmentary text, *6Q14*, is labelled "an apocalyptic text" by the editors for no apparent reason. Another allegedly eschatological text (which may not, in fact, be such) is

4QMess ar, the so-called "Elect of God" text. This Aramaic fragment is a horoscopic prediction of the life of an individual who is called the "Elect of God," but that title is not necessarily messianic. The reference may be to Noah (so Fitzmyer 1965). See also ARAMAIC "MESSIANIC" TEXT (4Qmess ar). It should be noted that such compositions as 11QMelch and 4Q2Ezekiel (see E above) are also closely related to apocalyptic literature.

I. Miscellaneous Compositions

Several other categories of literature are represented in the Qumran library. These include:

sapiential works such as "The Wiles of the Wicked Woman" (4Q*184*, DJD 5:82–85), which is similar to the warning of Proverbs 1–9, and other admonitions (4Q*185* and the unpublished 4Q*371*);

horoscopes: 4Q*186*, written in archaic Heb letters (with some Gk ones) from left to right, comments on physical and psychological features, assigns portions in the "houses" of light and darkness, and specifies astrological signs (4Qmess ar also falls in this category);

list of treasures: one of the most puzzling of all the Qumran documents is the *Copper Scroll* (3Q15; DJD 3: 201–302). See also COPPER SCROLL (3Q15). Two scrolls were discovered which appear to have originally formed a single plaque of copper-based metal. On this was inscribed, in postbiblical Hebrew, a list of 64 deposits of gold, silver, aromatics, and mss. Because of the enormous amount involved, Milik, the editor, was convinced that the list was fictional. He also argued that the author was not an Essene, because of the lack of distinctively Essene features but also because of the language and orthography. Others, however, (e.g., Golb 1985) have argued that the list records the disposition of the treasures of the Jerusalem temple. There is no close parallel to the *Copper Scroll* in the Qumran library, but Milik notes a similar preoccupation with detail in such imaginative documents as the Description of the New Jerusalem and the *War Scroll;*

a quasi-medical text? An obscure fragment, 6QTherapeia, is interpreted by Allegro (1985: 235–40) as "a clinical report on some aspects of Essene therapy." This fragment consists of ten lines, and Allegro's published photo is largely illegible. Allegro's interpretation has now been decisively refuted by Naveh (1986), who suggests that the document in question is merely a writing exercise.

J. History of the Community

The origin of the Qumran settlement is dated on archaeological grounds to the second half of the 2d century B.C.E. (probably prior to the reign of John Hyrcanus, 135–104 B.C.E., but not by much; de Vaux 1973: 5). Most scholars date the activity of the Teacher of Righteousness to this period. See also QUMRAN, KHIRBET; TEACHER OF RIGHTEOUSNESS. The major dissenters from this consensus (Dupont-Sommer 1973, who favors the 1st century B.C.E., and Driver [1951] and Rabin [1957], who argued for a 1st century C.E. date) have found few followers in recent years. There have been several idiosyncratic proposals in recent years (Thiering [1979]; Eisenmann [1983], diversely, for an Herodian date; Golb [1985] denies that the library belonged to a Qumran settlement), but they have made little impression on the scholarly debates. The dominant consensus (Vermes, Cross, Milik) sees the Essenes as an offshoot of the Hasidim of the Maccabean period which broke away when the Hasmoneans took over the high priesthood, to which they had no traditional right. The "Wicked Priest," who appears as the adversary of the Teacher in the pesharim is usually identified as Jonathan Maccabeus, alternatively as Simon (so Cross). (For a very skeptical review of the discussion, see Callaway 1988).

The primary internal evidence for the history of the community is found in the *Damascus Document* (CD) and the pesharim. Only CD provides a narrative account of its origin. According to CD 1 God caused "a root of planting to spring from Israel and Aaron" 390 years after he delivered them into the hand of Nebuchadnezzar, king of Babylon. It has been argued, for metrical reasons, that the chronological data are added as a gloss (Davies 1983: 63), but even if this be granted, their evidence cannot be disregarded because they preserve the sect's own recollection of its history. The chronological precision of the information is questionable. The figure 390 is taken from Ezek 4:9. If it is extended by 20 years until the arrival of the Teacher, by 40 for his career, and by another 40 from his death until the overthrow of his opponents (CD 20:15), we arrive at the classic figure of 490 (the "seventy weeks of years" of Daniel 9). It is then a schematic figure which gives at best an approximate date in the early 2d or late 3d

century B.C.E. CD 1 goes on to say that this "plant root" was "like blind men" for 20 years until the arrival of the Teacher of Righteousness.

Some scholars (Murphy-O'Connor, Davies) have argued that the origin of the movement can be traced back further to the Babylonian exile. Their arguments rest primarily on the interpretation of disputed passages in CD. In CD 3 God is said to establish his covenant with a remnant, and this statement follows directly on the description of the Babylonian exile. In the context of CD, however, this passage must surely be understood in light of the chronological data of CD 1: i.e., the new covenant should be placed "390 years" after the Exile. Other writings from the 2d century (the Apocalypse of Weeks in *1 Enoch, Jubilees*) skip over the postexilic period in a similar way. Again the phrase *šby yiśrā*›*ēl* (CD 4:2–3; 6:5) is translated by Murphy-O'Connor as "the returnees of Israel" (Davies takes it as "the captivity of Israel"). CD 6:5 says that those who dug the well of the Law were the *šby yiśrā*›*ēl* who went out from the land of Judah and sojourned in the land of Damascus. These are men of understanding from Aaron and men of wisdom from Israel and must be identified with the plant root of CD 1. In 4:2–3 the priests are the *šby yiśrā*›*ēl* who went forth from the land of Judah. In these cases, however, the "going out" is not the indiscriminate deportation of exiles but the voluntary separation of a reform movement. Consequently, most scholars translate *šby yiśrā*›*ēl* as "penitents of Israel" (compare the phrase *šby peša*‹, "those who turn from sin" [CD 2:5; 20:17]). Moreover, the "plant root" is explicitly said to be a penitential movement in CD 1:8. The geographical significance of Damascus remains in dispute. It is variously taken as Babylon, Qumran, a place or state of separation from Jewish society, or literally as Damascus. The identification with Babylon depends on the broader theory that the movement originated in Babylon, and in view of the symbolic language of CD a literal reference to Damascus is improbable. The reference to Damascus symbolizes separation from Jewish society, whether Qumran is specifically intended or not. The general sense is clarified by CD 8:16, which refers to the *šby yiśrā*›*ēl* "who departed from the way of the people" (for a critique of the Babylonian hypothesis, as based on CD, see Knibb 1983).

If the development of the movement is located in Palestine in the early 2d century, it must be seen in the context of other developments at that time. The Apocalypse of Weeks (*1 En.* 93:1–10; 91:11–17) speaks of the emergence of "the chosen righteous from the eternal plant of righteousness" at the end of the seventh "week." The Animal Apocalypse (*1 Enoch* 83–91) speaks of "small lambs" who begin to open their eyes and who find a leader in a horned ram, which is evidently to be identified with Judas Maccabeus. *Jubilees* 23:26 tells how "the children will begin to study the laws" in a time of crisis. A group of wise teachers (*maśkîlîm*) play a key role in the prophecy of Daniel 10–12. Many scholars (e.g., Hengel) take all of these passages and also CD 1 as references to the Hasidim, who are known from the books of Maccabees (1 Macc 2:42; 7:12–13; 2 Macc 14:6). We have little direct information about the Hasidim. They were militant supporters of Judas Maccabeus, and they sought peace with the high priest Alcimus, who betrayed them. Their support of Judas Maccabeus is compatible with the lambs of the Animal Apocalypse, but scarcely with Daniel or CD. The Maccabean books tell us nothing of the beliefs or organization of the Hasidim. Nonetheless, there was evidently some relationship between the various reform groups of the Maccabean era. It may be that "Hasidim" was a loose umbrella term which covered more positions than are indicated in the books of Maccabees. It is not possible, however, to relate all the references to groups in the Maccabean era to a single organization. Since CD refers to a "new covenant," this movement at least was formally organized. The Enoch apocalypses, by contrast, make no reference to the organization of their groups and so can scarcely be identified with the plant root of CD, although they were related to it (contra Davies 1987: 107–47, who speaks of the Apocalypse of Weeks and *Jubilees* as "Essene texts.")

It is not fully clear from CD at what point the new covenant was formed. In CD 1 two stages are distinguished, the emergence of the "plant root" and the arrival of the Teacher 20 years later. In CD 3 it is said that God established his covenant with a remnant; and when they sinned, God forgave them and established a sure house for them. If two distinct stages are meant here, as in CD 1, then the covenant was probably established before the Teacher arrived. In CD 6, however, one continuous process is envisaged. The elect group from Aaron and Israel dig the well of the Law with the "staffs" provided by the

interpreter of the Law (presumably the historical Teacher; CD 6:11 refers to another eschatological figure who will teach righteousness at the end of days). In CD the Teacher is seen as confirming and establishing the covenant, so that there is no discontinuity with the "plant" which preceded him. It is not clear how far the movement had separated itself from the rest of Judaism before the arrival of the Teacher. Most scholars assume that at least the settlement at Qumran came about after his arrival.

In CD the Teacher is opposed by the Man of Scoffing who "let flow over Israel the waters of falsehood" (1:14–15). This figure is elsewhere known as "the Man of the Lie." He is mentioned again in 8:13; 19:26; and 20:15. The latter passage refers to the end of "all the men of war who went with the Man of the Lie." He also appears in the Pesher on Habakkuk 2:1–2; 5:8–12; and 10:9–13. There he is grouped with the traitors who "were not faithful to the covenant of God" (2:3–4) and rejected the words of the Teacher. He is also said to have rejected the Torah and rebuked the Teacher in a council where the "house of Absalom" failed to oppose him (5:8–12) and to have established a congregation with deceit (10:10). He is also mentioned in the Pesher on Psalm 37, where he is said to have led many astray and caused them not to listen to the Teacher (a further alleged reference in 1QpMic 10:2 is not actually attested—see Horgan 1979: 60).

The pesharim also refer to an opponent of the Teacher called "the Wicked Priest" (1QpHab [1:13]; 8:8–13; 8:16–9:2; 9:9–12; [9:16–10:1]; 10:3–5; 11:4–8; 2:2–10; 4QpPs 37 4:8–10). We are told that this figure "was called by the true name at the beginning of his course, but when he ruled in Israel he became arrogant, abandoned God, and betrayed the statutes for the sake of wealth" (1QpHab 8:9–13). He is also said to have persecuted the Teacher, when the latter was observing the Day of Atonement (11:4–8). Several passages predict his punishment at the hand of God.

Some scholars assume that the Wicked Priest and the Man of the Lie are one and the same (e.g., Vermes). Jeremias and Stegemann have argued strongly that they are distinct. The Man of the Lie is the leader of a group which rejected the authority of the Teacher. The Wicked Priest is a high priest of Judaism as a whole. While both are enemies of the Teacher, only the priest is accused of defiling the sanctuary. The feud with the Man of the Lie concerns the true teaching. It appears then that the Teacher was involved in two disputes, one with the high priest and another with a rival teacher.

The points of dispute between the "new covenant" and "all Israel" can be inferred from CD. All Israel erred with regard to "his holy sabbaths and his glorious feasts" (CD 3:14–15), i.e., the cultic calendar. It is well-known that the Qumran community held to the 364 day calendar, which is attested in *1 Enoch, Jubilees,* and the *Temple Scroll.* Furthermore, CD 4:15–5:15 expounds the "three nets" in which Belial ensnared Israel—lust (by marrying two women in their lifetime), riches, and defilement of the sanctuary by failure to observe purity laws. Much light will be thrown on the points of dispute between the sect and other Jews by the publication of 4QMMT, supposedly a letter from a leader of the sect (possibly the Teacher of Righteousness) to a high priest (possibly the Wicked Priest). From the preliminary description of this document it seems that the main issue concerned the cultic calendar, ritual purity, and marriage laws.

Many scholars have supposed that the occasion for the break away of the sect was the assumption of the high priesthood by the Hasmoneans, either by Jonathan, who was appointed high priest by the Syrian king Alexander Balas in 152 B.C.E. (so Vermes, Milik, and most scholars) or by Simon, who was both recognized by a Syrian king and acclaimed by the priests and people in 140 B.C.E. (so Cross). Recently some scholars have also held that the Teacher of Righteousness was himself high priest during the interval between the death of Alcimus and the accession of Jonathan. (Stegemann; Murphy-O'Connor says he was de facto high priest; Josephus, *Ant* 20.10.3 §237 says that the office was vacant for seven years. Elsewhere he says that Judas Maccabeus had functioned as high priest and that the interval was only four years, *Ant* 12.112 §434; 13.2.3 §46.) The Teacher is called "the priest" in 4QpPs37 2:19; 3:15 (compare 1QpHab 2:8), and it has been claimed that this absolute designation is elsewhere reserved for the high priest in the postexilic period (Stegemann, Murphy-O'Connor). This claim is not justified, however (see Collins 1989: 166). Ezra is called "the priest," and he is not generally thought to have been a high priest. Moreover, the succession to the high priesthood is not an issue in CD (nor in what has been

made public of 4QMMT). In 1QpHab 8:8 we are told that the Wicked Priest was called by the name of truth at the beginning of his course and only "betrayed the statutes" when he ruled in Israel and became arrogant. It would seem then that he was not considered to be illegitimate because of his descent or to have usurped the rightful office of the Teacher. Rather, the objections to him were that he violated the *halakôt* of the sect by his wealth and impurity (1QpHab 8:10–13; 12:8–9). Besides, the Wicked Priest took the offensive against the sect. We are told that he pursued the Teacher to his place of exile on the Day of Atonement "to swallow them up and to make them stumble on the fast day, their restful sabbath" (1QpHab 11:4–8; cf. 4QpPs37 4:8–10). From this it would seem that the Wicked Priest attempted to suppress the observance of the heterodox calendar. The polemic against him in the pesharim may be a reflex of his own hostility to the sect. Yet, from 1QpHab8 it would seem that better things had been expected of him. If the followers of the Teacher had been among the Hasidim who supported Jonathan, their disappointment would be understandable. (On the Teacher and the high priesthood see Burgmann 1980. Van der Woude [1982] has proposed that each reference to "Wicked Priest" in the Habakkuk pesher refers to a different individual. While this is not persuasive, it is possible that the title is used for more than one of the Hasmonean high priests.)

The Man of the Lie is depicted in the scrolls as one who rejected the Teacher and caused others to do likewise. From CD 20:11–13 it appears that those who "turned back with the men of scoffing had been members of the new covenant. It would seem then that the advent of the Teacher brought about a split in the movement that had existed up to that point. The only reason given is that the Man of the Lie refused to accept the teaching authority of the Teacher. This may have been a matter of personal rivalry, or may have resulted from a new proposal of the Teacher (e.g., the establishment of the Qumran settlement, so Murphy-O'Connor).

Scholars have understood this split in the movement in various ways. In Stegemann's reconstruction, the followers of the Man of the Lie became the Pharisees (those who broke off). Murphy-O'Connor and Davies suppose that the followers of the Teacher were confined to Qumran, while those of the Man of the Lie became the "non-Qumran Essenes" (cf. Garcia-Martinez 1985, who argues that the Essenes originated in Palestine in apocalyptic circles in the early 2d century, but that the Qumran community resulted from a schism in the Essene movement). The latter suggestion is implausible because CD clearly comes from the Teacher's movement. Yet it legislates for life in camps and in towns—i.e., in several settlements. Moreover, the accounts of the Essenes in Philo and Josephus have most affinities with the quasi-monastic *Rule of the Community* which is presumably the rule of the Qumran settlement; yet they both say that the Essenes were found throughout the land. There is no evidence of a schism between the Qumran community and other Essenes. Stegemann's suggestion on the origin of the Pharisees is attractive but cannot be verified conclusively. There are indications that the withdrawal to the desert was not entirely voluntary. In 1QH 4:8–9 the hymnist (presumably the Teacher of Righteousness) says that he was driven out like a bird from its nest. The retreat to Qumran, "to expiate iniquity" (1QS 8:3), may also have been a way of escaping from hostile opponents, some of whom persisted in their pursuit (1QpHab 11:4–8).

From the archaeology of Qumran it appears that the community attracted an influx of new settlers in the early first century B.C.E.—possibly Pharisees fleeing from Alexander Jannaeus (who appears as the "Lion of Wrath" in the pesher on Nahum). The site of Qumran was abandoned for several decades at the end of the 1st century B.C.E. after it had been destroyed, perhaps by the earthquake of 31 B.C.E., perhaps by the Parthian invasion of 40 B.C.E. The settlement was finally destroyed by the Romans during the First Jewish Revolt (66–70 C.E.).

K. Character and Significance

The identification of the Qumran community as an Essene settlement is well established. See ESSENES. Yet the character of the community as it emerges from the scrolls is very different from that conveyed by Philo and Josephus in their descriptions of the Essenes. The ascetic tendencies of the community arise not from the pursuit of philosophical mysticism or from the dualism of mind and body but from the observance of priestly purity laws, the dualism of light and darkness, and the expectation of divine judgment.

The priestly character of the community is pervasive and is reflected in its leadership and even in the name "sons of Zadok." (See Davies 1987: 51–72, on the limitations of what can be inferred from this term.) It is also reflected in the sense of participation in the angelic world, which is evident in hymnic compositions, such as the *Hodayot* and 4QShirShabb. Some of the most fundamental points at issue between the community and other strands of Judaism pertained to cultic and purity laws—notably the calendar. In the scrolls, however, these issues are viewed in a particular context (see Collins 1984: 115–41). Right observance depends on right revelation, which in this case is provided by the inspired exegesis of the Teacher (and presumably of his successors). The revelation of Qumran also contains an understanding of the world and of history which is enshrined in the *Rule of the Community.* The dualistic opposition of the two spirits provides a new context even for such a traditional institution as the covenant. The persistent importance of this dualism is shown by the *War Scroll,* which was copied in the Roman period. While other documents (CD, the *Hodayot*), do not expound the dualism of the two spirits, they also ascribe a role to Belial as a supernatural enemy of God and thereby attest the essential structure of dualism.

We have repeatedly noted the eschatological orientation of the scrolls. Several documents attest a periodization of history, culminating in the penultimate age of wrath, in which the community lived. The settlement in the desert was supposed to prepare the imminent way of the Lord (1Q58), and rule books were prepared for the community of the end of days (1QSa) and for the final war. The scrolls frequently refer to the coming of the messiahs of Aaron and Israel—the eschatological counterparts of the priest and the overseer of the actual community. We should expect that the level of eschatological fervor rose and fell during the two centuries of the community's existence, but attempts to trace development in the extant literature have not been successful. The Pesher on Habakkuk shows an awareness of the problem of the delay of the end times, but insists that all of God's times will come in their fixed order (7:9–14). While the *War Scroll* cannot be simply assigned to the Roman period, the late copies of it show the continued vitality of eschatological hope. Whether that hope led the community to participate in the revolt against Rome in the belief that the day of vengeance had come, remains a tantalizing but unanswerable question.

The primary importance of the Dead Sea Scrolls is that they greatly enrich our understanding of Judaism around the turn of the era. Not only do they preserve the actual documents of a sect which had been known through second (or third) hand accounts; they also preserve a range of documents which were not strictly sectarian but illustrate the variety of Judaism. In recent years increasing attention has been paid to the presence of nonsectarian material in the Qumran library (conceivably including the entire Aramaic corpus). In some cases this material sheds light on the pre-Maccabean period, from which we have so little material. The scrolls also show that variety in text and canon persisted at the turn of the era and help dispel the mirage of normative Judaism in this period.

Christian scholars have naturally been preoccupied with the relevance of the scrolls for the NT. Sensational attempts to find direct references to Jesus or John the Baptist in the scrolls have not entirely disappeared but have been thoroughly discredited. The significance of the scrolls for the NT is less direct, but more far-reaching. The scrolls attest another Jewish community which, like the early Christians, lived in the belief that the end of days was at hand and that its struggle was with principalities and powers, and which reinterpreted the Scriptures in that context. There were of course great differences between the priestly Teacher and the miracle worker from Galilee, between the pursuit of purity at Qumran and the Christian mission to the Gentiles. Yet the scrolls have provided a wealth of comparative material which will continue to occupy NT scholars for the foreseeable future (Stendahl 1957; Vermes 1981: 211–25).

JOHN J. COLLINS

DEAD, ABODE OF THE. Several terms are used to denote the abode of the dead in the Hebrew Bible, and they often occur in parallelism to one another. The most common is *šĕ›ôl*. Both *šĕ›ôl* and *māwet*, "Death" are often used in Hebrew to refer to the realm of death as well as to the personified chthonic power behind death and all that is associated with it. See MOT. Hebrew *›ereṣ* is simply "earth" yet, as with Ug *›arṣ* and Akk *erṣetu*, it too can designate the netherworld. The words *šaḥat* and *bôr* both refer to the abode of the dead as the "Pit." Hebrew *›ăbaddôn* is another poetic name for the underworld usually translated "Perdition" or " (place of) Destruction."

Several terms are used to describe the abode of the dead in the NT as well. The word *hadēs* most commonly translates *šĕ›ôl* in the LXX and is used ten times in the NT. It shares many of the physical characteristics of Sheol, and it too can designate either the underworld or the personified lord of the underworld. The NT also refers to the abode of the dead as the "Abyss" (*abussos*). 2 Pet 2:4 mentions Tartaros, which is well known from Greek mythology for its great depth. GEHENNA is also used to describe the eschatological hell of fire where the ungodly are punished after death.

3. The Inhabitants of Sheol
C. Other Designations for the Abode of the Dead
D. Hades In the New Testament

———

A. Etymology of Sheol

Sheol is the most common word used in the Hebrew Bible to refer to the abode of the dead, occurring some 66 times (including repointing MT's *šĕ›ālâ* in Isa 7:11 to *šĕ›ōlâ* following the reading *eis hadēn* in Aquila, Symmachus, Theodotion, and most commentators). Interestingly, Sheol is not found in any of the cognate languages. There is no description of any extrabiblical myths about Sheol as we have with other chthonic figures mentioned in the Hebrew Bible such as Mot and Reshep. There is an extrabiblical reference to *šĕ›ôl* in Cowley's Aramaic papyri #71 (*CAP* 180–81; cf. Sir 41:4 and Yadin 1965: 41).

Because of the significance of *šĕ›ôl* there has been a long history of scholarly debate concerning its etymology with suggestions ranging far and wide. Lo proposal has met with unanimous consensus. The following are just a few of the etymologies which have been advocated. A more nearly complete list may be found in Spronk (1986: 66–67).

(1) Delitzsch suggested a putative Akk *šu›ālu* meaning "underworld" (1881: 121; 1886: 145 n. 2) and was followed by many (e.g., Jastrow 1897: 165–70; Gunkel 1895: 154; and others; cf. Tromp 1969: 21). The Akkadian has been misanalyzed (see the critiques of Jensen 1890; Heidel 1949: 173 and esp. von Soden 1970), and thus this widely held proposal should be abandoned.

(2) Jensen (1890: 131) pointed out the equation *ši-la-an = e-reb* ^{d}*UTU-ši* and connected biblical *šĕ›ôl* with the descent of Šamaš, the sun (deity), into the underworld (cf. *AHW* 1235). This proposal is far from certain and was even retracted at a later time by Jensen himself. This need not detract from the large role which the sun deity (e.g., Šamaš in Mesopotamia and Šapšu at Ugarit) played in underworld activities and the cult of the dead (see Lewis 1989: 35–46).

(3) Albright (1918: 209) noted how etymologists were handling *šĕ›ôl* "somewhat gingerly" ever since Delitzsch's "unlucky adventure with an assumed *šu›ālu*." At first Albright (1918: 209–10) played it safe by looking to Akk *ša›ālu*, "to ask," "to decide," and thus *šĕ›ôl* would be equivalent to "a place of decision (of fates)." Later however, Albright (1926: 151–52; cf. Baumgartner 1946: 233–35) was himself more adventurous, looking to Akk *šu›ara* to illuminate biblical *šĕ›ôl* (supposing the interchange of *r* and *l*). According to Albright's view *šu›ara* would be a modified form of *šubaru/subartu*, which is associated with the Tammuz cult and equated with Ḫubur, the river of the netherworld (cf. Gelb 1944: 92–98; *CAD* Ḫ 219; *AHW* 352 s.v. *ḫubur*). This, too, is strained, and later we find Albright (1956: 257) embracing yet another analysis of *šĕ›ôl*, namely, the place of ordeal/examination arising out of a forensic context (see (5) below).

(4) In 1946 and again in 1956 Koehler reacted against those looking for the etymology of *šĕ›ôl* among Akkadian words and asserted that *šĕ›ôl* is "a good simple Hebrew word." In *urhebräisch*, says Koehler, "there could have existed an ancient form **šĕ›ô*, which is no longer extant" to which was added "the epenthetic final consonant *l*" resulting in the word *šĕ›ôl.* Accordingly, concluded Koehler, *šĕ›ôl* may be derived from the root *š›h* (cf. nouns *šā›ôn, šĕ›iyyâ, šē›t*) and may denote a desolate or devastated place, which is best translated by "No Land" (*Unland*) designating a world "where are found shadowiness, decay, remoteness from God: Nothingness" (1956: 19–20; cf. KB, 935).

(5) The most plausible etymology for *šĕ›ôl* is also the most obvious and the least strained, i.e., to derive it from the verb *š›l,* "to ask, inquire." This proposal has been suggested on and off through the years with slightly different nuances. A. Jeremias (1887: 62, 109) suggested "Ort der Endscheidung/Ein (for)derung," yet this has not been adopted by many scholars. More likely are the following theses. Jastrow (1897: 169–70; cf. 1900: 82–105) and others (König 1933: 474; *IDB* 1: 787–88) suggested a place of inquiry referring to the practice of necromancy. Jastrow (1900: 89–92) found 28 times where *š›l* is used of consulting oracles including references to consulting the spirits of the dead in Deut 18:11 and 1 Chr 10:13. Oppenheim (1956: 221–23) has argued that *š›l* could also have the technical sense referring to necromancy in the story about Saul and the necromancer at Endor (1 Sam 28:6) and compares the roles of

the *šā›iltu*-priestess in Akkadian (cf. Lewis 1989: 104–17). One could also compare the use of *š›l* in connection with the *tĕrāpîm* (Ezek 21:26), which van der Toorn (fc.) and others have connected to ancestral cults (cf. Akk *eṭemmē ša›ālu,* "to consult the spirits of the dead").

As mentioned in (2) above, Albright's last understanding of the etymology of *šĕ›ôl* emphasized the underlying forensic aspect of the root *š›l.* McCarter's (1973: 407–8) study of the river ordeal in ancient Israel concluded likewise that *šĕ›ôl* may have originally meant "the place of interrogation." Finally, compare Rosenberg (1980: 8–12), who has provided the most detailed study of *šĕ›ôl* to date. She too emphasizes the forensic aspect of the imagery underlying the use of *šĕ›ôl* and suggests "a semantic development from inquire > call to account > punish."

B. Sheol in the Hebrew Bible

1. Depiction of the Place Sheol. We have few descriptive details of Sheol in comparison to the elaborate depictions of the underworld found in Egyptian and Mesopotamiam literature (Rosenberg 1980: 166–67). One thinks immediately of the Egyptian "guide books" for the dead in the underworld (*dat/duat*), which lead the dead through various gates, portals, and caverns. The Mesopotamian story about the descent of Isthar into the netherworld describes the entrants' journey to "the land of no return" (*māt la târi*), which is a place "bereft of light where their sustenance is dust and their food is clay." Gates and guardian gatekeepers are common to both traditions. For a discussion of the various names for the underworld in Mesopotamia, see Tallqvist (1934).

Sheol is typically depicted as a place to which one "goes down" (*yrd;* e.g., Num 16:30; Job 7:9; Isa 57:9; cf. Isa 29:4; Ps 88:3–4; *KTU* 1.161.21–22; 1.5.6.24–25; CAD A2: 216 s.v. *arādu*). It represents the lowest place imaginable (Deut 32:22; Isa 7:11) often used in contrast with the highest heavens (Amos 9:2; Ps 139:8; Job 11:8). To emphasize further the depth of Sheol we also find *šĕ›ôl,* as well as *›ereṣ* and *bôr* (see C below), modified by *taḥtît/taḥtiyyôt* (e.g., Deut 32:32; Ps 86:13; Ezek 31:14–18), usually translated "the lowest parts of the underworld." Sheol is often associated with various water images (Tromp 1969: 59–66). The best example of this imagery can be found in Jonah 2:3–6, which couples *šĕ›ôl* with numerous terms for the chaotic waters including Sea (*yām/yammîm*), River (*nāhār*), breakers (*mišbārîm*), waves (*gallîm*), waters (*mayîm*), and the deep (*tĕhôm*) (see Cross 1983: 159–67). Rosenberg (1980: 102–69) has noted the stereotypical fixed formulas employed in such passages (e.g., Jonah 2:3–6; Pss 42:8; 69:2–3, 15–16; 88:7–8). Building on the analysis of the river ordeal by McCarter (1973: 403–12) and Frymer-Kensky (1977), Rosenberg proposed that the water imagery has more to say about divine judgment than about an actual description of the locale of *šĕ›ôl.* Rosenberg's contributions to understanding the forensic context of *šĕ›ôl* are many. Yet the crossing of water as part of one's travel to the underworld is too persistent in the ANE not to be underlying the imagery of biblical Sheol to some degree, even if the water imagery is used primarily in forensic contexts. Compare *ḫubur* in Akkadian (CAD Ḫ, 219), which is a designation for both the place of the river ordeal and the netherworld.

The gates of Sheol are mentioned several times in the Hebrew Bible (Isa 38:10; Pss 9:14—Eng9:13; 107:18; Job 38:17; cf. Jer 15:7). As mentioned above, gates and guardian gatekeepers are prominent in the Egyptian and Mesopotamian conceptions of the netherworld. The same concept continues in later Jewish (Wis 16:13; *3 Macc.* 5:51) and Christian (Matt 16:18; cf. Rev 1:18) literature. Similarly, Jonah 2:7—Eng2:6 describes the "bars" (*bĕrîḥîm*) of the underworld (cf. Job 38:10; the common translation "bars of Sheol" in Job 17:16 [cf. RSV] is doubtful). Both of these images have to do with the imprisoning power of Sheol and its impassable nature, which prevents escape. Compare Job 7:9, *yôrēd šĕ›ôl lō› ya‹aleh,* "he who goes down to Sheol does not come up" and the Akkadian description of the netherworld as *māt la târi*, "the land of no return." See also BELIAL. Compare also the ropes and snares of Sheol/Death (2 Sam 22:6 = Ps 18:5–6—Eng18:4–5).

Darkness is a key characteristic of netherworlds (Held 1973: 179 n. 53), and this holds true for Sheol as well. It occurs in parallelism with *ḥōšek,* "darkness" (Job 17:13; cf. Lam 3:6; Job 18:18) as does *›ereṣ,* "underworld" (Pss 88:13; 143:3). One of the etymologies proposed above would see *šĕ›ôl* as the place where one engages in necromancy. If this etymology is valid, it would be significant to note that necromantic rituals regularly took place at night (1 Sam 28:8; Isa 45:18–19; 65:4), the time during which

it was thought appropriate to consult those who live in darkness (Lewis 1989: 12, 114, 142–43, 160). Sheol is also characterized by dust (Job 17:16; 21:26; Ps 7:6–Eng Ps 7:5; cf. Gen 3:19) and quite often silence (Pss 31:17–18; 94:17; 115:17; Isa 47:5; cf. Allegro 1968: 82–84; Ps 28:1).

Sheol is intimately connected with the grave, although the degree to which it is identified with the grave has been debated. On one extreme we have those who see the grave behind every reference to Sheol, while on the other extreme Sheol and the grave are kept totally separate. An example of the former view is that of Harris, who has repeatedly emphasized (1961, 1980, 1986) that Sheol always means simply "grave" and never "underworld." The problem, notes Harris (1980: 892), "is the theological one." "Does the OT teach, in contradiction to the NT, that all men after death go to a dark and dismal place where the dead know nothing and are cut off from God?" The fact that "both good men (Jacob, Gen 37:35) and bad men (Korah, Dathan, etc., Num 16:30) go there" presents insurmountable difficulties. If Sheol does not mean simply "grave," asserts Harris, then all we are left with is the early Church's inadequate notion of a *limbus patrum* (1986: 59; 1980: 892). The weakness of Harris' view is his lack of any appreciation for the solidarity and shared legacy which the biblical authors had in common with their ANE environment (Harris does not cite any extrabiblical literature from either Mesopotamia, Ugarit, or Egypt). There are other ways of addressing the difficulties which lie behind the question of who goes down to Sheol (see B.3 below).

Of a less extreme nature is Pedersen (1926: 461–62), who asserts that Sheol is the netherworld, but:

> The ideas of the grave and of Sheol cannot be separated … The dead are at the same time in the grave and in Sheol … Sheol is the entirety into which all graves are merged … Sheol should be the sum of the graves … The "Ur"-grave we might call Sheol … Where there is grave, there is Sheol, and where there is Sheol, there is grave.

Heidel (1949: 170–91) also demonstrates how Sheol refers to the underworld as well as the grave.

An example of the other end of the spectrum is Rosenberg (1980: 168–69), who argues that Pedersen and others have been too influenced by the extrabiblical material which describes the grave as forming "a veritable continuum with the underworld." "The concept of the grave and of Sheol or its semantic equivalents," remarks Rosenberg, "were consistently kept apart … no concept of 'Ur' grave is attested in the Bible." Sheol in this view is simply the underworld.

2. Personification of Sheol. In the Hebrew Bible the word for death (*māwet/môt*) often refers to the realm of death as well as to death personified (see MOT). The same can be said of Sheol. Zimmerli (1983: 152) comments that "the lack of the article in all the occurrences [of Sheol] in the OT would certainly suggest that the word still had something of the ring of a proper name about it." There seems to have been a fluidity between Sheol/Death as a person and a locality. We might mention a similar notion in Mesopotamia where *ḫubur* and *irkallu* are used as both a term for the netherworld and as a name of a deity (CAD Ḫ, 219; I, 178; see Hades discussion below). Sheol, like Death, is described in the Hebrew Bible as having an insatiable appetite (Isa 5:14; Hab 2:5; Prov 27:20; 30:15b–16) which is remarkably reminiscent of Mot's voracious appetite in *CTA* 5.1.19–20; 5.2.2–4. Compare also the swallowing imagery used of Sheol (Prov 1:12; cf. Ps 141:7). Isaiah 25:8 plays on this imagery and turns the tables by having Yahweh swallow up Death forever.

Twice in Hos 13:14 Yahweh is described as ransoming Ephraim from the grasp of personified Sheol and Death (Andersen and Freedman, *Hosea* AB, 639–40). In Isa 14:9 Sheol seems to be the personified monarch of the kingdom of the dead, who rouses the shades of the dead to greet the tyrant of Babylon. Compare also Isa 28:15, 18, where the leaders are accused of making covenants with Sheol//Death (Irwin 1977: 26–29).

Ancient Near Eastern names contain theophoric elements and thus many scholars (e.g., Parker *IDBSup,* 224; cf. Westermann 1984: 328–29; Sarna, *Genesis* JPS, 36) analyze the personal name Methushael in Gen 4:18 as "Man of [the god] Sheol." Others, however (e.g., Cassuto 1961: 233; Speiser, *Genesis* AB, 36; *HALAT,* 618), would analyze Methushael as "man of god/El." See also METHUSHAEL.

3. The Inhabitants of Sheol. The denizens of Sheol are called the REPHAIM. A great deal of literature has been written on the nature of the Rephaim especially since the publication of Ugaritic texts where

they are mentioned extensively (*CTA* 20–22 = *Ugaritica* V and *KTU* 1.161). See (*IDBSup*, 739) and L'Heureux (1979) for bibliography. On *KTU* 1.161, a funerary liturgy which invokes the Rephaim, see Lewis 1989: 5–46.

A great deal of attention has also been paid to the nature of those who go to Sheol. It has commonly been asserted that Sheol in the Hebrew Bible is the place where all the dead, both righteous (Jacob and Samuel being given as prime examples) and wicked, eventually reside (e.g., Gray, *Kings* OTL, 102; Pedersen 1926: 461–62; cf. Harris cited above in B.1). Other see Sheol as the habitation of the wicked only. Thus Heidel (1949: 184–91) asserts that "there is no passage which proves that *Shĕ›ôl* was ever employed as a designation for the gathering-place of the departed spirits of the godly." Similarly Rosenberg (1980: 178–252) proposes that Sheol is associated with the concept of premature or "evil death," which was distinguished from the common fate of all humans. On the other hand, "natural death is accompanied by unification with kin, and Sheol is never mentioned" in these contexts. The place where one is "gathered to his/her kin" is never specified says Rosenberg, yet "it is never jointly mentioned with Sheol." "Evil death … results in delegation to Sheol, which is never described as an ancestral meeting place." Rosenberg does not go as far as Heidel, and she admits that in some contexts Sheol may connote the meeting place of all the dead (cf. Ps 89:49—Eng 89:48). Nevertheless, its most common usage is a place for the wicked.

Another pertinent question is whether those who resided in the underworld could be consulted through necromancy. It is commonly asserted that there was no cult of the dead in ancient Israel because such practices were expressly forbidden (Deut 18:11) and, furthermore, "the dead know nothing" (Qoh 9:4–6, 10; cf. Job 7:9; 14:21). Yet the Wisdom tradition is not consistent with other texts which show that the dead were in fact consulted (e.g., 1 Samuel 28; cf. the designation of the spirits of the dead as *yiddĕ‹ōnî* < *yd‹*, "to know"). While the Yahwism which became normative may have been resolute in its condemnation of cults of the dead, such practices were carried out in some forms of popular religion in ancient Israelite society (see ANCESTOR WORSHIP; Lewis 1989).

C. Other Designations for the Abode of the Dead

While the most common word to designate the abode of the dead in the Hebrew Bible is *šĕ›ôl*, numerous other terms were also employed as semantic equivalents (cf. Tromp 1969: 23–128 for a complete list of various suggestions all of which cannot be substantiated). Often these terms are used in parallelism with *šĕ›ôl*. They are found in contexts similar to those used of *šĕ›ôl*, including similar phraseology and imagery. Heb *māwet*, "Death," like *šĕ›ôl*, is often used to refer to the realm of death (Ps 6:6—Eng6:5; Prov 7:27) as well as to the personified chthonic power behind death and to all that is associated with it such as disease, sterility, drought, etc. (Hab 2:5; Job 18:13–14; 28:22; Isa 28:15, 18; Hos 13:14; Ps 49:15; Cant 8:6). See MOT for a description of the Canaanite deity of death and the underworld who goes by the same name. Heb *›ereṣ* is simply "earth" yet, as with Ug *›arṣ* and Akk *erṣetu*, it too can designate the netherworld (*HALAT*, 88; CAD E: 310–11; *AHW* 245 s.v. *erṣetu;* Tromp 1969: 7, 23–46; Rosenberg 1980: 29–52; Tallqvist 1934: 8–11). Like *šĕ›ôl, ›ereṣ* is also modified by *taḥtît/taḥtiyyôt* (cf. Zimmerli 1983: 39) to denote the depths of the netherworld. Hebrew *šaḥat* (e.g., Ps 16:10; Job 17:13–14; Isa 38:17–18; Jonah 2:3–7) and *bôr* (e.g., Isa 5:14; 38:18; Ezek 31:16; Pss 30:4—Eng 30:3; 88:4–5—Eng 88:3–4; Prov 1:12) both refer to the abode of the dead as the "Pit." (See Tromp 1969: 66–71; Rosenberg 1980: 53–89; and esp. Held 1973: 173–90, which includes a detailed analysis of the etymology of *šaḥat*) Another poetic name for the underworld is *›ăbaddôn*, usually translated "Perdition" or " (place of) Destruction" <*›bd*, "to perish" (Job 26:6; 28:22; 31:12; Ps 88:12—Eng 88:11; Prov 15:11; 27:20). The personification of Abaddon (cf. Job 28:22, where Abaddon and Death are speakers) leads to the notion of a destroying angel (*›apolluōn* in Greek) of the abyss (Rev 9:11). See also APOLLYON. In rabbinic literature Abaddon comes to designate the place of punishment and damnation = Gehinnom. See also ABADDON.

D. Hades In the New Testament

In the LXX *šĕ›ôl* is most commonly translated *hadēs.* As with Sheol and its semantic equivalents, Hades can either refer to the underworld or be personified. The description of Hades parallels that of Sheol

above (B.1). As with Sheol, Hades is a place to which one goes down, and it too represents the lowest depths in contrast to the highest heavens (Matt 11:23; Luke 10:15). Hades has the familar "gates" (Matt 16:18) which are prominent in the netherworlds of ANE and Greek mythology. Compare especially the mention of "keys of Death and Hades" in Rev 1:18.

In Greek mythology (*Iliad* 15.188; cf. Nilsson 1955: 452–56; Burkert 1985: 194–200) Hades occurs as the proper name of the gatekeeper/god of the netherworld. The netherworld was called the "house of Hades" and eventually simply Hades. Likewise in the NT Hades occurs in personified form (Rev 6:8). Death and Hades give up the dead and are then thrown into the lake of fire in Rev 20:13–14.

The question of who resides in Hades is just as acute a problem as it is for Sheol (see discussion above). Most scholars affirm that changes in the understandings of retribution and immortality, most likely through the influence of Persian and Hellenistic thought, resulted in different eternal abodes for the righteous and the wicked (cf. *1 Enoch* 22). The abode of the wicked dead comes to be a place for punishment and torment; the abode of the righteous dead comes to be a place of happiness and bliss. The development of both these concepts is notably absent from the Hebrew Bible. According to Jeremias (*TDNT* 1:147–49) Hades sometimes denotes the abode of both the godly and the wicked (Luke 16:23; Acts 2:27, 31; cf. *Ant* 18.14; *JW* 2.163). At other times (1 Pet 3:19; cf. *JW* 3.375) it appears to be a designation of the abode only of the ungodly, with the righteous residing in paradise or some similar environment (Luke 16:9; 23:43; cf. 2 Cor 5:8; Phil 1:23; Heb 12:22; Rev 6:9; 7:9). Where Hades denotes the abode of all the dead, it is described as a temporary holding place until the resurrection, when Hades gives up its dead (Rev 20:13). This is further underscored by the demarcation between Hades and GEHENNA, which is used to describe the eschatological hell of fire where the ungodly will be punished after death (Matt 5:22). There is one place, however, where Hades is described as a place of torment (Luke 16:23). Yet in contrast to much of later Christian literture, the "torments of hell" are not elaborated upon in the NT.

The underworld is also described in the NT as the "Abyss" (*abussos*), often translated "Bottomless Pit" (Luke 8:31; Rom 10:7; Rev 9:1–2, 11; 11:7; 17:18; 20:1, 3; see Jeremias, *TDNT* 1:9–10). In 2 Pet 2:4 mention is made of casting rebel angels into Tartarus. In classical Greek mythology murky Tartarus was said to be as far below Hades as earth is below the heavens, so much so that an anvil could fall for nine days and nights until it reached it. Tartarus is described as a prison with gates, and it too is personified (Homer *Iliad* 8.13–16; Hesiod *Theog.* 713–35).

Hades plays an essential role in Christian theology. Hades cannot prevail over the Church (Matt 16:18) because Christ holds the keys to Death and Hades (Rev 1:18). Compare Isa 25:8, above, where Yahweh swallows Death (Mot) forever. In fact, those who die are sometimes thought not to be in Hades but are rather united with Christ (Luke 23:43; Phil 1:23; 2 Cor 5:8). The description of the descent of Christ into Hades and his preaching to the spirits of the dead (1 Pet 3:18–20; 4:6) led to the doctrine of Christ's *descensus* (Selwyn 1947: 337–62).

THEODORE J. LEWIS

DEATH. This entry consists of two articles covering the subject of death in the OT and in the NT.

OLD TESTAMENT

Late 19th- and early 20th-century study of death in the Hebrew Bible focused on immortality, the future life, the development of the concept of resurrection, and eschatology. From the mid-20th century the diversity of perspectives on death in the OT has received the greatest attention. Acknowledgment of the long history reflected in the texts, as well as recognition of the diverse folk and "official" Yahwistic views, has made it complicated to suggest any normative concept. The richness of perspectives on death emerges because of the multifaceted way Israel speaks of the intersection between life and death.

There is a complex of terms which circumscribe the Hebrew concept of death. Just as in English, there are diverse verbal and nominal terms which are employed to speak of death (e.g., perish, decease). Most of the efforts to understand the Hebrew perspectives have begun lexically with words derived from the common Semitic root *mwt.* In biblical Hebrew these words include the verb *mût,* "die" (e.g., Gen 2:17) and the noun *māwet,* "death" (e.g., Ps 6:6—Eng6:5); cf. *TWAT* 4:763–88. In other verbal patterns (conjugations) *mût* may be translated "kill" (e.g., 1 Sam 14:13) or "slay" (e.g., Gen 18:25). Several OT texts personify death by referring to the Canaanite deity Mot (e.g., Jer 9:20—Eng9:21), whose name stems from this common Semitic term.

Some of the other Hebrew terms employed for death are: *ʾābad,* "perish" (Job 4:7, 9, 11, 20); *hārag,* "kill, murder, slay" (Gen 12:12; 2 Sam 3:30); *ḥālal* (Ps 88:6—Eng 88:5); *nākâ,* "kill, smite" (Gen 4:15; Ps 135:10); *tam,* "consume, destroy" (Deut 2:14, 15, 16); and many others. In addition, metaphors such as "sleep" (Deut 31:16) further shape the concepts of death. Greater understanding of the diverse

perspectives on death will develop only after these various terms have been studied. While the terms sometimes function in tandem, they often appear separately in distinct genres, from different social contexts, and within contrasting perspectives.

Even though most of the study of death has concentrated on Heb *māwet,* there is no consensus on how best to display the Hebrew Bible's diverse understandings. It is not surprising that in many discussions the intersection of life and death provides the backdrop (Fohrer 1972: 214–22; Kraus 1986: 162–68). Death, after all, is the opposite of life, even in traditions where concepts of life after death are prominent. Dahood (*Psalms III* AB, xli–lii) is one of the few who in recent times discussed Israel's understanding of death in the context of immortality and resurrection. Because there was little if any vision of an afterlife in Israel, it is almost unanimously agreed that the country's "healthy materialism" and "healthy eroticism" required it "to examine the meaning of man's earthly existence to a degree and to a depth seemingly without parallel in the thinking of its contemporaries" (Vawter 1972: 170–71).

A great deal is known about the ANE understandings of death (Bailey 1979: 5–21). Israel's neighbors, so far as evidenced by artifactual and literary remains, show a significant interest in elaborate rituals to fend off the panoply of demons, ghosts, and gods associated with death and the underworld (see MAGIC [ANE]). There exist stories of persons seeking immortality (Gilgamesh's attempt to find eternal life for his dear friend Enkidu), of evil figures bringing death and disease on humans (*Rešep*, the NW Semitic god of pestilence, may be named in Deut 32:5; Hab 3:5; and Job 5:7), and of incantations and various apotropaic charms to fight off death, which, along with a host of institutions and social practices point to the power death exerted on these people. While all religions of the ANE think of their deities as bringing forth life, there were also those deities who terrorized and attacked humankind. The polytheism of these religions presented a rhythm between death and life, a rotation between ascending and descending power which was sewn into the fabric of human existence.

Hebrew literature does not hide a sense of death's power nor does it sequester death from life as though it did not exist. The reminiscences of Israel's seeking to placate or communicate with the dead are heard (1 Sam 28:8–14; Isa 8:19ff.), but intolerance for any cult of the dead is the dominant position.

Death is seen as the normal end of life. The notations of the death of important individuals (Gen 23:1–2; 35:29), as well as of multiple individuals (Josh 5:4; 10:11) are found throughout the literature. A "good" death is portrayed when an individual dies with sufficient offspring and at an old age (Gen 25:8; 46:30). Humankind must accept mortality (2 Sam 14:14), while Yahweh was thought to perdure (Pss 18:47—Eng18:46; 90). Death was a problem when it came prematurely. Whatever their understanding of premature death, it is here where humans begin questioning, whether in a polytheistic or monotheistic context.

The questioning may begin with the etiological question, how did death first come about? Religions account for death in the midst of life either as a part of creation or as something which came into the world after creation. These stories can be classified into seven or eight different types (*EncRel* 4: 251–59). Genesis 2–3 is the locus for Israel's etiology. Some think this represents two original stories (Bailey 1979: 38). The one etiology suggests that death is a punishment for disobeying God, while the other understands it as a part of the original plan for humans. The OT does not suggest which etiology is more appropriate. In fact, there seems little preoccupation with the origin of death. However, understanding death as a part of some original plan is far less compatible with the wide range of texts.

The questioning for Israel focused far more on how to understand the invasion of death into life. This invasion was not articulated predominantly through speaking of divine powers which were threatening Yahweh and with whom battle must be done. Yahweh was the source of life and death. It was not possible to place the blame on competing divine forces. Yahweh could give or take away life (2 Kgs 20:1–11). Life was dependent on the deity whether one looked at this from an individual or communal perspective. Life, as biological or physical existence, was significant; but Israel looked to qualities of relationship with the deity to express the meaning of life and hence the relationship of it to death. The relationships could be expressed in terms of the covenant theme (*IDBSup*, 220). However, this is by no means the most prominent conceptualization.

The most significant theme for Israel was the understanding that life provided an opportunity for the individual and community to praise Yahweh. Praise of God was the sign of life. The inability to praise was a signal of death, even in life. The Hebrew Bible is replete with the idea that death constitutes silence and that the major characteristic of life is to praise Yahweh (Ps 30:9–11—Eng 30:8–10; Isa 38:16–20). Since praise took place in the cult, life was constituted in the special space provided by God. Life was not merely a biological or natural phenomenon. It was a spatial phenomenon. The images of the underworld (e.g., Sheol, Pit), as the space apart from Yahweh, obviously assist in the depiction of life. Death appears as a parallel to Sheol (Prov 5:5; 7:27).

One of the major differences of opinion about the OT understandings of death centers around whether death is viewed predominantly with fear. There are magnificently crafted Hebrew texts on the fear of death. The conclusion of Qoheleth is among the most provocative (12:1–8). The reader is placed before the fact that among all the images of the undoing of nature no death is more profound than the reader's own. There is certainly a deep sense of fear in being brought before this reality. However provocative these expressions of fear are, they do not provide the dominant perspectives. Anger and hostility in the face of death are more common expressions (Psalms 6, 102). Few contemporaries are able to express so vividly the horror of death's invasion into the midst of life. Whatever perspective is taken on the issue of the fear of death, it is widely agreed that the Hebrew Bible contains ample expression of the anger and grief experienced in the face of death. This finds its greatest focus in the Psalms and some of the wisdom literature.

Proverbs presents another interesting theme. This centers in the relationship of life and death to Wisdom. The possession of Wisdom is identified with life in Proverbs 1–9. A person who obtains long life may possess Wisdom, but more importantly in this portion of Proverbs, long life is not the consequence of wisdom. It is what constitutes life. So death is not so much a consequence associated with folly or, as expressed in Proverbs 1–9, of associating with the "strange woman." Death is an expression of a mode of living apart from life (Prov 8:35–36).

This living in life or living in death is expanded in Proverbs through one of the instructions regarding the "strange woman." The man is encouraged to be "infatuated" (Heb *šgh*) with his wife (Prov 5:19–20). On the other hand, he is exhorted not to be "infatuated" (*šgh*) with the "strange woman." The section concludes with the line describing the man who does not follow the advice.

> He dies *yamût* for lack of discipline,
> and because of his great folly he goes astray (*yišgeh*).
> (Prov 5:23)

The Hebrew word *šgh* plays on a double meaning in this passage. It expresses in the concluding verse, not any kind of biological cessation of life, but rather a straying or "infatuation" with folly in this life. "Infatuation" or intense relationship with appropriate objects, as evidenced by the distinction between the two women referred to earlier, is to be encouraged. The folly embodied in the "strange woman" and the death connected with her are not shunned because death is understood as a natural part of existence and therefore not to be feared. "Dying" is understood as a negative way of living. It is a mode of living over against the way (*derek*) of life (Prov 2:19; 5:6; 6:23).

The major English work on death in the OT by Bailey (1979) indicates three senses: (1) a "metaphor for those things which detract from life as Yahweh intends it"; (2) "as a 'power' in opposition to the created order"; and (3) "for biological cessation." While it is recognized that the dominant focus of the Hebrew Bible is the metaphoric, Bailey's "primary concern" is with biological cessation. In the final analysis a threefold distinction, whether Bailey's or another very similar one (symbolic, mythological, and biological), brings OT literature into discussions of various contemporary issues such as bioethics and care for the dying (Bailey 1979: 97–101). The recent discussions do not relegate the OT to a mere proem for the NT.

On the other hand, the threefold senses domesticate the Hebrew Bible perceptions of death. A focus on biological cessation undercuts the dynamic intersection of death with life. Israel, maybe because of its history, is more at home in understanding death through all its faces as a radical challenge to life. The

tripartite understanding unnecessarily isolates Israel's developing monotheistic perspective from its ANE neighbors' polytheistic understandings, which influenced Israel's ideas more than is frequently suggested. Death can be understood and accepted as a natural part of God's order, but the people of the Hebrew Bible experienced individual and communal death, which was far more pervasive than biological cessation.

KENT HAROLD RICHARDS

NEW TESTAMENT

In the *Phaedo* of Plato (ca. 427–347 B.C.), Socrates philosophizes about death before he drinks the poison. Death is defined as "a release and separation from the body" (67.D; cf. 66.E). For the "soul is immortal" (*athanaton* 73.A). In life the soul is "entirely fastened and welded to the body and is compelled to regard realities through the body as through prison bars" (82.E). The soul, therefore, "never willingly associated with the body" (80.E, cf. "hostile to the body" 67.E). So at death the soul is "freed from the body as from fetters" (67.D). To be afraid to die is to love the body more than wisdom (68.B, C). In facing his own death, Socrates had no fear and looked forward to the release. He took the hemlock "very cheerfully and quietly drained it" (*Phd.* 117.C). See also SUICIDE.

Homer (9th century B.C.) likens the generations of men to the coming and going of leaves on a tree (*Il.* 6. 145–50). The Babylonian *Epic of Gilgamesh* records, "When the gods created mankind, they destined death for man." Perhaps these ideas are joined in Plato's view of reincarnation, a view which may also have roots from the Pythagoreans (6th century B.C.) and Egyptians. Plato considered that souls existed previously "apart from bodies" (*Phd.* 76.C), that "the living are generated from the dead, just as much as the dead from the living" (*Phd.* 72.A). So death is both "god ordained" and confined to the body alone, as the immortal soul returns to many earth lives but never dies. Hesiod (*Theog.* 213) and Diodorus Siculus (15, 25.2) represented death as a sleep.

The words "death" (Gk noun *thanatos, teleute*), "dead" (Gk adj. *nekros*), and "die" (Gk verb *apothnēskō*) occur in the NT. The NT speaks of God alone as immortal (1 Tim 6:16). By contrast, the NT refers to humans as mortals (Col 1:16; cf. Heb 1:2), evidenced by their death (1 Cor 15:21–22) and by the promise of a future gift of immortality at the PAROUSIA (1 Cor 15:53). Death, for humans, is universal (Heb 9:27). The only two exceptions in Scripture are Enoch (Gen 5:24; Heb 11:5) and Elijah (2 Kgs 2:11).

Death does not appear to be a part of God's original plan for the race. "The wages of sin is death" (Rom 6:23); "Death came through a man" (1 Cor 15:21); "sin entered the world through one man, and death through sin" (Rom 5:12). Death is linked with God's judgment (Rev 2:11; 20:6; 21:8).

Romans 5 compares Adam and Christ. (Christ is called "the last Adam" in 1 Cor 15:45). In opposite ways each "Adam" made a contribution to death. Romans 5:12–19 is a parallelism, noting the gifts to the race made by each "Adam." Just as one sin (Rom 5:16), "one trespass" (Rom 5:18), brought condemnation and death to the whole race, so "one act … brings life for all" (Rom 5:18). The one act of the second Adam, his death, canceled the results of the one act of the first Adam (Rom 5:10). So Christ's death destroyed the one who "holds the power of death" (Heb 2:14) and "destroyed death" (2 Tim 1:10). Death could not hold him (Acts 2:24), so Christ is now said to be "Lord of both the dead and the living" (Rom 14:9) and "has the keys of Death and Hades" (Rev 1:18).

Thus death in the NT is qualified. Death is now viewed in the light of the resurrection of Jesus. In 75 places *nekros* is the object of *egeiro,* "to awaken," or *anastasis,* "to raise" (*NIDNT* 1: 445), and Christ is called the first (in importance, not time) from the dead (Col 1:18; Rev 1:5). Death does not "separate us"

from Christ (Rom 8:38–39); so death is spoken of as being "at home with the Lord" (2 Cor 5:8), as "gain" (Phil 1:21), and "to depart and to be with Christ" (Phil 1:23), and as to have "fallen asleep" (John 11:11).

In the NT death is more than a terminus to life. It can affect life as it moves to that end. One can experience a living death, or a "body of death," Rom 7:24. Existentially, one who has encountered Christ is said to have eternal life even during this present life (John 3:36); whereas, one who has not yet encountered Christ is said to be "dead" in sin (Eph 2:1; cf. Col 2:13; Rev 3:1). Passing from death to life, experientially, is spoken of as the new birth (John 3:3–8).

To a degree, then, eternal life (the opposite of death) is given now, but not in fullness. "For as in Adam all die, so in Christ all will be made alive" (1 Cor 15:22). The tension between the "already" and the "not yet" maintains an "eschatological reserve," for "the last enemy to be destroyed is death" (1 Cor 15:26). The final generation, living at the PAROUSIA, will be translated without experiencing death (Matt 16:28). Evidently the translated, and those resurrected, begin the fullness of eternal life at the Parousia (1 Thess 4:16–18). They will be beyond death (Rev 20:6).

DEATH OF CHRIST. See CHRIST, DEATH OF.

DEATH, POLLUTION OF. See HEIFER, RED.

DEATH, SECOND [Gk *ho deuteros thanatos* (ὁ δευτερος θανατος)]. In the NT, the second death is mentioned only in Rev 2:11; 20:6, 14; and 21:8. It is symbolized as the "lake of fire" (20:14; 21:8), and presented as the opposite of receiving a crown of life (2:10) and life lived in the presence of God (21:3–7;

22:3–5). As opposed to the first death which is physical death, the second death is the final destruction of all that belongs to the realm of evil. It is the fate of those whose names are not written in the book of life (20:15), the unrighteous (21:8), the false prophet and the beast (19:20), the devil (20:10), and Death and Hades (20:14). The second death was the subject of Jesus' warning: "And do not fear those who kill the body but cannot kill the soul; rather fear him who can destroy both soul and body in hell" (Matt 10:28 = Luke 12:4–5; RSV).

Whether the second death is complete destruction or everlasting torment is uncertain from Revelation, although for the Devil, beast, and false prophet, it is everlasting (20:10). Both notions are found in tradition. In *1 Enoch* the second death is destruction: "Woe unto you who spread evil to your neighbors! For you shall be slain in Sheol" (99:11, *OTP*), and "… for the names of (the sinners) shall be blotted out from the Book of Life and the books of the Holy One; their seeds shall be destroyed forever and their spirits shall perish and die …" (108:3, *OTP*; cf. 10:14–15). In Philo, however, second death is everlasting: "live for ever in a state of dying and so to speak suffer a death which is deathless and unending" (*Praem* 12.70; LCL).

Although other Jewish writings contain the concept, both the concept and the expression "second death" are found in the Targums. Here second death can refer to either exclusion from the resurrection (i.e. remaining in the grave) or being relegated to eternal torment after judgment (Str-B 3.830–31). The former sense is found in *Tg. Jer.* 15:39, 57 which describes the fate of the Babylonian oppressors as second death which is the exclusion from the life to come. The latter sense which is more akin to Revelation occurs in *Tg. Isa.* 65:5–6, a passage very close to Rev 20:14 and 21:8, states: "Their punishment shall be in Gehenna where the fire burns all the day. Behold, it is written before me: 'I will not give them respite during (their) life but will render them the punishment of their transgressions and will deliver their body to the second death' " (cf. *Tg. Deut.* 33:6; *Tg. Isa.* 22:14; 65:15).

DUANE F. WATSON

DEBIR (PERSON) [Heb *dĕbîr* (דְּבִיר)]. The Amorite king of Eglon at the time of Joshua who joined the coalition of 5 kings led by Adoni-Zedek of Jerusalem (Josh 10:3). After being defeated by Joshua at Gibeon, the kings of this coalition fled to the cave of Makkedah (Josh 10:1–27), where they were captured and hanged by Joshua. As a personal name, Debir occurs only once in the Hebrew Bible. Otherwise Debir is found as the site of 2 (apparently) separate Judean cities (see DEBIR (PLACE)), and as a technical term for the holy of holies in Solomon's temple (1 Kings 6–8).

D. G. SCHLEY

DEBIR (PLACE) [Heb *dĕbîr* (דְּבִיר)]. Three towns mentioned in the OT bear this name.

1. A town in the S hill country of Judah listed in the roster of cities that Joshua captured and utterly destroyed (Josh 10:38–39). It was governed by a king (10:39; 12:13). Joshua 15 preserves the tradition that Othniel the son of Kenaz captured the city, thereby winning in marriage Achsah, daughter of Caleb (vv 15–19 = Judg 1:11–15). It also preserves the tradition that the city was associated with "upper and lower springs" and that the pre-Israelite name of the city was Kiriath-sepher, which the LXX simply translates "city of books" (Gk *polis grammatōn*). Josh 15:49 records that its previous name was Heb *qiryat-sannâ,* which is probably an erroneous reading of Kiriath-sepher. See KIRIATH-SANNAH.

Josh 11:21 preserves the tradition that the Anakim were residents of Debir in the time of Joshua. It is uncertain whether or not these people constituted one of the groups of Sea Peoples who occupied parts of Canaan toward the end of the LB Age (Boling and Wright, *Joshua* AB, 315). See ANAK. Mendenhall (1973: 76, 163) suggests that the original form underlying both *dĕbîr* and (*qiryat*) *spr* (which he re-vocalizes *sōpēr*) is Hittite *dabara,* "lord, governor" (cf. Heb *sōpēr*, "official," esp. Judg 5:14); "Kiriath-

sopher" ("town of the governing official") would then have become "Kiriath-sepher" ("town of the book/scroll") by popular etymology. If Mendenhall's linguistic analysis is correct, this reinforces the hypothesis that in the LB/early Iron transition period the city fell under the influence of some NE Mediterranean groups loosely identified as Sea Peoples. See also the linguistic discussion of Debir/Kiriath-sepher in CITY NAMES.

The biblical references all suggest that this Debir is located near the Shephelah in the southernmost region of the Judaean hill country SW of Hebron. For a variety of reasons Albright proposed identifying it with Tell Beit Mirsim (M.R. 141096). See BEIT MIRSIM, TELL. However, dissatisfaction with several of the geographic features of Tell Beit Mirsim which seemingly contradict the biblical references to Debir has prompted a number of scholars to look elsewhere for its location (*ISBE* 1: 901–4). K. Galling first suggested (1954) that Debir should be located at Kh. Rabud (M.R. 151093). The site fits the geographic and expected stratigraphic profile much better. Not only does Kh. Rabud have remains of LB occupation, but the combination of cisterns with 2 nearby wells complies with the description of the site in the biblical narrative (cf. Josh 15:17–19 = Judg 1:13–15). The occupational sequence has been clarified by excavations conducted by M. Kochavi (1974; *EAEHL* 4: 995), which have shown complete agreement with the information provided in the biblical texts.

GARY A. HERION
DALE W. MANOR

2. A town that was situated above the Achor Valley, used to demarcate the N boundary of Judah (Josh 15:7). The location is thought to be either along the Wadi Dabr or in Thogret ed-Dabr. Both seem to retain the distinction of a place name. At the head of the Wadi there was a ruin called Khan el-hatrur, which is now covered and displaced by the Jericho-Jerusalem highway and by a local inn. The LXX gives the Gk *epi to tetarton,* which could be a misreading or the deciphering of a damaged Hebrew manuscript, where it was mistakenly understood as the Heb *rbyʿy*.

3. A town that marks the boundary of the tribe of Gad (Josh 13:26). The location is presumed to be in the E part of Gilead, though the actual site is unknown. In the passage, the MT gives the Heb *lidebir*, which could be revocalized to read *lôdebār*. This is thought to be the site of Makir's house in 2 Sam 9:4, 5. Here is where Mephibosheth, the lame son of Jonathan, stayed until called by David. This place is mentioned again in 2 Sam 17:27, where the same Makir helped supply provisions to David when he was fleeing from his son Absalom. Evidently, this town was later captured by the Arameans; the fact that Jeroboam II eventually recaptured the city gave the prophet Amos a sarcastic weapon. Using a word play on *lôdebār* (Amos 6:13), he arranges it as *lōʾ dabar*, "nothing," in reference to Israel's boasting about their victory and their false sense of security. See also LO-DEBAR.

JEFFREY K. LOTT

DEBORAH (PERSON) [Heb *dĕbōrâ* (דְּבֹרָה)]. Three persons in the OT and deuterocanonical books bear this name.

1. Rebekah's nurse (Gen 35:8). She is also mentioned, by position but not by name, among those who accompany Rebekah and Abraham's servant on their return to meet Isaac (Gen 24:59). When Deborah the nurse died, she was buried under "the oak" (sacred tree?) near Bethel, which is hence forth known as *Allon-bacuth,* that is, "oak of weeping." Cf. the etiology of Bochim, "weepers" (probably Bethel!) in Judg 2:1–5.

2. One of those who successfully mobilized the Israelite militia, and whose deeds are variously recalled, evaluated, and celebrated in the book of Judges. The activity of Deborah, wife of Lappidoth ("flashes") is admiringly recounted in prose (Judges 4) and celebrated in song (Judges 5). Introduced as a "prophetess," Deborah was available for oracular consultation at "Deborah's palm," also situated near Bethel. On the

relationship between prophecy and warfare in this period, see Ackerman (1975). This was a time of severe oppression sponsored by Jabin, king of Canaan reigning at Hazor, and executed by Sisera, commander of 900 chariots. Sisera, whose name is non-Semitic, probably belonged to one of the Sea Peoples (Tjeker?). His headquarters at the time of the battle are at Harosheth-haggoim ("plantations of the gentiles"), which looks like the poetic equivalent of "Taanach by the waters of Megiddo" (5:19; Rainey 1981; 1983).

Consulted by Israelites in the face of Sisera's aggression, Deborah's "judgment" is to summon Barak ("lightning"), field commander of the Israelite militia from Kedesh in Naphtali, together with forces from Zebulun and Naphtali (the only tribes mentioned by name in the prose account). Barak is most reluctant to go into the field against far superior armaments unless accompanied by Deborah, who repays reluctance with a taunt: She'll go, but victory will not mean glory for Barak, since a woman will deal the final blow. The combination of promise by Deborah and fulfillment by Jael evokes comparison with the partner-like goddesses Anath and Astarte (Taylor 1982). See also Lindars (1983) for the highlighted role of woman. Once the battle is joined, Sisera departs the scene at the flash-flooded Kishon River W of Mt. Tabor, where the chariots were mired, and flees to the far N where, thrown off guard by the hospitality of Jael, he dies at her feet.

Behind the irony and sense of humor, the story is rooted in decisive military action, with a hefty providential assist, which prevented Sisera's forces in the Esdraelon from finally severing connections between the Israelites in Galilee and in the central hill country of Ephraim and Manasseh. Archaeology at the sites of Megiddo and Taanach suggests a setting not long after mid-12th century B.C.E. The relationship between Jabin, king of Canaan in Judges 4 and another Jabin, king of Hazor in Joshua 11, is unclear, and the direction of interaction in the shaping of the stories is still an open question (Boling *Judges* AB, 92–120). In the poetic version Jabin is not named, but it is a coalition of "kings of Canaan" whose forces Sisera commands. And the character of the oppression is specific: disruption of the caravan trade routes where they empty into the Esdraelon (Chaney 1983).

The Song of Deborah and Barak (5:2–31) is for the most part much older than the received form of the prose account, to judge from evidence of archaic language and poetic structure. Here the focus of attention is not on the interaction between Honey Bee and Lightning, Lightning and Jael, but upon the varied response and performance of the Israelite constituencies in rallying against a common threat (Coogan 1978). At the time of crisis the league appears to consist of 10 tribes (Freedman 1979; Boling 1988): 57–63). Judah is not mentioned, nor is Levi. If Levi is already dispersed as priestly-teaching cadre (in effect, muster officers) throughout the other tribes, it may be represented here (unnamed) as carrier of the poetic tradition. That Judah is not mentioned for either praise or blame in the poetic roll call suggests that it is already rendered dysfunctional by S Sea Peoples, the Philistines.

The other 10 tribes are variously lauded for their performance: Ephraim, Benjamin, Machir (that is, Manasseh), Zebulun, Issachar, and Naphtali. Or they are lampooned for nonparticipation: Reuben, Gilead (that is, Gad), Dan, and Asher. The victory song is in many ways comparable to victory hymns of Egyptian and Assyrian Kings. In other ways it anticipates the much later form of a ballad. It celebrates both the prowess of Yahweh's peasantry and the reciprocal intervention by Yahweh, when "the stars in their courses" (source of rain?) "fought against Sisera." The concluding irony contrasts Deborah, "a mother in Israel" who rose up, with Sisera's anxious mother and the wisest of her ladies (5:28–30), both of whom are confident that the victory celebration had delayed the return of the troops, as indeed was the case.

The final verse (5:31) looks, therefore, like a poetic couplet in a different style, which once followed directly upon 5:1 as the content of what Deborah and Barak sang in the story, before it was broken open for insertion of the parallel old favorite.

3. The grandmother of Tobit. She was the one who raised, nurtured, and taught Tobit after he was orphaned. Tobit's story is presented as a model of familial piety. Tobit affirms his obedience to both "the law of Moses and the exhortations of Deborah" (Tob 1:8).

ROBERT G. BOLING

DEBTS. The necessity for loans is recognized openly in the Hebrew Bible, where an attempt is made to prevent the practice of requiring interest from debtors. Interest on loans in the ANE could be exorbitant by modern standards (and might be required in advance, from the very principal of the loan. The attempt to convince creditors to forego potential profit was grounded in care for the community, which God had liberated from slavery. A brother might become poor and need a loan (cf. Lev 25:35), but interest was not to be exacted (vv 36, 37), in the name of the same LORD "who brought you out of the land of Egypt" (v 38). The desire for interest is seen as posing the danger that Israel might exchange one form of slavery for another—economic—form of oppression. It is notable that the whole of Leviticus 25 concerns precisely the issue of maintaining the integrity of what God had redeemed, in respect of the release which was to occur during sabbath and jubilee years (vv 1–34), in respect of loans (vv 35–38), and in respect of hired service (vv 39–55). The right of a creditor to receive a pledge against his loan is implicitly acknowledged within the pristine requirement not to expect interest, and abusive liberties with pledges received is forbidden (cf. Exod 22:25–27; Deut 24:10–13). But certain pledges, correctly handled, might yield their own profits, and foreigners in any case might be charged interest (cf. Deut 23:19–20); even on a strict interpretation of the Torah, a creditor might make a living.

Despite persistent attempts at regulation, debt was a perennial, social problem in Israel. 1 Sam 22:2 laconically refers to the attraction to David of "everyone in straits, everyone indebted, and everyone who was bitter"; there would have been no such people to attract had the prescriptions of the Torah been obeyed. One of the stories concerning Elijah is predicated on the fear that creditors can in fact enslave the families of those who fail to pay them (2 Kgs 4:1–7). Nehemiah reflects both a widespread growth of usurious practices, and a programmatic attempt to root them out (Neh 5:1–13; cf. 10:31). It is quite evident that neither the prescriptions of the Torah, nor the prudential wisdom of Proverbs (cf. Prov 28:8), succeeded in preventing abusive lending: even in the time of Ezekiel, it is roundly condemned as one of the community's all too frequent sins (cf. Ezek 18:5–18; 22:12). Of course, generalization is notoriously problematic, in that the sources to hand are far from complete social records, and stem from a variety of periods, but it appears fairly safe to say that the notion of an unprofitable loan proved liable to abuse during Israel's long history.

The necessity of such loans, however, was as obvious as the problem of poverty: Some people simply did not possess adequate means, and required financial assistance. Where the Persians, according to Herodotus (Hdt. 1.138), attempted to discourage debt entirely, inventive means were found in Judaism after the biblical period to humanize the institution. Hillel, a famous rabbi and older contemporary of Jesus', is credited with the provision of *prozbul* (*m. Šeb.* 10.3–6, *m. Giṭ.* 36a; Neusner 1985: 100–102). R. Hillel's provision was designed to address the problem that Deut 15:2 requires the release of debts every 7th year: Obviously, loans under such a scheme would be impracticable shortly before the year of release. Accordingly, Hillel allows the debts to be entrusted by the creditor to a court, which could collect the debt for him. Hillel's provision must in no sense be understood as a mere evasion of the requirements of Torah, since his stance in regard to debt could be very stringent indeed. He was particularly concerned that changes in the market value of commodities might result in interest, if one returned in kind an object (such as a loaf of bread) one had borrowed (*Šabb.* 148b; *B. Meṣ* 62b–62a; Neusner 1985, 102–103). It is therefore plain that the *prozbul* was designed to facilitate responsible lending, not to encourage

exploitation, and it became a cornerstone in the financial practices encouraged by the rabbis. Such practices included writs of debt (which might themselves be traded, cf. Kethuboth), the extension in the period of a loan (*m. Giṭ.* 13b), and the exaction of very large fines from those who took interest (*B. Bat.* 94b).

The justification for excluding the release from debts mandated in Deut 15.2 became a leitmotif within rabbinic discussion. (The regulations concerning sabbath years and years of jubilee of course had implications for many commercial relationships, cf. Morgenstein *IDB* 2: 1001–02; and Van Sehms *IDBSup*, 496–98.) Deuteronomy 15:3 itself excludes foreigners from the provision, and the experience of debt in Judaism was frequently at the hands of gentiles, and therefore quite outside any religious or communal control (cf. *m. Mo‹ed Qat.* 9b and *m. Giṭ.* 43b–44a). Notably, "Rabbi" (that is, R. Judah ha-Nasi) is said to link the forgiveness of debts (Deut 15.2) to the permission of land to remain fallow in the sabbatical year (cf. Lev 25:1–7; *m. Mo‹ed Qaṭ.* 2b; *Kiddushin* 38b). In his understanding, one must be practised when the other is, but debts need not be forgiven when there is no land of promise to be released. The effect of that teaching is a far greater extension of the incentive to loan money than is Hillel's stipulation of *prozbul.* When one takes into account the opinion that sabbatical release did not encompass, in many instances, the possibilities of the rise and fall in the value of loans, the market in the purchase of loans, and payment for arrangement of loans, one is not surprised at the frequency in Talmud with which rabbis are called upon to adjudicate financial disputes (Neusner 1987: 248–56).

The usage in the LXX of the verb "to owe" (*opheilō*),when a specific Hebrew term is rendered, is generally restricted to those passages in which commercial affairs are at issue (Hauck *TDNT* 5:561). That strikes Hauck as curious (560–61) for the reason that secular usages (and Philo) establish the wider meaning of *opheilō* as including moral indebtedness and obligation. Precisely that broader usage, characteristically paired with another verb in the infinitive, is found frequently in the NT (cf. Luke 17:10; John 13:14; 19:7; Acts 17:29; Rom 15:1, 27; 1 Cor 5:10; 7:36; 9:10; 11:7, 10: 2 Cor 12:11, 14; Eph 5:28; 2 Thess 1:3; 2:13; Heb 2:17; 5:3; 1 John 2:6; 3:16; 4:11; 3 John 8). There are, in fact, usages in the LXX which are roughly comparable (Wis 12.15; *4 Macc.* 11:15; 16:19), but they appear less frequently than in the NT. Moreover, the LXX usages bear out Hauck's point, that the rendering of the Hebrew Bible into Greek did not result in the exploitation of the moral sense of *opheilo* in the Greek language of the period: both Wisdom and *4 Maccabees* are thoroughly Hellenistic in language and concept. In this aspect of its language, then, the NT is more at home in its Greek literary environment than is the LXX.

There is, however, quite another aspect within the NT's language of debt. Just as it represents secular Greek usage, so a principal theologoumenon of early Judaism comes to expression. "Debt" (*ḥwb›*) was the regular translation of "sin" in the Aramaic Targumim, and "debtor" (*ḥyyb*) was the ordinary term for "sinner." The regularity of Aramaic usage may be assessed by the consideration that several words in the Hebrew text are rendered by "debt" and "debtor" in the Targumim (cf. van Zijl 1979: 57–58, 61 and Chilton 1987: 1vi). Two passages in the *Targum of Isaiah* may serve to illustrate the ordinary usage in Aramaic. In 5:18, the Hebrew text reads, "Woe to those who draw iniquity with cords of falsehood, and sin as with cart ropes." In the Targum, that wording is largely respected, but there are also notable, interpretative transformations: "Woe to those who begin to debt a little, drawing debts with cords of vanity, continuing and increasing until debts are strong as cart ropes." The rendering of the Targum immediately makes it plain that "debt" is the ordinary word for "sin"; indeed, it appears naively literal to translate the Aramaic term as "debt" on each and every occasion it appears. It is equally obvious that "debt" was seen by the Aramaic interpreter as the appropriate rendering of several Hebrew words, and as a concept implicit in the text, even when no particular term in Hebrew required the use of "debt" in Aramaic (cf. van Zijl 1979: 57–58).

Nonetheless, a second example (50:1) demonstrates that "debt" was understood as a genuine metaphor of sin, not simply as a conventional rendering. The Masoretic Text reads, "Thus says the LORD, where is your mother's bill of divorce, with which I put her away? Or to which of my creditors is it to whom I sold you? Behold, for your iniquities you were sold, and for your transgressions your mother was put away." This stark statement is so presented in the Targum, as to turn on the literal and the metaphorical senses of

"debt": "Thus says the LORD, where is the bill of divorce, which I gave to your congregation, that it is rejected? Or who had a debt against me, to whom I have sold you? Behold, for your debts you were sold, and for your apostasies your congregation was rejected." The passage instances the generally Targumic tendency to refer metaphors in the Hebrew text to specific entities; Hence, "mother" becomes "congregation." At the same time, a deliberate emphasis upon the ordinary *and* the theological meaning of "debt" is insisted upon.

When, in the Matthean version of the Lord's Prayer, Jesus instructs his follows to ask God, "forgive us our debts, as we also forgive our debtors," there is no doubt but that Matthew is preserving an Aramaic idiom (6:12). Luke only partially preserves the usage: "Forgive us our sins, as we also forgive everyone who is indebted to us" (11:4). Jesus' usage of the Aramaic idiom is not a mere matter of convention: Several of his parables turn on the metaphorical and the literal sense of "debt," much as in the *Targum of Isaiah* 50:1.

Several instances of parabolic presentation of debt are especially striking. In Matt 18:23–35, a debtor is said to owe the astronomical sum of 10,000 talents (18:24). When it is borne in mind that the annual imposition of tax upon the whole of Galilee and Peraea amounted to merely 200 talents (Josephus, *Ant* 17.9.4), the hyperbole involved in the parable becomes readily apparent. The debtor is in no position to repay such a debt, nor is there any credible way in which he could have incurred it. He behaves astoundingly, after his debt is forgiven (v 27), in a manner all but calculated to trivialize such forgiveness: He refuses to deal mercifully with a colleague who owed him 100 denarii (vv 28–30). The latter amount is by no means insignificant; A single denarius was the going rate for a full day of labor (Jeremias 1976: 136–39). But the contrast with the king's incalculable generosity cannot be overlooked, and the close of the parable makes it unmistakably plain that God's forgiveness demands ours as a proper response (vv 31–35). To fail to forgive one's fellow, even when what needs to be forgiven is considerable, is to betray the very logic of forgiveness which alone gives us standing before God.

Two other parables portray, in an apparently paradoxical fashion, the inextricable link between divine forgiveness and our behavior. Within the story of Jesus at the house of a Pharisee named Simon (Luke 7:36–50), a parable explains why Jesus chose to forgive a sinful woman (vv 40–43). Of 2 debtors, the one who has been released from the greater debt will obviously love his creditor more. The sinful woman's great love, therefore, in an outlandish display of affection and honor (vv 37–38, 44–46), is proof that God had forgiven her (v 47). Her love is proof of her capacity to be forgiven (Moule 1982: 282–84). She had succeeded precisely where the unforgiving servant of Matthew 18 had failed: Her actions displayed the value she accorded to forgiveness. Precisely the same logic, developed more strictly in respect of debt, is evident in the otherwise inexplicable parable of the crafty steward (Luke 16:1–9). His lord (or master) praised the steward for his cleverness (v 8) in reducing the debts of those who owed commodities to the lord (vv 5–7). The scheme was devised so that the lucky debtors would receive the steward (v 4) after his lord had followed through on the threat of dismissing the steward for dishonesty (vv 1, 2). On any ordinarily moral accounting, the steward has gone from bad to worse, and yet his lord praises him (v 8). Because God is the lord of the parable, what would be bribery in the case of any ordinary master's property turns out to be purposeful generosity. The effect of the steward's panic is to fulfill the lord's desire (Chilton 1984: 117–23), because he is the same as the unforgiving servant's king, the God who forgave the sinful woman.

Jesus' usage of "debt," therefore, is initially to be understood as an Aramaism. But he appears, on the evidence of the Gospels, to have exploited the metaphorical possibilities of the term in a way which is precedented in the *Targum of Isaiah*, but in a characteristically parabolic fashion. The general activity of telling parables, of course, is well attested among early rabbis (Chilton and McDonald 1987: 31–43). At issue here is not absolute uniqueness, but the relative distinctiveness which distinguishes any significantly historical feature from his contemporaries. A well-established theologoumenon of early Judaism spoke not only of debts, but of credit in respect of God (*TDNT* 5:562). Jesus appears to have exploited the latter metaphor, as well as the former (Matt 6:19–21; 19:21; Mark 10:21; Luke 12:33, 34; 18:22). But it was in

his adaptation of an idiom and in his theology of "debt" that Jesus developed a systematic aspect of his message as a whole.

BRUCE CHILTON

DECAPOLIS. A group of Hellenistic cities E of the Jordan and Lake Tiberias which were of considerable importance in the history of the region and figure in the Gospels in the ministry of Jesus. The term is from Gk and means literally "Ten Towns," although the number of cities actually included by the term appears not to have been strictly delimited.

———

A. Attestations of the Term

The oldest attestations of the term *Decapolis* can be found in the Synoptic Gospels. In Mark 5:20, Jesus, having gone to the other side of Lake Tiberias, cured a possessed man who, according to Jesus' instructions, went on his way proclaiming in the Decapolis what Jesus had done for him. In Mark 7:31 Jesus, having left the territories of Tyre and Sidon, reached Lake Tiberias by passing through the Decapolis. In Matt 4:25 it is specified that the crowds that accompanied Jesus came from Galilee, the Decapolis, Jerusalem, Judea, and from the region above the Jordan.

The *Onomasticon* of Eusebius explains that the Decapolis is a region of 10 cities beyond the Jordan, and around Hippos, Pella and Gadara. (An incorrect definition, but one that suited a region apparently involved in events from the Gospels). The story of the demoniac cured by Jesus in the Synoptic Gospels poses a problem of textual criticism. Matthew 8:28, which speaks of 2 possessed men, places the episode in the countryside of Gadara; in the parallel stories, Mark 5:1 and Luke 8:26–37, the location is the countryside of Gerasa; some manuscripts offer the variant *Gergesinōn* referring to a site N of Hippos (Parker 1975). Flavius Josephus (*JW* 3.9.7 §446) specifies that Scythopolis, to the W of the Jordan, is the largest city of the Decapolis; in the *Life* 65 §341 and 74 §410, he mentions 10 Syrian cities whose notables came to Vespasian to complain about the ravages that rioting Jews were wreaking on the villages in their territories; the passage implies these 10 cities were well known. Pliny the Elder (*HN* 5.18.74) is the clearest. Judea, he writes, is continguous on the Syrian side with the region of the Decapolis (so called for the number of its cities). He notes that in his time there was some uncertainty about the exact list of the cities of the Decapolis and he gives the most currently accepted list, which includes Damascus and Galasa (the form received in the manuscript tradition, considered a mistake for Gerasa). A Gk inscription of the Palmyra region from the time of Hadrian mentions a citizen from Abila of the Decapolis; the city is not found in Pliny's list. A Gk inscription discovered in the Balkans indicates that an officer whose career is dated by the decorations he received during the Domitian wars was prefect of the Decapolis of Syria (Isaac 1981). Ptolemy (*Geog.* 5.14.18) knows but one list, the Decapolis and Coelesyria, in which the cities named by Pliny are, except for Raphana, mixed with other cities of S Syria. Eusebius (*Hist. Eccl.*

3.5.3) and Epiphanius of Salamis in Cyprus (A.D. 315–403) (*Adv. Haeres.* 29.7.7–8) mention Pella of the Decapolis as a place of refuge for the Christian community of Jerusalem in A.D. 69–70. In the *Ethnika* of Stephanus of Byzantium (135.15) Gerasa is called a city of the Decapolis.

B. List of the Cities

It is thus difficult to establish an exact list of the 10 cities of the Decapolis. Neither inscriptions nor coins lead one to think that any of these cities was ever officially called a city of the Decapolis; the specification in the inscription from Palmyra, concerning a private person, is intended to avoid confusion with another Abila in Lysanias (*Ant* 19.275). Abila, Canata, Dius, Gadara, Gerasa, Hippos, Pella, Philadelphia, and Scythopolis have in common that during the Roman period they used on their coins and in their inscriptions a system of dating according to the so-called Pompeian eras that commemorated their liberation by Pompey. Damascus, which after Pliny is often counted among the cities of the Decapolis, never used any but the Seleucid era. Modern historians often include Capitolias among the cities of the Decapolis, but Pliny doesn't mention it and undoubtedly couldn't have mentioned it: The era that the city on its coinage was inaugurated under the reign of Nerva or at the beginning of Trajan's; the city was not founded, at least under this name, until the end of the 1st century A.D.

C. Identification of Sites

The identification of most of the cities of Decapolis no longer poses any problems, even if it is not always possible to determine the limits of their territories. Scythopolis is Beth-shan in the lower Galilean plain (*ANRW* 2/8: 262–94). All the others are found to the E of the Jordan. Pella (Smith 1973; McNicoll 1982) is Tabaqat Pahil, on the very edge of the plateau, above a valley rich in water; here there was constructed a nymphaeum, a monumental fountain and water sanctuary, that became famous and gave it the official name Pella (of) Nymphaion (Seyrig 1959: 41–42; Smith 1973: 52–53). Philadelphia (Zayadine 1982) is Amman, the southernmost. The edge of the plateau forms the E limits of its territory (Villeneuve 1988: 280–81), violently contested by the people of Peraea during the time of Emperor Claudius (*Ant* 20.1.1 §1). Gerasa (Kraeling 1938) is Jerash, in the ancient hills of Gilead; the frontier between its territory and that of Philadelphia is situated on a tributary of the Jordan, the river Jabbok, partially more to the S. The two cities are on the main road that runs N–S through the inhabited area of the Jordanian plateau (Bauzou 1988). The territory of Gerasa did not extend NW to Lake Tiberias; despite Mark 5:1 and Luke 8:26; Gerasa was separated from the lake by the territory of Gadara and, without doubt, that of Hippos. Gadara (Wagner-Lux 1982), located at the present-day Umm-Qeis, dominated the river Yarmuk, a tributory of the Jordan, and, at a distance, Lake Tiberias. On the N bank of the Yarmuk were located the Emmatha baths, renowned hot springs; according to Matt 8:28 the territory of Gadara would have run alongside Lake Tiberias. In order to escape the difficulties that are presented on this point by the Synoptic stories, Origen (*Joan.* 6:24, followed by Cyril of Scythopolis *Vita Sabae* 24), conjectured that one must place the healing of the demoniacs in the country of the Gergasenians, identified as Korsia (modern Kursi), along the lake to the N of Hippos, conjecture passed on in a part of the manuscript tradition (PWSup 13:425).

Hippos (*EAEHL* 2:521–23) is near the edge of the lake, on the spot called Qalat el-Hosn, 30 stadia from Tiberias according to Josephus (*Life* 65 §349), facing Tarichaeae (*Life* 31 §153); its territory doubtless encompassed the site of el-Al, to the E of the lake, where an inscription is dated according to an era of the Decapolis. Abila is identified as Tell Qwelbeh, 12 Roman miles to the E of Gadara according to the *Onomastican* of Eusebius (32.16. One must not confuse it with Abila or Abela in the Peraea that Nero gave to Agrippa II according to Josephus [*JW* 2.13.2 §252; Villeneuve 1988: 275; 285 n.4]; that Abila is much farther to the S, without doubt the present Kefrin). Capitolias is located at Beit Ras, in Jordan, N of Irbid. Raphana is the same as Raphon (1 Macc 5:37), and is located at the village of er-Rafe, 13 km ENE of the Sheik Sa‹ad in Syria (*ANRW* 2/8: 223); but some think that Raphana became Capitolias (Jones 1971: 259). Different locations have been proposed for Dium, which Ptolemy (*Geog.* 5.14.8) mentions as lying between Pella and Gadara, an indication without precise geographic value. It has been located in Jordan, at Kefr Abil (E of Pella); at Tell el-Hosn (several km SSE of Irbid); or even further to the SE, near

Mafraq and Er-Rihab, at Edun. A location at Tell el Ashari in Syria, about 15 km NNW of Deraa, is the most likely; among the coins found at the site are two Dium bronzes (Augé 1988: 328, 331).

Canata, Canatha, or Canotha (the spelling variants found in literary texts, inscriptions, and coins are considered variations of the same toponym) is generally identified as Qanawat in the Jebel Arab, formerly called the Jebel Druze; if *Chanata* of the Peutinger Table is indeed Canatha, the distances indicated point to Qanawat. This identification raises some difficulties. An inscription commemorates certain works to harness water to supply the city of Canatha; the springs named can be identified, and they are at an altitude much lower than that of Qanawat. Canatha may designate not the city, but a portion of its vast rural territory (Sartre 1981); but this explanation is not convincing. The coins of Canata/Canatha are dated according to the Pompeian era, while the dated inscriptions found at Qanawat are dated by regnal years of the Roman emperors. It is extremely unlikely that two different systems of dating would have been in use in the same city. The use of the regnal years would indicate attachment to the imperial domain; such a status does not seem acceptable for a city in the Decapolis (Rey-Coquais 1982). Archaeological investigation of the Qanawat region shows an essentially rural area where Hellenistic influences were felt late in the 1st century A.D. (Dentzer 1986; Sartre 1987); but the "ten cities" boasted of being cities of Greek culture, institutions, and origin.

D. History of the Cities

The first foundations by Macedonians and other Greeks in the region of the Jordan date back to the conquest of the East by Alexander the Great. Gerasa claimed Alexander and his lieutenant Perdiccas as founders; Alexander was the founder of Dium according to Stephanus of Byzantium (*Ethnika* 103–4), of Abila, if its coins have been properly interpreted, of Capitolias, which celebrated him as *genarchos* "first ancestor" (Seyrig 1965: 24–28; Frézouls 1988: 127 n. 47). Pella, which got its name from the royal capital of Macedonia, is a Macedonian foundation from this same period; archaeological finds of Ptolemaic coins and stamps from Rhodian amphoras seem to confirm this (McNicoll 1982). Philadelphia was founded by Ptolemy II Philadelphus (308–246 B.C.). The absence of any early Hellenistic levels in some archaeological excavations, notably at Amman and at Jerash, poses the problem of the foundation and of the development of these cities (Zayadine 1982: 20; Seigne 1986: 53).

The Greco-Macedonian colonies occupy sites chosen for their natural advantages, their defensive and strategic value, their position on vital roads (Mittmann 1966; Bauzou 1988), their situation on fertile soil. These sites had already been inhabited since early antiquity, as toponymic traditions and archaeological discoveries attest. Philadelphia, for example, is the ancient Rabbath Ammon, mentioned by Polybius (*Hist.* 5.69–70), under the name of Rabbatamana (see RABBAH). Abila, Canatha, Gadara, Gerasa kept their original names (Zayadine 1982). The name of Pella probably replaces an indigenous name of similar sound mentioned in ancient Egyptian documents, which remains to this day in the form of Paḥil or Faḥil. The image on coins from Hippos is a winged horse; the Gk name Hippos, which means "horse," translates a Semitic name of the same meaning: Sussitha in the Talmudic sources, Sussiya in Arabic.

The city of Scythopolis (*ANRW* 2/8 262–67) covers the ancient Beth-shan. A variety of suggestions have been made concerning the origin of the Gk name. According to the 6th century *Chronography* of John Malalas (5.178) the name recalled a Scythian settlement there from the time of the Trojan War. A Scythian settlement might date from the 7th century according to Herodotus, (4.105), or perhaps have arisen under Ptolemy II (*ANRW* 2/8 262–94); "Scythopolis" could also be a very approximate rendering of a Semitic name, if one supposes that a semantic doublet of *-šĕʿan,* "quiet," underlies the element **scyth* (<Heb *šeqeṭ* "quietness"?; Frézouls 1987).

Scythopolis also had the name Nysa, which during the Roman period was linked to the legend of Dionysius, whose wet nurse was named Nysa, as Pliny (*HN* 5.18.14) and also the coins of the city attest. The name might derive from a Seleucid princess, a grandmother of Antiochus III, or perhaps one of his daughters (Rigsby 1980), or even one of Antiochus IV's nieces (Frézouls 1987: 88).

At the end of the 3d century B.C., Antiochus III (the Great) took Syria, southern Phoenicia, and Palestine from the Lagides. He acquired Scythopolis through a treaty; the commander Ptolemaios son of Thraseas, who possessed vast domains in the surrounding area, left the service of the king of Egypt and went over to

the Seleucid king, for whom he then governed the province (*ANRW* 2/8: 268–70; Sartre 1988: 21). Antiochus took Pella; the Galaatide, which is the country of Gerasa, Abila, and Gadara and is thus the strongest area of the region; and Rabbatamana, i.e., Philadelphia (Polyb. *Hist.* 5.69–71). The Seleucid seizure of Philadelphia forced John Hyrcanus, the last representative of the great Tobiad family, servant and partisan of the Lagides, to take refuge in their *baris*, their fortress called "Tyre" (*Ant* 12.4.11 229–35), identified as Iraq el-Amir (Will 1982; Villeneuve 1988).

Antiochus III and, to a lesser degree, his successors, developed the colonization of the Jordan region. Several cities received a Seleucid dynastic toponym, the mark of a new foundation, that the cities would recall with pride during the Roman epoch (Frézouls 1988: 117–19). Gadara, according to Stephanus of Byzantium (*Ethn.* 128.30), became Seleucia and Antioch. Gerasa was Antioch of Chrysorrhoas, from the name of the river that waters it, as attests a weight from the Hellenistic period, dated from 143/42 B.C. (Seyrig 1950: 53), an inscription under Hadrian, and coins from Marcus Aurelius to Commodus (Spijkerman 1978: 160–63). Abila was called S'leucia and Hippos Antioch as its coins show (Spijkerman 1978: 50–57; 170–79). It is perhaps only during this period that the Greco-Macedonian foundations of the Jordan region gained the status of true Hellenistic cities and experienced real urban development (Barghouti 1982), well documented for Gerasa (Pierobon 1983: 18–19; Seigne 1986: 53).

At the end of the 2d century and at the beginning of the 1st century B.C., the cities of Decapolis suffered from the anarchy which began to afflict the Seleucid empire with the rival ambitions of the Jews and the Nabataeans, whose kingdoms were in great expansion. Philadelphia and Gerasa (Gatier 1988: 159–62) were under the power of a dynast, Zenon nicknamed "Cotylas," and his son Theodoros, who operated as vassals of the Nabataeans (Gatier 1988); they owned numerous fortresses in the region and they stored their treasure at Gerasa. About 130 B.C. they offered refuge to the Jew Ptolemy, enemy of John Hyrcanus, at Philadelphia. The Jewish king Alexander Janneus made war on them several times, took over their fortresses (of which Amathus was the most important) and their treasure; he made himself master of numerous cities in Syria and of Dius, Abila, Scythopolis, and Gadara. He led a fanatical war to impose Jewish customs and to annihilate Hellenistic culture (*JW* 1.4.8 §104; *Ant* 13.15.3–4 393: 396–97). The resistance of the inhabitants of Pella ended in the destruction of their city. Alexander Janneus died in the hills of the region of Gerasa while he was attacking the fortress of Ragaba (*Ant* 13.15.5 §398). In 64 B.C., Gadara, Dius, Pella, and Scythopolis found themselves in Jewish territory. At the beginning of 63 B.C., the Nabataean king Aretas III possessed Philadelphia, whither he retreated when Pompey ordered him to raise the siege of Jerusalem (*JW* 1.6.3 §129); without a doubt he also controlled Gerasa (Gatier 1988: 162).

The Roman intervention led by Pompey in 64 and 63 B.C. put an end to the troubles of the Decapolis cities. Taking control of the fortified sites and treasure troves of tyrants and brigands (Strabo 16.2.40 C 763), Pompey liberated the cities from oppression by kings and Jewish and Nabataean tyrants, and rebuilt them from the ruins that the wars, and particularly the Jewish incursions, had caused to accumulate there. Gadara, which had been destroyed a short time before, was given by Pompey to his freedman Demetrius, whose native city it was. Hippos, Scythopolis, Pella, and Dius were turned over to their inhabitants. All the Greek cities were left free—that is to say, they regained their municipal autonomy—but they were attached to the province of Syria (*JW* 1.7.7 §155–57; *Ant* 14.4.4 §74–76). The economic and cultural capital of the region, Gadara, first received the right to mint bronze coinage.

To celebrate their liberation, the cities inaugurated new eras which, contrary to many other new "Pompeian" eras adopted by other cities of the Near East, remained in use up until the end of the Roman empire (Seyrig 1959). Gadara, Hippos, Scythopolis (Alt 1932) made use of eras beginning in the autumn of 64 B.C.; in Gadara, the 1st year of the new era is called "year 1 of the liberty of Rome" (Seyrig 1959). The eras of Gerasa, Pella, and Philadelphia (Gatier 1988: 165) begin in the autumn of 63. For Abila and Dius (Augé 1988: 326), it is not possible to determine whether their eras begin in 64 or 63; an inscription from Tafas (Rey-Coquais 1978: 45 n. 18), and an inscription from Khisfin, in the S Golan (*Revue des Etudes Grecques* 1979 *Bulletin epigraphique* 620), show the use of an era beginning in 64, but it is not known in which ancient city's territory these sites were located. Inscriptions from Qonaitra also employ an era of the Decapolis, which is difficult to specify further.

About two centuries later, these cities made a point of recalling officially in the legends inscribed on their coins that they owed to Pompey and his lieutenants a new foundation (Seyrig 1959). Gadara called itself Pompeia Gadara; L. Marcius Philippus, Governor of Syria in 61 and 60 B.C., gave his name to Pella; on its coins issued under Lucius Verus, Commodus and, Elagabalus, the city calls itself Philippa Pella and also makes reference to Pompey (Smith 1973: 52–54). Aulus Gabinius, governor from 57 to 55 B.C., who contributed to the restoration of many cities, intervened in particular for Canatha which, under Commodus and Elagabalus, proclaimed itself Gabinia Canatha; the *Chronicon Pascal* (351.16 [Dindorf]) also witnesses the action of Gabinius in favor of Philadelphia (Rey-Coquais 1981: 25–26). All these governors had to fight against the Arabs (Appian *Syr*. 51), who were not only the nomads of the E desert but also most certainly the Nabataeans (*JW* 1.7.7 §55–57); *Ant* 14.4.4 §74–76), who were not happy to see Rome cut the direct route between Petra and Bostra, their two great capitals.

During the troubled period of the Roman civil wars the Nabataeans were able to recommence their expansion toward the N. When Mark Antony gave S Syria to Cleopatra, the region of Qanawat, where Canatha is usually located, was in the hands of the Nabataeans. The same year as the victory of Augustus at Actium, Jews and Nabataeans were warring in the region of Dius (which Josephus calls *Diospolis; JW* 1.19.2 §336), the region of Canatha (*JW* 1.19.2 §336–67; *Ant* 15.4.5 §112), and of Philadelphia (*JW* 1.19.5 §380). Reorganizing the E empire after Actium, Augustus gave the area N of Hauran first to Zenodorus of Calchis, who sold part of it to the Nabataeans, and part, after 23 B.C., to Herod the Great, who, in order to maintain security, installed 2 military camps and in 12 B.C. had to call in the Roman army. In 30 B.C., Hippos and Gadara although they had been Greek cities (Joseph. *Ant* 15.7.3 §217), were ceded to Herod and remained in his realm despite their complaints (*Ant* 15.10.2–3 §351–58). Nothing indicates that Scythopolis and Pella had formed enclaves in the Herodian realm and even less that they had submitted to him. At Herod's death, Hippos and Gadara regained their municipal freedom and were attached to the province of Syria (*Ant* 17.11.4 320), like the other Greek cities of the region. The area N of Hauran entered the domain of the tetrarch Philip; it was then given first to king Agrippa I and then, after a new period of direct administration by Syria during the reign of the emperor Claudius, to Agrippa II, who held it until his death around 93–94 C.E. (*HJP*^{3} 2: 336–40; 442–54; 471–83; Bowersock 1975). Numerous inscriptions witness their domination.

At the beginning of the First Jewish War, after the disaster of Caesarea, the Jews in revolt attacked the 10 Syrian cities, sacking the territories of Philadelphia, Gerasa, Pella, and Scythopolis, and later Gadara and Hippos (*JW* 2.18.1–4 §458; *Life* 65 §341). When Vespasian arrived in Ptolemais, the notables from the 10 cities came to complain and ask him for protection (*Life* 74 §410). In A.D. 66, the whole Jewish population of Scythopolis was annihilated, after having been forced to help the pagans defend the city against the Jews in revolt (*JW* 2.18.3–5 §446–77; 7.8.7 §364). Scythopolis served as a base of operations for Vespasian's army. In Hippos and in Gadara the Jews were massacred. Gadara was the only city to organize an expedition against the Jews; the other Greek cities of the region do not seem to have sent any contingent. In Gerasa, the Jews were spared, and those who wanted to leave the city were permitted to do so with an escort. According to Josephus (*JW* 4.9.1 §487–89), Gerasa was destroyed by Vespasian and its population was massacred or reduced to slavery; however, an inscription dating from A.D. 70 tells us that a "suppliant" came to seek the right of asylum in the sanctuary of Zeus, offering him 10,000 drachmas in thanks. Fleeing besieged Jerusalem, the growing Christian community sought refuge in the countryside of Pella in the Decapolis (Euseb. *Hist. Eccl.* 3.5.3; Epiphanius *Adv. haer* 29.7.7–8; Manns 1982).

E. Nature of the Decapolis

The Decapolis has often been presented as a league of independent cities organized by Pompey (Bietenhard 1963; Jones 1971: 259). An examination of the documents, the recollection of historic events shows that it was nothing of the sort (Parker 1975). Neither Strabo, well informed on all of Pompey's actions, nor Josephus knew of such a league. Each city of the Decapolis used its own era, from 64 or 63 B.C., according to the date on which it was liberated by Pompey. The 10 cities experienced different destinies during the first part of the Roman domination; they did not form a politically coherent unit.

Their unity comes from their Hellenistic character, which distinguished them sharply from neighboring populations, Jews to the W, Nabataeans to the S, highland tribes or semi-nomads to the N The 10 cities were Greek cities not only in origin and institutions but in culture (Bietenhard *ANRW* 2/8: 249–52; Rey-Coquais 1982: 9). They gave birth to rhetors, scholars, poets, and renowned jurists. In the 2d century B.C., Hippos was considered the most cultivated city of southern Syria. Natives of Gadara in the Hellenistic period included the satirist Menippus (3d century B.C.); the poet Meleager (ca. 140–ca. 70 B.C.), author of the famous *Garland,* which called his homeland the Syrian Attica; and the Epicurian philosopher Philodemus (ca. 110–ca. 40 B.C.). From the beginning of the imperial period, among renowned Gadarans were the philosopher Antiochus; the orator Theodoros (fl. 33 B.C.), a contemporary of Strabo (Strabo 16.2.29 C 759), who was Tiberius's advisor; and Strabo's adversary the Cynical philosopher Oenomaos (ca. A.D. 12). In the 3d century A.D., Aspine (ca. 190–250), who held the imperial chair of philosophy at Athens and was consul at Rome, came from Gadara; shortly after his time, the illustrious philosopher Iamblicus (ca. 250–ca. 325), a native of Chalcis, would betake himself to the baths of Emmatha in Gadara while philosophizing with his disciples. Among famous men from Gerasa, Stephanius of Byzantium names the rhetor Ariston, the sophist Kerykos, the lawyer Plato; the best known is the mathematician and pythagorian theorist Nicomacus, from the 2d century A.D. From Pella comes an esteemed Christian historian, Ariston. Scythopolis was a center of Greek culture.

The cults and divinities of the cities of the Decapolis were Greek, even if they show signs of eastern influence (Seyrig 1959 and 1962; Augé 1982 and 1988). The arts were developed there according to Greek forms; architecture, sculpture, and painting also, as revealed by tombs from the Roman period (Zayadine 1976; Barbet 1982 and 1986; Vibert-Guigne 1982). City planning and monuments, porticoed avenues, theaters, fountains, and sanctuaries were Greek; Hellenism there was vital enough to enrich itself from eastern borrowing (Seign 1986: 41–53). All this gave to the 10 Greek cities a feeling of shared culture, and conferred them an originality noteworthy in this part of the Orient. The Roman provincial organization was conscious of this fact (Rey-Coquais 1982).

The attestations of the term *Decapolis* go back to the period which extend from Tiberius to the Flavians. Most particularly important and significant is a Gk inscription, for a long time misunderstood, that mentions a prefect of the Decapolis in Syria. The Decapolis was thus, from the 1st century A.D., an administrative region, in the territory of a single holder, endowed with a certain autonomy, and attached to the province of Syria (Isaac 1981). Its situation must have been analogous to that of Judea under the prefect Pontius Pilate, and perhaps also, around the same time, to the territory of Arados, a prefect of which city is honored in an inscription (Rey-Coquais 1978: 50). The status of local communities was intermediate between the "liberty" of free cities like Antioch on the Orontes, Laodicea by the Sea, or Tyre, and the condition of subject cities closely subjugated to the common law of the Roman province. The number of cities allocated to the Decapolis in the Roman administrative region was without doubt variable, as Pliny implies; Stephanus of Byzantium, with respect to Gerasa, notes that at one time these cities numbered 14 (PWSup 13: 370).

F. End of the Decapolis

The annexation of Nabataea and the creation of the province of Arabia by Trajan (A.D. 106) brought about the end of the Decapolis. The administrative region by this name no longer existed; the cities that had been part of it now found themselves distributed among neighboring provinces. Philadelphia and Gerasa were included in the new province of Arabia. Many modifications of provincial boundaries during the 2d and 3d centuries would bring about the attachment of other Decapolis cities to the provinces of Arabia or of Palestine.

From the beginning of the 2d century, in the official titles of numerous cities of the Decapolis, appears the name of *Coelesyria;* the term appears on coins and in inscriptions from Philadelphia of Hadrian's epoch; on coins from Scythopolis, Gadara, and Abila under Marcus Aurelius; and on coins of Dius and Pella under Caracalla. Since the time when all of the cities of the Decapolis were part of the province of Syria, they had participated in the celebration of the imperial cult as the district of Phoenicia and Coelesyria, of which Tyre was the metropolis. Those cities that ceased to belong to the province of Syria

would have obtained the right to continue to celebrate the imperial cult in the district of Coelesyria, which was reorganized in the reign of Hadrian, with Damascus as its capital. The Greek cities suffered greatly in being assimilated to Arab or Jewish cities; the ones in Arabia would not have wanted to be associated with the Nabataeans in the celebration of the provincial imperial cult in Petra, metropolis of Arabia since the reign of Trajan (Bowerstock 1983: 85), even if Hellenistic influence was felt there. Scythopolis, gone over to the province of Palestine, called itself one of the Greek cities of Syria on coins minted during the period of Commodus (Spijkerman 1978: 194–95 n. 21). Thus would be explained the name of Coelesyria (Rey-Coquais 1981: 28–31; 1982: 8–9; Sartre 1988: 27). Although the boundaries between the Roman provinces of Syria, Arabia, and Palestine were redrawn several times, the date of the appearance of this name on coins does not necessarily represent the date of the change of province.

The foregoing explains why the geographer Ptolemy used a unique rubic, *Decapolis et Coelesyria,* which regrouped all the cities that participated together in the imperial cult in the district of Damascus without taking into account the provincial boundaries. Ptolemy makes a second mention of certain of the Decapolis cities in other regional lists. Beginning with the 2d century, many of the cities from the former Decapolis would regain their autonomy or liberty, exempting them from the common law of the province, as coins and inscriptions from Gerasa (from Hadrian's period on), and from Gadara, Abila, Capitolias, and Scythopolis attest. Belonging to Arabia or to Palestine, the Greek cities of the region, proud of their origins, their traditions and their culture, continued to affirm their differences. Their own character assured them a unity that, ignoring administrative boundaries, preserved the distinctive traits of the former Decapolis.

JEAN-PAUL REY-COQUAIS
TRANS. STEPHEN ROSOFF

DECISION, VALLEY OF (PLACE) [Heb *ʿēmeq* (עֵמֶק) *heḥārûṣ* (הֶחָרוּץ)]. The Valley of Judgment spoken of in Joel 3:14, indicating the place where God will give a judicial decree against the nations; it is also to be identified with the Valley of Jehoshaphat; see JEHOSHAPHAT, VALLEY OF. The exact location of the site is uncertain, but from the references to judgment of the nations in Joel 3:32 and 12, and the twice repeated reference to the "Valley of Decision" and to "multitudes" in Joel 3:14, it is clear that the place is a *place* of judgment. The context is eschatological ("sun and moon will be darkened and the stars no longer shine," Joel 3:15), and the site is to be located somewhere in the area of Judah (Joel 3:1) and Jerusalem in particular (Joel 3:1, 16, 17); here the Lord's great judgment is predicted to fall on all the nations (Joel 3:2). Traditionally the last judgment has been viewed by Jews, Christians, and Muslims as occurring in the Kidron Valley just E of Jerusalem, including the valley slopes; as a result of this belief many tombs are to be found on the Kidron slopes, the Muslim cemetery on the W and the Jewish on the E. It is in this Valley of Decision then that the final judgment is seen as taking place.
W. HAROLD MARE

DECONSTRUCTION. See POSTSTRUCTURALIST ANALYSIS.

DEDAN (PLACE) [Heb *dĕdān* (דְּדָן)]. DEDANITE. An important commercial settlement located at one of the major oases in NW Arabia (Gen 10:7; Gen 25:3). The town has been identified with the ruins of Khuraybah just N of the modern village of al-ʿUla in the Ḥijāz (26°41′N; 38°1.5′E). During the 6th century B.C., it emerged into prominence. Dedan appears in the biblical genealogies both as the descendant of Raamah son of Cush (Gen 10:7; 1 Chr 1:9) and Jokshan son of Abraham and Keturah (Gen 25:3; 1 Chr 1:32). The "sons of Dedan" appear in the plural form, which led to their being interpreted as professional classes—warriors, craftsmen, and tribesmen (Albright 1953: 9–10), but they more likely represent ethnic groups, the "Asshurim" denoting a Syrian colony at the oasis (Winnett 1970: 190–191), the "Letushim" perhaps the native Arabs, and "Leummim" another foreign group residing at the oasis. In

the 6th century B.C., the Hebrew prophets link Dedan with Syria-Palestine and Phoenicia in trading enterprises: the Arab settlers provided Tyre with saddle blankets for their horses (Ezek 27: 20; cf. 15, where LXX "men of Rhodes" is to be preferred with RSV to MT "sons of Dedan") and perhaps the inhabitants of the Levant with incense from S Arabia. The merchants and caravans of Dedan are among the foreigners who drew the ire of the Hebrew prophets (Isa 21:13 and Ezek 38:13).

The ruins of ancient Dedan are extensive, running for approximately 1 km alongside the sandstone cliffs of the narrow valley just N of the modern town of al-ʿUla (Jaussen and Savignac 1909; 1914; Parr, Harding, and Dayton 1970: 204–14). Along this 13-km serpentine stretch, there are the remains of numerous settlements for which Khuraybah was the administrative center (Bawden 1979). The intensive agricultural cultivation of this fertile valley (known as the "valley of villages" or Wadi al-Qurā by Arab historians) is reflected in the complex hydrological system of subterranean conduits that irrigated the fields. These remains appear to be the product of the Lihyanite period (Nasif 1980). The cult of the local god, Ḏu-gabat, also appears to have been an agricultural religion (Beeston 1974). The unique architecture, sculpture and ceramics produced by Dedanite culture indicate a complex, highly organized society. The necropolis with the famous Lion tombs on the E side of the wadi are a fine example of the distinctiveness of the culture.

Hundreds of inscriptions in a distinctive form of S Semitic script have been found at the settlement, in the various adjacent sandstone cliffs, and beyond. Many more undoubtedly await discovery. To the almost 400 texts collected by Jaussen and Savignac, over 100 more must now be added to the corpus. Most of them are from al-ʿUla (Altheim and Stiehl 1968, 1971; Parr, Harding, and Dayton 1972: 36–39) or nearby at Medāʾin Ṣāliḥ (50), but others have been discovered more distantly, such as the handful from Jabal Thadra, 85 km NW of Khuraybah (Jamme 1981: 99–105), and those from Midian (van den Branden 1960) and further N in the region of Aqaba in Jordan (Graf 1983). This corpus has been organized into three categories—Dedanite, Early Lihyanite, and late Lihyanite. This tripartite classification remains a matter of some dispute (Jamme 1968), but the following chronology is widely accepted (Drewes *Encyclopedia of Islam*^{2} 5: 761–63). The "Dedanite" inscriptions are assigned to the 6th–5th century B.C. based on their similarity to the Taymanite texts of the same period. The "Lihyanite" texts appear to be later, ranging probably from the 5th–1st centuries B.C. (Altheim and Stiehl 1964; al-Ansary 1970; Winnett and Reed 1970: 119–20). The "lower" chronology of the 2d century B.C. to the 2d century A.D. advocated by Caskel (1953) seems less convincing.

In addition to these indigenous scripts, there is a small body of S Arabian texts at Dedan that appear to be the product of a Minaean merchant colony established at the oasis and involved in the incense trade in the Mediterranean from the 4th–2d centuries B.C. The Lihyanite kingdom appears to be contemporaneous with these texts (van den Branden 1957). The language of the Dedanite-Lihyanite texts represents an early form of Arabic that occasionally even borders on classical Arabic (Beeston 1973). The content is primarily funerary or cultic, but occasionally the brief petitions or epitaphs refer to royal figures who ruled at the oasis. Only one text speaks of a king of "Dedan," but at least 6 or 7 kings and even 1 queen of "Lihyan" are mentioned.

The transition from Dedanite to Lihyanite rule remains unclear. Without such clues, an absolute chronology is at this time impossible and only general guidelines serve to date the texts. Several indications of the Hellenistic era for the Lihyanite inscriptions exist, but these are also subject to dispute. Several Lihyanite kings are named *tlmy* (Tulmay), which has been derived from the dynastic name of Ptolemy, the rulers of Egypt, and interpreted as a product of Hellenistic influence. But the name Talmai appears in the Hebrew Bible (2 Sam 3:3, 13:37; 1 Chr 3:2), rendering such connections uncertain (al-Ansary 1970: 58), particularly since a large number of personal names in the Lihyanite onomasticon are well attested in Hebrew and other W Semitic dialects (al-Ansary 1975: 9–12).

Moreover, it can no longer be assumed that Ptolemy II's campaign of 278/7 B.C. was directed against the Lihyanite kindom in Arabia in an effort to gain control of the incense route (Tarn 1929). The expedition rather appears to have been to Syria-Palestine and Asia, not Arabia (Lorton 1971). Minaean inscriptions from the early Hellenistic period indicate S Arabian merchants were in contact with the oasis,

but only one reference is made to Lihyan, whereas Dedan is mentioned nine times (Garbini 1974: no. 392). Lihyanite legends in the late form of the script appear on coins discovered in South Arabia that are imitations of Athenian coins and probably date to the same period (Walker 1959; Boneschi 1961). The fact that Mas‹udu, one of the kings of Lihyan, recorded his name in Nabataean Aramaic inscriptions near Tayma seems to represent the terminus for the kingdom and the Lihyanite inscriptions, i.e., about 100 B.C. Afterwards, the Nabataeans appear to have controlled the region and shifted the administrative center from Dedan to Ḥegrā (Madā'in Ṣaliḥ) some 20 km further N.

In the oracles against Edom in the Hebrew prophets, the Dedanites are involved in the condemnation (Jer 49:8 and Ezek 25:13). Evidence that Dedan moved within the Edomite orbit seems clear. One of the kings of Dedan was named *gltqs* (Caskel no. 30), and Lihyanite texts later refer to individuals named *‹bdqs* and *slmtqs* (Jaussen and Savignac 1909: Lih. no. 363; *‹dbqs* in 143 must be a case of metathesis; and *slmtqs*, no. 117). These names suggest the presence of the cult of the Edomite god, Qaus/Qos, at the oasis. Activities of Dedanites in Edomite territory are indicated by discoveries of their inscriptions at Tell el-Kheleifeh on the gulf of Aqaba and 50 km farther NE in the Ḥismā desert just S of the Edomite plateau (Graf 1983). In the excavations of the Edomite fortress at Ghrareh about 20 km S of Petra, a seal also was discovered inscribed in the proto-Arabic script of the Ḥijāz in a 7th–6th century context (as interpreted by E. A. Knauf in Hart 1988: 98–99). The cult of the Syrian god, Ba‹alsamina, is also present at the oasis in the Ḥijāz during the early Dedanite period (Caskel 1953: no. 12). The cosmopolitan nature of the oasis and its far-flung contacts with Syria, Palestine, and Phoenicia may have taken place under Edomite auspices.

During Nabonidus' Arabian expedition and 10 year sojourn at Tayma (ca. 552–542 B.C.), the Neo-Babylonian king conducted a campaign deep into the Ḥijāz in which the kings of Tayma and Dedan were slain (Graf 1989: 140). A "war against Dedan" is also mentioned in "Taymanite" inscriptions from Jabal Ghunaym just 10 km S of Tayma (Winnett and Reed 1970: nos. 20–23) and at a small watch tower 8 km NW of Tayma (Parr, Harding, and Dayton 1972: 41, no. 39), which also may allude to Nabonidus' expedition (cf. Eph‹al 1982: 179–91). In 539 B.C., Nabonidus was defeated by Cyrus and the oasis may have come under Achaemenid Persian control. The primary evidence for this assumption is one of the inscriptions of the oasis that refers to "Gashm b. Shahr and ‹Abd the governor (*fḥt*) of Dedan" (Jaussen and Savignac 1909: Lih no. 138). This Gashm has been identified with "Geshem the Arab," one of the opponents of Nehemiah (Neh 2:19; 6:1–2, 6), but reservations have been expressed about such connections (Eph‹al 1982: 204).

The matter seems now fairly certain, as a recent Aramaic text found at Tayma indicates the governor of the town in the 5th century B.C. was Pṣgw Shahru, "the son of the king of Lihyan" (Cross 1986). Since Shahru is a dynastic name both of the royal house at Dedan and that of Qedar, the ruling governors in the Ḥijāz may have been Qedarites. A Persian satrap and governor of Qedar is known as early as the 5th year of Cyrus' reign (ca. 545 in BE VIII/1: 65), indicating the Qedarites were subjects of the Achaemenid empire before the defeat of Nabonidus in 539. The Qedarites may have been installed as governors in the region because of their loyalty to the Achaemenid ruler. The common assumption that the title of "governor" (*fḥt*, Aramaic *pḥh*) was used only in the Achaemenid period (Winnett and Reed 1970: 116; Knauf 1985: 105) must now be rejected; the title was in general use throughout the Neo-Babylonian empire for governors including those of the Levant prior to the reign of Nabonidus (Graf 1989: 140). It may therefore be the legacy of Nabonidus' rule in the region. It also has been suggested that Nabonidus used Jewish mercenaries during his Arabian campaign and established them in military colonies in the Ḥijāz at such locations as Dedan (Gadd 1958: 86). Later Jewish presence at the oasis is indicated by several Aramaic inscriptions from the oasis from the Byzantine period (J. T. Milik in Winnett and Reed 1970: 163), but there is no reflection of and Jewish presence in the extensive epigraphic Dedanite corpus of the earlier periods.

DAVID F. GRAF

DEDICATION, FEAST OF. The festival of dedication, which is named Hanukkah in Hebrew, is the Jewish holiday which celebrates the reconsecration of the Jerusalem temple and its altar to the traditional service of the Lord in 165 or 164 B.C.E. It begins on the 25th day of the month Kislev (the 9th month in the lunisolar calendar; it coincides with parts of November and December) and lasts for 8 days.

A. The Name

The term Hanukkah as the name for this festival first occurs in *Megillat Taʿanit*, a 1st century C.E. text in which the festival (*ḥnkt*) is included among the days on which fasting was forbidden. There can be no doubt, though, that the Hebrew term was used in the now-lost original Hebrew text of 1 Maccabees. The word *ḥănukkāh* is usually translated "dedication, consecration," but the Gk words which ancient translators chose for rendering it suggest the idea of "renewal, restoration" (*egkainismos* [1 Macc 4:56, 59; 2 Macc 2:19; cf. 2:9]; *egkainia* [John 10:22]; related verbs are found in 1 Macc 4:36, 54, 57). This association of Hebrew and Greek terms agrees with the practice elsewhere in the LXX (Num 7:10, 11, 84, 88 [this chapter later became the Torah passage which was to be read on Hanukkah (*m. Meg.* 3:6)]; Deut 20:5; 1 Kgs 8:63; 2 Chr 7:5, 9: Neh 12:27; Ps 30:1 [LXX 29:1]), although the words in the two languages do not seem to have precisely the same meanings.

B. The Event Celebrated

Like the great festivals of the OT, Hanukkah remembers and celebrates a significant historical event. Unlike the others, it commemorates an event which is described outside the Hebrew Bible. The temple in

Jerusalem had been desecrated and transformed into the center for a pagan cult by order of King Antiochus IV (175–164 B.C.E.) in Kislev of 168 or 167 B.C.E. (1 Macc 1:29–64; 2 Macc 6:1–9) as part of a general proscription of the traditional practices of Judaism. The exact reasons for the king's actions, which were atypical for him, are not clear. He was anxious to create a stronger base of support in Jerusalem during his wars with Egypt, and he had recently had to crush an uprising in the city against his appointee, the high priest Menelaus (2 Macc 5:5–16). The Maccabean revolt which followed his decrees that banned traditional Judaism achieved some surprisingly successful results so that by late 165 or 164 B.C.E. Judas, the leader of the rebels, and his troops were able to gain possession of the temple mount. There they cleaned and repaired the temple and built a new altar so that the traditional forms of worship could be reinstituted (1 Macc 4:36–61; 2 Macc 10:1–8). 1 Macc 4:52–54 indicates that on Kislev 25, exactly three (compare 4:54 with v 52 and 1:59) or two (2 Macc 10:3) years after the pagans had profaned the old altar with their illicit offerings (part of the monthly celebration of the deified king's birthday [1 Macc 1:59; 2 Macc 6:7]), Judas and his collaborators offered sacrifices on the new altar. The celebration which began in this way continued for 8 days (1 Macc 4:56; 2 Macc 10:6). During this initial observance of Hanukkah, the celebrants decreed that in the future it should occur annually (1 Macc 4:59; 2 Macc 10:8).

C. Elements of the Celebration

The books of Maccabees agree about several important details regarding the first Hanukkah. For example, they both place the beginning of the festival on the same date, prescribe the same duration for it, and mention sacrifices on the new altar. There are, however, some ways in which their narratives differ. One noteworthy case in point is the fact that the account in 1 Macc 4:36–61 centers on the dedication or restoration of the altar, while the various references in 2 Maccabees (1:18; 2:16, 19; 10:3, 5, 7) focus on the cleansing of the temple. A more intriguing instance is the fact that 2 Maccabees, in complete distinction from 1 Maccabees, links Hanukkah with the Festival of Tabernacles. In 2 Macc 1:9, the Jews of Jerusalem urge their kin in Egypt to celebrate the days of tabernacles in the month Kislev; 1:18 links the purification of the temple with tabernacles and fire; and 10:6 relates that the original festival lasted 8 joyful days after the manner of tabernacles, adding that only a short time before, during the proper time for the Festival of Tabernacles (the 7th month, days 15–22), "they had been wandering in the mountains and caves like wild animals" (RSV). This last verse connects the 8-day duration with Tabernacles and suggests that their inability to celebrate the Festival of Tabernacles at the correct time led them to observe some of its rites as the first Hanukkah. 2 Maccabees never actually calls Hanukkah a festival of tabernacles, but it clearly relates the two occasions, both of which were marked by joy (Lev 23:40; 1 Macc 4:56, 58–59; 2 Macc 10:6). The 8 days of the holiday seem also to be modelled on Solomon's inauguration of the first temple (cf. 2 Macc 2:8–12). According to 1 Kgs 8:65–66, Solomon dismissed the assembled throng on the 8th day, after 7 days of dedicatory rites—days which coincided with the Festival of Tabernacles (8:2; 2 Chr 7:8–10). The parallel in 2 Chr 7:9–10, however, adds an 8th day to the festivities.

There are also several rituals which the two festivals share. (1) Both involved carrying branches (for Tabernacles, see Lev 23:40; Neh 8:15; *Jub.* 16:31; for Hanukkah, 2 Macc 10:7; cf. 6:7 where there is reference to a festival of Dionysus, possibly on the 25th of the month, in which wreaths of ivy were worn), though there is no indication that making booths was ever part of Hanukkah. (2) Both eventually included the Hallel (Psalms 113–18) in their liturgies (for Tabernacles, see *m. Sukk.* 4:1; for Hanukkah, *b. Šabb.* 21b; Scholion to *Megillat Ta*ʿ*anit*; note that the title of Psalm 30 relates it to the dedication of the temple). 2 Macc 10:7 may already be pointing in this direction with its reference to "hymns of thanksgiving" (RSV; see also 1 Macc 1:54).

The Festivals of Tabernacles and Hanukkah also resemble one another in that both are associated with light. But their lights are very different: Tabernacles involved illuminating the Women's Court of the temple (*m. Sukk.* 5:2–4), while Hanukkah came to include lamps and lights at each one's home. As part of the pre-festival renovations and repairs, 1 Macc 4:49–50 notes that the candelabrum was brought into the temple and that its lamps were lit so that they gave light in the temple; 2 Macc 1:8; 10:3 allude to the

same events. The second letter that is prefaced to 2 Maccabees refers to the festival of cleansing as a time of tabernacles and fire (1:18) and adds a story about a miraculous fire from the altar of the first temple that eventually turned into "nephthar" and later kindled the fire on the new altar in Nehemiah's time (1:19–36; cf. 2:1, 8–12). Nevertheless, these sorts of references to lights and fire hardly prepare one for Josephus' claim (*Ant* 12.7.7 §325) that the festival itself was named "Lights" (*phōta*).He had previously (12.7.6 §319) written that lights were kindled on Kislev 25, but here (§325) he explains the reason for the name *Lights:* "giving this name to it, I think, from the fact that the right to worship appeared [*phanēnai*] to us at a time when we hardly dared hope for it." Lights did indeed become a major characteristic of the festival, though the original reason for them seems to have been forgotten (for another early reference to the Hanukkah light, see *m. B. Qam.* 6:6).

D. Later References

The prominence of lights during the holiday encouraged discussions about their use and origin. One learns from *b. Šabb.* 21b that the Shammaites lit 8 lights on the first day of Hanukkah and reduced the total by one each succeeding day, but the Hillelites lit one on the first day and increased the number by one each of the following days (see also Scholion to *Megillat Ta‹anit*). The dearth of information about the origin of the lights seems to have led to the creation of stories to supply the deficiency. According to one legend, the temple candelabrum had been defiled during the Antiochan persecution so that it could not be used when the temple was recovered. The Hasmoneans (= the Maccabees) then took 7 or 8 iron spears and hung lamps on them (Scholion to *Megillat Ta‹anit*; *Pesiq. R.* 2.5). The famous story about a miraculous cruse of oil is also related to the lights of Hanukkah and the duration of the festival. It claims that when the Hasmoneans regained the temple they found just enough undefiled oil in a cruse to fuel the candelabrum for one day; by a miracle, however, the oil kept it burning for 8 days.

JAMES C. VANDERKAM

DEEP, THE [Heb *tĕhôm* (תְּהוֹם)]. In ANE cosmology, the earth was thought to have been placed afloat in the midst of terrifying cosmic waters. In Hebrew, this primeval ocean is usually called *tĕhôm*, but also *mĕṣûlāh*, *mĕṣôlāh*, and *ṣûlāh*. These synonyms are regularly translated by *abyssos*, "abyss," in Greek, far less frequently by *bathos* and *bythos*, "depth". The deep may, of course, refer simply to the ocean without any mythological implication (so in Job 38:30; 41:23—Eng 41:31; Ps 107:24; and Mic 7:19).

In Babylonian mythology, the deep is personified in the figure of monstrous Tiamat, a goddess whose name is related to the Hebrew word *tĕhôm.* It was upon the defeat of Tiamat that Babylon's patron god, Marduk, was able to create the cosmos and establish order. Tiamat's body was split in two like a shellfish. One half of the body became the firmament, the other became the bedrock of earth. Traces of this ancient cosmogony are still evident in the priestly account of creation in Genesis 1. Here the wind of God was instrumental in creation, a detail that is reminiscent of Marduk's final blow on Tiamat: a raging wind sent into her mouth (*ANET*, 67). According to the biblical writer, a firmament divided "the waters from the waters" (Gen 1:6). Hence the concept in the Bible of the two deeps calling to one another (Ps 42:8—Eng 42:7).

In another account of creation which confirms the role of the divine wind, the deity is said to have contained the watery chaos: "By the word the heavens were made; by the wind of his mouth all their host. He gathered the waters of the sea as in a container; he put the deeps (*tĕhômôt*) in storehouses" (Ps 33:6–7; cf. Prov 8:27–29). Henceforth, the unruly waters were held back and order was maintained. Only in the face of intolerable corruption on earth did God open the floodgates to unleash the destructive power of the deep. Water burst forth from the great deep (*tĕhôm rabbāh*)and poured out through the "windows of

heaven" (Gen 7:11). Eventually the deluge was ended when "the fountains of the deep and the windows of heaven were closed" (Gen 8:2).

The deep is regularly associated with other watery monsters against whom Yahweh fought in both the creation of the world and of God's people: Rahab, Leviathan, River, Sea, Tannin, Mighty Waters. Indeed, the deep is named with the dragons (*tannînîm*) in Ps 148:7, and some archaic texts still recall the deep personified as a beast "crouching down under" (Gen 49:25; Deut 33:13). A hymn in Isaiah 51 echoes the ignominious defeat of the monster Tiamat:

> Was it not you who dismembered Rahab,
> who pierced the dragon?
> Was it not you who dried up the sea,
> the waters of the great deep (*tĕhôm rabbāh*),
> Who made the depths of the sea a way
> for the redeemed to cross over? (Isa 51:9c–10).

The cosmogonic battle was historicized and appropriated for the propaganda of the nation. Yahweh is said to have defeated Israel's earthly enemies as surely as he defeated the cosmic forces of chaos. Thus, the exodus is often portrayed as God's victory over the sea and the deep (Pss 77:17–21—Eng 77:16–20; 106:9; 107:23–24; Isa 44:27; 63:11–12; Hab 3:10; Zech 10:11; cf. Ps 74:13–15). In the Song of the Sea, however, the waters are not the enemies of Yahweh. Rather, they are merely instruments in Yahweh's victory: "The deeps (*tĕhōmôt*) covered them, they sank into the depths (*mĕṣōlôt*) like a stone" (Exod 15:5; cf. Neh 9:11). Likewise, in Ps 68:23 the victory of the divine warrior was not over the deep but *at* the deep.

In other texts, *tĕhôm* refers to the subterranean waters that have been tamed. The Ugaritic texts speak of the abode of the high god El "at the sources of the two rivers (*nhrm*), amid the springs of two deep (*thmtm*)" at the mountain of El (*CTA* 4.iv.21–22; 6.i.33–34; 17.vi.47–48). Thus the abode of Yahweh in Jerusalem is also said to have water flowing from it (Ps 46:5—Eng 46:4; Ezek 47:1–12; Zech 14:8; Joel 4:18—Eng 3:18; Isa 33:21–23a). Jewish traditions maintained that the rock of the temple was built located precisely at the mouth of the *tĕhôm* (*Tg. J.* on Exod 28:30; cf. *M. Para* 3.3). The deep was thought to be the source from which the subterranean waters flowed (Isa 44:27; cf. Eccl 1:7) and water continually welled up (2 Sam 1:21, reading *t<h>wmt* instead of *trwmt;* cf. *CTA* 19.1.44–45). In the defeat of the watery monsters, the restless deep was tamed (Ps 74:13–15). Now in the garden of God, the unending waters of the deep are harnessed for good, giving nourishment for the trees there (Ezek 31:4, 15). Likewise, the deep provided life-giving waters to the Israelites in the wilderness (Ps 78:15–16; cf. Exod 17:6).

But the waters of the deep were not always so reassuring to the Israelites. Landlubbers that they were, they found the ocean terrifying. It was equated with the underworld to which the wicked were cast and from which they long to be delivered. The prayer of Jonah illustrates this well:

> From my distress I called to YHWH
> And he answered me.
> From the belly of Sheol I cried out
> And he heard me
> You have cast me into the deep (*mĕṣûlāh*)
> into the heart of the seas.
> The flood (*nāhār*) surrounded me;
> All your breakers and your waves,
> They washed over me.
> …
> The waters encompassed me to the neck,
> The deep (*tĕhôm*) surrounded me
> The weeds are wrapped around my head
> At the roots of the mountains.

I have descended to the underworld
Its bars are ever behind me
You brought my life up from the pit
O YHWH, my God. (Jonah 2:4, 6–7)

Here the ocean into which Jonah was cast is seen as the netherworld, where all the terrifying forces were. The poem resembles several individual laments in the psalter. One such psalm speaks metaphorically of *tĕhōmôt hā‹āreṣ* "the depths of the earth" (Ps 71:20). Another describes the underworld as the deep where darkness abides (Ps 88:7—Eng 88:6). In the book of Job 38, the deep is considered the mysterious realm of the dead (Job 38:16–18). It is not surprising, therefore, that the deep is frequently seen as the opposite of heaven (Gen 49:25; Deut 33:13; Ps 107:26; cf. *CTA* 3.iii.21–22). The deep became a metaphor for deep trouble that devours an individual on the earth (Ps 69:3, 16—Eng16:2, 15).

According to Ben Sirach, Wisdom walked in the depths of the abyss near the assembly of the Most High (Sir 24:1–5). In the NT, *abyssos* occurs 9 times. Alluding to the *tĕhōmôt* in Ps 107:26, the apostle Paul speaks of the *abyssos* as the realm of the dead (Rom 10:7). Elsewhere in the NT, the abyss appears to be the place of imprisonment for all kinds of wicked spirits (Luke 8:31; Rev 9:1–2, 11; 11:7; 17:8; 20:1, 3; cf. 2 Pet 2:4; Jude 6).

DEFILE. See UNCLEAN AND CLEAN.

DEIR ‹ALLA, TELL (M.R. 209178). A site in the E Jordan Valley, roughly halfway between the Lake of Tiberias and the Dead Sea, near the river Zerqa (biblical Jabbok). The tell measures roughly 200 by 200 m at its foot; the highest point is 200 m below sea level, which is nearly 30 m above the surrounding fields. This entry will discuss the archaeology of the site, as well as the noteworthy texts discovered there.

ARCHAEOLOGY

A. Identification

Tell Deir ‹Alla is often connected with the biblical Succoth mentioned in Gen 33:17 and Judg 8:4–16. In the 19th century, Merrill discovered the name Deir ‹Alla which was used locally to indicate a stretch of land through which the river Zerqa flows from the foot of the mountains in the E to where it flows into the Jordan River. The mountains recede a little here to the E, and form a valley. Merrill associated this name with the Dar‹ala or Tar‹ala mentioned in the Talmud, *Šebi‹it* 9, 2 *Gemara,* which had replaced the name Succoth. *Succoth* means "booth," *tar‹ala* means "reeling," and *Deir ‹Alla* means "high monastery." Thus Deir ‹Alla could be a corruption of Tar‹ala, and if so this would mean that the name had been known locally since early Islamic times, whereas the Succoth-Tar‹ala tradition must have gone back to at least the early centuries of the Iron Age. Can this assumption be substantiated? The identification was made in the last century even before the true nature of a mound of ruins or tell was realized, whereas we know little about the nature of biblical Succoth in the sense of its physical appearance, its culture, religion, or its economic and social life. It was assumed before excavations began that Tell Deir ‹Alla was a town in biblical times, and it was taken for granted that Succoth was a town, as it is called in one place in the OT (Judg 8:16).

Through the excavations a good deal is known about the ruins of Tell Deir ʿAlla in the LB Age and in the Iron Age. This evidence cannot be reconciled with our traditional understanding of what Succoth was. It is quite possible that the excavations have revealed Succoth, but this would require biblical Succoth to be interpreted in an unexpected way.

An attempt to explain why the name of Succoth was changed into Tarʿala in antiquity may clarify the issue of identification. This attempt has only become possible since we have known that the tell contains ruins of sanctuaries from the LB Age and from the Iron Age.

The Hebrew word *terʿala* comes from the root *rʿl* meaning "to quiver, shake, reel," and *trʿlh* means "reeling." The word occurs in Ps 60:8 and Isa 51:17–22. In both cases the reference is not to people who are simply drunk, but is applied metaphorically to people who have drunk from "a cup of trembling" and "wine of astonishment." In the Psalm this refers to the aftermath of an earthquake which presumably hit Shechem and the Valley of Succoth. This destruction paved the way for the establishment of God's dominion in the Valley of Succoth. At Deir ʿAlla a complex building, which must be interpreted as a sanctuary dating from the 8th century B.C., was destroyed by an earthquake. Even before the disaster, the prophets of Israel may have referred to the valley of the "booth" as a place of drunkenness, inebriation, or intoxication, which occurred during religious festivals and for which the cult of the Baʿals was known. This prophetic qualification may have become popular in pious circles, and may in the long run have caused the change of name. Yet, in the same way, Succoth may also have been a sobriquet used purposely to avoid mentioning the real name of the LB pagan sanctuary at Deir ʿAlla, or its Iron Age successors. Also both names were occasionally used to indicate the valley as well as the site of the cult.

From about 1550 B.C. until after 1200 B.C. there was a sanctuary which did not belong to a village or a town. The reason for its existence was inferred partly through the study of technological features in the pottery found in the successive stages of rebuilding and repair of the cult center. Although the pottery at each level of development seemed to form an homogeneous group, the composition of the clays used in their production showed that a fair amount of the pottery had been imported from the hinterland. For instance, pottery was brought from basalt areas such as that found in Basan, but also from totally different geological areas. This means that people in the LB Age traveled long distances to bring gifts in pottery containers to the sanctuary. This almost certainly connects the site of Deir ʿAlla and its surroundings with trade and with a staple market. Products from Gilead and beyond to the E, the N, and the S were collected and transported to this area, where they were sold in large quantities to caravans bound for Egypt (Gen 37:25), the Mediterranean coast, and Syria. In return the caravans brought objects from these regions to Deir ʿAlla.

This interpretation can provide the answers to a number of questions about the archaeological evidence. It explains why there would have been a really large sanctuary standing all by itself in the LB Age. It is now clear that it was supported by trade. On the one hand this sanctuary was necessary as a meeting point for caravans and tradespeople because it ensured safe trading through its relation with the divine world, and on the other hand its income was secure. Trading "houses" could introduce their own protective genius into the sanctuary. This would explain the presence of pottery "shrines" in the LB sanctuary, which can be interpreted as containers for sacred objects symbolizing the divine blessing for a tribe, clan, or caravan. The sanctuary of the 8th century B.C. where the "Balaam texts" were written on a plastered wall (see below) may also have been a meeting point for traders and caravan owners from different regions, all with their own deities and rituals. Many kinds of priests from a wide variety of backgrounds may have been permanently stationed there, to sanction sales contracts or bless goods that were being traded. The excavations at the site make it possible to explain Succoth as a market area with an international character. It is not so surprising then that Pharaoh Shishak, when he invaded Palestine in 918 B.C., also crossed the Jordan with his army and went to the Succoth area to control, possibly to restore, the trade between Gilead and Egypt. This would also explain the Egyptian presence in Deir ʿAlla in about 1200 B.C. A faience vase from Queen Taousert was interpreted by J. Yoyotte (1962) as an artifact of political significance. If Deir ʿAlla was a market through which Egypt regularly received products from Gilead, then officials of the Pharaoh must have visited this center of trade.

H. Gazelles (1965) made an attempt to decipher the 3 clay tablets discovered in the sanctuary dating from about 1200 B.C.; together with A. van den Branden, he found a strong influence from early S Semitic writing in the script. One group of foreign pots came from an area where shale sand is abundant, and these pots could have come from the S of Jordan. Midianites whose caravans passed by Gilead could have brought them.

Early in the excavations it became clear that the material culture, as well as the language and religion connected with the site, were atypical of the Israelites as represented from other excavations and historical documents. This suggested that the Iron Age inhabitants were to a high degree assimilated to the culture and the customs of the non-Israelite population of Gilead. Which of the Israelite tribes living across the Jordan in Gilead owned the Valley of Succoth is a much debated issue. In the light of the interpretation given above, members of the tribes who were involved in the trade of local products would have been found in this valley.

B. The Natural Setting

Some aspects of the geological formation on which Tell Deir ʿAlla is situated have strongly influenced the history of the site itself, as well as that of its inhabitants. During the Pleistocene, when the area was still covered by the waters of the Lissan lake, the river Zerqa drained its waters from the E mountains into the lake, and deposited a huge accumulation of detritus, including gravels, sands, and clays. When the area became dry, dunes of thick deposits of banded clays were formed on top of the dry lake bed. This material was used in historical times for the construction of houses and other buildings, and also for pottery making. It is the special quality of these clays which explains that Tell Deir ʿAlla has suffered less from erosion than, for instance, the tell of ancient Jericho, whereas the former is exposed to stronger erosive forces than the latter. Because of the characteristics of these clays, it is also easy to separate locally made pottery from imported wares. It is possible that these clays were the reason why foundries were set up "between Succoth and Zarethan" (1 Kgs 7:46).

In this area earth tremors and earthquakes frequently occur. It was discovered that the buildings of the site had been destroyed frequently by earthquakes, followed by heavy fires.

C. The History of the Site

Deir ʿAlla lies on a high, clay ridge covered with sand dunes. It is not clear when the first settlers came to the site, although there are some indications that the site was inhabited in the MB Age. The natural surface that existed then on the N side of the tell lies buried under many meters of later soil deposits washed down from the E foothills. At the beginning of the LB Age, about 1550 B.C., an artificial platform was made, and this may cover ruins from the MB Age. On the N side, the platform was over 6 m high and served as a mound for a sanctuary. Very little is known about the original plan of the building, but the earliest cella was built of boulders with a tower-like structure on the N side. It stood on a higher level than the surrounding rooms. A cache of early LB pottery was found under one of the earliest floors of the cella. There are no indications that during the LB Age stone was used for other buildings. The cella was regularly rebuilt on a higher level, the last one from 1200 B.C., made entirely of mudbricks. Its roof was supported by two heavy wooden beams standing on large stone bases, more or less on the long axis. The entrance was on the S side. The N wall came very close to the N slope of the hill, and there was no defense wall. On the W side, rooms have been excavated over a stretch of ca. 25 m, all belonging to a complex of storerooms and workrooms that were built against the cella. E of the cella was a small courtyard leading to a series of small rooms that had clearly contained precious objects and administrative tablets. It seems that the sanctuary had developed its own script, which has not yet been satisfactorily deciphered. Farther to the E were found some rooms that have been interpreted as a priest's house: a pantry, kitchen, and small shrine.

Shortly after 1200 B.C. the entire complex was destroyed by an earthquake, followed by fire. Before rebuilding had started there was another earthquake that levelled the crumbling ruins. From broken and burnt objects it is clear that the sanctuary collected objects from all parts of the ancient world: from Egypt, the Mycenean world, and N Syria. Most remarkable is that until now the excavations have not

produced any terra-cotta or other fertility images of living beings from the LB Age, apart from stylized birds and goats painted on pottery.

While the people were rebuilding after the earthquakes, fire broke out again. Perhaps this was taken as a sign of heavenly disapproval and the site was abandoned (cf. Isa 29:6). Almost immediately afterwards the site was taken over by bronze-smiths who used it for their industry. Their pottery is not the same as that from the 13th century B.C. sanctuary. They may have been there for about half a century, when another earthquake occurred. On that occasion the earth split open and a man fell in the gap and was squashed the next moment, when the crack closed again. The disaster marks the end of the presence of smiths on the site.

There are some indications in the excavated area above these levels that in the second half of the 12th century B.C. the tradition of a holy place was restored. But the plans of the various phases show scattered small buildings of mudbrick, and in one fairly short period, there seems to have been a flimsy defense wall and gate between 2 round towers (ca. 10th century B.C.). Evidence that the original function of the site was not lost came from the excavations just below the summit. A complex building was found over a large area. The layout was not that of a village. The remains were in very poor condition because, again, an earthquake followed by conflagration had destroyed this complex. Masses of restorable and identifiable objects made of stone and clay were preserved. In the middle of the destruction debris, large and small fragments of fallen wall plaster were found containing a beautifully written Aramaic text, relating the seer Balaam the son of Beor, who witnessed a meeting of gods trying to prevent a goddess from punishing the human race by destruction. Balaam the son of Beor is mentioned in a number of texts in the Bible (Numbers 22–24). In the 1st millennium B.C., he was apparently remembered as a great religious authority in Jordan. This sanctuary was unattached to any particular village or town. It was composed of many rooms which had specific purposes such as storage and processing of goods, as well as weaving, which was done in many rooms.

Certain objects of particular interest found here should be mentioned. Among these is a flintstone with a high sheen from having been regularly touched or kissed; it bears the inscription "stone of shar‹a," possibly a goddess. With it were uncovered a libation goblet of a special form and an outsize loomweight; weaving "clothes for Asherah" (2 Kgs 23:7) may have been combined here with sacred prostitution. There are also terra-cottas, some of which depict naked priests and priestesses in a style not found in ancient Israel, and there are also animal figurines of horses, cows, and deer, as well as little clay models of legs. In analogy to pilgrim places such as Lourdes in France, these suggest that visitors expected to be healed from arthritis and other diseases.

After its destruction the site may have been abandoned for a considerable time. When building resumed, another type of pottery appeared, with different forms and techniques based on the use of a true potter's wheel, which had replaced a small hand-operated tournette. The inhabitants dug many large storage bins in their courtyards, and by the 5th century B.C., there were so many deep and wide pits with soft filling, that house walls often sank (probably after heavy rains) causing the dwellings to collapse. At this point, stone foundations became a regular feature. Since these pits often destroyed the remains of earlier walls, it is difficult to reconstruct the original plans of the buildings over the 8 building phases of the latest occupation. It is thought that one of these phases consists of the ruins of a small fortress. The end of the occupation of the site is dated to the 4th century B.C.

From the 8th until the 16th century A.D., the mound was used as a cemetery by the Arab inhabitants of a nearby village.

Since 1960, a Dutch team directed by H. J. Franken has been excavating the site. In the 1980s the work was continued as a joint enterprise headed by M. M. Ibrahim and G. van der Kooij.

TEXTS

Found in 1967 at the E Jordan Valley site of Tell Deir ʿAlla, this text (or texts) consists of 2 large and several smaller combinations of plaster fragments, written in black and (occasionally) red ink. The text was probably originally written on a wall, or on a stela hung on a wall, of a building that has been described as a sanctuary. The wall fell in a series of earthquakes, and part of the text was burned in a resulting fire. The script of the text, its date, and its dialect are all matters of dispute. The script is said to be either Aramaic or an Ammonite (or "Gileadite") offshoot of the Aramaic, and the date of the text, which is for the most part dependent on an analysis of the script, either mid-8th century or ca. 700 B.C.E.

There has been much discussion as to whether the dialect of the text is Aramaic or Canaanite. A comparison with Old Aramaic texts is suggested especially by the use of the pronominal suffix *-wh* on the preposition *ʾl* (and perhaps on plural nouns), and by the representation of consonants in the text (with *q* used to represent **ḏ*). Other features of the text would generally be called Canaanite: use of *waw*-consecutive; appearance of N conjugation verbs; use of *ldʿt* from the root **wdʿ*; imperative plural *lkw* from the root *hlk;* vocabulary items like *dbr* with the meaning "to speak." As far as we understand the dialects of the first half of the 1st millennium B.C.E., then, the text includes some features that would be incongruous in a mid- or late-8th century Aramaic text, and some that would be incongruous in a contemporary Canaanite text. These difficulties have led to several more or less satisfactory suggestions for the origin of the dialect of the Deir ʿAlla text, generally drawn from dialect linguistics or ANE historical records of settlement patterns, although occasionally from more imaginative realms: One commentator has suggested that the incongruities in this text disappear when one realizes that the text as we have it is a word-for-word copy of a 10th-century or even earlier Aramaic manuscript, written on the wall of a school as an exemplary text; another, that the dialect might represent archaic NW Semitic from the time of the Exodus, just the time period in which the Bible places Balaam.

The interpretation of the text has been no less divided. Some of the division results from differences in understanding certain words as either Aramaic or Canaanite; some of it results from variant readings among the several scholars who have examined the fragments or photographs of them; and some is the inevitable result of interpreting such a fragmentary text. In the discussion that follows, the more likely alternative translations and interpretations will be included in brackets at each point of contention.

The text begins by reporting that it is the "book" or "account" (*spr*) of Balaam the son of Beor, a seer of the gods, and continues that the gods came to Balaam by night, and that he saw a vision like an oracle of El [or "according to these words"]. Then the gods say to Balaam something that takes up half of the second line of the inscription (6 or 7 words) and is written in red ink, as was the first half of line 1. [Scholars disagree about whether the division into red and black ink here follows the syntax of the sentences, or is simply half the line in both cases. There is another portion of the text, in the "second combination," that is also written in red, part of the way across one line. The context is too broken, however, to offer more information about the meaning of the use of red ink.] The message is impossible to read clearly. Interpretations have ranged from simply suggesting that some future action is indicated by the first verb *ypʿl*, to reading within it words for fire and destruction and thus interpreting the message as a short statement of a warning of destruction spelled out later in the text.

Whatever the content of the end of line 2, the experience clearly upsets Balaam. He gets up the next day and cries, and he apparently refuses to eat. His people come up to him [or "His uncle Eliqah enters"] and

ask about his behavior, and his response is to tell them of his vision of a meeting of the Divine Council; the gods in attendance are called *ʾlhn* and *šdyn*. (Some scholars have seen in the *ʾlhn* and the *šdyn* two warring groups of gods, one group favorably disposed toward humanity and the other bent on its destruction.)

They (the gods of the Council) have asked a goddess to cover the heavens with a cloud forever because of the unnatural goings-on on the earth. This is upsetting to Balaam presumably because it would mean a loss of light and eventually all life from the earth. The name of the goddess concerned has been lost to us in a break in the text, except for the first letter, *š*. One of three suggestions as to her identity has generally been followed. Some think she is "Šagar," a goddess they think is mentioned later in the text along with another deity (*ʿštr*, in line I, 14). Many commentators, however, read *šgr wʿštr* in that line as common nouns and not divine names ("offspring, young"; cf. Deut 7:13), and so they are not disposed to consider a goddess Šagar at this point. Another suggestion has been to see her as the goddess Šamaš (or Šapaš), since the sun is a female deity in the Ugaritic texts, and some such powerful divinity seems necessary here. But, finally, other scholars see no obvious connection between the sun goddess and the following lines in our text, since what the goddess is asked to do is precisely to cover up the heavens so as to deny light to the earth—the opposite, one would think, of the sun goddess' function. These scholars prefer to leave the issue open.

The goddess is asked to "sew up" the heavens with her cloud, and perhaps to seal the cloud and not ever remove the seal (or "do not be angry forever" or "do not say anything"). The reason she is to do this (or else the result of her doing this) is presented in the next few lines (or else someone, probably Balaam, continues in the next few lines to explain the reasons or present the results). In typical reversals-text style, we read that nothing on earth is as it should be: Small birds are reviling large ones, normally gentle birds are clawing at others, haughty hyenas are sitting still for chastisement, poor women are mixing expensive myrrh, deaf people hear from afar, and so on. (Some commentators have seen this reversals motif in only some of these phrases, while in others they have identified simply lists of birds, lists of female cult personnel, and admonitions shouted by Balaam, presumably, to the gathered people.)

The first main fragment combination of the inscription breaks off at this point. In the readable fragments of the second combination there is no mention of Balaam; rather, there is a description of some sort of ritual, perhaps performed to appease the angry gods of the earlier fragments, if the two combinations are related. This second combination apparently has to do with death and/or sex and has been read, for instance: (1) as including a series of curses from Balaam to his hearers; (2) as a description of a child sacrifice ritual (based on interpreting the word *nqr* as cognate to Heb *nēṣer*, "sprout," like the *ṣmḥ* of Punic and neo-Punic child sacrifice texts); (3) as a version of the descent to the netherworld of a goddess, like the Mesopotamian *Descent of Ishtar;* and (4) even as a foundation story for the establishment at the Deir ʿAlla sanctuary of a brothel for "sacred prostitutes" (Rofé 1979). This last explanation ties in with the accusation in Num 31:16 that Balaam gave advice to certain Midianite women about drawing Israelite men away from their proper worship. Many commentators have thought it prudent to decline to interpret this combination.

Late in this second grouping we have a few words that might indicate the return of life to the planet, with mention of dew and rain, so that if some sort of ritual is envisioned as a cure for the chaos described in the first combination, or simply to appease the obviously angry deities, it would seem that the ritual was effective and that light and life were returned or retained for the planet.

Whether the "second combination" of the inscription is related to the "first combination" is an open question, so any use of this material to comment on the Balaam traditions in the Bible must remain speculative. The first part of the inscription is solidly tied to Balaam, however, and presents us with a picture not unlike Hebrew Bible representations of a prophet as one who is privy to the meetings of the Divine Council (Jer 23:18–22; I Kgs 22:19–23). The occurrence of the divine epithet *šdy* in a vision of Balaam is reminiscent of Num 24:4, 16, where Balaam describes himself as one who sees the vision of Šadday. (If the divine name *ʾl* has been correctly read in I, 2, this would be another connection with Num 24:4, 16.)

Some of the wording in the first combination is remarkably like that in the story of Balaam in Numbers 22–24. *wy›tw ›lwh ›lhn blylh* in I, 1, of the Deir ‹Alla text is very close to *way-yābō› ›ēlōhīm ›el-bil‹ām laylāh* in Num 22:20 (cf. also 22:9), and *wyqm bl‹m mn mḥr* in I, 3, of the Deir ‹Alla text reminds one of Num 22:21: *way-yā́qom bil‹ām bab-bṓqer*. There is even mention of Balaam's "people," in I, 4 (if the mysterious uncle Eliqah be banished from the text), and it is to his "people" that the biblical Balaam returns after Balak has banished him, Num 24:14.

There is no certainty about the placement of the Deir ‹Alla text or about the building in which it must have stood. It has been suggested that the building was a sanctuary, however, and that the inscription was originally written on a wall of this sanctuary or on a stela attached to a wall. The mention that Balaam would flee to or return to his "place," *māqôm*, in Num 24:11 and 25 invites the suggestion that *māqôm* here, as often, refers to a sanctuary, a sacred place (see, e.g., Gen 12:6; Deut 12:2); it therefore would not be difficult to see Deir ‹Alla as the home of just such a sanctuary with which Balaam son of Beor was traditionally tied.

It has also been suggested that the confirmation of Balaam's tie to a god or gods with the epithet Šadday, and to a ritual possibly having to do with death, allows us to speculate that the biblical *šēdîm*, "demons," in Deut 32:17 and Ps 106:37 have been misunderstood and were originally a biblical record of the Šadday-gods mentioned in the Deir ‹Alla text. It is to these characters that the Israelites are said in the psalm to have sacrificed their sons and daughters; shortly before (vv 28–31) the psalmist has mentioned the incident at Peor for which the Priestly source blames Balaam, an incident that had to do with sacrifices of or to the dead—to deities other than Yahweh, perhaps deified ancestors (cf. Num 25:2 with Ps 106:28).

JO ANN HACKETT

DEIR EL-BALAH (M.R. 088093). The site of Deir el-Balah is located 1.5 km E of the Mediterranean shoreline just S of Gaza. The ancient identification of the site remains unknown. Nine phases of occupation with minor subdivisions were uncovered, dating from the LB II through the Byzantine era, which includes both the settlement and the associated LB cemetery. Founded by Egypt in the 14th century, the site was both an economic and administrative center, as well as a military outpost during different phases of its existence. The LB strata, accordingly, were the most prominent and became the focus of the excavations.

The LB Age was a cosmopolitan era marked by the mixture of cultures, international trade, and commerce. The architectural features and the material finds of the LB strata at Deir el-Balah point to the predominantly Egyptian character of the settlement at that time and reflect the international character of the age. The extensions of occupation into the Philistine, Iron, and Byzantine periods, though extremely important for the history of the site, were much less substantial.

Deir el-Balah is situated in the midst of towering sand dunes. As a result, only about one-half acre of the settlement was excavated. The excavations, therefore, provide at most a window into the history of occupation at the site. Surveys and trial probes conducted at selected locations in the surrounding area indicate that the settlement spread in all directions, but its precise perimeters remain undefined.

Stratum IX. Stratum IX was founded upon virgin soil. The major architectural feature from this stratum is a large residence adjacent to a man-made pond, similar in design to building complexes of the Amarna

period in Egypt. This relation of building to pond in conjunction with the specifically diagnostic finds of stratum IX point to the Egyptian background of those who built the first settlement during the second half of the 14th century B.C.E.

The residence is comprised of 3 mudbrick buildings set at a right angle. The two N–S buildings together measure approximately 50 m in length and contain the remains of as many as 15 rooms. The single E–W building measures 20 m in length and contains at least 4 to 5 rooms. It is probable that these buildings are part of a larger settlement, although the N and W boundaries of the complex are as yet undetermined since they continue under the sand dunes.

The residency borders the pond on its E and S perimeters. The pond itself is square (20 × 20 m), its sides sloping steeply into the virgin marl to a depth of 5 m. Both archaeological observation and geological investigation confirm that the crater is man-made. The crater served as a water reservoir, both in stratum IX and throughout stratum VII. The use of the crater as a pond is confirmed both by hydrological investigation and by the known building pattern of the Amarna Age in which building complexes were designed adjacent to a pond or lake.

On the beaten earth floors of several rooms in the residence were large amounts of locally made pottery of Egyptian and Canaanite types, with predominantly Egyptian types which relate to the Amarna period. In addition, sherds of imported Cypriot and Mycenaean vessels were found.

A number of special finds from in and around the residence indicate the close contact between the inhabitants of this site and Amarna. Four worked *kurkar* stone bases were found on the beaten earth floor in one of the rooms of the residence which likely served as supports for the 4 legs of a bedstead. Although many well-known and well-preserved wooden beds have been found in Egypt, the only other stone bases known are from Tell el-Amarna where an identical set was found in a bedroom niche.

In the open area alongside the building, a *favissa* was excavated which contained a clay bulla bearing 4 hieroglyphs, 2 *udjats*, and 2 *nefers.* The closest parallel to this seal again comes from Tell el-Amarna and provides a good chronological indication of the date of the locus and the buildings of stratum IX. This seal also indicates possible correspondence between Tell el-Amarna and Deir el-Balah, since bullae were used to seal papyrus letters.

Another room in the residence yielded approximately 10 cylindrical pieces of carnelian and blue frit, the latter bearing traces of gold. Each cylinder was pierced by a square aperture. These fragments can be reconstructed as a scepter or flail of the type found in the tomb of Tutankhamen. The discovery of this scepter in the building indicates that it was very likely the residence of the local ruler or governor. The size and beauty of the object provide additional proof of the specifically Egyptian character and highly developed culture linking this stratum with the Amarna Age.

The Amarna Age was characterized by continued Egyptian commitment and involvement in maintaining the strength of its borders and the stability of the empire. The site of Deir el-Balah is located on the farthest border of Egypt of that era, just before the entry to Canaan at Gaza. This location and the unique architectural elements of stratum IX, with its rich assortment of special finds, indicate that during this period Deir el-Balah was an Egyptian administrative center, perhaps with links to the capital itself.

Stratum VIII. Remains of an intermediate phase of occupation were discerned between the Amarna residence of stratum IX and the fortress of stratum VII. This phase may date to the reign of Horemheb, though diagnostic finds are lacking. It appears that following the destruction of the stratum IX settlement, a small interim occupation occurred which did not constitute a major occupational level.

Stratum VII. A dramatic change is reflected in the character of stratum VII. The prominent architectural feature was a roughly square monumental structure resembling a fort or tower complex. It was constructed atop the remains of both the Amarna residence and the meager remains of the interim stratum, and in direct relation to the pond, which continued in use.

The fortress measures 20 × 20 m, including 14 rooms and a tower at each corner. The massive mudbrick walls, preserved to a height of 1 m, served as the foundations of a structure which stood at least two stories high, while the main outer walls were 2.4 m thick. The construction technique of a layer of sand at the base of the foundation trenches, a well-known Egyptian building method, points to the Egyptian

construction of this fortress. This "Egyptianizing" feature indicates that the fortress was built by the 13th century B.C.E.

The function and nature of this structure became evident in light of the Egyptian activity along the coastal route during the 19th Dynasty. The N Sinai route called by the Egyptians "the Ways of Horus," was vividly depicted by Seti I on a wall relief in the Amun Temple at Karnak. On the N wall of the great Hypostyle Hall, one of the earliest "maps" depicts a series of fortresses and their accompanying wells or reservoirs running from the Egyptian frontier town of Sile (Qantara) to the Canaanite border town of Gaza. Deir el-Balah with its fort and pond fits into this picture of garrison outposts along the ancient Egyptian route connecting the two areas.

It is possible to link the fortified route, "the Ways of Horus," with "the Way to the Land of the Philistines" (Exod 13:17), the shorter coastal route referred to in the account of the Israelite exodus from Egypt.

Strata VI–IV. These strata coincide with the lengthy reign of Ramesses II, a period of empire building which necessitated the upkeep and constant use of the fortresses and way stations along the N Sinai coast. Strata VI–IV include both occupational levels in the settlement as well as the primary use of the cemetery.

The cemetery, extremely rich in coffins and small finds, seems to have been in use from the 14th century B.C.E. to the last phase of the LB Age. This date is confirmed by a seal of Ramesses II and scarabs of the Ramesside age (13th century B.C.E.) found *in situ* in the tomb excavations. The finds reflect the cosmopolitan nature of the period. However, as noted above, the Egyptian element again predominates, as attested by the custom of burying the deceased in anthropoid coffins as well as by the associated objects found in the tombs.

The excavation of Deir el-Balah began in the cemetery after the appearance on the antiquities market of illicitly excavated coffins and grave goods. Four anthropoid coffin burials and over 100 simple burials were thereafter excavated *in situ.* These 4 coffins which are of distinctly Egyptian style, form a small fraction of the over 40 that surfaced through illicit digging along with their extremely rich burial gifts, and which together comprise the largest and richest group of anthropoid coffins so far known from Canaan. Of particular interest are 4 locally made burial stelae, one found *in situ,* made of *kurkar* with hieroglyphic inscriptions and depictions of Mut and Osiris, strikingly similar to 19th Dynasty stelae from Deir el-Medina in Egypt.

A variety of exquisite burial gifts, wrought primarily in Egyptian style, was recovered from the cemetery. These included a bronze wine set, an alabaster painted goblet and a cosmetic spoon in the shape of a swimming girl, and lotus and palmette shaped beads and earrings, as well as Bes amulets, wrought in gold and carnelian. All the gifts have close analogies in New Kingdom Egypt. Though distinct Canaanite traits were manifest in the workmanship of some of the jewelry and in some of the common pottery vessels, the predominant culture of the people buried in the cemetery was clearly Egyptian. The combined evidence of the coffins and the burial gifts points to an affluent population steeped in Egyptian religion and culture.

The one-half acre of the settlement of strata VI–IV which was excavated exhibited a marked shift in character during this period. The water reservoir was filled with debris—multiple layers of ash and clay mixed with huge quantities of broken pottery, as well as many small finds—and structures were built on top. Private buildings, a water installation, and kilns were excavated, indicating the transformation of the area into an industrial quarter. That the 3 kilns were not used for firing ordinary ceramic vessels is attested by the lack of kiln wastes and by the large number of coffin fragments found in and around the kilns. It is likely that the coffins with their lids received an initial firing in pits built into the filled-in crater, which would account for the heavy ash layers found there. Subsequently, the lids were fired once again, this time in the kilns, which would account for the finer finish of the lids in comparison to the coffin bodies. The evidence for coffin construction at the site, therefore, is indisputable.

In addition to the coffin industry, specific finds from the settlement provided concrete evidence that many of the burial gifts were locally made and the industrial quarter doubled as an artisans' quarter, housing a thriving and varied crafts industry. Burial gifts as well as materials prepared for their

manufacture included a reclining nude figurine of carved stone (a "divine concubine" intended to accompany the dead) and *ushabti* or servant figurines, both found also in the cemetery; chunks of ochre for coloring the coffins and figurines; heaps of modelling clay and 2 identical complete molds for figurines; a heap of bronze scrap; many fragments of spinning bowls for linen weaving; and a stamp bearing the image of the god Ptah, patron of artisans.

The discovery of an ancient artisans' quarter in such close proximity to the cemetery it served is unprecedented and provides an unparalleled glimpse in mortuary industry in antiquity. It is likely that the artisans' quarter lay on the outskirts of the settlement, while the settlement of the rich patrons of the cemetery still lies buried beneath the dunes. In the LB Age, long before the encroachment of the Byzantine dunes, the cemetery lay only 150 m from the artisans' quarter. Together they formed a self-contained mortuary unit.

Stratum III. Five pits containing Philistine pottery were dug into the LB deposits of stratum IV. No traces of walls which relate to these pits were found. Philistine pottery was also found in large quantities in the Byzantine wadi. Its presence indicates that a more substantial Philistine settlement existed SW of the excavated area and hence remains under the dunes.

The pits contained mainly fragments of typical Philistine bichrome pottery. Egyptian-type bowls and fragments of Egyptian-type beer bottles were found together with the Philistine pottery indicating that the Egyptian flavor of the site was preserved even as the new Philistine elements were introduced. A similar phenomenon can be observed in the tombs of Tell el-Farah (S). The reoccupation or incorporation of Philistines in Egyptian strongholds is one of the characteristic settlement patterns of the Philistines in Canaan and Israel.

Because of the lack of elaborately decorated pottery, it appears that the Philistines did not arrive early at Deir el-Balah. Rather, the more-simply decorated types found at Deir el-Balah indicate a slightly later phase (second half of the 12th–early 11th centuries B.C.E.).

Stratum II. Two small pits that cut into the LB levels had fragments of Iron Age pottery. This pottery assemblage is datable to the late 11th/early 10th century B.C.E. Most fragments were bowls with red slip and irregular burnishing. Additional quantities of sherds were found in the Byzantine wadi, again, as with the Philistine ware, indicating that a sizable Iron Age settlement was once located SW of the area excavated, which now lies under the dunes.

Stratum I. Following a gap of 1,400 years, Byzantine presence in the area is indicated by huge amounts of pottery found in a wadi that cuts across the LB crater. Though no definite traces of a settlement have been found, historical sources mention the presence of a monastery in the area. Both geologic studies and historical records indicate that the large sand dunes accumulated during the Byzantine era.

Conclusion. Deir el-Balah in its various phases serves as an excellent type-site for Egyptian activity on the border of Canaan during the New Kingdom. Founded during the Amarna Age (14th century B.C.E.) as an Egyptian administrative center on the route to Canaan, its predominantly Egyptian population experienced some interaction with the local Canaanite population (stratum IX). During the next major phase of occupation, stratum VII, the site was transformed into a fortified station on the "Ways of Horus," facilitating Egypt's renewed activity in Canaan during the early 19th Dynasty. In the late 19th Dyn. strata VI–IV, it was an Egyptian-type settlement whose rich material culture was reflected both in its cemetery and in the artisans' quarter for the mortuary industry. Philistine settlement at Deir el-Balah, beginning in the 12th century as indicated by the ceramic repertoire of stratum III, reflects one facet of their settlement in Canaan, i.e. at Egyptianizing sites. The period from the end of the 11th century through the early 10th century was characterized by new cultural trends appearing in stratum II. The Byzantine wadi of stratum I provides evidence of the final chapter of occupation of the site up until modern times.

DEITY NAMES. See NAMES OF GOD IN THE OT.

DELAIAH (PERSON) [Heb *dĕlāyāhû* (דְּלָיָהוּ), *dĕlāyâ* (דְּלָיָה)]. **1.** A priest who received the 23d position in the priestly order of the Temple during the reign of David (1 Chr 24:18). Rather than an historical person from the time of David, Delaiah seems to represent the family name of a group which returned from Babylon and which the Chronicler has projected back into the time of David as an individual. The exact date of the priestly list of 1 Chr 24:1–19, where Delaiah appears, remains debated. See GAMUL. The stylistic evidence of the list, however, seems to link the list to the time of the composition of Chronicles.

2. A member of Jehoiakim's royal cabinet in the last years of the 7th century B.C.E. (Jer 36:12). Delaiah functions as part of a larger literary motif within the narrative of Jeremiah 36; along with the other nobility, he represents Judah's failure to respond properly to the prophetic word (Jer 36:24). His opposition to Jehoiakim's burning of the scroll emphasized the king's obduracy (Jer 36:25; see Carroll, *Jeremiah* OTL, 661). Despite his literary function, it seems likely that Jeremiah 36 accurately reflects the structure and personnel of Jehoiakim's court. Aharoni (1968: 168–69) discovered an ostracon from the late monarchical period at Lachish mentioning a high official named Delaiah. While equating the 2 persons remains completely conjectural, the Lachish ostracon does indicate that Delaiah was a name held by at least 1 person in the upper stratum of Judean society in the time of Jehoiakim.

3. A family of returnees from exile who, upon their arrival in Judah, were not able to prove their ethnic identity as Israelites (Ezra 2:60 = Neh 7:62 = 1 Esdras 5:37). This is generally regarded as an authentic source, reflecting important social tensions associated with the return and the inability of certain groups to prove an authentic Judean identity with proper genealogical records. Exclusion from the community of the returnees could result in the suspension of property rights, and thus complete economic and social disenfranchisement (see Ezra 10:8). The descendants of Delaiah most likely eventually became fully incorporated into the Judean society (see Neh 6:10).

DELILAH (PERSON) [Heb *dĕlîlâ* (דְּלִילָה)]. The woman to whom Samson revealed the source of his strength and who betrayed him to the Philistines for a large sum of money (Judg 16:4–22). Delilah, who lived in the valley of Sorek at the N end of the Philistine plain, was probably Philistine, though the text does not say so. On 2 other occasions, at Timnah (14:1–15:8) and at Gaza (16:1–3), Samson was involved with Philistine women. Each time pursuit of a woman leads Samson into trouble. Of the 3 women, only Delilah's name is recorded. The name may mean "loose hair" or "small, slight"; it is easily explained as a pun on the Hebrew word for "night" (*laylâ*), since Samson's name is related to the word for "sun" (*šemeš*). On a symbolic level, their names suggest the overcoming of the sun by the night.

The motif of the strong man overcome by a woman who learns the secret of his strength and betrays it to his enemies is common to folklore around the world. So too is the motif of strength residing in the hair. The biblical writer has provided popular folk motifs with a religious meaning by relating Samson's strength to his dedication to God—from birth—as a Nazirite.

Delilah makes 4 attempts to learn the secret of Samson's strength (vv 4–9, 10–12, 13–14, and 15–22). The highly stylized repetition in these reports, a characteristic of oral composition, builds suspense: The

closer Delilah gets to Samson's secret, the clearer our realization that Samson is doomed. Only through persistence does Delilah break down Samson's resolve ("she harassed him with her words day after day," 16:16). The strong man's one weakness is love. Faced with Delilah's accusation that he cannot really love her if he does not share his secret with her, Samson reveals that his strength will leave him if his hair is cut. Recognizing that Samson has told her the truth this time, Delilah calls the Philistine lords. As soon as his hair is cut, the Philistines blind Samson and take him prisoner.

Delilah has gone down in popular history as the treacherous temptress who betrays her lover for money. But she is not the only one who betrays Samson. His Timnite wife reveals the answer to his riddle, though she does it to save her father's household (the story of Samson and the Timnite in Judges 14 and 15 is modelled on the Samson-Delilah story). Moreover, Samson's own people, the Judahites, also betray him, out of fear of the Philistines (15:9–13). Viewed in the larger context of the book of Judges, Delilah is the Philistine version of Jael (Judges 4–5)—the woman who brings about the downfall of an enemy through deception. Delilah, unlike Jael, is on the side of Israel's enemies; only the Philistines would have sung her praises, but, interestingly, they attribute their victory over Samson not to Delilah but to their god (16:23 and 24).

J. CHERYL EXUM

DELOS (PLACE) [Gk *Dēlos* (Δηλος)]. This central Aegean island is rich in Greco-Roman history, though it rests relatively deserted as modern Mikra Dili. Originally, Ionians (ca. 1000 B.C.) inhabited this small Greek island, which is only 3 miles long and 1 mile wide. But as the sacred seat of Apollo, and as the treasury and administrative center of the Delian League, Delos was of monumental importance. Its prestigious position prompted the naming of the 220 Cyclade islands which cluster (*kyklos*) around Delos.

During the Third Macedonian War Rome punished Delos, causing most of the Greek inhabitants to take refuge on the mainland. Nearly 2 centuries of independence ended for Delos when Rome made the island a free port (167 B.C.), a calculated move to weaken the commercial position of Rhodes. The free port, rather than Athens, may have been the strong attraction for Jewish immigrants. 1 Macc 15:16–23, inscriptions, and ruins of a (possible) synagogue all attest to a Jewish settlement on the island (Goldstein *1 Maccabees* AB, 498). Delos established itself as the center of Mediterranean trade during the last two centuries B.C. At its economic zenith, ca. 100 B.C., Delos markets could handle 10,000 slaves per day. The managers of the famous temple of Apollo in Delos wielded much power, and even managed to purchase the entire island of Rheneia, farming it with slave labor (Kent 1984: 243–47). But the Mithridatic War (88 B.C.) served the prosperous island its first of three terminal blows. Mithradates VI (the Great) massacred most of Delos' inhabitants. The island barely survived a massive pirate raid in 69 B.C., but was raized in 46 A.D. (Strabo *Geog.* 10.5.2–4).

DELTA. The fourth letter of the Greek alphabet.

DEMAS (PERSON) [Gk *Dēmas* (Δημας)]. Demas is mentioned by Paul in Philemon 24, along with Mark, Aristarchus, and Luke, as being among those fellow workers who were with Paul during his imprisonment (presumably in Rome or Ephesus). In Colossians, Demas is similarly portrayed and associated with Luke (4:14), Aristarchus and Mark (4:10), Jesus Justus (4:11), and Epaphras (4:12). From Colossians it is evident that while Mark, Aristarchus, and Jesus Justus were Jews (cf. 4:11), Demas was a

Gentile, as were Epaphras and Luke. In both Philemon and Colossians, Demas sends greetings to the church at Colossae. This indicates some acquaintance with the Colossian Christians, probably as a visiting missionary, since he was not originally from Colossae (cf. Col 4:12 where only Epaphras is described as "one of yourselves").

2 Timothy reflects a tradition that the relationship between Demas and Paul ended in an apparently unresolved rupture. Demas, described as having been "in love with this present world," is said to have deserted the imprisoned Paul and gone to Thessalonica (4:10). The phrase in quotes is eschatological language (cf. 1 Tim 4:8; Tit 2:12; Gal 1:4; Eph 1:21) which contrasts the present age with that to come, and in this case offers a sharp contrast to Paul, Timothy, and others who "love Christ's appearing" (2 Tim 4:8) (Fee *1 & 2 Timothy, Titus* GNC, 242–43). The contrast seems to argue that Demas' break with Paul was a dishonorable one, i.e. apostasy from Christianity. (Polycarp in *Ep. Phil.* 9:1–2 sets up a similar contrast to imply apostasy.) But it has also been theorized that Demas had merely grown discouraged in his work with Paul and decided to leave. Why he chose Thessalonica—it had no reputation as one of the "hot spots" of the Greco-Roman world—(Fee *ibid.*, 243) is not evident from the text; perhaps it was his home.

NT sources offer nothing further about Demas. The apocryphal *Acts of Paul*, however, makes numerous references to him (3.1, 4, 12–14, 16). While it may be that these statements actually derive from 2 Tim 4:10—the reference about Demas' desertion is the type of material on which the apocryphal documents thrive—it is also possible that the *Acts of Paul* are an independent reflection of the same oral traditions reflected in the Pastorals. In that case, the *Acts* may have preserved a few shreds of information not included in 2 Timothy (MacDonald 1983: 65–66).

In the *Acts of Paul*, Demas is linked with HERMOGENES and the two travel with Paul to Iconium where they are entertained by Onesiphorus and his family. Later, both desert Paul for a bribe, but the household of Onesiphorus remains faithful to Paul even though Paul is in prison. Demas and Hermogenes urge that Paul should be arrested for "seducing the crowds to the new doctrine of the Christians" (*Acts Paul* 3:14) and teach, contrary to Paul, that the resurrection has already taken place.

While the apocryphal text pairs Demas with Hermogenes, the Pastorals name Phygelus as Hermogenes' partner. Also, the Pastorals never connect Demas with Iconium nor indicate that Demas knew Onesiphorus. Most striking of all the differences, however, is the information that Demas preached a resurrection that had already occurred. In the NT, this doctrine is mentioned (as unacceptable) only once (2 Tim 2:17–18), and is attributed to Hymenaeus and Philetus. Cf. related issue in 1 Cor 15:12.

With respect to Demas, if the *Acts of Paul* is not merely an elaboration of 2 Tim 4:10, but draws independently from the same oral traditions used by the Pastoral Epistles, it may be suspected that Demas' differences with Paul were theological and so concerned a disagreement about the resurrection. This may in turn illuminate the information in 2 Timothy that Demas left Paul for Thessalonica. For it is certain that questions about resurrection had troubled the Thessalonian community from its founding (1 Thess 4:13–18), and apparently remained pervasive for some years (Bauer, 1971: 74–75). Perhaps Demas went to Thessalonica to join others who agreed with his view concerning a spiritual resurrection.

FLORENCE MORGAN GILLMAN

DEMETRIUS (PERSON) [Gk *Demetrios* (Δεμετριος)]. **1.** Demetrius Poliorcetes (336–283 B.C.E.) "the Besieger," king of Macedon (293–288 B.C.E.). His father Antigonus, who was one of the Diodochi, had been satrap of Phrygia and was able to extend his power all the way to Media, so Demetrius saw himself as inheritor of Alexander's legacy. This aroused the enmity of other officials of Alexander who then waged war against Antigonus. In attempting to protect the S boundaries of the kingdom against Ptolemy I of Egypt, Demetrius met with defeat at Gaza in 312, but this did not prevent further exploits. Demetrius defeated Ptolemy I at Cyprus in 306, and then attempted to take Rhodes from Ptolemy but was

forced to give up the endeavor. After the death of Antigonus at the Battle of Ipsus in Phrygia (301) a brief period of peace ensued, but since Demetrius was still alive warfare soon again erupted (Tcherikover 1966: 9–10). In 296 Demetrius conquered Samaria from Ptolemy I, but he held it only until 295. By that time he had lost all his non-Greek territories (Schürer *HJP²* 2: 87). He was crowned king of Macedon in 293 but was never able to extend his influence eastward.

2. Demetrius I Soter, "Savior," king of Syria about 162–150 B.C.E. (1 Macc 7:1; 2 Macc 14:1–2). He was the son of Seleucus IV Philopator and the nephew of Antiochus IV Epiphanes. He came to power during a time of Seleucid domination of Palestine which was threatened both by Ptolemaic Egypt and Roman expansion. Conflict broke out in Palestine between the Seleucids and the Jerusalem religious community because of encroachment of Seleucid authorities against the sanctuary in Jerusalem and the religious observance of the Jews. In view of all the external pressures, internal strife in the Jerusalem community was not welcome by the Seleucids because it threatened the deteriorating situation (Noth *NHI*, 359–361).

Antiochus III (223–187 B.C.E.) was defeated by the Romans and submitted to the Peace of Apamea in 189. He was succeeded in 187 by his son Seleucus IV Philopator, whose brother Antiochus was held hostage in Rome. Seleucus IV exchanged his own son Demetrius for Antiochus. On the death of his father in 175, Demetrius attempted to negotiate his own freedom to assume power, but his failure to do so enabled his uncle to seize the throne under the title Antiochus IV Epiphanes (174–164 B.C.E.). Demetrius finally managed to escape from Rome, and on his return took vengeance on the young successor of Antiochus IV who ruled under a regent (164–162). He arranged the murder of Antiochus V and Lysias and thus ended their short reign which had seen the return of Jewish observance. Demetrius assumed the throne as Demetrius I Soter in 164 (1 Macc 7:1–4).

The history of the interaction between Demetrius I and the Jews is recounted in 1 Macc 7:1–10:52 and by Josephus (*Ant* 12.189–13.79). Demetrius was immediately approached by Alcimus, a member of the hellenizing faction who wanted to be high priest. He aroused the king against the Jews because of the revolts led by the Maccabees. Demetrius sent his faithful friend Bacchides with Alcimus to take vengeance which was initiated by a treacherous massacre of 60 Jews in one day (1 Macc 7:16). The Jews revolted against Alcimus and his forces, so Demetrius sent Nicanor to destroy this people. Nicanor's arrogant mockery and defilement of the temple sparked a battle in which the forces of Nicanor were crushed by the Maccabees and Nicanor himself fell (1 Macc 7:43). Demetrius then sent Bacchides and Alcimus into Judah a second time. They killed many and did battle in which Judas Maccabeus fell. His brother Jonathan assumed leadership and routed Bacchides (1 Macc 9:48). Bacchides returned a third time after the death of Alcimus, but his expedition failed and he made peace with Jonathan. Some years later Demetrius was faced with the arrival of Alexander I Epiphanes (Balas) who posed as the son of Antiochus IV Epiphanes and assumed the throne in Ptolemais. Demetrius' bid for an alliance with Jonathan failed because of Alexander's counter offer. The death of Demetrius in battle with Alexander about 150 left Alexander in power and in a position of contention with the son of Demetrius.

3. Demetrius II, Nicator, "Victor," son of Demetrius I, Seleucid king of Syria about 145–140 and 129–125 B.C.E. (1 Macc 10:67). Power was seized from Demetrius I by Alexander Balas, so Demetrius II rose against Alexander to recover the throne which belonged to him. When Demetrius II arrived from Crete in 147 B.C.E., Alexander was threatened and returned from Phoenicia to Antioch to make his position secure there (1 Macc 10:67–68). 1 Maccabees reports that Demetrius II appointed Appollonius governor of Coelesyria and that Appollonius then moved against Jonathan whose choice of allegiance was with Alexander (1 Macc 10:18–21, 67–69). Josephus credits Alexander with the appointment of Appollonius, but this is likely a mistake and would be contrary to the advance of Appollonius against Jonathan (*Ant* 13.4.3, n.d.). At this point the position of Demetrius was stronger than that of Alexander, since the people of Antioch, his own soldiers, and his father-in-law Ptolemy VI sided with him.

Jonathan's victories over Appollonius at Joppa and Azotus won him rich rewards from Alexander. Ptolemy VI Philometor advanced against Alexander and gained control of the coastal cities as far as Seleucia, and he entered into a pact with Demetrius II. Ptolemy VI promised to take back his daughter

Cleopatra from Alexander and give her as wife to Demetrius II. Subsequently in battles between them, Alexander fled and was assassinated in Arabia, and Ptolemy was mortally wounded and died a few days later (Josephus *Ant* 13.116–19). Jonathan was left to contend with Demetrius II from whom he extorted many concessions. Later Demetrius was forced to further concessions to secure Jonathan's help against Diodotus Tryphon, a former general of Alexander who ostensibly sought the throne for Alexander's son Antiochus VI as a rival to Demetrius II. Jonathan continued to consolidate his power and renewed treaties of friendship with Rome and Sparta (Schürer *HJP²* 1: 181–85). This Jewish ascendency became disquieting to Tryphon who took Jonathan prisoner and finally killed him (1 Macc 12:39–13:24). Shortly afterward he killed the young king Antiochus VI and assumed the crown himself. Jonathan was succeeded in the leadership of the Jews by his brother Simon with whom Demetrius made peace (1 Macc 13:33–40). Simon also made peace with the men in the citadel of Jerusalem, cleansed the citadel, and took control of it (1 Macc 13:52).

In the year 140 B.C.E., Demetrius II marched against Media. He was quickly taken into captivity by Arsaces the king of the Parthians and thus was out of circulation for some time. His brother Antiochus VII Sidetes took his place against Tryphon, whom he besieged at Apamea and forced to take his own life. In 130 Antiochus VII advanced against the Parthians and was lost in battle in 129. In the same year, Demetrius II was released and resumed the throne of Syria to rule for a second time, though briefly. Almost immediately Ptolemy VI Physcon sent Alexander Zebinas, the alleged son of Alexander Balas, against Demetrius as a rival to the throne. Demetrius II was defeated by Alexander Zebinas, and his reign ended in about 125. He was succeeded briefly by his son Seleucus in 125, and by Antiochus VIII Grypus in 125–113 (Schürer *HJP²* 1: 130–33).

4. Demetrius III, Eucerus, son of Antiochus VIII Grypus. His full name was Demetrius III Theos Philopator Soter, and Eucerus was a nickname.

In the Seleucid empire of the day there was continual fighting. Antiochus IX Cyzicenus defeated his brother/cousin Seleucus V, so Philip I the brother of Seleucus V assumed power over part of Syria (Josephus *Ant* 13.370). Schürer (*HJP²* 1: 225) calls him king of the Nabataeans. Ptolemy Lathyrus then made Demetrius III Eucerus king at Damascus. At the death of their father Antiochus VIII in 96 B.C.E., all of Syria was in the hands of the two brothers, Philip I and Demetrius III.

It was from this position that Demetrius III was called to the aid of Jews rebelling against Alexander Jannaeus in 88 B.C.E. Alexander was routed, but the Jews had a change of heart, apparently preferring a free Jewish state under the Hasmonean Jannaeus, to annexation to the Seleucid empire under Demetrius. About 6,000 Jews went over to Alexander, and Demetrius returned home (Schürer *HJP²* 1: 224).

After the Judean campaign, Demetrius III was besieged by the Parthians who captured him and held him till his death through illness in 88 B.C.E. His brother Philip I then seized Antioch and became king of all Syria (*Ant* 13.365–86).

5. Demetrius of Phalerum, director of the royal library of Alexandria (345–283 B.C.E.). On the basis of the legendary *Letter of Aristeas,* Demetrius was credited with suggesting to King Ptolemy II Philadelphus (283–246) the translation of the Hebrew Scriptures into Greek. The Septuagint version was indeed available around the 3d century B.C.E., but the *Letter of Aristeas* is dated around 100 B.C.E., and thus it is too late to have arisen in the historical situation which it describes.

Schürer (*HJP²* 3: 1, 475) makes the point that the role of Demetrius cannot be historical because he was never in charge of the library. After the death of Ptolemy I, he was banished by Ptolemy II Philadelphus because he was at variance with the king. In indicating the antiquity of Jewish tradition, Josephus (*AgAp* 1.218) mentions Demetrius Phalerum among other scholars, but this is likely a confusion with another Jewish historian also named Demetrius.

6. A Christian mentioned in 3 John 12. Attempts to identify this person with others in the NT of similar name are conjecture. What we can reasonably assume from this letter is derived from the letter itself, particularly from the testimonial in 3 John 12.

Demetrius may previously have been rejected by Diotrephes (3 John 10) and thus the threefold testimonial of the Elder would have been given as a reference to Gaius to receive Demetrius well. The

strength of the recommendation is based on three witnesses: all who knew him (12a); the truth itself, perhaps the goodness of his own life (12b); and the Elder (12c). The writer seems to call for cooperation from Gaius who exercises hospitality to missionaries (3 John 5–9), whereas Diotrephes does not pay attention to the requests of the Elder (Brown *Epistles of John* AB, 721–24; 748–49). Demetrius may have carried the letter himself, or it may have been sent ahead to prepare Gaius for the missionary's coming.

BETTY JANE LILLIE

7. A silversmith who was a resident of Ephesus who instigated a riot against Paul when the latter's preaching began to interfere with his trade, which was making silver shrines of Artemis, the patron deity of Ephesus (Acts 19:23–41). Note also Alexander the coppersmith in 2 Tim 4:14, and *IvEph* 554 where the profession of coppersmith is mentioned.

There has been no significant controversy concerning the identity of this individual, except for the effort of E. L. Hicks (1890: 401–22) to demonstrate that this was the same individual mentioned in an Ephesian inscription dating approximately to the time of the Lukan narrative. Hicks' suggestion was predicated on a reworking of the Lukan text of Acts 19:24. This hypothesis has attracted few adherents and raises more problems than it solves. One knows nothing about this Demetrius except the minimal amount of information given by Luke. The germane facts of the story focus upon the nature of Demetrius's occupation and the role of this artisan labor union, rather than upon his personal identity.

Labor unions were part and parcel of urban life in antiquity. In Anatolia such unions are well attested in literary and epigraphical evidence of the Roman era (Magie 1950: 811–13). There are currently over half a dozen inscriptions from Ephesus which mention in particular the guild of silver workers (*IvEph* 425, 547, 585, 586, 636, 2212, 2441). This Lukan vignette portraying the civil disturbances that could be instigated by the labor unions of the period is supported by epigraphical as well as literary evidence (MacMullen 1966: 173–78). In fact, another Ephesian inscription records a riot that was engendered by disgruntled members of the bakers' union at Ephesus (*IvEph* 215). The somewhat later literary evidence that appears in the Pliny-Trajan correspondence (*Ep.* 10.33–34) concerning illegal and potentially disruptive *collegia* in Asia Minor reflects the same urban ethos depicted in Luke's account of the character of the silversmiths' union at Ephesus.

Although silver devotional replicas of the temple of Artemis have yet to be found, devotional objects made from other materials and dedicated to the Ephesian goddess Artemis have been discovered. Silver, in fact, was frequently used for devotional items and statues in various cults (e.g., Lucian, *Alex.* 18; Petron. *Sat.* 29; *IvEph* 27, and the C. Vibius Salutaris inscription for the use of silver in the Artemis cult in objects other than temple replicas).

RICHARD E. OSTER, JR.

DEMETRIUS THE CHRONOGRAPHER. A Jewish historian-exegete who probably flourished in Egypt during the last quarter of the 3d century B.C.E. He composed at least one work, probably entitled *On the Kings in Judaea,* that appears to have chronicled Jewish history from the time of the patriarchs until the postexilic period. Only a few fragments of the work survive.

Six extant fragments are reliably attributed to Demetrius. They suggest a work closely, probably exclusively, dependent on the LXX, written in straightforward, unadorned Gk style. The fragments

especially deal with questions of chronology arising from the biblical text, hence the designation chronographer (Freudenthal). Though he rehearses biblical history in the tradition of certain Hellenistic historians, such as Eratosthenes, Manetho, and Berossus, Demetrius displays an explicit interest in exegetical problems. In his exegetical approach, he appears to employ an established method of interpretation known as *aporiai kai luseis* ("problems and solutions," or "questions and answers") used by pagan writers to interpret the writings of Homer and Hesiod and later applied by Philo of Alexandria in interpreting Genesis and Exodus.

Five of the Demetrius fragments (4 of which are explicitly attributed to him) are preserved by Eusebius in *Praep. Evang.*, Book 9, although Eusebius states that he is quoting the excerpts from the pagan author Alexander Polyhistor (ca. 112–30 B.C.E.), who thus appears to be the earliest author to mention Demetrius and quote from his work. A 6th fragment, preserved in Clement of Alexandria *Strom.*, Book 1, attributes a work entitled *On the Kings in Judaea* to Demetrius and provides a summary of its chronological calculations for events following the fall of Samaria and the fall of Jerusalem until the time of Ptolemy IV Philopator (ca. 220–204 B.C.E.).

All of the fragments preserved by Eusebius focus on events in Genesis and Exodus. Fragment 1 provides a brief, unexceptional summary of Abraham's sacrifice of Isaac (Genesis 22). Fragment 2 is the longest of the six fragments (approximately 137 lines of Gk text). It treats various events relating to Jacob and Joseph recorded in Genesis 27–50, giving special attention to chronological questions such as the ages of the patriarchs at various junctures in their lives, the birthdates of Jacob's sons, his children's ages when significant events occurred, and the cumulative number of years for certain designated periods of time, e.g., from Adam until the time Joseph's brothers arrive in Egypt. The next three fragments treat events from Exodus. Fragment 3 focuses on Moses, particularly his marriage to Zipporah (Exod 2:15–22): It was chronologically possible because she was only one generation older than Moses; she was endogamous, a descendant of Abraham and Keturah; she was monogamous, identified with the Cushite (Ethiopian) woman of Num 12:1. Fragment 4 briefly treats the incident of the bitter water at Marah (Exod 15:22–27), while Fragment 5 explains how the Israelites could have left Egypt unarmed yet managed to obtain weapons with which to fight the Egyptians (Exod 13:18; 17:8–13).

Establishing the date and provenance for Demetrius is based primarily on Fragment 6 (Clement of Alexandria *Strom.* 1.21.141.1–2), in which the reign of "Ptolemy the 4th" (Philopator, 220–204 B.C.E.) is used as a reference point for making certain chronological calculations pertaining to the length of time between 2 events: the deportation of the 10 tribes after the fall of Samaria (722 B.C.E.) and the deportation of the tribes of Benjamin and Judah after the fall of Jerusalem (586 B.C.E.). Because the calculations present several difficulties, various textual emendations have been suggested, some of which identify him as Ptolemy III (246–221 B.C.E.) or Ptolemy VII Euergetes II (170–164 and 145–117 B.C.E.). These alternative suggestions, however, have not won widespread acceptance. Consequently, because it is safe to assume that Demetrius would bring his chronological calculations down to his own time, and that he would define this time in terms of his own reigning Ptolemy, his date is confidently set in the last quarter of the 3d century B.C.E. Because Ptolemaic rule at this time was concentrated in Egypt, Demetrius is usually placed in an Egyptian, or even more specifically, an Alexandrian setting. Yet since the extent of Ptolemaic rule prior to the battle of Paneion (200 B.C.E.) encompassed Syria as well as Egypt, the setting might have been Palestine, or even Cyrene.

The ability to set a relatively firm date for Demetrius is important in assessing his overall significance for Judaism in the Hellenistic period. He thus has the distinction of being the earliest named Jewish author known to have written in Greek. His importance is related to at least the following areas:

(1) *LXX studies.* He is an important, reliably dated witness for the existence of a Gk version of Genesis and Exodus (perhaps the Gk Pentateuch) as early as the 3d century B.C.E. Indeed, depending on the date of Ezekiel the Tragedian, Demetrius may be the earliest independent witness of LXX Genesis and Exodus. In any case, he becomes an important resource for the study of LXX origins.

(2) *Jewish historiography.* Though brief, the Demetrius fragments provide an early instance of a Jewish author in the tradition of other Hellenistic "cultural" historians, Berossus (Babylon) or Manetho (Egypt),

who wrote national histories promoting their respective peoples and cultures. More specifically, his explicit interest in chronography perhaps testifies to the increased respect this particular intellectual discipline had begun to enjoy, especially among Jews, in the Hellenistic period. It has been plausibly suggested that Demetrius belonged to a school of chronographical interpretation that sought systematically to apply principles of Hellenistic "scientific historiography" to biblical interpretation. Certainly, his work should be viewed alongside other Jewish writings with similar chronological interests, such as *Jubilees*, *Genesis Apocryphon*, and *Seder Olam.*

(3) *Biblical exegesis.* Demetrius displays a consistent interest in resolving difficulties in the biblical text. Besides questions of chronology, he addresses other questions the text might pose for a critical reader: Why did Joseph remain in Egypt 9 years flourishing without reporting his whereabouts to his aged father in Canaan? Why did he show partiality to Benjamin? Why is the sinew of the thigh of cattle not eaten by Jews? These may be questions asked by Jews as they began to read the biblical text critically, influenced perhaps by Hellenistic "scientific historiography." Or, perhaps they are questions asked by non-Jews, either unsympathetic or manifestly hostile, as they became aware of Jewish biblical history. In these instances, as well as in his discussion of Moses' marriage to Zipporah, Demetrius appears to be interpreting the biblical text not merely to resolve chronological difficulties in the text as an intellectual exercise, but to answer such questions of religious practice as whether Jews should intermarry with non-Jews, or why certain food laws are observed.

CARL R. HOLLADAY

DEMONS. This entry consists of two articles: one treats the subject of demons as attested in the Hebrew Bible, and the other treats the subject of demons and exorcism as attested in the NT.

OLD TESTAMENT

Discussion of the identity, nature, and role of demons in the OT is complicated by terminology, historical developments, and theoretical issues. Decisions made regarding these factors influence both what one identifies as demons in the OT and the significance of this evidence for reconstructions of the understanding of demons in the OT and in ancient Israel.

A. Factors Complicating Discussion

1. Terminology. Use of the term demon in relation to the OT is problematic for 3 reasons: First, it does not seem that there is a single term in biblical Hebrew which can be consistently and unquestionably translated as "demon" (Caquot 1971: 118). Second, many terms thought to refer to demons are either *hapax legomena* or appear only in a few instances. Third, the English term demon is used to refer to two very different concepts—evil spirits and neutral "anonymous gods" or spirits (*daimons*). Both understandings have been applied to the OT.

2. Historical Developments. Historical developments also complicate the discussion. The OT itself lacks a simple or coherent presentation of demons. Most interpreters agree that views of demons in ancient Israel became increasingly complex and negative, however, they disagree as to how this occurred. Several possibilities have been suggested: (a) A general belief in demons as independent evil spirits was always a part of Israel's theology (particularly on the popular level) which was simply expanded in later

periods. (b) A general belief in demons as ambivalent spirits or aspects of God was an original part of Israel's theology which in later periods became separated into "good" spirits (angels) and "evil" spirits (demons). (c) A general belief in demons as independent evil figures was a late development arising as it became theologically unacceptable to present evil events and elements as aspects of God. (d) A general belief in the demons reflected in the poetic texts (*deber, qeṭeb*) gradually decreased while belief in other types of demons increased (the various forms of the Satan figure and the hosts of demons and evil angels represented in the intertestamental period).

3. Theoretical Issues. Discussion of the identity, nature and role of demons in the OT is complicated by other issues as well. (1) Much of the study of demons in the OT uses comparative materials, particularly those from other ANE cultures. Linguistic and archaeological evidence has proven helpful in illuminating some aspects of OT understandings of demons, however, this evidence also raises the issue of the degree of legitimate comparison possible between cultures separated by language, time, geography, and theology. (2) Much of the language about demons in both the ANE and OT appears in poetic materials with reference to natural phenomena. This context raises the issue of how poetic references to natural phenomena should be interpreted—as literal references to the physical phenomena, as poetic symbolizations or personifications, or as references to actual demons or deities. (3) Translation in general of terms dealing with demons is problematic. Translations are influenced by many factors: philological evidence and trends, theology, and previous decisions regarding understandings of the term demon and proper ways to interpret each particular text. (4) Identifications and understandings of demons in the OT are strongly influenced by the wider context within which demons are discussed; past contexts have included magic and witchcraft, "popular" religion, official apotropaic rituals, poetic symbolism, and religious psychology.

B. Proposed Demons

As a result of these factors, identification of demons in the OT has not been consistent. The most generally accepted understanding is of demons as "evil spirits" who live in ruins and the desert and are responsible for illness and natural disasters. However, more neutral, anonymous, or positive demons have also been identified.

1. *šēdîm* and *śĕʿîrîm*. Most interpreters identify two general classes of demons in the OT: *šēdîm* (demons) and *śĕʿîrîm* (hairy demons, satyrs). References to these demons appear in two contexts: the worship of demons equated with new or false gods (Deut 32:17; Ps 106:37 [*šēdîm*] and Lev 17:7; 2 Chr 11:15 [*śĕʿîrîm*]); and two judgment oracles (Isa 13:21; 34:14) where the *śĕʿîrîm* are among several demons left among the ruins after God's judgment.

2. Lilith and Azazel. Generally accepted as two specific demons referred to in the OT. Lilith (Heb *lîlît*) is seen as a female demon associated in Isa 34:14 with various unclean animals. Additional clues to her character and activities are derived from references in ANE and Rabbinic literature and archaeological evidence which picture her as a succubus and a "child stealing" demon (*IDB* 1: 819) and as Adam's first, rebellious wife (Barnstone 1984: 31). The name Azazel (Heb *ʿăzāʾzēl*) occurs in Leviticus 16 in relation to the goat sent into the wilderness "to Azazel" in the Atonement ritual. Although "Azazel" has been understood to refer to the goat itself or to a place in the wilderness, most interpreters see Azazel as the name of a particular wilderness demon to whom the goat is dedicated (*EncJud* 5: 1524).

3. Natural Phenomena as Demons. Several terms referring to natural phenomena have also been seen as allusions to demons: *deber* (plague, pestilence; Hos 13:14; Hab 3:5; Ps 91:6); *qeṭeb* (destruction; Deut 32:24; Isa 28:2; Hos 13:14); *qeṭeb yāšûd ṣāhŏrāyim* (destruction that wastes at noonday; Ps 91:6); *rešep* (flame, firebolt; Deut 32:24; Hab 3:5; Pss 76:4 [Eng 76:3] and 78:48); *paḥad lāylāh* (terror in the night; Ps 91:5); and *bārād* (great cold; Ps 78:48; Isa 28:2). Such identifications are based both on ANE parallels (*IDB* 1: 817–21) and on understandings of poetic texts as referring not simply to the natural phenomena themselves but to the demon/god responsible for, or present in, them.

4. Other Proposed Evil Demons. In addition to the categories above, other demons have been identified.

a. Animal Demons. Some interpreters have taken several texts as allusions to theriomorphic demons and have proposed the following animal demons: *ʿălûqāh* (vampire, leech; Prov 30:15); *śĕrāpîm* (fiery flying demonic serpents; Num 21:6, 8; Isa 14:29; 30:6) (Langton 1949: 37–38); the various creatures in Isa 13:21–22 paralleling *śĕʿîrîm—ṣiyyîm* (wild beasts), *ʾōḥîm* (howling creatures), *bĕnōt yaʿănāh* (ostriches), *ʾiyyîm* (hyenas), and *tannîm* (jackals) (Langton 1949: 41–43); *lîlît* pictured as a bird (Isa 34:14); and in some cases Leviathan (*liwyātān*) who on the basis of ANE parallels and opposition to God can be seen as "demonic" (Isa 27:1; Job 3:8; 40:25 [Eng 41:1]).

b. "Beings" Associated with the Underworld. *māwet* (death; Isa 28:15, 18; Jer 9:20 [Eng 9:21]; Hos 13:14; Job 18:13; 28:20) (*EncJud* 5: 1523–24); *dĕbar bĕlîyaʿal* ("a thing of belial/Belial; Ps 41:9 [Eng 41:8]); and *melek ballāhōt* (King of Terrors; Job 18:14) (*IDB* 1: 820–21). Significantly, most interpreters do not place the *repāʾîm*, the "shades of the dead," in the category of evil or haunting demons.

c. Additional Terms. *ḥēṣ* ("[demonic] arrow"; Ps 91:5; Job 6:4; 34:6); 7 evil spirits (Deut 28:22) (*IDB* 1: 820).

5. *ʾĕlōhîm, rûaḥ ʾĕlōhîm*. Finally, some interpreters (*TDNT* 2:10–11; *IDB* 1: 817–18) see in the OT additional, more neutral allusions to demons in the sense of "anonymous" gods or spirits. In some cases possession by an *ʾĕlōhîm* or a *rûaḥ ʾĕlōhîm* (Exod 31:3; 1 Sam 10:10; 16:15–16) or the raising up of an *ʾĕlōhîm* from the dead (1 Sam 28:13; Isa 8:19) is understood to reflect this more classical idea of a demon.

C. Significance

Interpreters disagree as to the weight to be given to the OT references to demons in reconstructing Israelite religion and theology. Some (Langton 1949: 10) feel such references attest to a widespread belief in demons among the Israelites which was later systematically suppressed in the text if not in actual practice. Others (*EncJud* 5: 1523; *TDNT* 2:11) caution against using the scattered and limited references in the OT as evidence for a widespread belief in demons. Most interpreters argue for a position which partially accepts both points. References both to demons themselves and to practices associated with them seem to argue for some belief in demons at certain levels of Israelite society at certain times. However, the text as it now stands contains few references to demons and while illness and disasters may in some cases be attributed to demons, they are more often attributed to Israel's God or God's "spirit."

D. Relation to Satan

Finally, it should be recognized that there is no connection in the OT between the figure of Satan and the demons referred to above. While one late text (1 Chr 21:1) has Satan as a proper name for an independent being who acts in what could be seen as a demonic manner, "The Satan" in the OT serves primarily as a judicial "adversary" acting at God's request (Job 1; Zech 3:1).

JOANNE K. KUEMMERLIN-MCLEAN

NEW TESTAMENT

In the NT, demons are portrayed as real and powerful enemies of humankind, who are effectively removed ("exorcized") by the power of God at work in Jesus.

A. Background
B. Terminology
C. Description of Activity
D. Jesus' Exorcisms in the Synoptics
E. Other NT References
F. Interpretations

A. Background

A belief in the existence and activity of demons is not limited to the NT. Some conception of evil spirits or demons was held almost universally by the religions of the ancient world. Many of these religions had developed a rather extensive demonology. Egyptian religion included the use of magical incantations to ward off disease and misfortune caused by malevolent spirits. Greek popular belief postulated a class of spirit beings (possibly spirits of the dead) between men and the gods. These beings could afflict people with madness and sickness. Zoroastrianism conceived a dualism in the spirit world, with a dark kingdom of demons under the direction of Ahriman warring against the spirits of light led by Ahura Mazda. Though the Hebrew concept of Yahweh's sovereignty minimized the development of demonology in the canonical writings (Job 1:6–12; 1 Sam 16:14–23; 1 Chr 21:1; Zech 3:1–2), Jewish literature began in the intertestamental period to elaborate on the origin and activity of malevolent spirits. Thousands of demons were said to be at the side of every man, posing a threat to enter the personality and cause sickness and distress. Various procedures and conjurations were suggested as a means of protection from them. Against this backdrop of widespread concern for the harmful influence of evil spirits the NT conception becomes clear.

B. Terminology

The NT documents take for granted the existence of demons, using various terms in reference to them. The Textus Receptus has the word *daimōn* occurring in Matt 8:31; Mark 5:12; Luke 8:29; and Rev 16:14; 18:2, though some manuscripts attest to its use only in the Matthean passage. Far more common is the diminutive form *daimonion*, occurring more than 60 times, mostly in the Gospels. (Note that Paul uses this term in his speech in Acts 17 and in I Cor 10:20–21 with reference to pagan gods.) In a few instances the word *pneuma* without any modifier refers to demons (Matt 8:16; Luke 9:39; 10:20), but the usual practice is to describe the character of the spirit. Consequently the phrases *pneuma akatharton* or *to akatharton pneuma* occur frequently in Mark and Luke (but only twice in Matthew). A demon is also called *pneuma poneron* in Matt 12:45 = Luke 11:26, with Luke using the term again in 7:21; 8:2; and Acts 19:12–16. A singular reference to a *pneuma daimoniou akathartou* is found in Luke 4:33. Matthew seems to prefer the term *daimonion.* Mark uses both *pneuma akatharton* and *daimonion* frequently. Luke employs the wider variety of terms. In addition to these nouns, the Gospels employ the participle *daimonizomai* to describe the phenomenon. A person is said to "have a demon" or to be "demonized." The English translation "demon-possessed" for the participle is wrongly understood if associated with the idea of ownership. The term rather designates the influence or control exercised over a person by the demon present.

C. Description of Activity

Various kinds of physical affliction are attributed to the working of evil spirits. They may cause violently insane behavior (Matt 8:28 = Mark 5:1–5), the inability to speak (Matt 9:32) or to hear (Mark 9:25), blindness (Matt 12:22), characteristics of epilepsy (Luke 9:39), and apparent tendencies to self-destruction (Matt 17:15). The possibility of their being responsible for other maladies not specifically named is suggested in the summary statement of Matt 8:16. There many "demonized" were brought to Jesus, who drove out the spirits and "healed all the sick." As the reference above indicates, the gospel writers do not clearly explain the relationship between demonization and sickness. On the one hand, not all illness is attributed to the actual presence of evil spirits. It is significant that summary statements from all 3 gospels (Matt 4:24; Mark 1:32; and Luke 7:21) list the "demonized" as a category separate from those suffering with other diseases. Mark especially differentiates between the two, never using the word "to heal" (*therapeuō*) in reference to a demonized person. Moreover, the same symptom is spoken of as sickness in one reference (Matt 4:25) and as demonization in another (Matt 17:15). On the other hand, the grammatical construction of Matt 10:1 implies that the disciples' activities of casting out demons and healing sickness both were derived from their "authority over unclean spirits." The inference seems to be that in the exorcisms the power of demons operating directly on individuals is broken, whereas the healings overcome the indirect influences of malevolent spirits (Kallas 1961: 78–79). Support for this inference is drawn from the fact that Matthew uses the term *therapeuō* with indifference as to whether a passage is dealing with the diseased or the demonized.

In contrast to most of the contemporary literature, the NT makes no highly speculative conjectures concerning the origin of these spirits or descriptions of materialized appearances. The emphasis throughout is on the activity of demonic forces especially in relation to the ministry of Jesus.

D. Jesus' Exorcisms in the Synoptics

All 3 synoptics agree that the casting out of demons was a most significant aspect of Jesus' ministry. The Beelzebul passages (Matt 12:25–29; Mark 3:23–27; Luke 11:17–22) clearly depict the power of Jesus over demons as the evidence that God's kingdom had broken into the present world order. That kingdom was confronting more than a loose confederation of hostile forces. It faced an opposing kingdom of evil spirits ruled by Beelzebul (whom Jesus identified as Satan in Matt 12:26–27). Therefore Jesus' exorcisms were not merely isolated incidents of compassion for individuals oppressed by malevolent forces. They were direct confrontations with the kingdom of the enemy. They were demonstrations of the power and presence of the Kingdom of God. The success of Jesus' assaults indicated that the head of that evil kingdom had already been bound, making possible the spoiling of his domain. On that basis demons were cast out of people and individuals were liberated from Satan's oppression in order to become participants in the blessings of God's kingdom. Contending that Jesus' ministry in this regard was absolutely unique, Theissen points out that no other charismatic miracle-worker ever claimed that his miracles portended the end of the old world and the beginning of a new age (1983: 278–79). Jesus was the first to make a specific connection between the common occurrence of exorcism and the eschatological defeat of Satan (Leivestad 1954: 254; Twelftree 1985: 79–80).

Jesus' authority over the power of Satan was conveyed to his disciples as well. The commissioning accounts in all 3 gospels connect the casting out of demons with the ministry Jesus authorized the disciples to continue (Matt 10:8; Mark 3:13–19; 6:7–13; Luke 9:1–2). In fact, the only activity that runs consistently from the opening summary of Jesus' ministry through the accounts of his miracles and into the commission given to his disciples is the casting out of demons. The context also relates the commissioning to the proclamation of the Kingdom of God. In the mind of Jesus the casting out of demons appears as one of the most verifiable indicators of the arrival of the kingdom (Leivestad 1954: 254).

Of special note is the lack of reference to any formula or procedure passed along from Jesus to his followers. Rather than being given any secret technique, they are simply endowed with his authority (*exousia*) over the spirits. This observation reflects the fact that Jesus' practice was in pointed contrast to the magical approach of other exorcists. Hull's study of exorcistic practice up to the time the gospels were written found that without exception the expulsion of demons was associated with magical practices (Hull 1974: 129). For that reason, some scholars view Jewish and Hellenistic exorcism stories as the background for the NT practice. David Bartlett, however, in a form-critical study contends that the Jewish and Hellenistic parallels are not close enough to the gospel accounts to be considered their source (1972). Rather, as Eitram points out, Jesus acted with an authority quite different from that of an ordinary magician or exorcist, making any technical gesture or use of names superfluous (Eitram 1966: 30). Jesus' absolute authority is emphasized in Matt 8:28–34, where the pericope is structured to focus on the single word of command effecting the deliverance of the demoniacs: "Go."

Despite Jesus' authority over Satan and his demons, Matthew's gospel depicts a continuing conflict between the forces of the evil one and the sons of God's Kingdom in the present age (13:36–43). A similar allowance for demonic powers to operate against man is found in the pseudepigraphal *Jubilees* (10:5–9) and *1 Enoch* (15:11–16:1). The final outcome is not in doubt, however, and according to Matt 25:41 Satan and his "angels" ultimately will be confined to the eternal fire (compare this reference to a number of allusions in intertestamental literature cited by Langton [1942: 238–44]).

E. Other NT References

Mentions of the casting out of demons in the book of Acts are significant in that they represent an extension of the ministry of the Risen Lord through the community of believers. The language of Acts 5:16 describing the apostles' ministry is reminiscent of the summaries in the synoptics (cf. Matt 4:24–25; 8:16; Mark 1:32–34; Luke 4:40–41). The ability to cast out demons was not limited to the apostles,

however. Acts 8:5–8 refers to the healings and deliverance from demons which Philip carried out. Significant in this context is the close association of this activity with the proclamation of the kingdom (Acts 8:12), a theme which reflects the commissioning statements of Jesus (Matt 10:7–8; Luke 9:1–2). Further references in Acts are Peter's characterization of Jesus' activity as "doing good and healing all who were under the power of the devil" (10:38), and Paul's exorcism of a "spirit of python" from a slave girl (16:16–18). The sole mention of any objects being used in exorcism is Acts 19:11–12, where cloths that had touched Paul were taken to the sick with the result that their illnesses were cured and evil spirits left them. This phenomenon, however, was not considered to be the normal pattern, as the term *extraordinary* is used to describe it. Moreover, the writer of Acts is careful to attribute the working to God, and not to any power inherent in Paul. Paul was the human instrumentality, but the power was from God (cf. Luke's understanding of Jesus' dependence on that power in Luke 4:14–19 and Acts 10:38). The motif of dependence on God's power rather than any exorcistic technique or formula is amplified in the next pericope. The Jewish exorcists who invoked the name of Jesus in an attempt to cast out demons were not successful (Acts 19:13–16). Their failure indicates that the use of Jesus' name was not a formula with power to operate *ex opera operati*. This story may be compared with Mark 9:38–40 = Luke 9:49–50. There Jesus allows a man outside of his immediate circle to perform exorcisms in his name. One way to explain the difference is to posit that the man in the gospel accounts was a true follower of Christ, though not in the inner circle of disciples ("not one of us"), whereas the exorcists in Acts were decidedly unbelievers.

Strikingly absent from John's account of Jesus' ministry is any reference at all to the casting out of demons. Twelftree (1985: 90) suggests that since exorcism is closely associated with the Kingdom of God, John's choice to give little attention to the kingdom led him to preclude the exorcism stories. In this gospel, Jesus' conflict with the diabolical realm is not described in terms of individual skirmishes with unclean spirits, but in the climactic overthrow of the opposing spirit world by Jesus' death and resurrection. As the "hour" for Jesus approached, nothing less than the "casting out" of the ruler of this world is signified (John 12:31). The triumph of Jesus in John's gospel, while expressed in more cosmic language, nonetheless involved the same defeat of Satan's realm as that described in the Synoptics.

References to demons in the remainder of the NT focus on their moral and spiritual opposition to believers rather than the kinds of physical affliction described in the Synoptics. They are the spiritual reality behind the apparent nothingness of idols which the heathen worship (1 Cor 10:20–21; Rev 9:20). They are spiritual forces of wickedness in the heavenlies against which the believer must contend by using the armor of God (Eph 6:10–18). They are the source of false teaching designed to lead people away from the faith (1 Tim 4:1). The equation of unclean spirits with demons is clear in Rev 16:13–14 (cf. 18:2), where they are declared to perform miracles and gather the kings of the world for the apocalyptic battle.

F. Interpretations

The reports of demonic activity and exorcism in the NT are subject to various considerations by different scholars. One interpretation views the phenomenon as a 1st-century understanding of what would be known today as a psychological problem. What the ancients called demonization would be diagnosed as psychoses. Representatives of this viewpoint include McCasland, Langton, and Oesterreich. Others, such as Bultmann, see in these accounts a mythological description of a person's existential need to transcend the oppressive power systems of evil in the world. Still others maintain that the concept of demons actually existing is not incompatible with a modern cosmology (Dickason, Kallas, Schniewind). In any case, an understanding of the demonic is absolutely essential to a proper interpretation of the life and ministry of Jesus.

DAVID GEORGE REESE

DEMOPHON (PERSON) [Gk *Dēmophōn* (Δημοφων)]. Local governor or commander in the time of Judas Maccabeus (2 Macc 12:2). After Lysias returned to Antiochus V, Demophon together with other local governors or commanders (Goldstein *2 Maccabees* AB, 432) continued to persecute the Jewish residents of their cities. Whether they acted on their own initiative or were following orders from either Antiochus V or Lysias cannot be determined. In contrast to 1 Maccabees 5 where the enemies listed are the ancient enemies of Israel, 2 Macc 12:2 lists only officials of the Seleucid empire, whose names are all common Greek names.
RUSSELL D. NELSON

DEMOTIC CHRONICLE. The so-called Demotic Chronicle, which forms the recto of Papyrus Bibliothèque Nationale 215 (Spiegelberg 1914; Bresciani 1969: 551–60; Roeder 1927: 238–49), consists of a series of chapters containing what appear to be oracular statements plus explanations, or glosses, in terms of the (political) history of Egypt during the 4th (and early 3d?) century B.C. Each chapter forms a separate unit. Although there are carryovers of theme between chapters, one cannot assume a chronological order between them or explain the political history of one chapter in terms of another. Both the beginning and the end of the papyrus are missing. Although it cannot be proven, it seems quite likely that the chapters were originally set in a narrative framework, i.e., that there was an accompanying story giving the background for the chapters. Other Late Period prophecies, such as the Prophecy of the Lamb (Zauzich 1983) and the Potter's Prophecy (Koenen 1968), are set within such accompanying stories. Paleographically, Papyrus Bibliothèque Nationale 215 appears to be early Ptolemaic and of Lower Egyptian, probably Memphite, origin (Spiegelberg 1914: 3, n. 3; 4 with n. 7). There is no evidence for a long gap between the time when the oracular statements were made and the time the explanations, which are written in standard Ptolemaic demotic, were provided. Thus the text was probably composed early in the Ptolemaic period.

The specific rulers who are named in the explanatory passages of the Demotic Chronicle run from Amyrtaios (Manetho's Dynasty 28), who claimed the throne of Egypt at the death of Darius II in 404 B.C., through Teos, the second king of Manetho's Dynasty 30, whose rule ended in 360 B.C. Teos is treated throughout the text as the "reigning" pharaoh (Meyer 1915: 295 with n. 2); when later rulers are mentioned, they are not identified by name, and events in their reigns are presented as prophecy. When historical statements made in the Demotic Chronicle can be checked with external sources, the facts presented in the Chronicle are seen to be quite reliable. Because of this general historical reliability of the Demotic Chronicle, and since there are few contemporary records of Dynasties 28–30, the Demotic Chronicle has been used as a basic source for the history of this period. But many of the explanations are nearly as unclear as the original oracular statements and, although the explanations clearly refer to events which occurred during this period in Egypt, the exact meaning of many of them remains ambiguous. Indeed, often our (very limited) knowledge of the history of this period is insufficient to interpret with certainty the references being made in the text.

The portion of the Demotic Chronicle which has been preserved includes no statement of authorship. The religious background of the text is apparent from the content of the oracular statements, which are

largely a mixture of calendrical dates (days of the week, days of the month, months of the year), of ritual activities and festivals, and of references to various divinities and/or (holy) cities. Wessetzky (1942) has argued that all were mythological references to calendrical dates (using the lunar calendar) relating to the Nile inundation. Internal evidence suggests that the text was written by, or on behalf of, the High Priest of Harsaphes in Herakleopolis. The prophetic sections of the text predict that a ruler will come into being in Herakleopolis after the Greeks. One of the glosses in chap. 8 states, "It is said, 'A man of Herakleopolis is the one who will rule after the foreigners and the Greeks' " (2/24–24). The following oracular statement "Take joy, o High Priest of Harsaphes!" is explained by saying, "The High Priest of Harsaphes will rejoice after the Greeks; that means coming into being by a ruler in Herakleopolis" (3/1). Although the text might have been written to justify a rebellion which was in progress, it is just as likely that it was preparing the way for one which had not yet begun (Spiegelberg 1914: 6; Meyer 1915: 297).

While providing justification for a rebellion, the Demotic Chronicle also presents a statement of, even a definition of, legitimate kingship (Johnson 1983). In this context, the historical rulers of Dynasties 28–30 are used as examples, illustrating both the good and the bad king and their resultant fates. The clearest statement of this is found in chap. 10, where the fates of different rulers of Dynasties 28–30 are dependent on the manner in which they governed. Thus, of Amyrtaios, the sole ruler of Dynasty 28, it is said that his son was not allowed to succeed him as ruler because he, Amyrtaios, had allowed the law to be violated (lit., "The first ruler who came after the foreigners, who are the Medes, [i.e.] Pharaoh Amyrtaios, when violation of the law was done [in] his time, he was caused to make the movements [of] yesterday; there was no rule by his son after him" [3/18–19]). The fate of Amyrtaios is specified even more clearly later in the same chapter when the oracular statement "first" is explained by saying that "the first who came after the Medes" was forced off the throne because he had ordered that the law be violated (lit., "when he ordered violation of the law, the things which were done for him were seen; his son was not allowed to succeed him; but, instead, he was caused to remove himself [from] upon his throne while he was alive" [4/1–2]).

A very similar statement is found later in the same chapter where the two-part oracular statement "the third—he was deposed" is explained by saying "the third ruler who came into being between the Medes" was deposed "when he abandoned the law" (4/6). This same sentiment also underlies the passage describing the fate of the son and successor of Neferites I of Dynasty 29: "[Only] a few days are what were given to him, himself, because of numerous sins which were done in his time" (3/21). A slight variation is the statement concerning Neferites II of Dynasty 29, "Because the law was abandoned under his father, a crime was made to reach his son after him" (4/12).

By contrast, long rule and succession by one's son result from proper behavior by the king. The clearest example is the explanation of the oracular statement "the fifth—he completed" as "the fifth ruler who came after the Medes [i.e., Achoris, Repeater of Appearances], whose days of rule were caused to be complete [i.e., when he was beneficent to the temples]." (4/9–10). The same standard is found applied to Neferites I of Dynasty 29, "When he did what he did conscientiously [lit., firmly, securely], his son was allowed to succeed him" (3/20–21). A general statement of this theory is found in chap. 12, "The ruler who will be beneficent is the one whom it [i.e., the uraeus, a deity who protects the ruling king] will love" (5/22).

The legitimate king, as portrayed in the Demotic Chronicle and contemporary Egyptian documents, undergoes the proper coronation rituals and possesses the proper royal regalia; he makes Egypt flourish and protects her from foreign invasion; and he shows proper respect for the gods and their temples and for temple ritual. All of these are summed up in the general statement that he will not abandon the law.

Not only past rulers were judged by the criterion of appropriate behavior, for the ruler prophesied to come from Herakleopolis is bound by the same rules of conduct. In chap. 9, one stage of the rebellion which will be led by this man, who will come into being in Herakleopolis, is his legitimization: "A titulary [is given] to me [in] the third month of Winter" is explained by saying, "He will be revealed and he will appear in glory in the crown of gold in the third month of Winter; that means his acting as ruler in the third month of Winter" (3/10). This ruler will found a legitimate dynasty. The following oracular

statement "They will give a seat to Pe [a prehistoric capital of Egypt]" is glossed "His eldest son will be put on his seat [Egyptian *p*] [i.e., (the seat of) the ruler who will come into being in Herakleopolis]; that means he will be similar to Harsiese" (3/11). Harsiese is the archetypal good king who avenged his father's death and succeeded him on the throne. The following sections of the same chapter also stress the legitimate status of this ruler since he will be recognized in Dep as well as Pe, and Isis will stop grieving (for her slain husband Osiris) because the legitimate successor (Harsiese) has taken the throne and avenged the death of his father. This use of mythological references as part of the justification for the ruler whose coming is being predicted reflects the mythological underpinnings of Egyptian kingship as a whole.

The tradition that the quality of a king's rule is reflected in the length of his reign is also found in Hebrew texts (Meyer 1915: 199, 304–5; Daumas 1961; Lloyd 1982: 42–44, n. 37 to p. 45) and in the Hellenistic Babylonian New Year's Festival Ritual (Smith 1978: 72–73). Similarly, the use of recent political events as explanatory devices in prophetic and exegetical texts is found not only in Egyptian materials such as the Demotic Chronicle, for which there are long roots in Egyptian literature, but also in Hebrew, and especially Essenian, exegesis (Meyer 1915: 294; Daumas 1961; Smith 1978: 77–87). Other points of comparison with biblical materials include concepts such as walking on the "path of God" or "path of life" (Johnson 1983: 69).

JANET H. JOHNSON

DEN OF LIONS. See PUNISHMENTS AND CRIMES (OT AND ANE).

DENARIUS [Gk *Dēnarion* (Δηναριον)]. See COINAGE.

DEPOSIT. Primarily a legal term referring to money or property placed with a guardian for safekeeping. Israelite laws regarding deposits, including penalties assessed to a custodian under whose guardianship a deposit was lost or stolen, are found in Exod 22:6–10 and Lev 6:2–4 (5:21–23 LXX). In later times, private monies were said to be placed on deposit in the temple treasury, with the high priest as guardian (2 Macc 3:7–34; cf. *4 Macc* 4:1–14). In a derivative sense, people could be placed "on deposit" for safekeeping (e.g., Tob 10:13). When his message fell on deaf ears, Isaiah committed his teaching and writing to the guardianship of his disciples, much like a deposit. Other documents can be described as deposits, placed in earthen vessels for safekeeping (e.g., Jeremiah's deed, Jer 32:9–15; and the books of Moses in *T. Mos.* 11:16).

In the NT, the word "deposit" (*parathēkē*) only appears in the Pastoral Epistles (1 Tim 6:20; 2 Tim 1:12, 14). The background for this NT term appears to include classical Greek, which preferred the synonym *parakatathēkē* to the NT word (but the Textus Receptus reads *parakatathēkē* at 1 Tim 6:20 and 2 Tim 1:14). The ancient Greek and Roman societies had very specific laws of deposit, the language of which had some influence on Christian times. A clear example of this juridical influence can be seen in *Herm.*

Man. 3:2, where truth is said to be part of God's "deposit" with which man is entrusted—the one who lies defrauds God by not restoring the deposit he received (cf. humans as guardians of the divine "deposit" [the soul] in Josephus *JW* 3.372.1).

In the Pastorals "deposit" refers to the faith which has been entrusted to the church in the form of tradition (1 Tim 6:20; 2 Tim 1:14), and to Paul (2 Tim 1:12; or of Paul's personal faith which he entrusts to God's keeping), of which the apostle and his co-workers are simply stewards. The "deposit" apparently includes Pauline teaching and the OT. Guarding the tradition is not a static enterprise, however, in light of the fact that Timothy is charged to guard the deposit by the Holy Spirit, the Spirit which is said to give him guidance in matters of interpretation. A similar glimpse of developing tradition is provided by 2 Peter, whose wholesale appropriation of Jude constitutes a dynamic interpretation of "the faith once for all delivered to the saints" (Jude 3).

Another legal term for "deposit," *arrabōn*, also translated "guarantee," or "pledge," is a Hebrew loan-word (*ʿērābôn*) used of the pledge given to Tamar by Judah (Gen 38:17–20). The word is used by Paul to describe the role of the Holy Spirit as a "deposit" or "guarantee" of the believer's inheritance (2 Cor 1:22, 5:5; cf. Eph 1:14). See PW 5: 233–36; *Kl Pauly* (1979): 1492–93; *RAC* 3: 778–84.

THOMAS SCOTT CAULLEY

DERBE (PLACE) [Gk *Derbē* (Δερβη)]. An ancient city of Lycaonia located on the plateau of south central Anatolia (modern Turkey). Derbe was located along the main road which connected the chief city of the region Iconium (modern Konya) with Laranda. The city was located in the Lycaonian district of the Roman province of Galatia. Iconium was a Phrygian city but Derbe and the neighboring city of Lystra spoke a local dialect called Lycaonian (Acts 14:11). The name of the city may be derived from a word in the local tongue which means "juniper tree."

Derbe was the home of Gaius who accompanied Paul to Ephesus (Acts 19:29) and on his trip through Macedonia and Greece (Acts 20:4, *Derbaios*). Derbe was the most easterly point of the first missionary journey of Paul and Barnabas. Paul and Barnabas preached in Iconium and some of the leaders of the city planned to have them stoned. Paul and Barnabas, after hearing of the plot against them, fled to the Lycaonian cities of Lystra and Derbe. In Lystra, Paul healed a lame man and the people believed that he was the incarnation of Hermes and Barnabas that of Zeus. The crowd, after much persuasion, was convinced that Paul and Barnabas were only men. This same crowd was later incited by Jews from Antioch and Iconium to stone Paul and drag him outside the city walls, thinking that he was dead. Paul, however, did revive and the next day he and Barnabas departed for Derbe. Once in Derbe Paul and Barnabas preached the good news and many individuals were converted. Paul with Silas returned to Derbe on his second missionary journey (Acts 16:1) and Paul probably returned again at the beginning of his third missionary journey (Acts 18:23).

Little is known of the early history of the Derbe but it was undoubtedly hellenized after the Greeks took control of this region. The city later came under Roman control and was added to Cappadocia as the "eleventh *strategia*" (ca. 65 B.C.). Derbe was later seized by Antipater, a local ruler, who was called "the robber" by Strabo (11.535), but he was also a friend of Cicero (*Fam.* 13.73). Later the city came under the control of Amyntas the king of Galatia after he defeated Antipater. Derbe became a part of Roman Galatia upon the death of Amyntas in 25 B.C. During the 1st century A.D. the nearby city Laranda was under the control of Antiochus IV of Commagene. Derbe at this time gained a special title which indicated a special link to the Emperor Claudius, hence the title Claudio-Derbe. This appellation (*Clau[dia] Derb[e]*) is recorded on the coins of the city dating to the 2d century A.D.

The exact location of the city has long been debated. J. R. S. Sterrett in 1888 purposed that the area near Gudelisin was a probable location of Derbe due to its proximity to Lystra. Ramsey working from this information later affirmed that Gudelisin was the location of Derbe. This was the standard interpretation until two inscriptions were found which indicate that Kerti Huyuk, located nearly 30 miles E of Gudelisin, is the likely location of Derbe. The first inscription was found at the Kerti Huyuk in 1956 by Michael

Ballance. This inscription, dated to 157 A.D., is a dedication of the council and people of Derbe. The second inscription was carried by local inhabitants from Kerti Huyuk to the nearby village of Suduraya. This inscription, dated to the last part of the 4th century A.D., is found on the tombstone of Michael, a bishop of Derbe.

JOHN D. WINELAND

DESCENT TO THE UNDERWORLD. In the ancient world, as in many other cultures, the realm of the dead was usually located in the underworld (Hades, Sheol, sometimes Gehenna) and a descent to the underworld was simply a way of visiting the dead. However, occasionally the dead were also located in other areas. An old alternative to the underworld placed the realm of the dead at the furthest extremity of the world in the west, where the sun goes down. Sometimes the righteous dead were placed in an earthly or heavenly paradise, whereas the underworld was reserved for the wicked dead. During the early centuries C.E., there was a tendency among pagans, Jews, and Christians to relocate even the place of postmortem punishment to the upper atmosphere or the lower heavens. Thus journeys to the world of the dead were not always descents. While this article will focus on descents, it will not be possible to avoid referring sometimes to other kinds of journeys to the world of the dead when they are closely related to descents to the underworld. The common descent to the underworld by all who die will not be discussed, but only cases of those who descend alive and return still alive, or who descend in death but escape death and return to life.

Descents to the underworld occur in the myths and traditions of many cultures and are often attributed to the gods and heroes of myths and legends. Attitudes to the loss of loved ones in death may find expression, for example, in stories of those who braved the terrors of the underworld in order to rescue a relative who had died. The cycle of the seasons may be represented in myths of gods who periodically descend to and return from the underworld. Myths of heavenly gods descending to the world ruled by the infernal deities may serve to emphasize the power of death which cannot be overcome or alternatively to define the limits of the power of death. Descents may also occur as unusual psychological experiences, in trance, vision, or temporary loss of consciousness, when the soul seems to leave the body and finds itself in the other world as described in the traditions of the culture. Such descents may be chance occurrences, or they may be deliberately cultivated and undertaken, as by the shamans of central Asia. Very often accounts of descents to the underworld, either attributed pseudonymously to great heroes or seers of the past, or else actually reported by those who have experienced visions and trances, serve as revelations of the secrets of death and the life to come, preparing their hearers or readers for the journey of death, or seeking to influence their lives by warning of the future rewards and punishments consequent on behavior in this life. Descents of all these kinds and more are found, to varying extents, in the various cultures of the biblical world. The following survey will show, by contrast, how remarkably lacking they are in the biblical literature itself, though the particular forms which descents to the underworld took in the environment of the biblical tradition will also illuminate particular biblical passages and phrases.

Several Sumerian myths include descents to the netherworld by divine or human beings, which are the oldest known examples of such stories. All make clear that a descent to the world of the dead is extremely perilous. The netherworld is "the land of no return," guarded by seven walls, each with a gate and a gatekeeper whose role is to allow only the dead to enter and to prevent anyone from leaving. To descend and to return to the land of the living is possible only on exceptional terms. Indeed (as the story of Inanna's descent will make clear) even a god cannot descend without dying.

In the myth of *Enlil and Ninlil,* the god Enlil is banished to the netherworld by the gods as punishment for his rape of Ninlil. Ninlil, who is pregnant with Enlil's child Nanna-Sin, the moon god, follows Enlil. Since the moon god belongs in the sky, Enlil does not want his child doomed to live in the netherworld. He adopts a remarkable stratagem to prevent this. As Ninlil leaves the city of Nippur and travels to the netherworld, Enlil disguises himself three times: first as the gatekeeper of Nippur, then as the gatekeeper of the netherworld, then as the ferryman who rows the dead across the river in the netherworld (the Sumerian equivalent of the Greek Charon). On each occasion he makes love to Ninlil and fathers a child. These three new offspring, who become three of the gods of the underworld, are exchanged for the moon god, who is thus free to take his place in heaven (see Cooper 1980). Enlil thus conforms to an inflexible rule of the netherworld: no one who enters can leave except by providing a substitute. (For a much later survival of this idea, see Lucian *Catapl.* 10.)

The same rule comes into play in the fullest account of a descent, that of the goddess Inanna, the morning star. This is known both in a Sumerian version and in a slightly different Akkadian version (the *Descent of Ishtar;* see Sladek 1974). The motive for Inanna's descent is not entirely clear, but it seems that not content with being the queen of heaven she suddenly felt the desire to rule also the lower world of which her sister Ereshkigal is queen. On a false pretext she gains admittance, but the process by which she passes each of the seven gates is in fact the process of death. At each she is made to relinquish items of her jewelry and clothing, until when she enters the presence of Ereshkigal and the Anunnaki, the seven judges of the dead, she is naked, as the dead are when they reach the netherworld. There she is condemned, killed, and hung up as a decaying corpse. However, Inanna had given instructions to Ninshubur her servant to appeal to the gods on her behalf if she did not return. Only Enki is willing to help. He fashions two strange creatures who slip unnoticed into the netherworld, ingratiate themselves with Ereshkigal, and are able to use the water of life and the grass of life they have brought with them to revive Inanna. However, Inanna may leave only on the condition that she find a substitute. Accompanied by a troop of terrible demons she ascends to earth and seeks a substitute. Eventually she comes to her consort, the young shepherd Dumuzi. Enraged by the fact that he is not mourning for her, she allows the demons to seize him. He temporarily escapes, his sister Geshtinanna comes to his aid, and Inanna consents to an arrangement whereby Dumuzi's fate is to be shared with his sister: each year he will spend half the year in the netherworld and Geshtinanna the other half of the year. This conclusion (cf. the Greek myths of Persephone and Adonis) makes it certain that the myth has some connection with the cycle of the seasons. In fact, the theme of the disappearance and renewal of fertility is more obvious in the Akkadian version, in which Ishtar's rescue is prompted by the concern of the gods about the infertility of the earth which has resulted from her descent and death. But Jabobsen's highly ingenious and detailed explanations of such myths in terms of the events of the agricultural year (1976: 62–63) are debated (cf. Kirk 1970: 88–118).

A Sumerian story of a hero's unsuccessful descent to the netherworld is told in *Gilgamesh, Enkidu, and the Netherworld* (Shaffer 1963). (An Akkadian version of this story also forms tablet 12 of the Gilgamesh Epic. When a chasm opens in the ground and two treasured objects belonging to Gilgamesh drop into the netherworld, his friend Enkidu offers to retrieve them. Gilgamesh gives him careful instructions on how to behave in the netherworld so as not to attract attention to himself. Enkidu fails to follow the

instructions and is held there, as dead. Gilgamesh appeals to the gods but the most they can do for him is to enable Enkidu's ghost to ascend temporarily to speak with Gilgamesh. Enkidu tells Gilgamesh about life in the netherworld: how his own corpse is decaying there, and how various categories of the dead fare better than others. The account is of great interest as the earliest instance of a description of the state of the dead given by someone who had been to the underworld and had returned.

The Akkadian *Epic of Gilgamesh* (*ANET*, 72–99, 503–7), whose account of Enkidu's death is different, recounts a dream which Enkidu had when his death was near (7.4.11–55). It seems to be a premonition of his approaching death. A fierce psychopomp seizes him and leads him down to the "house of darkness," where he sees the kings of old. The text breaks off at the point where Ereshkigal asks, "Who has brought this man here?" Possibly, as in stories in Greek and Roman literature (see F. below), the story continued by disclosing that Enkidu had been brought to the netherworld too soon, so that he had to be sent back, though with the knowledge that his real death was fast approaching.

An Akkadian text from the 7th century B.C.E. (*ANET*, 109–10) tells another story of a visit to the netherworld in a dream by a living human being. An Assyrian crown prince called Kummâ (perhaps Assurbanipal: Bottéro 1987: 68) prays to Ereshkigal and Nergal, the rulers of the netherworld, to be allowed to see the netherworld. His prayer is answered in a dream in which he describes the terrifying appearance of the various guardians and gods of the netherworld. Like the dead, he is arraigned before Nergal and the Anunnaki. He is spared death at the hands of Nergal only so that when he returns to the upper world, he may persuade his father to follow the will of the gods of the netherworld.

B. Egypt

The myth of Osiris cannot be included here, since his resurrection does not mean his return to the world of the living: he remains in the realm of the dead, as its ruler. More properly a myth of descent and return is that of the sun god Re, who every evening, after traveling in his boat across the sky, descends to the world of the dead through an entrance in the far west, and during the night passes through the underworld before ascending into the sky again every morning. The *Book of What Is in the Other World (Am-Tuat)* and the *Book of Gates* describe in detail Re's passage through the world of the dead during the twelve hours of night (Budge 1906).

Two stories of human beings visiting the world of the dead are known. One is reported by Herodotus (2.122), who says that King Rhampsinitus (Ramses III) descended alive into the realm of the dead, where he played dice (probably checkers) with Demeter (i.e., Isis) and returned to earth with a golden napkin she had given him. He describes an annual ritual supposed to commemorate the event.

The other story is that of Setne and his son Si-Osire (*AEL* 3: 138–51). The story is extant in a Demotic text written probably in the second half of the 1st century C.E., but, since Setne Khamwas was high priest of Memphis ca. 1250 B.C.E., it is likely to be based on an older Egyptian tale. An Egyptian in the realm of the dead was allowed to return to earth in order to deal with a Nubian magician who was proving too powerful for the magicians of Egypt. He was reincarnated as the miraculous child of a childless couple, Setne and his wife, and called Si-Osire. When he reached the age of 12 he vanquished the Nubian magician and returned to the netherworld. But before this there was an occasion when father and son observed two funerals, one of a rich man buried in sumptuous clothing and with much mourning, the other of a poor man buried without ceremony or mourning. The father declared he would rather have the lot of the rich man than that of the pauper, but his son expressed the wish that his father's fate in the netherworld would be the opposite, that of the pauper rather than that of the rich man. In order to justify his wish and demonstrate the reversal of fortunes in the afterlife, he took his father on a tour of the seven halls of the underworld. The account of the first three halls is lost. In the fourth and fifth halls the dead were being punished. In the fifth hall was the rich man, with the pivot of the door of the hall fixed in his eye. In the sixth hall were gods and attendants, in the seventh a scene of judgment before Osiris. The pauper was to be seen, elevated to high rank, near Osiris. Si-Osire explained to his father what they saw, and the fate of the three classes of the dead: those whose good deeds outnumber their bad deeds (like the pauper), those whose bad deeds outnumber their good deeds (like the rich man), and those whose good and bad deeds are equal. (For the coherence of the account with ancient Egyptian concepts, see Zandee

1960: 297–302.) The story is of special importance, both because it is an example of the genre of conducted tours of the underworld (also to be found in Greek, Jewish, and Christian literature) and because it passed into Jewish religious folklore (see section G.) and has been claimed as the original of the parable of the rich man and Lazarus (Luke 16:19–31).

C. Syria and Palestine

Among the mythological texts from Ugarit, the Baal cycle includes a notable divine descent to the netherworld (*ANET*, 138–42). After his victory over Yam, the god of the waters of chaos, Baal, who was at the summit of his power, saw signs that the power of Mot, the god of death, was encroaching on his rule. So he sent messengers to Mot in the netherworld to demand his submission to Baal's power, but Mot's reply was to summon Baal to admit defeat and come down to him in the netherworld. Baal sent a message of capitulation ("I am your slave") and then descended to the netherworld (i.e., he died). His sister Anat found his body and buried it on the summit of Mt. Zaphon. Then, driven by her love for her brother, she sought out Mot in the netherworld and vanquished him. Baal revived, returned, and resumed his rule. But seven years later Mot again challenged Baal and they engaged in a fierce battle. The outcome is not preserved: presumably Baal won a decisive victory over Mot. If so, the descent of Baal differs significantly in its final outcome from that of Inanna. Both are first obliged to submit to the power of the netherworld in dying and then escape the power of death with the help of other gods. But whereas in the myth of Inanna's descent the power of death remains intact, in that of Baal it is eventually subjected to Baal's power.

The Ugaritic myth has commonly been connected with the annual cycle of the seasons, and there are elements of the text which suggest this. Baal, the storm god who brings clouds and rain and therefore fertility, would descend to the netherworld at the end of spring, when the scorching heat of summer begins, and return to life in the autumn, bringing the autumn rains and plenty after the summer drought. However, the final battle with Mot in the 7th year is hard to explain in this way, and may indicate that the agrarian elements have been subsumed into a larger mythical design. Xella (1987) sees the myth as expressing the eternal dialectic between life and death. Baal defends the cosmic order against the power of death, not abolishing it but forcing it to observe limits. Mot's attempt at unlimited power—killing gods and threatening the extinction of humanity—is foiled, and death becomes a power subdued and kept in its place by Baal. Xella's further supposition that Baal's resurrection includes representatively some kind of transcendence of death by the great ancestors of the people seems more speculative.

Tammuz, for whom the women of Jerusalem in the 6th century B.C.E. observed a ceremony of mourning (Ezek 8:14), was the Sumerian Dumuzi (see section A.). There is much later evidence about his cult in Phoenicia and Syria, centered at Byblos (Gebal) in Hellenistic times, when he was also called in Greek Adonis. But since this Syrian cult of Tammuz was the intermediary between Mesopotamia and the Greek cult of Adonis, well established in Greece by 600 B.C.E., it must have flourished already in OT times, while the myths of Dumuzi (section A. above) and Adonis (section F. below) are sufficiently similar to show that some such myth about Tammuz, descending to and returning from the netherworld annually, must have been current in Syria and Palestine.

D. Old Testament

A. Cooper (1983) argues that Ps 24:7–10 is a fragment of a descent myth in which a high god (now identified with Yahweh) descends to the netherworld to confront the powers of death. The verses describe either the divine warrior's entry into the netherworld to combat death or his victorious emergence from the netherworld after subduing death. The doors are the gates of the netherworld, barred against God's entry or exit. The gatekeepers, commanded to open, challenge him for his identity. This is an attractive interpretation (especially as it would make the early Christian interpretation of these verses with reference to the descent of Christ to Hades a reactivation of their original mythical sense), but unfortunately there are no extant parallels to such a fragment of myth. Baal's entry into the netherworld (section C. above) is not triumphant, but a submission to death. In the fragmentary narrative no account of his subsequent reemergence from the netherworld is preserved, and we cannot tell whether his final conflict with Mot involved a descent.

Ancient Israel shared the conviction of the Mesopotamian peoples that "he who goes down to Sheol [the underworld] does not come up" (Job 7:9; cf. 10:21; 16:22; 2 Sam 12:23). No exceptions were known: there is no OT instance of a true descent to and return from the underworld by a living human being, though there is one case of someone being summoned from Sheol by necromancy (1 Sam 28:3–25; this practice was rejected by the law and the prophets, Lev 19:31; Deut 18:10–12; Isa 8:19; 65:2–4). However, in the OT the *idea* of descending to Sheol and returning alive to the land of the living does occur as a way of describing the experience of coming very close to death and escaping. When the psalmists feel themselves to be so close to death as to be virtually certain of dying they speak of themselves as already at the gates of the underworld (Ps 107:18; Isa 38:10; cf. *3 Maccabees* 5:51; *Pss. Sol.* 16:2) or even already in the depths of the underworld (Ps 88:6). They have already made the descent to the world of the dead and only Yahweh's intervention brings them up again (Pss 9:13; 30:3; 86:13; Isa 38:17; cf. Sir 51:5). The picture of descent and return is more than a poetic fancy. For the psalmists to be already in the region of death means that they are in death's power. The experience of Yahweh's power to deliver them was a step toward the belief that his sovereignty over the world of the dead would in the future be asserted in bringing the dead back to the world of the living in eschatological resurrection. The assertion that Yahweh "kills and makes alive" (Deut 32:39; 1 Sam 2:6; 2 Kgs 5:7; cf. *4 Maccabees* 18:18–19), later found in the form, "he leads down to Hades and brings up again" (Tob 13:2; Wis 16:13), originally referred to the kind of experience the psalmists expressed but became the basis of the later Jewish confession of faith in "the God who makes the dead alive" (*Ascen. Jos.* 20:7; Rom 4:17; 2 Cor 1:9; *Eighteen Benedictions*).

Jonah 2:2–9 is a psalm of thanksgiving for deliverance from death by drowning, which uses the kind of language just discussed in a specially strong form: "I went down to the land [Sheol] whose bars closed upon me for ever; yet thou didst bring up my life from the Pit" (2:6). It has been appropriately incorporated by the author of the book of Jonah, who wished to represent Jonah's miraculous escape from drowning as his rescue by God from the world of the dead itself. Jonah's descent into the sea was a descent to the depths of the underworld, and the great fish was the means by which God delivered him from Sheol and brought him back to dry land. That the fish does not itself represent Sheol but the means of ascent from Sheol is shown by the reference to "three days and three nights" (1:17). The use of this phrase in the *Descent of Inanna* (see section A.) shows that it was the time it took to travel from the earth to the underworld. In Jonah's case it was the time the fish took to bring him back from Sheol to the world of the living (Landes 1967a; 1967b). In later Jewish interpretation, however, the belly of the fish came to be seen as representing the belly of Sheol from which God delivered Jonah (Jonah 2:1–2, 7–8 LXX; *3 Maccabees 6:8*; Matt 12:40).

E. Iran

Three visits by living human beings to the world of the dead are known from the Zoroastrian tradition: the legend of a visit to paradise by Zoroaster's royal patron Vištāsp, the long and detailed vision in the *Ardā Virāz Nāmag,* and the journey of Kirdīr (Skjaervø 1983). The last is of great importance, since it is related in an account by the high priest Kirdīr himself (3d century C.E.) in two inscriptions from Iran. It is therefore a historical event, which took place in the reign of the Sassanid king Shapur I (ca. 240–70 C.E.).

Kirdīr relates how he prayed for a vision of the other world, as a special favor from the gods in reward for his outstanding piety and religious service, and in order to increase his confidence in Zoroastrian teaching about the afterlife. He also expresses the wish that his account of it should aid its readers' belief in heaven and hell, so that the vision has in fact the function of a revelation of the fate of the dead, confirming the revelation given in Zoroastrian traditions. The vision itself is not narrated by Kirdīr in the first person; rather he reports the way it was narrated by a group of people (designated in the text by an unknown word) who were presumably visionaries who went into a trance after the performance of a ritual, and told Kirdīr what they were seeing as they experienced it (for this interpretation of the text, see Skjaervø 1983: 294). The visionaries themselves travel through the other world and as they do they see a man who looks like Kirdīr (his soul) following the route which the souls of the dead take. Most of the account (some of which is fragmentary) conforms closely to the traditional Zoroastrian features of the world of the dead: a beautiful woman (who is Kirdīr's *daēna*, a personification of his conscience) comes

to meet him and they travel together on a luminous road towards the east; they pause before a judge with scales to weigh the sins and merits of the dead; they come to the bottomless pit of hell, full of reptiles, and must cross it on the perilously narrow bridge (called Činwad in other sources) which widens for them; they then ascend to a succession of palaces in paradise.

The account of the vision of *Ardā Virāz*, though the pseudo-historical introduction to it seems to date it at about the same time as Kirdīr's vision (see Vahman 1986: 227–28, but cf. 233), only reached the written form in which we have it much later, in the 10th or 11th century C.E. It has no doubt been through a number of redactions (Gignoux 1984b: 14–17), but whether it has a historical core, originally preserved in oral tradition, is very uncertain. Besides the traditional Zoroastrian features, such as the bridge Činwad, the bulk of the text describes in detail the many different punishments suffered in hell by specific classes of sinners. Both the general concept and some of the specific details (such as those punishments in which people are suspended by some part of their body) of the punishments in hell are paralleled in the Jewish and Christian apocalyptic tradition of descriptions of hell (see section G. below). The direction of dependence has been disputed, but the presence of motifs which are also paralleled in ancient Greek accounts of Hades (Tardieu 1985) makes it fairly certain that the *Ardā Virāz Nāmag* is indebted to the Judeo-Christian apocalyptic tradition, which has mediated to it features borrowed from the Greek Hades. Thus the distinctively Zoroastrian features of the other world in *Ardā Virāz Nāmag* have been augmented, probably at a relatively late date, by borrowings from other traditions.

However, there are features which link *Ardā Virāz Nāmag* with Kirdīr's account. The magi seek a vision of the other world for propaganda purposes: in order to verify Zoroastrian teaching and the efficacy of the cult with regard to the fate of souls after death (on this feature in all three accounts, see Gignoux 1974). Virāz is selected for his outstanding piety and righteousness, just as Kirdīr attributes his vision to his exceptional worthiness. Ritual preparations precede his trance, which he experiences in the presence of others. However, unlike Kirdīr he experiences the journey to the other world himself and unlike Kirdīr's visionaries he does not narrate it while experiencing it, but only when he returns after seven days of apparent sleep. This apparent sleep is a feature which is shared with the legend of Vištāsp's visit to paradise, as is the drink of wine mixed with henbane—presumably a drug to induce trance—which is given to both before their experiences.

Gignoux (1979, 1981) detects an ancient Iranian tradition of shamanistic experience (for shamanism, see section F. below) in the three features preserved as a literary tradition in the later sources: a drug conducive to ecstatic experience, the state of apparent death, and the journey to the other world. It is unfortunate for this argument that in the earliest account (the Journey of Kirdīr), the drug is not mentioned and the state of the visionaries is certainly not one of death since they are depicted as speaking. However, it is possible that the accounts do reflect, very remotely, the experiences of an early period. Lucian's satirical account (from the 2d century C.E.) of a Babylonian magus who conducted Menippus to Hades (see section F. below) suggests that Kirdīr's experience, though exceptional by his own account, was not unique among the Zoroastrian magi. Menippus had been told that Zoroaster's disciples, the magi, "by means of certain incantations and initiation rites could open the gates of Hades, take down anyone they wished in safety and afterwards bring him back again" (*Menippus* 6).

F. Greece and Rome

Many descents to the underworld were known in the classical Greek and Hellenistic cultures (a fairly exhaustive listing can be found in PW, 2395–448). A number of different influences and concerns are needed to account for them, but two particular kinds of origin may be mentioned at the outset. One is the mythical representation of the cycle of nature as a descent to and return from the underworld. This appears in the myth of Demeter and Persephone, on which the Eleusinian mysteries were based, and which it is difficult not to suppose was connected with the cycle of the seasons in its origin (but cf. Burkert 1979: 138). At any rate the connection is clear in the earliest extant source, the *Homeric Hymn to Demeter* (7th or early 6th century B.C.E.). Persephone was gathering flowers when the earth opened and the god Hades carried her off to the underworld. When her mother Demeter, after searching for her, discovered the truth, she wandered the earth disguised as an old woman and came to Eleusis. Eventually

she brought about a famine which threatened to put an end to humanity and to their sacrifices to the gods. Zeus succeeded in pacifying her by sending Hermes to persuade Hades to let Persephone return to her mother. The resulting compromise was that Persephone was to spend two thirds of each year with her mother on Olympus and one third with her husband Hades as queen of the underworld. When Demeter consented to this arrangement, she made life return to the fields. She also taught her secret rites to the princes of Eleusis. This was the myth that was somehow enacted in the ceremonies of the Eleusinian mysteries, but again the *Hymn to Demeter* already makes clear that in these the theme of the renewal of the fruitfulness of the natural world was linked with the promise of a blessed afterlife in the underworld. Although the annual descent and return of Persephone is unmistakably parallel to that of Dumuzi in the Sumerian myth, the Greek myth, unlike the Sumerian, acquired a significance for personal fate. However, precisely how the assurance to initiates that they would be happy in Hades after death was linked to the myth and to the secret rites of the mysteries remains obscure.

Not only parallel to but actually derived from the cult and the myth of Dumuzi was the Greek cult and myth of Adonis, though as the name itself indicates (= Semitic *adonî*, "my lord") the Greek Adonis was more immediately the Tammuz of Phoenicia, Syria, and Cyprus. As Dumuzi was linked with Inanna and Tammuz with Astarte, so Adonis was linked with Aphrodite. The old form of the Greek myth seems to have been that Adonis as a child was so beautiful that Aphrodite hid him in a coffin and gave him to Persephone. Later, when she wanted him back, Persephone, who also loved him, refused. The deal, arbitrated by Zeus, was that Adonis was to belong for one third of the year to Aphrodite, one third to Persephone, and one third to himself. He added his own share to Aphrodite's and so spends two thirds of the year on Olympus and one third in the underworld. More popular than the odd form of Adonis' death in this version was the story that he died from a wound by a wild boar when hunting. A later version, attested only by Christian authors, has Aphrodite herself go down to Hades to ask Persephone to give Adonis back. It is doubtful whether in Greece the Adonis myth retained any agrarian association, while the festival in July at which Adonis' death was mourned by women seems to have put no particular emphasis on his return from the underworld.

Secondly, a number of scholars have argued for a decisive influence of "shamanism" on certain Greek religious traditions. Shamanism is a type of religious practice characteristic of the central Asian tribes, but also found in many other societies. The shaman is an ecstatic whose soul leaves his body and goes on journeys, including journeys to the underworld. His ritual initiation typically involves a ritual death and rebirth experienced as a descent to the underworld. He may also travel to the underworld to conduct the soul of a dead person there or to encounter the dead and other supernatural beings. Since the shaman also enjoys a privileged relationship with animals and the natural world, Orpheus, to whose music the whole natural world responded and who visited Hades to rescue his wife, seems an obviously shamanistic figure. Moreover Orpheus came from Thrace, where the shamanistic practices of central Asia most likely penetrated (West 1983: 4–7). Certainly shamanism seems to illuminate the story of Orpheus better than the theory that this myth represents the cycle of the seasons, for which there is no evidence. Shamanistic features have also been seen in the figures of Heracles (Burkert 1979: 78–98) and Odysseus, while Pythagoras, who also visited Hades, can be seen as a historical Greek shaman (Burkert 1972: 162–63).

Many of the descents (*katabaseis*) in Greek mythology are for the purpose of rescuing from death someone who has recently died. The classic instance is Orpheus' rescue of Euridyce (in some versions of the story successful, in others not: see Linforth 1941: 16–21; Lee 1965). Theseus and Pirithous descended to bring Persephone back from Hades, but were unsuccessful. They themselves (or in one version of the story, only Theseus) were later rescued by Heracles (who had not descended for this purpose, but in order to bring up the hound of Hades, Cerberus). On another occasion Heracles descended to Hades in order to rescue Alcestis, the wife of his friend Admetus. Dionysus descended to bring back his mortal mother Semele.

A different motive is represented in the story of Heracles' descent to capture and bring to earth the dog Cerberus: this was the last of the twelve heroic exploits he was obliged to perform at the command of Eurystheus. A rather similar instance occurs in the story of Cupid and Psyche (Apul. *Met.* 4.28–6.24).

One of the tasks imposed on Psyche by Aphrodite was to descend to Hades and to ask Persephone to fill a box with beauty for Aphrodite (6.16–21).

Such motives apply only to the gods and heroes of myth. But the desire to obtain oracular advice from the dead was a motive in the myths which could also be shared and followed by ordinary humans. Odysseus, in the best known of all the literary accounts of journeys to Hades, went there to consult the famous dead seer Teiresias, who gave him prophetic advice about his future. (Compare Saul's similar motive for consulting the dead Samuel: 1 Sam 28:6–25. The story is comparable to the extent that Odysseus not only traveled to Hades, but also employed a necromantic ritual to summon the spirits of the dead.) Virgil later imitated Odysseus' motive when he made Aeneas visit Hades in order to consult his father Anchises, who prophesies the future history of Rome (*Aen.* 6). It was also imitated by Lucian in his satirical dialogue *Menippus* (probably based on the *Nekyia* of the Cynic philosopher Menippus), in which Menippus visits Teiresias in Hades to seek advice on the best form of life. In Lucian's account Menippus returns to earth by way of the famous oracular shrine of Trophonius at Lebadea in Beotia, where visitors were able to make a ritual descent to the underworld to consult the hero Trophonius (probably originally a chthonic deity). After ritual preparations, the inquirer descended a narrow shaft, feet first like the dead, into an underground cave (sometimes called the *katabasion*), where he might spend several days and where Trophonius would appear to him (Paus. 9.39; Lucian *Dial. Mort.* 3).

Another reason why the living might attempt, through trance or dream, a journey to the underworld is suggested by the legend of Leonymus of Athens (Paus. 3.19.11–13), who was wounded in battle and, seeking a means of recovery, was advised by the Delphic oracle to go to the White Isle (Elysium: see Burkert 1972: 152–53; Edwards 1985; Culianu 1983: 38–39). Another motive is uniquely attested in a fragment of a poetic account of a descent to Hades, undertaken by a man who blames his dead wife or mistress for his ruin and seeks her out among the dead in order to upbraid her (Page 1941: 416–21). While such references suggest the availability of magical and ritual means of descent for various purposes, the most important function of such descents was in initiation into the mysteries (see below).

The means of descent to Hades differ. The Greeks knew numerous places which in local tradition were supposed to be entrances to the underworld: springs, rivers, lakes, caves, chasms, and volcanos (lists in PW, 2379–87). These places were used by the gods and heroes of the myths to gain access to the underworld. Heracles, for example, descended by way of Taenarum and ascended by way of Trozen. Such descents, however, encountered the obstacles which normally only the dead could pass. There was the dog Cerberus (variously supposed to have two, three, or fifty heads) who guarded the gate of Hades, the Acherusian lake (or, later, the river Styx), across which the ferryman Charon would willingly row only the dead (Virgil *Aen.* 392–93), and other monsters beyond. Heracles was conducted to Hades by Athene and Hermes (the latter the psychopomp who led down the souls of the dead); Orpheus charmed the guardians and the rulers of Hades with his music; Aeneas bore the golden bow as his passport and tribute to Persephone; Lucian's Menippus dressed up as Heracles, Orpheus, and Theseus at once, in order to fool Charon and the guards; Apuleius's Psyche managed to get through with only the usual fare for Charon and sops of bread to throw to Cerberus. But in normal circumstances a living person could not for a moment expect to make the journey before death (Eur. *Alc.* 357–64).

But since the obvious way to reach Hades was to die (cf. Heracles' advice to Dionysus in Ar., *Frogs* 120–35), it was also possible to visit Hades and return during a temporary experience of death. Stories were told of people who had been dead or at least taken for dead but revived after a few days and recounted their experiences in the world of the dead. Such stories correspond to the very frequent modern testimonies of people who have "died" and been resuscitated and report visionary experiences of reaching the threshold of the next life before being sent back. So, although most of the stories we have from antiquity belong to a literary tradition, it is likely that the literary tradition had its origins in stories actually told by people who had had near-death experiences. The earliest example, and a model for others, is already a conscious literary creation: Plato's story of Er the Pamphylian (*Resp.* 10.614B–621B), who was killed in battle, but several days later revived on his funeral pyre and recounted what he had seen as a disembodied spirit in the realm of the dead before being returned to his body. The no longer extant *Peri*

physeōs, one of the Greek works supposed to have been written by Zoroaster, actually identifies Zoroaster with Plato's Er (like Er, he is described as "the son of Harmonius, the Pamphylian"; cf. also Arnobius *Adv. Gent.* 1.52) and began with an account of how Zoroaster visited Hades between death and resuscitation (Bidez and Cumont 1938: 112–13; but cf. Bolton 1962: 159, 203 n. 26). Plutarch (*De sera* 22–33) tells a similar story of Thespesius, who became unconscious and was taken for dead but revived on the third day: the story is no doubt modeled on Plato's, for the same purpose of depicting the author's view of the fate of souls in a myth.

Other accounts of temporary death probably bring us closer to popular storytelling. Aristotle's disciple Clearchus of Soli (fr. 8) told of Cleonymus, an Athenian, who revived from apparent death and reported that he had seen the rivers of Hades and souls being judged and punished and purified. He also met another temporary visitor to Hades and the two agreed to try to get in touch when they returned to earth. The same motif appears in Cornelius Labeo's story of two men who died on the same day, met each other at a crossroads (the crossroads in Hades: cf. Plato *Grg.* 524A), were commanded to return, and resolved to live as friends thereafter (August. *De civ. D.* 22.28). The soldier Gabienus, while dying from his wounds, was able to bring a prophetic message (which turned out to be misleading) from the gods of the underworld before he expired (Pliny *HN* 7.178).

Pliny reports from Varro the story of the two brothers Cerfidius, of whom one, taken for dead, returned from Hades with news of the other brother whom he had met in Hades and was then found to be dead (Pliny *HN* 7.177). Evidently the wrong brother had initially been taken to Hades. This motif of mistaken identity (found also in Hindu and Chinese folklore) occurs also in Plutarch's story of Antyllus (*apud* Euseb. *Praep. Evang.* 11.36) and later in stories reported by Gregory the Great (*Dial.* 4.36). Lucian parodied it in the character of Cleomenes (*Philops.* 25) who claims that he went to Hades temporarily during an illness because his psychopomp came to fetch him by mistake. He was sent back when Pluto declared he was not to die yet, whereas the man who was due to die was Demylus the coppersmith who lived next door to Cleodemus. As usually in these stories, Cleodemus authenticates his tale by reporting that Demylus did in fact die not long after Cleodemus had brought the news from Hades. The fact that Cleodemus also mentions seeing the well-known sights of Hades indicates again that such stories were often the framework for descriptions of Hades, especially its punishments. Plato and his successors were probably making their own use of a less sophisticated tradition of such stories, which was to continue in Christian use (*Acts Thom.* 51–59; Gregory *Dial.* 4.31, 36; Bede *Hist. Eccl.* 5.12; *Preaching of Andrew* [Lewis 1904: 7–8; Budge 1935: 147–48]; *History of the Contending of St Paul* 13 [Budge 1935: 552–54]).

A variant on the theme of temporary death is that of the recently dead person temporarily recalled by necromancy. Lucan (*Pharsalia* 6.569–830) relates in fascinating detail how the Thessalian witch Erichtho recalled the soul of one of Pompey's soldiers only recently dead and still on the journey to Hades. Though he is reluctant to return, she obliges him to reenter his body. He tells what he has seen and prophesies the future before the witch allows him finally to die.

For those who wished to visit Hades without dying, dreams, visions, and trances were the available means. Pindar (fr. 116/131) apparently considers that the future life in Hades is frequently revealed in dreams, since the occult power of the soul is released while the body sleeps (cf. Xen. *Cyr.* 8.7.21). Perhaps it was in dreams that some of those who were initiated in the mysteries experienced the underworld (see below). Empedotimus, a fictional philosopher-seer in a lost work of Plato's disciple Heraclides Ponticus, "saw the truth about the fate of souls as if witnessing a drama" in a vision of Pluto and Persephone (Bolton 1962: 151–53), though Heraclides (like Plutarch and others later) located Hades in the air. The possibility of seeing Hades in a vision without even descending into it is parodied by Lucian in the character of Eucrates, who claims to have seen everything in Hades through a chasm in the earth (*Philops.* 22–24; cf. Virgil, *Aen.* 8.243–46).

A close equivalent to the experience of temporary death through illness could be had in the form of cataleptic trance, in which the subject appears to be dead and in which therefore the soul could be thought to experience places distant from the body. Catalepsy for the purpose of shamanistic experience seems to have been cultivated in Greece (Bolton 1962: 139–41, 148–49, 153–56; Culianu 1983: 37–39). One way

in which it could be achieved seems to be suggested by the demonstration of hypnotism which allegedly convinced Aristotle that the soul could separate from the body (reported by his disciple Clearchus of Soli fr. 7; see Lewy 1938). The magician guided the soul from the body with a wand, leaving the body as insensitive as a corpse, and when the soul returned to the body it reported all it had seen. It was surely a cataleptic trance that Timarchus in Plutarch's story (*De gen.* 21–22) experienced in the cave of Trophonius: unsure whether he was awake or dreaming, his soul left his body and traveled above the earth to a position from which he was able to look down on Hades. Since Timarchus was unconscious for two days, this was not the incubation and dreaming associated with other oracles. Clark (1968) suggests that visitors to the cave of Trophonius may have been given a hallucinatory drug.

When Lucian's Menippus wished to visit Hades he traveled to Babylon to consult the Chaldean magus Mithrobarzanes, who put him through an elaborate ritual preparation lasting a month, including ritual purifications and spells to protect him from the dangers of the journey, before conducting him to Hades by boat and copying Odysseus' necromantic ritual (*Menippus* 6–9). Behind Lucian's somewhat tongue-in-cheek account must lie the practice of ritual and magical means of visiting the dead. It also indicates that by the 2d century C.E., the Chaldean magi had a reputation in the Roman world as shamanistic psychopomps for living visitors to the other world. The firsthand account of the magus Kirdīr, a century later (see section E above), gives some clues as to how it was done.

Of the famous mythical descents there were numerous literary accounts, not many of which have survived. That of Odysseus in book 11 of the *Odyssey* is not, in the strict sense, a *descent* (but cf. 11.475), since Odysseus reaches the environs of Hades by sailing to the edge of the world, beyond the river Oceanus. There he conjures the spirits of the dead by a necromantic ritual. Only at the end of the account, in a passage which has often been thought a later addition (11.565–627), does Odysseus seem, without explanation, to view the sights within "the house of Hades": Minos sitting in judgment and several of the famous dead engaging in the activities which occupy them in the realm of the dead. Whatever the origin of this passage, it is notable that more than the rest of the account, it resembles the genre of other accounts of visits to Hades, in relating, one after another, the sights which the visitor saw and, in particular, specific types of punishments taking place. Most of Homer's dead are neither happy nor suffering punishment, but the exceptional cases of Tityos, Tantalus, and Sisyphus (11.576–600) point the way that other influential accounts would follow.

Besides the *Odyssey*, two other old epic poems, now lost, included journeys to Hades: the *Minyas* seems to have recounted the descent of Theseus and Pirithous (Paus. 10.28.2), while the *Nostoi* (on the return of the heroes from Troy) included a *nekyia* whose subject is unknown (Paus. 10.28.7). A lost poem of Hesiod also described the descent of Theseus and Pirithous (Paus. 9.31.5). There was probably an old epic poem on the descent of Heracles to seize Cerberus. Aristophanes' comedy *The Frogs* (only one of many Greek dramas which portrayed a descent to Hades) recounts a descent of Dionysus, who explicitly follows the example of Heracles, and seems to be a parody of a well-known account of the descent of Heracles. A poem, perhaps by Pindar, on this theme survives in fragments (see Lloyd-Jones 1967). There was a *Descent to Hades* attributed to Orpheus (Kern 1922: 304–6), in which presumably he described in the first person his own descent to rescue Eurydice and what he saw in the underworld. This may have been only one of several accounts of Orpheus' descent, which seems to have been important for various mystery cults. One reference to a description by Orpheus of the descent of Heracles (Kern 1922: no. 296) may indicate that there was a *Descent of Heracles* ascribed to Orpheus, but may only mean that Heracles' earlier descent was mentioned in Orpheus' account of his own descent. It is noteworthy that in the 2d century C.E., Lucian's *Menippus* (8) takes it for granted that Heracles, Orpheus, and Odysseus were the three heroes whose descents to Hades were known.

These descents probably provided Greeks of the classical period and later with much of their information about the world of the dead. The accounts of the blessedness of the happy dead in Pindar and the accounts of the underworld, its geography, and the fate of the dead in Plato's dialogues (*Phd.* 112A–14C; *Grg.* 523A–526D; *Resp.* 614B–621D) and in the pseudo-Platonic *Axiochus* (371 ff.) may well derive in large part from them. So did the famous painting of Hades by Polygnotus at Delphi, which Pausanias

describes in detail (10.28–31). Although it depicts the descent of Odysseus, many of its details must derive from other accounts. The lost descents have probably also left their mark on later versions modeled on them. Lucian's satirical work *Menippus*, an account of Menippus' visit to the underworld, *Vera Historia* which includes a visit to the islands of the dead beyond the ocean, and *Cataplus*, which describes the journey of the dead to Hades and their judgment (cf. also *Philops.* 22–25), are probably parodic imitations of the manner and content of the great mythical descents to which he alludes in the *Menippus*, as well as perhaps making fun of those claimed for historical persons such as Pythagoras. The sources of book 6 of Virgil's *Aeneid* have been much debated and cannot be reconstructed with any certainty, but they probably included descents of Orpheus and Heracles. Certainly Virgil was consciously writing in the already ancient and well-known genre of descents to Hades and took not only Odysseus as the model for Aeneas in his descent. A papyrus of probably the 3d or 4th century C.E. contains a very fragmentary text of a *katabasis* which described both various categories of sinners undergoing punishment and the state of the blessed dead. Some close parallels with Virgil's account have been observed in it (see Turcan 1956 and Schilling 1982).

Such literary accounts of descents to Hades functioned as *revelations* of the world of the dead. It is important to distinguish between the motives of the heroes themselves in the stories and the function of the literary accounts. Orpheus and Odysseus did not go to Hades in order to see it (though Arnobius *Adv. Gent.* 5.28 does attribute this motive to Heracles, probably reflecting a literary account in which the motive of the writer and the readers was attributed to the hero). But accounts of their descents were able to describe what they saw in Hades and so could function for their readers as apocalypses—revelations of the geography of Hades, its monsters and rulers, the journey the dead will have to take to reach it and the judgment they will face when they arrive, and especially the fate of the various classes of the dead. This function became more explicit when the role of the guide who conducts the visitor to Hades is no longer simply to show the way, as Hermes presumably did for Heracles, but also to explain what the visitor sees in Hades, as the Sibyl does for Aeneas in *Aeneid* 6 (see also the role of guides in Plutarch, *De gen.* 22; *De sera* 27–30). If *Odyssey* 11.565–627 already forms a little apocalyptic revelation of Hades, *Aeneid* book 6 is the fullest such revelation which survives. It must reflect the apocalyptic form and function of older accounts. The revelatory function of descents to Hades was also exploited by Plato and Plutarch, who used the genre to express in mythical form their own understandings of the fate of the soul (*Resp.* 10.614B–621B; Plutarch *De sera* 22–33; *De gen.* 21–22).

What the tradition of descents to Hades seems especially to have revealed is the fate of souls after death. The old Homeric view was that the existence of the dead is undifferentiated: all share the same joyless gloom. The exceptions—on the one hand, Tantalus, Tityos, and Sisyphus, who are punished eternally for their crimes against the gods, and on the other hand, a very few heroes of divine descent, like Menelaus, who are exempted from the common lot and dwell in blessedness in Elysium—are exceptions that prove the rule. But the descents to Hades, so far as we can tell, reflected and encouraged a growing belief in retribution after death. The damned, who may be regarded either as those guilty of heinous crimes or as those who have not been initiated in the mysteries, suffer punishments (cf. Kern 1922: nos. 293, 295), while the blessed enjoy themselves in a sunlit paradise. Although Plato already consigns the souls of the blessed to the sky and sends only the wicked below ground, the common view in the early period, which still survives in Virgil, is that the place of happiness after death is also in the underworld. In Aristophanes' *Frogs* Dionysus sees in Hades both the eternal mud in which various types of criminals are plunged and the sunlit myrtle groves in which the initiates of the Eleusinian mysteries dance (145–58). It is mistaken to regard such views as peculiarly "Orphic," though they do seem to have been especially associated with the mysteries. The well-known accounts of descents to Hades must have played an important part in making retribution in the afterlife a very common belief in the Hellenistic world.

The descents seem to be linked with the mysteries, though it is impossible to be precise on this point. According to the account of his descent, Heracles was initiated at Eleusis before going down to Hades and was presumably thereby protected from the dangers of the underworld. The chorus of Eleusinian initiates who constitute the blessed dead in Aristophanes' *Frogs* also suggest a link between Eleusis and the

descent of Heracles, on which the play is based. At least by the 4th century B.C.E., the Eleusinian mysteries were held to have been founded by Orpheus, who was also associated with Bacchic mysteries, as well as with specifically Orphic groups and with the Pythagoreans (West 1983: 7–29). All such groups taught initiation in the mysteries as a means of attaining a happy afterlife. The *Descent to Hades* attributed to Orpheus cannot be securely associated with any one mystery cult. It was ascribed by some in antiquity to Cercops the Pythagorean or Herodicus of Perinthus: if it did not originate in Pythagorean circles, at least it was taken over by them.

How far initiation into the mysteries involved a ritual enactment or trance experience of a descent to the underworld is uncertain, though it is clear that it did in some cases. There is no evidence that the Eleusinian mysteries included a descent to the underworld. A fragment included in one of the Greek magical papyri (*PGM* LXX, lines 5–19) refers to a mystical initiation in an underground chamber, where the initiate was shown objects associated with the goddesses of the underworld. Presumably this was a symbolic descent to the underworld. The initiate is to be protected by appeal to this initiation from the hostile powers of the realm of the dead, perhaps on a subsequent descent in trance or dream (Betz 1980, who suggests the fragment is from a ritual of the Idaean Dactyls) or after death (cf. the many Egyptian spells for protecting the dead from the demons and other dangers of the underworld: Zandee 1960: 253–59). It is possible that many of the caves and underground chambers associated with shrines were ritual equivalents of Hades and could be used for ritual descents. Apuleius, in his description of initiation into the mysteries of Isis, recounts, as all that can be divulged of the most secret part of the process: "I approached the boundary of death and treading on Proserpine's threshold, I was carried through all the elements, after which I returned. At dead of night I saw the sun flashing with bright effulgence. I approached close to the gods above and the gods below and worshipped them face to face" (*Met.* 11:23; Griffiths 1975: 99). This may refer to the fact that in Egyptian mythology the sun god travels through the underworld during the twelve hours of the night (section B. above). The initiate may undergo a ritual death and resurrection in identification with Osiris (Griffiths 1975: 296–308).

One of the few historical individuals about whom an account of a descent to Hades was composed was Pythagoras, though only a few allusions to it survive (the elaborate attempt of Lévy 1927: 79–128, to reconstruct it is highly speculative). The satirical account given in a fragment of Hermippus (*apud Diog. Laert.* 8.41; Tert. *De Anim.* 28) describes how Pythagoras built an underground cellar in his house, disappeared into it for several years, and when he emerged claimed he had been to Hades. Burkert regards this as a rationalized version of a story in which Pythagoras' descent to Hades took place in the subterranean chamber of a sanctuary of Demeter (since Hermippus' account refers to Pythagoras' mother). He takes Pythagoras' famous golden thigh as a sign of his initiation into the cult of the Great Mother which enabled him to travel to the underworld with impunity. The Pythagorean doctrines of blessed immortality and metempsychosis were closely related to this initiatory descent into Hades (Burkert 1972: 155–63). Hermippus' account of Pythagoras' descent to Hades is curiously parallel to the story reported by Herodotus (4:94–96) about the god Zalmoxis worshiped by the Getae of Thrace, and it is clear that the Greeks themselves associated the two (cf. also Greg. Naz. *Or.* 4.59, and Bolton 1962: 144–46). The cult of Zalmoxis was also a mystery cult conferring blessed immortality (Eliade 1972: 21–61). Finally, it seems that Parmenides describes his philosophical journey (fr. 1) in terms of a journey, like that of Odysseus, to the distant edge of the world where the sun goes down to the underworld. If not exactly a *descent* to Hades, it is as much one as that of Odysseus, and should be understood in the tradition of Pythagoras' descent (Morrison 1955; Burkert 1969).

Thus, for the Greco-Roman world, descents to Hades were more than stories about the gods and heroes. They were also apocalypses, revealing the fate of souls in the netherworld, and they were models which could in some sense be imitated, most importantly in the experience of initiation into the mysteries, which dispelled the terrors of the underworld and secured a blessed immortality for the initiate.

G. Jewish and Christian Apocalyptic

In the Jewish tradition descents to the underworld are found largely within the apocalyptic tradition, in which they are ascribed to seers of the past such as Enoch, Elijah, and Moses. The Christian apocalyptic

tradition of visionary descents to the world of the dead is entirely continuous with the Jewish tradition. In both Judaism and Christianity the tradition spans at least a thousand years.

The earliest visits to the world of the dead in Jewish apocalyptic take place in the context of a cosmic tour in which the secrets of heaven and earth are revealed to the seer by angelic guides. The oldest is that of Enoch (*1 En.* 17–36), dating from the 3d or early 2d century B.C.E. In keeping with the widespread ancient tradition which located the realm of the dead, or at least the entrance to it, in the far west where the sun goes down, Enoch is taken to a mountain on the western edge of the world, where he sees the four "hollows" in which the four categories of the dead are kept, separate from each other, until the day of judgment (*1 En.* 22 = 4QEn^{e} 1:22; 4QEn^{d} 1:11:1–3). This classification of the dead into four categories, instead of the two categories of the wicked and the righteous which later prevailed in Jewish descriptions of the world of the dead, indicates the archaic character of this account. *1 En.* 17:1–8, while not expressly mentioning Sheol, describes its environs in the west in terms which resemble both the Greek mythical geography of *Od.* 11 and the Mesopotamian geography which is described most fully in the *Epic of Gilgamesh.* The latter, which alone includes the mountain, is the more probable source for Enoch's description (Grelot 1958). Besides the realm of the dead, Enoch's tour also included the fiery abysses where the erring stars and the fallen angels are punished (*1 En.* 18:10–19:2; 21).

Later versions of the cosmic tour (from the 1st century C.E. onward) take the form of an ascent through the seven heavens, and the realms of the dead were sometimes located within these seven heavens. Thus Enoch in *2 En.* 8–10 sees paradise and hell in (or perhaps from: cf. 40:12; 42:3) the third heaven. (These are not the places which the dead inhabit yet, but the places of reward and punishment ready for them to enter after the last judgment.) In this tour Enoch also sees the fallen angels confined in the second and fifth heavens (*2 En.* 7, 18). According to the later, probably Christian *T. Isaac*, Isaac saw in the heavens the hell in which the wicked dead are presently being punished (*T. Isaac* 5). But in other forms of the tour through the seven heavens, visits to hell and paradise take place only after the ascent to the seventh heaven, and hell retains its traditional place beneath the earth. This was probably the case in the original ending of *3 Baruch* (summarized in the Slavonic version of 16:4–8), although secondary additions to the text in the Greek version locate Hades in the third heaven (4:3, 6; 5:3) and the souls of the righteous in the fourth (10:5). The pattern of a visit to the subterranean hell, as well as paradise, after a tour of the seven heavens also occurs in the Hebrew apocalypse of Moses, known as the *Gedulat Moshe,* which in its present form is probably quite late but reflects an ancient model. From cosmic tours with a strong interest in the fate of the dead developed apocalypses exclusively concerned with the fate of the dead, such as the *Apoc. Zeph.* and the *Apoc. Paul,* which take their seers on journeys around the heavens, the underworld, and the extremities of the earth but only in order to see sights concerned with the judgment, punishments, and rewards of the dead.

It seems that during the first two centuries C.E. a gradual change took place in Jewish and Christian belief about the fate of the wicked after death, from the older view that the wicked are not actively punished immediately after death, but held in detention awaiting punishment at the last judgment, to the later view that the eternal punishment of the wicked begins already after death. This change was very important for apocalyptic descents to the underworld (where increasingly only the wicked were located). The older view allowed for visits to the place of detention in Sheol (*1 En.* 22), visits to the hell which is already prepared for but not yet inhabited by the wicked (*1 En.* 26:3–27:4; *2 En.* 10; 40:12; *2 Bar.* 59:10), and prophetic visions of the casting of the wicked into Gehenna at the last judgment (*1 En.* 41:2; *2 Bar.* 59:11). But only the later view enabled a seer to see and describe in detail the punishments actually being inflicted on the wicked in hell. The later view therefore spawned a long tradition of "tours of hell" (studied especially in Himmelfarb 1983), in which a variety of different punishments appropriate to a variety of different categories of sinners is described.

The oldest extant "tour of hell" of this kind is probably that found in a Latin fragment of the ancient *Apocalypse of Elijah* (Stone and Strugnell 1979: 14–15), which was a Jewish work dating from no later than the 1st century C.E. It features the "hanging punishments" (in which the sinners are hung up by the part of the body with which they had sinned). These are also found in a whole series of later tours of hell,

the most important of which are the *Apoc. Pet.*, *Acts Thom.* 51–60, the *Apoc. Paul*, the *Greek Apoc. Ezra*, the *Greek Apoc. Vir.*, the *Gedulat Moshe*, and the Hebrew texts which describe visits to hell by Isaiah and Rabbi Joshua ben Levi. Most of these apocalypses, along with others which do not include the hanging punishments (such as the *Apoc. Zeph.*, the Latin *Vis. Ezra*, and *T. Isaac* 5), describe a wide variety of other punishments, such as immersion in a river of fire or a burning furnace, impalement on wheels of fire, and tantalization. The main concern is to show how a wide range of particular sins are specifically punished by appropriate forms of judgment in the afterlife. Some of these tours of hell (such as the *Apoc. Paul* and the *Apoc. Vir.*) were extremely popular in the medieval period. Together with the parallel descriptions of paradise, they form a literary tradition whose greatest product was Dante's *Divine Comedy*.

Especially since Dieterich's (1913) argument to this effect, these tours of hell have been thought to be heavily indebted to the Greek and Roman descents to Hades (see section F. above). Himmelfarb (1983; cf. also *ANRW* 2/25/6: 4712–50) has shown that they developed within the tradition of Jewish apocalyptic, as is shown by the important formal features they share with the cosmic tour apocalypses. This does not, of course, preclude Greek influence on them, especially since the Jewish and Christian apocalyptic tradition frequently borrowed from other cultural traditions. While the tours of hell make use of features which were already traditional characteristics of the Jewish Gehenna, especially its fiery quality, some of the punishments in the tours of hell closely resemble those found in Greek and Roman descriptions of the punishments in Hades (see Himmelfarb 1983: 84, 92–96, 107–8, 119), where also the idea of differing punishments for various categories of sinners can be found. It may be that not only specific punishments in hell, but the very idea of punishments inflicted on the wicked immediately after death, was the result of Greek influence, in particular of the descents to Hades, in which the Greek view of punishment in the afterlife would have been most vividly accessible. Thus the Jewish and Christian tours of hell are probably to be seen both as developing out of the cosmic tours of Jewish apocalyptic, with their strong interest in the fate of the dead, and also as incorporating ideas and images available in their cultural environment in the Greco-Roman world. Not only Greek but also Egyptian (see section B. above, for the story of Setne and Si-Osire) descents to the underworld may have influenced the tours of hell, while Zoroastrian influence is possible but more problematic in view of the dates of the texts (see section D. above: the distinctly Zoroastrian features are missing from the Jewish and early Christian tours, though the infernal bridge becomes a feature of medieval Christian visions of hell).

The means by which the apocalyptic seer descends to the underworld are not usually specified more closely than by saying that an angel guided him. Although medieval Jewish texts refer to specific entrances to the underworld, as in the Greek tradition (PW, 2387), these are not used in the tours of hell, nor is there usually any reference to obstacles to be passed. Thus Enoch shudders at the sight of the gatekeepers of hell (*2 En.* 42:1), but Ezra passes without difficulty, like the righteous dead, the two fiery lions who guard the gates of hell (*Vis. Ezra* 3), Paul, like Odysseus, has to cross the river Oceanus to reach hell in the far west, but it is not said how he does so (*Apoc. Paul* 31). In the *Gedulat Moshe*, the fire withdraws before Moses as he enters hell, but when he fears to descend to the abyss of fire and snow, the Shekinah goes before him to protect him from the angels of punishment. The angelic guides (or, in the case of Joshua ben Levi, the prophet Elijah, and in the *Apoc. Vir.*, Christ himself) are a constant feature of the tours: they lead, guide, explain, and answer questions.

The *Apoc. Zeph.* (which may be of Jewish or Christian origin) has a particular interest in that the seer seems to follow the path of a soul of a dead person through Hades to paradise. The fragmentary beginning of the Akhmimic text (1:1–2) seems to describe the body of Zephaniah appearing to be dead. Evidently he has gone into a cataleptic trance like those in which some descents to Hades in the Greek tradition took place (see section F. above; for cataleptic trance in the Jewish and Christian apocalyptic tradition, see *Ascen. Is.* 6:17; *4 Bar.* 9:7–14). In this state his soul could leave his body and be taken by an angel through the other world. His angelic guide protects him from the angels of punishment who seize the souls of the wicked when they die (4:1–10). He perhaps passes the gates of Hades (5:1–6) and the sea of fire in Hades (6:1–3), and is threatened by both. He encounters the angel Eremiel (= Remiel) who is in

charge of the souls in Hades and whom he mistakes for God (6:4–7, 10–15), and another terrifying angel who he discovers is Satan in his traditional role of judicial accuser (6:8–9, 17). He witnesses the assessment of his sins and righteous deeds (8:5). Satan reads out all Zephaniah's sins from a scroll, he prays to God for mercy and is told that he has triumphed over the accuser and come up from Hades, another angel apparently reads out the record of his righteous deeds, and he travels out of Hades in a boat accompanied by myriads of angels. He then finds himself in paradise, with the patriarchs (7–9). Evidently he has passed through the experiences of a righteous person's soul after death. The closest analogy seems to be that of Kirdīr (see section E.), though in Zephaniah's case he himself goes into a trance and recounts his experience afterward (cf. 8:5). The apocalypse, like so many descents to the underworld, serves the purpose of revealing what people can expect after death and warning them to be prepared.

Another feature of the *Apoc. Zeph.* recurs in many of the tours of hell: when Zephaniah sees the wicked in torment in hell, he is moved to pray for God's mercy for them (2:8–9). So do Ezra (*Greek Apoc. Ezra* and Latin *Vis. Ezra*), Baruch (*3 Bar.* 16:7–8 Slavonic), Paul (*Apoc. Paul* 33, 40, 42, 43), and the Virgin Mary (in her several apocalypses). Zephaniah and others also see the patriarchs and the righteous dead in paradise praying for the damned (*Apoc. Zeph.* 11; *T. Jac.* 7:11), while Paul is joined in his intercession by other saints and angels (*Apoc. Paul* 43–44). These pleas for mercy are sometimes rebuffed, but sometimes they win a concession from God, such as the Sabbath or Sunday rest of the damned, a day's respite each week from the pains of hell (*Apoc. Paul* 44). The motif of intercession for the damned was clearly important in the tradition. By attributing it to ideal, exemplary figures of Jewish and Christian piety, the authors were allowing an authoritative mode of expression to the natural compassionate reaction which they and their readers had when faced with the horrors of hell. This desire for mercy coexists with the emphasis on the justice of hell in the same apocalypses (see Bauckham 1990a).

Jewish and Christian tours of hell are found not only in apocalypses, but also in narrative contexts in which a character visits hell in a vision or a dream or an experience of temporary death. The detailed descriptions in such cases are no doubt drawn from the tours of hell in the apocalypses. Significant examples are the Jewish story of the rich wicked man and the pious poor man, which is probably a version of the Egyptian tale of Setne and Si-Osire (see section B. above) and which incorporates two different tours of hell in the version in the Palestinian Talmud (*j. Ḥag.* 77d; *j. Sanh.* 23c) and in the version in *Darkhei Teshuvah* (for which see Rosenstiehl 1985); the story in *Acts Thom.* 51–60, of a girl who dies, sees hell, and is brought back to life by the apostle (cf. other stories of temporary death in section F. above); Isaac's vision of hell in the *T. Isaac*; and Pachomios' vision of hell in the Coptic life of this 4th-century Egyptian saint (Himmelfarb 1983: 28–29). In the *T. Ab.*, Abraham is taken to see not hell itself but the place in the east (or by the river Oceanus: B8:3) where the dead are judged after death and two entrances lead to their respective destinies (A11–14; B8–11): the scene is strongly reminiscent of that visited by Plato's Er (see section F. above).

H. Christ's Descent to Hades (New Testament)

Since the most common Jewish view in NT times was that all the dead descend to Sheol (Hades), Jesus' descent to Hades was simply the corollary of his death, just as it was implied in his resurrection "from the dead." But rarely in the NT is his descent to Hades given any attention. Paul's adaptation of Deut 30:13 in Rom 10:7 simply describes resurrection as being brought up from the realm of the dead, while Eph 4:9–10 may indicate Christ's descent in death to Hades (cf. Pss 63:9; 139:15), though it is often taken to refer only to his descent from heaven to earth (but cf. *T. Dan* 5:10–11 for Ps 68:18 used with reference to the descent to Hades).

More significant are two passages which apply to Jesus' resurrection the OT notion of deliverance from Sheol by God (see section D above). In Acts 2:24–32 (cf. 13:34–37), a quotation from and an allusion to Psalms (vv 25–28, 31; Pss 16:8–11, 24; 18:4–5; 116:3; 2 Sam 22:6) interpret the resurrection as God's deliverance of Jesus from the power of Hades, as well as from the physical corruption of death. Matt 12:40 takes up the tradition of the Jewish interpretation of Jonah for which the belly of the fish represented the underworld, so that Jonah's emergence from the fish was God's deliverance of him from death (see section D above). Thus "the belly of the whale" in Jonah's case corresponds to "the heart of the

earth" (cf. Jon 2:3–4 LXX), i.e. Hades, in Jesus' case. Therefore Jonah's virtual death and resurrection prefigures Jesus' actual death and resurrection.

Rev 1:18 ("I have the keys of Death and Hades") presupposes that the gates of Hades have for the first time been opened for a man to leave. Thus the divine prerogative of releasing from the realm of death (cf. Wis 16:13) now belongs to Christ. That in his death and resurrection he has gained power over death and Hades is implied, but not the later notion of a victory won *in* Hades.

Thus in the NT, Christ's descent to and sojourn in the realm of the dead seem to have no independent interest or significance beside his death and resurrection. Such significance has often been found in 1 Pet 3:19; 4:6, understood to refer to a preaching of Christ to the dead during his sojourn in Hades. However, it is now widely recognized that in 3:19 the proclamation to the spirits follows the resurrection (v 18: "made alive in the spirit"), while "the spirits in prison" are most probably angels (cf. v 22). A reference to the idea, widely attested from the beginning of the 2d century, that Christ, after his death, preached the salvation he had achieved to the saints of the OT period, is more probable in 4:6, but on the other hand "the dead" may there refer to those who heard the Gospel while alive, but subsequently died.

Matt 27:52–53 seems to be related to the widespread early extracanonical tradition that Christ released the OT saints from Hades, especially as this was evidently understood as a real resurrection (see section I. below). The Matthean passage probably draws on that tradition, but makes no explicit reference to Christ's activity in Hades. Instead the motif is used to express the eschatological significance of the death of Christ, by which the power of death has been broken. It is striking that in perhaps the NT's closest contact with the development of the theme of the descent to Hades in other early Christian literature, the interest is exclusively in the significance of the death of Christ, not in any activity of Christ in Hades.

I. Christ's Descent to Hades (Early Church)

As well as retaining the fundamental notion that Jesus Christ's soul had to descend to Hades in order for him to fully share the human lot in death (*Sib. Or.* 8:312; Iren. *Haer.* 5.31.2; Tert. *De anim.* 55.2), Christians from a very early date saw in the descent to Hades an event of soteriological significance for the righteous dead of the period before Christ, whose souls were in Hades. This significance was expressed in three main motifs: (1) that while in Hades Christ preached to the dead, announcing and conferring on them the benefits of the salvation he had achieved; (2) that he brought the righteous out of Hades and led them into paradise or heaven; (3) that he defeated the powers of death or Hades which keep the dead captive in the underworld. The second of these motifs is usually combined with the first or the third, as its consequence. Only rarely (*Odes Sol.* 42:11–14) are the first and third combined.

The idea of Christ's preaching to the dead is found from the beginning of the 2d century onward (*Gos. Pet.* 41–42; Ign. *Magn* 9.2; *Odes Sol.* 42:14; *Ep. Apost.* 27; *Sib. Or.* 1:377–78; 8:310–11; the elder quoted in Iren. *Haer.* 4.27.1–2; Hipp. *Antichr.* 26, 45; *fr. Cant.* 1). An apocryphal fragment attributed to Jeremiah was current (quoted in somewhat varying forms in Just. *Dial.* 72.4; Iren. *Haer.* 3.20.4; 4.22.1; 4.33.1; 4.33.12; 5.31.1; *Dem.* 78; and see Geschwind 1911: 199–227; Bieder 1949: 135–41): it is possible that one form of this (Iren. *Haer.* 4.33.1; 4.33.12; 5.31.1) was a Jewish text prophesying the resurrection of the righteous at the last day, whereas the version which mentions the preaching to the dead (Just. *Dial.* 72.4; Iren. *Haer.* 3.20.4; 4.22.1; *Dem.* 78) is a Christian adaptation of the text referring it to Christ's descent to Hades. The recipients of Christ's preaching in these early references are the righteous people of the OT period who hoped for Christ (*Ign. Magn.* 9.2). When he proclaimed to them the good news of the salvation he had won, they believed in him and received forgiveness of sins through his death (Iren. *Haer.* 4.27.1–2). The idea met the problem of the fate of the righteous who died before Christ, and most probably arose in a Jewish Christian context where this would be a natural concern. According to the *Ep. Apos.* 26, Christ not only preached to but baptized the righteous dead (cf. also *Gos. Nicod.* 19)—a natural corollary of the idea that he brought Christian salvation to them. The idea of the baptizing of the dead is also found in Hermas *Sim.* 9.16.2–7, where it is not Christ but the apostles and teachers of the first Christian generation who preached Christ and administered baptism to the dead. This unique notion is otherwise found only in Clement of Alexandria, who quotes it from Hermas (*Str.* 2.43.5; 6.45.4).

The scope of the preaching was extended beyond the OT saints by Clement of Alexandria and Origen, who were also the first to refer to 1 Pet 3:19 in connection with the descent to Hades (see Dalton 1965: 16–20). Clement included righteous pagans alongside the OT saints (*Str.* 6.6.37–53), while Origen thought also of the conversion of sinners in Hades (*Princ.* 2.5), as 1 Pet 3:19 must imply, if taken seriously as a reference to the descent. Some other Greek Fathers followed Origen (Dalton 1965: 18–19), but the prevalent view in the Latin church continued to limit the soteriological benefit of the descent to those who were already believers before Christ.

It was widely believed that Christ brought the OT saints out of Hades and led them up to paradise or heaven, though this was denied by Tertullian in the interests of his view that before the last judgment only the Christian martyrs go to heaven, while the rest of the righteous dead remain in Abraham's bosom in Hades (*De anim.* 58). The primitive view was that the dead left Hades along with Christ at his resurrection (*Odes Sol.* 42:11) and ascended to heaven with him in his ascension (*Ascen. Is.* 9:17; *Apoc. Pet.* 17; Origen *Comm. in Rom.* 5:10). As it was sometimes put, he descended alone but ascended with a great multitude (*Acts of Thaddeus*, *apud* Eus. *Hist. Eccl.* 1.13.20; Melito New fr. 2.17; Armenian *Acts of Callistratus* 9). There is also good evidence that originally the thought was of an actual resurrection of the dead: language normally reserved for bodily resurrection is used (*Ign. Magn.* 9.2; Melito *Peri Pascha* 101; New fr. 2.12, 15; Origen *Comm. in Rom.* 5:10; cf. also the Jeremiah apocryphon mentioned above), and Matthew 27:52 was sometimes connected with this resurrection of the saints (Iren. fr. 26; cf. MacCulloch 1930: 289–91). Since Christ's death and resurrection were the eschatological saving event, entailing the resurrection of all who believe in him, the Jewish hope of the resurrection of the righteous was thought to be fulfilled when Christ brought them out of Hades. After all, to be brought out of Hades was to be raised from the dead, as it was for Christ himself.

Using the picture of Hades as a stronghold in which the dead are held captive by the angelic rulers of the dead, Christ's descent could be interpreted as a conquest of Hades. Often this was portrayed in images derived from OT prophetic texts. Thus the gatekeepers of Hades trembled when they saw Christ approach (Job 38:17 LXX; cf. Hipp. *Pasch.;* Ath. *Ar.* 3.29; Cyr. H. *Catech.* 4.11; Creed of Sirmium, *apud* Ath. *Synops.* 1.9; cf. MacCulloch 1930: 217–18). He broke open the gates of bronze and the iron bolts (Ps 107:16; Isa 45:2; cf. *Odes Sol.* 17:9–11; *Teach. Silv.* 110:19–24; Tert. *De Res. Carn.* 44; Eus. *d.e.* 8.1; *Ques. Barth.* 1:20; *Gos. Nicod.* 21:3), and released the captives from their chains and led them out of their prison (Ps 68:18; 107:14; Isa 49:9; 61:1; for releasing captives, cf. *Odes Sol.* 17:12; 22:4; Melito fr. 13; New fr. 2.12; *Acts Thom.* 10; *Gos. Nicod.* 21:3; for Ps 68:18, see *T. Dan* 5:10–11). Psalm 24:7–10 was often understood as a dialogue between Christ's angelic forces and the powers of death at the gates of Hades (*Gos. Nicod.* 21), as was Jesus' parable about binding the strong man and plundering his goods (Mark 3:27; cf. Melito *Peri Pascha* 103; fr. 13; Origen *Comm. in Rom.* 5.10; for plundering Hades, cf. *Ascen. Is.* 9:16; *T. Levi* 4:1; Cyr. *Hom. Pasch.* 6, 7; for binding Hades, cf. *Gos. Nicod.* 22:2; *Quest. Barth.* 3:20). Some texts explicitly state that Christ conquered or destroyed death or Hades (Melito *Peri Pascha* 102; New fr. 2.12; 3.5) and trampled death or Hades underfoot (Melito *Peri Pascha* 102; fr. 13; *Testament of Our Lord* 1.23; cf. MacCulloch 1930: 230–32).

There are traces of the view that as one of the dead, Christ was initially bound in Hades and had to break free before also freeing others (*Odes Sol.* 17:10; *Teach. Silv.* 110:14–16; Iren. *Haer.* 5.21.3), but generally the picture of Christ entering Hades by storming its fortifications seems to have prevailed. In the fullest and most dramatic portrayal of the scene, in the *Gos. Nicod.*, he is accompanied by an army of angels (21:3). It is important to notice that in the early period the defeated powers are the angelic rulers of the world of the dead (cf. *Ascen. Is.* 9:16; *Acts Thom.* 10; 143; 156), often Death or Hades personified (*Odes Sol.* 42:11), but not Satan and the forces of evil. In Jewish and early Christian thought Satan was not located in the underworld, but in the lower heavens. (A very exceptional case in which Beliar is the power which Christ defeats is *T. Dan* 5:10–11.) However, the more Hades was thought of as an enemy whom Christ defeated, the more natural it would be to see him as an ally of Satan (cf. Origen *Comm. in Rom.* 5.10), as he is in the *Gos. Nicod.* and Ephraim Syrus (MacCulloch 1930: 111–13). In these and

some other of the later Fathers, the result of the descent is that Satan is chained in the abyss (MacCulloch 1930: 232–33), and thus the descent becomes a mythical portrayal of Christ's triumph over all evil.

The influence of pagan myths of descent to the underworld on Christian ideas of Christ's descent to Hades was probably minimal. The parallels with Orpheus and Heracles were noticed and exploited in minor ways by some later writers, but there is no indication that they account for the origin of any of the Christian ideas. It is the theme of the conflict with and defeat of the powers of the underworld which has most often been claimed to have a broad mythological background in the religious cultures of the ancient world (see especially Kroll 1932), but it is extremely difficult to identify a suitable myth which was available in the environment of early Christianity. Of the myths surveyed in the earlier sections of this chapter, it is only in the Ugaritic account of Baal's victory over Mot (section C.) that the motif of a god who descends to the world of the dead and defeats the powers of death occurs. This parallel is far too chronologically remote to count as an influence on early Christianity. In fact, the idea of Christ's defeat of the powers of Hades is sufficiently explained from the Jewish apocalyptic expectation that at the last day God would "reprove the angel of death" (*2 Bar.* 21:23), command Sheol to release the souls of the dead (*2 Bar.* 42:8), abolish death (*L.A.B.* 3:10), close the mouth of Sheol (*L.A.B.* 3:10), and seal it up (*2 Bar.* 21:23; cf. *Teach. Silv.* 103:6–7). In the expectation of resurrection there was a sense of death and its realm as a power which had to be broken by God (cf. also Matt 16:18; 1 Cor 15:44–45; Rev 20:14; *4 Ezra* 8:53). These ideas were transferred to the context of Christ's descent to Hades because of the early Christian belief that Christ's death and resurrection were the eschatological triumph of God over death. The details, as we have seen, derived from that process of christological exegesis of the OT which supplied so much of the phraseology and imagery of early Christian belief.

The idea of Christ's descent to Hades was powerful and important for early Christians not just because it met the problem of the salvation of the righteous of the OT (and only occasionally because it opened salvation to good pagans of the past), but also because it represented that definitive defeat of death from which Christian believers benefit. If it tended to take precedence over the resurrection of Jesus in this respect (so that Bieder 1949: 202–3, ascribes it to a flagging of faith in Christ's victory in death and resurrection), this was because it showed Christ delivering others from death. His rescue of the OT saints and taking them to heaven was the sign of what he would also do for Christian believers (*Ep. Apost.* 27–28), who experienced salvation as release from the chains of Hades (*Odes Sol.* 17:4). If the suggestion (too strongly asserted by Daniélou 1964: 244–48; Ménard 1972: 303–4) that in the *Odes of Solomon* baptismal immersion is conceived as a descent into Hades and an experience of Christ's deliverance of the dead from Hades, then perhaps at this point Christianity came closest to the significance of the Greek descents to Hades in the mysteries (see section F. above).

However, a final point at which the Christian tradition of the descent took up Jewish motifs is in the prominence which the raising of Adam from Hades to paradise gains in *Gos. Nicod.* 19, 24–25 (cf. also MacCulloch 1930: 337–39). Even Adam's baptism (19; cf. 24:2) has a precedent (*Ap. Mos.* 37:3) in the Jewish tradition of Adam's translation to paradise. The release of Adam from Hades gave a universal significance to the myth of the descent. In this form especially, the "harrowing of hell" became for medieval Christians a powerful dramatization of the *Christus victor* theme in soteriology.

DESIRE. See WANTING AND DESIRING.

DESOLATION, ABOMINATION OF. See ABOMINATION OF DESOLATION.

DESSAU (PLACE) [Gk *Dessaou* (Δεσσαου)]. Village, presumably in Judea, at which 2 Macc 14:16 claims that the Jews under the leadership of Judah Maccabee first met in battle Nicanor the appointee of Demetrius I. While some major Greek uncials and minuscules use the term *Lessaou* (A' q 62 58 771), the present reading is based on Latin, Syriac, and Armenian texts, probably attesting to an older tradition at this point. The ending of the Greek term should not be considered a genitive since the Latin and Syriac texts retain the *-ou* (Goldstein *II Maccabees* AB, 488). The identification of this site with either of the two locations in 1 Maccabees which have been proposed is problematic. While ADASA, the site of Judah's final triumph over Nicanor in 1 Macc 7:39–46 (Abel 1924: 375; cf. Plöger 1958: 180), bears a linguistic similarity to Dessau, the association is doubtful (Goldstein, 489), since in 2 Maccabees only a minor skirmish occurs there. The proposal that this be equated with the encounter at CAPHARSALAMA recorded in 1 Macc 7:31–32 (Zeitlin and Tedesche 1954: 231) is also lacking a sound basis. While the battles occur at a similar point in the chronology of both works there is no linguistic reason for finding a connection between the two references. While we cannot identify its location, it is most reasonable to conclude that the forces of Judah Maccabee had more than one skirmish with those of Nicanor. Dessau, probably located in the Judean hills N of Jerusalem, would have been the site of one of these.

DESTINY. See MENI (DEITY).

DESTROYER, THE [Heb *mašḥît* (מַשְׁחִית); Gk *ho olothreutēs* (ὁ ὀλοθρευτης)]. The Destroyer is a superhuman agent of destruction mentioned in Exod 12:23 and 1 Cor 10:10. In Exodus the Destroyer is an angelic agent who is sent by God to kill the firstborn of Egypt as the tenth plague. However, the distinction between God himself and the angel is unclear. In 12:13 God himself destroys (same root) the firstborn, and in 12:27 he slays (*nāgap*) the firstborn. Ps 78:49–51 speaks of a company of destroying angels executing the tenth plague. Heb 11:28 recalls this incident using the participle "the one destroying" (*ho olothreuōn*).

The Destroyer is illustrative of the OT concept that God uses angels to execute his judgment. An angel destroys the people of Jerusalem with a plague because of David's census (2 Sam 24:16; 1 Chr 21:7–22:1) and destroys 185,000 soldiers of Sennacherib's army (2 Kgs 19:35; 2 Chr 32:21; Isa 37:36; Sir 48:21; 1 Macc 7:41). The vision of Ezekiel 9 is of angels executing judgment on Jerusalem and Judah.

In 1 Cor 10:10 Paul admonishes the Corinthians not to grumble as some of the Israelites did and were destroyed by the Destroyer. It is unclear if Paul refers to Num 14 or 16:41–50, but the latter is preferred because it speaks of the destruction of the people by a punishing plague sent from God. It is also unclear if the Destroyer is an angel or Satan himself. If the Destroyer is an angel it could be a type of angel that executes God's judgment, or the title for a specific angel that did so. A type of angel is supported by the rabbinic use of *mašḥît* as a term, among others, for an angel of destruction. It was an outgrowth of the rabbinic concept that God's mercy and wrath is put into effect by opposing groups of angels. A specific angel is supported by the presence of the definite article. Also, in postexilic Judaism *mašḥît* is sometimes used as a designation for a specific angel of destruction (Str-B 3:412–16). Later the angel Satan is identified as an agent of destruction (Wis 2:24; John 8:44; 1 Cor 5:5 [*olethros*]; Heb 2:14; cf. 2 Cor 12:7; 1 Thess 2:18; 1 Pet 5:8). It at least can be said that in the recollection of the incident of Num 16:41–50 in 4 Macc. 7:11 and Wis 18:20–25 the figure is an individual destroyer.

In the Hebrew Bible, LXX, and early Christian texts "the destroyer" (the participial form of *šāḥat, šādad, hāras, olothreuō,* and *diaphtheirō*) can also be used to designate a human agent of destruction, whether an individual, group, or nation (Job 15:21; Isa 21:2; 49:17; Jer 48:8, 15, 18; Rev 11:18; see also *ETOT* 2: 201–2; and *TDNT* 5:167–71).

DUANE F. WATSON

DEUEL (PERSON) [Heb *dĕʿû ēl* (דְּעוּאֵל)]. Father of the chief (*nāśîʾ*, Num 2:14) Eliasaph of the tribe of Gad during the wilderness sojourn after the Exodus. He is mentioned only four times in the MT and each time in a tribal list where his son Eliasaph is the current tribal leader (Num 1:14; 7:42, 47; 10:20). According to the LXX and the Syriac, the name "Deuel" should be "Reuel" (*ragouēl*), a reading confirmed in the tribal list at Num 2:14 of the MT. The two spellings of the name are probably due to the confusion of *dalet* with *reš* in the old Hebrew script. Under the leadership of Deuel's son Eliasaph, the tribe of Gad was (1) to list the men it had available for military service (Num 1:24–25); (2) to present its offerings on the sixth day of the twelve-day ceremony for the dedication of the altar (Num 7:42–47); and (3) to take its proper place during encampment on the south side of the tabernacle (Num 2:14) and its position in the order of march at the Israelites' departure from Mt. Sinai (Num 10:20). Baumgartner *(HALAT*) suggests that Deuel could be derived either from *dāʿâ*, "to seek, request," meaning perhaps "the request of God," or from *yādaʿ*, "to know," meaning perhaps "the knowledge of God."

DEUTERO-ISAIAH. See ISAIAH, BOOK OF (SECOND ISAIAH).

DEUTEROCANONICAL. See APOCRYPHA.

DEUTERONOMIC (D) SOURCE. The designation used by scholars to identify the core of the book of Deuteronomy, considered by some to be the "Book of the Law" found in the Temple in 621 B.C.E. during the reign of Josiah (2 Kings 22 = 2 Chronicles 34). See DEUTERONOMY, BOOK OF; (TORAH PENTATEUCH); SOURCE CRITICISM (OT).

DEUTERONOMISTIC HISTORY. The name commonly used to designate the book of Deuteronomy as well as the section of the Hebrew Bible known as the Former Prophets, i.e., Joshua, Judges, 1–2 Samuel, and 1–2 Kings. The name reflects the scholarly theory that these books comprise a single literary unit alongside the other two great historical works in the Hebrew Bible—the Tetrateuch (Genesis through Numbers) and the Chronicles complex (1–2 Chronicles and Ezra–Nehemiah). According to this theory, a later editor shifted the notice of Moses' death from its original position at the

end of Numbers to its present location at the end of Deuteronomy (chapter 34) in order to group the first five books of the Hebrew Bible into the Torah or Pentateuch.

———

A. Terminology

The Deuteronomistic History (DH) is also referred to as the Deuteronomic History by some scholars. However, the term "Deuteronomistic" in reference to this corpus is preferable since it better translates Martin Noth's adjective *deuteronomistische* (see B. below), and thus distinguishes between matters pertaining to the entire History (Deuteronomistic) and those concerning only the book of Deuteronomy (Deuteronomic). Thus, in this article, the abbreviation DH signifies "Deuteronomistic History," while "Deuteronomic" is reserved for the fifth book of the Bible, although the latter term may refer to the DH when found in titles or quotations from previous authors.

B. Origin of the Theory

The theory of the DH originated with the publication of M. Noth's *Überlieferungsgeschichtliche Studien* in 1943 (hereafter *NDH*). Previous treatments of the Former Prophets can be described in two broad categories (see Radjawane 1973: 178–80; Nicholson's introduction to *NDH*; and Mayes 1983: 1–3). One approach continued to apply to these books the same kind of source criticism used in analyzing the Pentateuch (Eissfeldt 1965: 241–48; Fohrer 1968: 193). This was particularly true for Joshua. Another perspective tended to view the books of Joshua, Judges, Samuel, and Kings as independent units that had passed through one or more Deuteronomistic redactions (Pfeiffer 1948: 293–412; Fohrer 1968: 193–95; Driver 1972: 103–203). Noth, in contrast, argued that the material in Deuteronomy and the Former Prophets was a unified history of Israel written by a single, exilic author/compiler. Noth named this writer the Deuteronomist (Dtr).

Noth pointed to the similar language and ideology exhibited throughout the DH as evidence of an individual hand. According to Noth, this individual, the Dtr, composed the first history of Israel on the basis of traditions which he had collected. The Dtr selected those traditions that were appropriate for his purposes and unified them by means of a common structure and chronology. He divided the history of Israel into four major periods: the time of Moses, the settlement of Canaan under Joshua, the period of the judges, and the era of the monarchy. The Dtr's use of the traditions before him was basically conservative. However, he did make changes where necessary in order to introduce his own theological view of Israel's history. He also formulated speeches for the main characters and inserted them at key junctures in his account in accordance with his periodic division of Israel's history. So, for example, Joshua's speeches in Joshua 1 and 23 initiate and conclude, respectively, the time of the settlement. Samuel's speech in 1 Samuel 12 stands at the point of transition between the era of the judges and that of the monarchy, while Solomon's prayer in 1 Kings 8 highlights the dedication of the Temple and closes the first part of the monarchy. Other Deuteronomistic compositions are in narrative form (Joshua 12; Judg 2:11–22; 2 Kgs 17:7–18, 20–23). The Dtr introduced his history with the old Deuteronomic law code (4:44–30:20 minus additions) for which he constructed a new framework (Deuteronomy 1–3 plus original parts of chap. 4 and 31:1–13 plus original parts of chap. 34). Hence, all of the book of Deuteronomy took on the appearance of a speech of Moses.

Noth dated the DH to the middle of the 6th century B.C.E., shortly after 562, the date of Jehoiachin's release from prison, the final event recounted in the DH (2 Kgs 25:27–30). Noth found no evidence to indicate that the materials in the DH had been redacted earlier. The Dtr addressed his contemporaries in Babylonian exile, his purpose being entirely negative: to show them that their sufferings were the fully deserved consequences of centuries of decline in Israel's loyalty to Yahweh. This loyalty was measured in terms of Israel's obedience to the Deuteronomic law. Since Israel and Judah had failed to follow that law, their histories had ended in complete destruction, in accordance with the divine judgment envisaged by Deuteronomy. There was not the slightest glimmer of hope for the future. The clearest illustration of the finality of God's punishment in the DH was Solomon's prayer in 1 Kings 8. The Dtr had Solomon ask Yahweh to hear the prayers of the exiles and to forgive their past misdeeds. But there was no hint of any expectation of the nation's restoration. Similarly, the report of Jehoiachin's release in 2 Kgs 25:27–30 was the result of the Dtr's conscientious reporting of historical fact and was not intended to herald the commencement of a new age for Judah and Israel.

C. The DH and Subsequent Scholarship

1. Unity and Structure. The main point of Noth's monograph, that Deuteronomy–Kings represents an original literary unit, gained wide acceptance almost immediately (for early reactions to Noth's views, see Radjawane 1973: 186–210). Noth was not the only scholar to conclude that Genesis–Numbers and Deuteronomy–Kings represented two originally distinct literary units. Y. Kaufmann (*RI,* 205–11) and I. Engnell (1969: 58–67) each arrived at this position independently (cf. also Jepsen under 3.b. below). However, it was Noth's volume that established this view in the field of biblical studies. The acceptance of this viewpoint has continued such that, to the extent that any position in biblical studies can be regarded as the consensus viewpoint, the existence of the DH has achieved almost canonical status. However, other approaches continue to be proposed (see Radjawane 1973; Mayes 1983: 14–19). D. N. Freedman, for example (*IDBSup,* 226–28), links his treatment of the DH to the Tetrateuch, viewing both as parts of a larger "Primary History" (compare Peckham's view under 3.c. below). However, Freedman has not put forth this view in detail, and theories such as his have not found a wide following (but see Gunn 1987: 32).

Noth's sketch of the way in which the Dtr structured his history has been corroborated and reinforced by subsequent studies. D. McCarthy (1965) and F. M. Cross (*CMHE,* 241–64) have shown that 2 Samuel 7 should be added to Noth's list of passages that form the Deuteronomistic framework of the DH. McCarthy (1974) has also discussed the significance of the "wrath of God" as a theme in certain of the framework texts. W. Lemke (1976) suggested 1 Kings 13 as another candidate for the series of structural passages. Lemke's arguments for Deuteronomistic revision in 1 Kings 13, especially vv 1–10, are convincing. However, since that chapter is still dominated by a northern, prophetic legend concerning a "man of God," it should not be viewed as a framework passage in the same sense as 2 Samuel 7 and those listed by Noth (Cross, *CMHE,* 279–80; McKenzie 1985b: 206–9).

2. Purpose. Perhaps the weakest aspect of Noth's theory, and the one that provoked the most criticism initially, was his view of the purpose of the DH. In a 1947 article on the theology of history in the DH, von Rad traced a theme of "grace" through the DH that provided a balance to the theme of judgment delineated by Noth. Von Rad showed that the DH contained the history of Yahweh's word at work. Time after time the Dtr described how a previously reported oracle from one of Yahweh's prophets was fulfilled precisely as foretold. Thus, on the one hand, the destruction of Israel and Judah was in keeping with the prophetic pronunciation of doom in retaliation for disobedience. On the other hand, the final destruction was restrained by Yahweh's promise to David found in Nathan's oracle in 2 Samuel 7 and reiterated throughout 1–2 Kings (1 Kgs 8:20, 25; 9:5; 11:5, 13, 32, 36; 15:4; 2 Kgs 2:4; 8:19; 19:34; 20:6). In the passages referring to this promise, von Rad found a series of "Messianic conceptions" that, in his view, provided the basis for hope on the part of the Dtr for the restoration of the Davidic monarchy. In this light, the reference to Jehoiachin's release at the very end of the DH was perceived by von Rad to have special theological significance. To be sure, the judgment component of Yahweh's word dominated, at least for the time being, in the reality of the Exile. The Dtr could not minimize the severity of God's

punishment. However, it was equally impossible for him to concede that Yahweh's promise to David had failed. The Dtr resolved this dilemma by recounting Jehoiachin's release from imprisonment. His hope was not explicit, but this final account did leave history open; the Davidic line continued and provided a place for Yahweh to begin anew with his people.

A second important article on the purpose of the DH was contributed by H. W. Wolff in 1961. Wolff criticized the positions of both Noth and von Rad, suggesting that it was inconceivable that an exilic Israelite writer would take pen in hand simply for the purpose of proving to his contemporaries that they were getting just what they deserved. Wolff pointed out that Noth's explanation for the inclusion of 2 Kgs 25:27–30 (Jehoiachin's release) contradicted his (Noth's) conclusion regarding the Dtr's selective use of sources. Against von Rad, Wolff argued that the promise to David in Nathan's oracle was subordinate to the Mosaic covenant, so that disobedience of the Mosaic law also abrogated the Davidic promise. Furthermore, the lack of reference to the Nathan oracle in 2 Kgs 25:27–30 indicated strongly that Dtr did not interpret Jehoiachin's release in terms of the continuation of the Davidic promise as von Rad had asserted. The very length of the DH, according to Wolff, implied a more intricate purpose than either Noth or von Rad had recognized. Wolff found the purpose of the Dtr in the pattern of apostasy, punishment, repentance, and deliverance common in the DH, particularly in Judges. Dtr's intent was to show the exiles that they were in the second stage of that cycle and therefore needed to cry out to Yahweh in repentance. Wolff pointed to the use of the verb *šûb,* "to return," in key Deuteronomistic passages, especially Solomon's speech in 1 Kings 8, as central to Dtr's plea. For Wolff, Dtr's purpose was not entirely negative as it was for Noth, nor did Dtr offer any explicit hope as von Rad claimed. Rather, Dtr raised only the possibility of hope by demonstrating the pattern of Yahweh's previous dealings with Israel; the imperative for the exiles was simply to turn back to God.

The essays of von Rad and Wolff showed the weakness of Noth's original position concerning the Dtr's purpose and pointed out the tension within the DH between the Mosaic and Davidic covenants. Yet the analyses of von Rad and Wolff have their weaknesses. Von Rad's work was especially insightful as far as it went, but he did not perceive the full significance of the Davidic theme for the related issues of purpose, composition, and date of the DH. Wolff's major shortcoming lay in his attempt to dismiss the Davidic promise as conditional in the Dtr's mind, a point specifically denied in the biblical texts.

3. Composition and Date. The one aspect of Noth's thesis that has elicited the most discussion since 1943 has been his ascription of the whole of the DH to a single, exilic composer. Indeed, the question of the authorship and date of the DH has become one of the most debated issues in the field of biblical studies.

a. A Deuteronomistic School. The two scholars most commonly associated with this position are E. W. Nicholson (1967) and M. Weinfeld (1972). Each has published a book focusing on Deuteronomy which contends that the DH was the product of a circle of Deuteronomistic traditionalists.

Nicholson theorized that ancient traditions were preserved and transmitted by northern prophetic circles. After the devastation of Israel in 721 B.C.E., members of these circles fled S to Judah with the traditions they had collected. A short time later they threw their support behind Hezekiah's doomed reform movement. During the reign of Manasseh (ca. 687–642 B.C.E.), these tradents drew up their own program for reform based in part upon traditional materials. The program's principal doctrine was the centralization of the cult in Jerusalem, a notion derived from a reinterpretation of the Davidic royal theology that promoted a unique covenantal relationship between Yahweh and the dynasty of David. This program produced an early form of the book of Deuteronomy. A copy of the book was deposited in the Temple where it was discovered during Josiah's reign and again used as a foundation for reform activity. At that point the Deuteronomistic school was revived and eventually generated the DH. Nicholson agreed with Noth's date for the final form of the DH, though he believed that the work began in late preexilic times.

Weinfeld's views on the composition of the DH are quite similar in some respects to those of Nicholson. Weinfeld traced three stages of development in Deuteronomistic composition: (1) the book of Deuteronomy in the second half of the 7th century B.C.E., (2) the editing of Joshua through Kings in the

first half of the 6th century B.C.E., and (3) the writing of the prose sermons in Jeremiah during the latter half of the same century. Weinfeld suggested that Deuteronomistic literary activity began during the time of Hezekiah and continued into the Exile (1972: 25). Hence, like Nicholson, Weinfeld agreed with Noth's date for the final form of the DH. Weinfeld's main concern in his exhaustive study was to locate the school responsible for the DH in the Israelite wisdom tradition. Many of the insights adduced by Weinfeld from ANE parallel texts are invaluable in the study of the DH. However, his arguments for connecting the DH with wisdom circles are not convincing since the arguments are based on (1) too broad a characterization of wisdom, and (2) overly general thematic similarities between wisdom literature and the DH.

The arguments for a Deuteronomistic school lasting a century or more point out the difficulties involved in viewing the DH as a work addressing only exilic concerns. Nicholson's reconstruction is especially attractive for its connections with historical circumstances. Still, it is never clear what a "school" or "circle" is supposed to have been, and the literary evidence alone is insufficient to reconstruct a social institution responsible for the production of the DH.

b. Redactional Levels. Four years before the appearance of Noth's famous monograph, A. Jepsen wrote *Die Quellen des Königsbuches.* Unfortunately, the publication of this book was delayed until 1953. Jepsen's complex analysis led him to conclude that the book of Kings was essentially the product of two exilic redactors. The first (R 1), a priest, compiled a history of Israel and Judah early in the Exile. The second (R 2) was a prophet about a generation later who took the work of R 1 as his primary source and enlarged it. Jepsen attributed most of the prophetic materials and the "Succession Narrative" to the editorial work of R 2. Since Jepsen's R 2 was essentially the same as Noth's Dtr (Jepsen 1956: 100–1, 105), this independent study provided valuable corroboration for Noth's basic thesis concerning the existence and unity of the DH. At the same time, Jepsen's conviction that redactional levels could be discerned in the DH clearly differed from Noth's perspective. While Jepsen's reconstruction of the redactional history of the DH has not achieved any real following (note, however, Baena 1973; 1974a; 1974b), his postulation of redactional levels was the initial representative of a position on the authorship of the DH that has gained many adherents.

Two major alternatives to Noth's theory of a single, exilic composer for the DH have surfaced in the generation since Noth due to proposals by R. Smend and F. M. Cross. These two opinions have little in common other than their agreement that the DH should be understood as the product of multiple editors.

(1) Multiple Exilic Redactions. Smend (1971) initiated this approach with his contribution to the von Rad *Festschrift.* He treated selected passages in Joshua (1:7–9; 13:1b–6; 23) and Judges (1:1–2:9, 17, 20–21, 23), which, he argued, shared a different perspective from surrounding passages concerning Israel's conquest of Canaan. According to the original version of the DH, Israel under Joshua conquered the entire land promised to them and drove out or destroyed its former inhabitants. The only task left to them was the settlement of the land. Smend called this original version of the DH "DtrG," the *G* standing for *Grundschrift,* i.e., basic text, and he equated it with Noth's Dtr. However, in the texts from Joshua and Judges listed above Smend found references to peoples the Israelites still needed to expel from the land. Smend also discerned an interest in law in these passages. He concluded that these texts were additions by a later redactor whom he designated DtrN (omistic). Smend's theory has been extended by W. Dietrich (1972).

One of the problems with Smend's initial essay was that it dealt with passages whose literary-critical condition was very much in disarray and debated among scholars. Dietrich's study avoided this problem by focusing on a more fruitful area of the DH, the book of Kings. As Smend had done, Dietrich used literary-critical techniques to isolate secondary material in various narratives of Kings. He showed that these insertions had a common language and theology which he then examined in order to discover the identity of their redactor. Dietrich concluded that the DH had undergone two redactions beyond the original one (DtrG). The first and major one of these was the work of an individual associated with prophetic (especially Jeremianic) circles (1972: 104). DtrP, as Dietrich designated him, was both a writer, who composed many of the oracles now found in the DH, and an editor, who added some older prophetic

materials to his DtrG *Vorlage.* DtrP was primarily responsible for the structure and contents of the DH. A final nomistic editor, designated DtrN, added certain other texts bearing a pro-Davidic interest, including the reference to Jehoiachin in 2 Kgs 25:27–30. Dietrich devoted very little space to the treatment of DtrN, almost presupposing its existence. Dietrich dated DtrG to ca. 580 B.C.E. and DtrN to ca. 560 with DtrP somewhere in between (1972: 143–44).

A third member of this "Göttingen school" is T. Veijola (1975; 1977). His two monographs have analyzed various portions of the DH according to the scheme worked out by Dietrich in Kings. In his 1975 volume Veijola covered most of 1–2 Samuel and 1 Kings 1–2. His 1977 work dealt with Judges 8–9; 17–21; and 1 Samuel 7–12. Both monographs assumed the correctness of Dietrich's approach to the DH. Like Dietrich, Veijola used literary-critical arguments to partition the passages he treated between the three redactors, DtrG, DtrP, and DtrN. In Veijola's view, DtrG had a positive perspective on the monarchy and was responsible for the doctrine in the DH concerning the permanence of the Davidic dynasty. DtrN, in contrast, viewed the monarchy negatively. While David himself was judged by DtrN to be a model king because of his fidelity to Yahweh's law, the institution of kingship was the product of human sin and was damned by DtrN on narrow, legalistic grounds. The middle redactor, DtrP, qualified the positive tone of DtrG toward monarchy by the insertion of prophetic stories which subordinated the king's role and importance to those of the prophets. Those stories also illustrated the certainty of Yahweh's prophetically mitigated word. The basic approach of Smend, Dietrich, and Veijola to the DH has been adopted by R. Klein (*1 Samuel* WBC) and E. Würthwein (*Kings* ATD).

The adherents of the Göttingen school are expert literary critics, so the literary-critical observations that form the basis of their theory are often quite valuable. However, there are methodological problems with the approach as a whole (see Hoffmann 1980: 18–20; Campbell 1986: 5–12). These appear particularly in Dietrich's work, since Veijola simply accepts Dietrich's methods. For one thing, this approach assumes Noth's conclusion that the DH was initially the product of exilic, Deuteronomistic redaction. The question of the existence of a preexilic, Deuteronomist or a pre-Dtr *Vorlage* is ignored. Yet, these are major issues in the debate over the authorship and setting of the DH. This failure has caused the proponents of this approach perhaps to misdate and misunderstand the prophetic component of the DH (see below). Secondly, the proponents of this approach have not produced an entirely clear picture of the three redactors. There are two sides to this problem. One is that the criteria provided do not always distinguish DtrG, DtrP, and DtrN clearly from each other. Dietrich, for example, is forced to admit that DtrP borrows heavily from DtrG both in terms of language and theology (1972: 138–39). The other side is that it is difficult to perceive any ideological unity within the material assigned to each redactor. The literary and linguistic evidence compiled by Dietrich and Veijola does illustrate the presence of editorial strands, but there is a need to distinguish more clearly the interests or tendencies of the editors at different levels.

(2) Double Redaction. The second major position on the composition of the DH is associated with Cross (*CMHE,* 274–89), who treated the issues of authorship, date, and purpose of the DH as different facets of the same question. Citing the validity of some of the older arguments, such as those of Jepsen (see above) and J. Gray (*Kings* OTL, 13–15), for a preexilic edition of Kings, Cross traced two themes through the book of Kings. The first was the sin of Jeroboam and the wickedness of the N kingdom, which culminated in the exposition on the destruction of Samaria in 2 Kgs 17:1–23. The second theme was grounded in the covenant theology of the S monarchy. The faithfulness of David set the tone for Yahweh's dealings with Judah in the same way that Jeroboam's sin led to Israel's decline. There were no good kings in Israel; all of them sinned against Yahweh by "walking in the way of Jeroboam, son of Nebat, who caused Israel to sin" (cf. 1 Kgs 15:26, 34; 16:19, 26, 31; 22:52; 2 Kgs 3:3; 10:29; 13:2, 6, 11; 14:24; 15:9, 18, 24, 28). In contrast to the series of dynasties in the N, Judah continued under David's descendants. Judah had its share of evil kings, but Yahweh had promised David an enduring fiefdom (*nîr,* see Hanson 1968) in Jerusalem as a reward for his loyalty (1 Kgs 11:36; 15:4; 2 Kgs 8:19). The good kings in Judah were compared individually with David. The only king, including David, who escaped criticism was Josiah; his reforming reign represented the climax of this second theme. The persistence of these two themes and their respective climaxes led Cross to posit a primary edition of the DH written as a

program supporting Josiah's reform measures (*CMHE,* 284–85). This editor (Dtr 1) admonished his contemporaries to obedience to the Mosaic covenant that Josiah was attempting to reinstitute, believing that Yahweh would restore the kingdom by the hand of this new David in whom Dtr 1 had placed his hopes. The bulk of the DH, in Cross' view, consisted of this propaganda from Josiah's reign. A second, exilic redactor (Dtr 2) brought the primary edition up to date and blamed the Exile on Manasseh, whose wickedness doomed the later reforms of Josiah to futility (2 Kgs 21:10–25). Cross suggested that certain passages throughout the DH represented retouchings by Dtr 2. Such passages made the promise to David conditional, presupposed the Exile, or addressed the exiles and called for their repentance (Deut 4:27–31; 28:36–37, 63–68; 29:27; 30:1–10; Josh 23:11–13, 15–16; 1 Sam 12:25; 1 Kgs 2:4; 6:11–13; 8:25b, 46–53; 9:4–9; 2 Kgs 17:19; 20:17–18; 22:15–20; and perhaps Deut 30:11–20; 1 Kgs 3:14). The lack of any peroration on the fall of Judah comparable to that found in 2 Kings 17 on the fall of Israel was best explained, according to Cross, by regarding the exilic editor as less articulate than Dtr 1 (*CMHE,* 288).

Cross' thematic argument has convinced a growing number of American scholars that the primary edition of the DH was Josianic, though his position has not been widely accepted in Europe. His Josianic setting for Dtr 1 accords well with the important place of Josiah noticed by previous studies of the DH, including that of Noth. Subsequent studies have gathered more evidence for a primary, Josianic edition. R. Friedman (1981a: 6–10), in particular, has noticed fundamental changes in the editorial perspective following the narrative concerning Josiah, and he has pointed out several deliberate links between the descriptions of the Mosaic period in Deuteronomy and Josiah's efforts at reform. R. Nelson (1981), in his monograph advocating the double redaction theory, has focused on literary analysis and theology in addition to Cross' thematic points. Nelson has also supplied the most thorough collection and evaluation available of the arguments for this hypothesis.

A number of scholars who concur with Cross' basic hypothesis have published works concerned with sketching more precisely the contours of Dtr 2's revisions and theology. All of these scholars are basically in agreement that Dtr 2 wrote during the Exile with the goals of ascribing that predicament to Manasseh and of bringing the Josianic history up to date. However, other passages attributed to Dtr 2 by Cross have been assigned to Dtr 1. Friedman (1981a: 12–13) and Nelson (1981: 118) have shown independently that the passages which Cross ascribed to Dtr 2 because they make the promise to David conditional (1 Kgs 2:4; 8:25b; 9:4–5) actually refer only to the loss of the N kingdom and hence are best viewed as the work of Dtr 1. Reference to captivity within a passage does not necessarily signal Dtr 2's hand, since exile was a common and feared occurrence in the ANE long before the 6th century B.C.E. Also, the exile of the N kingdom was well known in Judah after 721 B.C.E. The judgment that a passage "sounds like" it was addressed to the exiles is too subjective by itself to carry much conviction. Friedman and Nelson have instead based their arguments for Dtr 2 material on thematic and linguistic criteria. Their conclusions tend to support Cross' initial instincts in seeing Dtr 2's revisions as relatively light.

However, others credit Dtr 2 with a much more active role in shaping the DH. Levenson, for example, argues on literary and theological grounds that Dtr 2 was responsible for inserting the Book of the Law into Deuteronomy (1975) and ascribes most of Solomon's speech in 1 Kings 8 to him (1980). Mayes (1983) has produced the first attempt to reconstruct in detail the redactional history of the entire DH. His literary-critical discussion credits Dtr 2 with significant revision and supplementation throughout the corpus.

c. A Single Exilic Author. B. Peckham (1985) and H.-D. Hoffmann (1980) have made separate attempts to return to Noth's original position that the DH was the work of a single exilic writer, although each also tried to refine Noth's conclusions. Peckham's 1985 monograph (note also his 1983 article) expressed the opinion that the real problem with Noth's proposal was his understanding of the sources of the DH as fragmentary and discontinuous. By way of correction, Peckham offered a complex theory about the way in which Dtr 2 rewrote various sources in order to form the entire historical work from Genesis through Kings. Peckham analyzed each of Dtr 2's sources in turn. The fundamental source was J's terse narrative. Each of the following sources was composed as a running commentary on the text that grew out of Israel's historiographic tradition. J was expounded by Dtr 1, apparently in the reign of Hezekiah. An

alternative interpretation of J was written by P. E was produced as a supplement to J and P and as a variant to Dtr 1. Dtr 2's work was the culmination of this literary process. Dtr 2 was not an editor, but a tradent who thoroughly revised and rewrote the histories which he inherited. Dtr 2's history was never itself revised, but a legislative supplement (Lev 1:1–7:38 and 11:46–27:34), designated Ps, was grafted onto it, thus giving the Pentateuch its present form. Peckham's view of the relationship between the sources and the extent of Dtr 2's work is creative but highly idiosyncratic. His criteria for distinguishing these sources are never revealed. Indeed, he states that Dtr 2's use of repetition and imitation makes his history "almost indistinguishable from its antecedents" (1985: 49). As a result, his reconstruction of the various layers of composition in the DH appears almost entirely subjective.

Like Peckham (1983: 217–18), Hoffmann (1980: 16–17) asserts that Noth's original thesis contains an inherent contradiction in the notion of the Dtr as both author and editor. His own solution to this perceived contradiction is, however, quite different than Peckham's. Hoffmann concludes that the DH is essentially a fictional history of Israel's cult by an exilic or postexilic author. The Dtr's technique is to contrast the right reforms of good kings with the evil "reforms" of wicked kings. This "pendulum swing" effect is more exaggerated as the account approaches its climax (*Zielpunkt*) in Josiah's reform (2 Kings 22–24). Josiah and his reign serve as *the model* for a new beginning when the Exile is over. The story of Josiah shares connections with that of every reforming king before him. Indeed, the hallmark of the Dtr's literary work is the way in which he links texts by a variety of methods. The basis of the Dtr's judgments concerning the kings of Israel and Judah is the first commandment of the Mosaic law, which sets Israel apart from the nations. Jeroboam, who led Israel away from cultic centralization, and Ahab, who imported Baalism, are the paradigms of wickedness. While the Dtr did employ some historical sources, this occurred more rarely than most scholars, including Noth, have admitted, and these sources can no longer be isolated precisely in the Dtr's highly fictional and tendentious narrative (compare the similar views of Van Seters 1983a: 317–21, 354–62). In short, Hoffmann sees the Deuteronomist as a true author, not a compiler or redactor, whose work is far more creative than even Noth perceived it to be.

There is much that is useful in Hoffmann's book. His analysis of the cross-references within the DH confirms Noth's view of the essential unity of the work. He demonstrates the significance of the cult for the Dtr, a topic which had not previously received so full a treatment. He shows, perhaps more clearly than any previous scholar, the importance of Josiah in the DH. However, his theory regarding the exilic setting for the Dtr does not do justice to the significance of Josiah in the DH; the emphasis on Josiah is explained more clearly by Cross' proposal that the original edition of the DH was in fact Josianic. Hoffmann's monograph completely ignores the position of Cross and his followers. His failure to treat any king after Josiah also tends to substantiate the view that the material following Josiah in the DH is a less creative narrative tacked on to the main body of the work. Finally, Hoffmann's judgment regarding the fictional nature of the DH is unwarranted. To be sure, the Dtr (or Dtr 1) is a creative writer with definite interests, whose work must therefore be used with great caution in historical reconstruction. At the same time, the evidence for various historical traditions underlying the DH is too strong simply to dismiss the work cavalierly as fiction (see section 5 below).

d. Toward a Solution. Almost all of the above-mentioned studies on the composition of the DH have some merit, and it is possible to treat their various conclusions as complementary rather than contrastive. For instance, the notion of a Deuteronomistic school is compatible not only with the view that the DH was put together in its final form by a single individual in the Exile, but also with the theory of multiple editions of the DH (Weinfeld 1972: 7–8). The conclusions of Dietrich and Cross are not entirely irreconcilable, since they actually focus on different aspects of the issue of authorship. The arguments of Cross are primarily thematic, while Dietrich's are literary. Yet, Cross' evidence that the primary redaction of the DH supported Josiah carries more conviction than does Dietrich's interpretation on literary-critical grounds. The importance of Josiah for the DH is confirmed not only by the additional evidence from Friedman and Nelson, but also by the observations of Hoffmann. Still, Cross' theory of a double redaction does not answer all the questions raised by the DH. In particular, the significance of the prophetic stories with their generally negative orientation toward the monarchy goes beyond the interests of Dtr 1 and even

stands in tension with his support of the Davidic dynasty, especially as it is represented in Josiah. At the same time, the stress on prophecy is not likely a part of the same edition that added the laconic account of Judah after Josiah and blamed Manasseh for the Exile (Cross, *CMHE,* 285–86).

An intriguing addendum to Cross' theory incorporating some of the most important literary insights of Dietrich and Veijola has been proposed by P. K. McCarter. In his volumes on the books of Samuel (*1 Samuel* AB, 18–23; *2 Samuel* AB, 6–8) McCarter takes the position that a pre-Deuteronomistic level of redaction, done from a prophetic perspective, exists in this material. Hence, much of what Veijola identifies as DtrP in 2 Samuel is assigned by McCarter to this prophetic history. The prophetic historian, in McCarter's view, collected the oldest sources underlying Samuel. In 1 Samuel these include the Ark Narrative (1 Sam 2:12–17, 22–25; 4:1b–7:1), a cycle of stories about Saul (beneath 1 Sam 1:1–28; 9:1–10:16; 10:27b–11:15; 13:2–7a, 15b–23; 14:1–46), and an apology for David sometimes called the "History of David's Rise" (1980; *1 Samuel* AB, 18–20), behind 1 Samuel 16–2 Samuel 5. McCarter argues that in 2 Samuel the primary source was an apology for Solomon (the so-called "Succession Narrative"), which was itself a compilation of various stories from David's reign (*2 Samuel* AB, 9–16). See also COURT NARRATIVE (2 SAMUEL 9–1 KINGS 2). The prophetic historian reordered these sources, with editorial comments, into a running, historical narrative. According to McCarter, the skeptical view of kingship and its subjection to prophecy within the prophetic history betrays the work's N origin. However, the history's acceptance of the Davidic dynasty and the text's hopeful orientation toward Judah as the bearer of Israel's future leads McCarter to date the prophetic document to the end of the 8th century, during or shortly after the fall of Samaria (see also Mayes 1983: 84–85).

A. Campbell (1986) has also posited a prophetic document, which he calls the prophetic record, underlying the DH in the books of Samuel and Kings. Campbell's reconstruction differs from that of McCarter in several particulars. Campbell does not assign as much material in Samuel to his prophetic record as McCarter assigns to his prophetic history. For example, Campbell does not believe that the prophetic record included the Ark Narrative or the Succession Narrative (1986: 67, 82–84). Campbell's prophetic record viewed monarchy as the gift of Yahweh and not as a sinful, human invention, as McCarter argues is the case with his prophetic history. Finally, Campbell dates his prophetic record to the reign of Jehu (late 9th century B.C.E.) and sees it as a document that sought to legitimate Jehu's prophetic anointing and therefore, his kingship (1986: 108–10). Hence, Campbell traces the prophetic record in 1–2 Kings (cf. McKenzie 1985b). He finds it underlying the accounts of the N kings and culminating with a version of Jehu's revolt beneath 2 Kings 9–10. In Campbell's reconstruction, the prophetic record underlies the competition on Mt. Carmel in 1 Kings 18, the Naboth story in 1 Kings 21, and Ahijah's death in 2 Kings 1, but not the rest of the Elijah cycle and none of the Elisha stories.

Despite their differences, both McCarter and Campbell agree that a N prophetic document underlies the Deuteronomistic redaction in the books of Samuel and Kings. The existence of such a pre-Deuteronomistic, prophetic work may help to resolve some of the literary and thematic tensions within the DH. If McCarter's characterization is correct, the prophetic history should continue as an underlying layer in Kings (cf. McKenzie 1985b). Such a layer explains the preservation of lengthy prophetic stories which obviously had little to do in their original form with the concerns of Dtr 1 (e.g., 1 Kgs 13:11–32). It also supports the idea that many of the negative sentiments expressed in the DH toward Israel or its kingship come not from a late redaction of the history but from an earlier level founded in the old league traditions of the north. A number of questions about this prophetic level remain to be answered. What were its exact parameters? Is there any relationship between this prophetic work and the prophetic concerns pointed to by Nicholson in Deuteronomy? Is this prophetic redaction related to arguments by various scholars (Halpern 1981: 48–53; Mayes 1983: 120–25; McKenzie 1985a: 174–76; Weippert 1972) for redactional activity in the DH at the time of Hezekiah? The most that can be said at present is that a prophetic redaction of the sort described by McCarter and Campbell may have served as a major source for Dtr 1's account of the monarchy.

Since the days of Rost, Noth, and their contemporaries, and thanks to their pioneering work, scholars have made important strides in uncovering the process behind the formation of the DH. There is not, of

course, unanimous agreement on the issues, yet progress has been made and continues to be made, however slowly, within historical critical scholarship. This is an important point since several scholars in recent years have adopted newer approaches to the Bible, abandoning historical criticism out of frustration with its results (see below). Recent work on the books of Samuel and Kings makes it clear that a more fruitful approach to the question of the composition of the DH may be found not in late redactions (a task that has preoccupied many researchers), but in the search for sources and redactions preceding the edition of Dtr 1. McCarter and Campbell have drawn attention to the significance of intermediate redactions lying between the oldest sources and Dtr 1.

4. New Literary Approaches. A number of works have appeared in recent years which treat portions of the DH with a variety of literary or structuralist techniques (see STRUCTURALISM). These treatments are too many and too diverse to examine individually here. They generally focus on a single section of the DH, predominantly in Samuel, rather than discussing the DH as a whole (see McCarter, *2 Samuel* 16 for a brief listing of some of these works).

R. Polzin's 1980 study, however, deserves special review. This volume is the first part of a literary study of the entire DH. Polzin argues that the domination of reported speech in Deuteronomy in contrast to the preponderance of reporting speech in Joshua and Judges reflects the author's attempt to present himself to his audience in the role of mediator of God's word. Just as Moses was the authoritative interpreter of God's law for his day so the Deuteronomist is the authoritative interpreter of the Mosaic law for the exiles. Deuteronomy stands in relation to Joshua–Kings as prophecy to fulfillment, or as law to application. Polzin describes the book of Joshua as a meditation on the interpretation of the law—a meditation that illustrates the distance between divine law and human interpretation (1980: 144). The book of Judges, for Polzin, tests the traditionalism of Deuteronomy and Joshua. Judges presents a chaotic picture in which "everyone did what was right in his own eyes." A mechanistic interpretation of the Mosaic law would lead one to predict Israel's destruction because of the sinfulness of the judges period. But such an interpretation does not take account of divine mercy. Hence, Israel not only survives the era of the judges, but even prospers. Together, the three books of Deuteronomy, Joshua, and Judges, in Polzin's view, militate against the kind of rigid orthodoxy that does not allow flexibility in applying the word of God to new situations. Polzin applies the hermeneutical message he finds in the DH to the current crisis in biblical scholarship caused by the tension between traditional historical criticism and newer literary approaches (1980: 205–12). The DH, he argues, condemns the "scientific" methods of historical criticism that attempt to recover the unitary, original sense of the text. Rather, the DH calls for an approach to its text that constantly reapplies its message to the new situation in which interpreters find themselves.

Polzin's criticisms of traditional scholarship's failure to address the Bible on its own terms and of the scholarly tendency toward theological dogmatism are well taken, although these may reflect problems inherent more in the practitioners than in the method. However, Polzin has failed to show how his approach may interact with historical criticism (cf. Mayes 1983: 20–21). He essentially ignores the historical critical research done on the literary history of the DH, even though he obviously depends on the results of that research (otherwise, he would not treat the DH as a "literary unit" in the first place). Polzin never satisfactorily answers the objection to the literary methods which he employs, namely, that such methods are inappropriate for material that has been redacted numerous times (1980: 16–18). His point that the text must be approached by a method that allows it to be reapplied to the interpreter's ever-changing situation is valid. However, his conclusions seem to ignore the limits which the text places upon itself. His perspective on Judges, in particular, appears to be the result of his forcing the book to conform to the hermeneutical message he wishes to find in Deuteronomy–Judges. His desire to stress what he sees as cultic chaos recounted in Judges leads him to dismiss the rather rigid pattern of apostasy, oppression, repentance, and deliverance that the editor has imposed on the narrative.

Polzin's work underlines the tension existing in contemporary biblical scholarship between the older approach of historical criticism and newer literary study. Literary theory is more satisfying hermeneutically than historic criticism in facilitating the reader's interaction with the text. But D. Gunn

(1987: 69–70) is probably correct that reader-oriented theory undermines historical criticism's attempts at a normative understanding of the text. Moreover, the tendency of literary criticism to deal with canonical unit(s) ultimately is opposed to, or at least dismisses as irrelevant, questions about redactional levels which are at the heart of the topic of the "Deuteronomistic History." Ideally, perhaps, historical criticism and literary criticism should be complementary. Practically, however, the two approaches may simply be moving in different directions with only a few scholars able to bridge the gap between them (Gunn 1987: 72–73). For the perspective on the DH described in this article the view of literary methods is best expressed in the following quotation from R. Alter (1981: 46): "The Bible presents a kind of literature in which the primary impulse would often seem to be to provide instruction or at least necessary information, not merely to delight. If, however, we fail to see that the creators of biblical narrative were writers who, like writers elsewhere, took pleasure in exploring the formal and imaginative resources of their fictional medium, perhaps sometimes unexpectedly capturing the fullness of their subject in the very play of exploration, we shall miss much that the biblical stories are meant to convey."

5. Historiography and Historicity. J. Van Seters, in his recent volume on historiography in the ANE (1983a), argues that Noth's exilic Dtr constitutes the first Israelite historian as well as the first true historian in Western civilization. He contends, therefore, that Dtr did not incorporate any earlier historiographic works into his history, and that those sections of Samuel where scholars have perceived older, independent sources (e.g., the Ark Narrative, the Story of Saul, and the History of David's Rise) are actually original compositions by Dtr, sometimes using preformed traditions. The "Court History of David" or "Succession Narrative," which many scholars have seen as Dtr's source for much of 2 Samuel 9–20 and 1 Kings 1–2, is post-Dtr, i.e., a postexilic addition to the story of David. Thus, like Hoffmann, Van Seters (1983a: 117–21; 1983b: 131–32) regards the DH as largely fictional.

There are problems with some of Van Seters' conclusions. His contention that true history writing comes relatively late in Near Eastern history betrays the assumption that anything approaching historical or theological sophistication (from a modern perspective) must be late. He assumes Noth's date for the DH and does not adequately deal with those reconstructions of the DH that posit earlier redactions and sources. His view of the DH's historicity is probably overly negative and leads him to the conclusion that the first extant example of history writing in Western civilization is essentially a work of fiction. His stress on history writing also leads him to neglect the role played by royal propaganda in shaping the DH and its sources, particularly in its portrait of Josiah.

Nevertheless, Van Seters' volume has also made some very important contributions to the study of the DH. His comparison of the DH to history writing from the ANE and especially from Greece suggests a purpose behind Dtr's work which modern scholars have overlooked, namely that Dtr was an ancient historian who wrote "to render an account to Israel of its past." This understanding of the genre and purpose of the DH also has important implications for the method of composition employed in the DH. Like Herodotus, Dtr was both an author and an editor who creatively shaped Israel's traditions into a long, narrative history. In many respects, Van Seters' work represents a return to and a reinforcement of Noth's original conclusions regarding the DH. Van Seters has pointed the way for future studies on the techniques of composition and genre of literature represented in the DH.

D. Conclusion

The genius of Noth's initial proposal for the existence of the DH was his perception of the overall unity of the account from Deuteronomy through Kings. The genius of Cross' later correction rests in his observation that the principal concerns of this large unit were with an earlier era, rather than the period reached by the DH's account. In Cross' theory, the second editor of the DH was primarily responsible for adding a relatively brief appendix to the body of the work, while the unity of that body was maintained. The search for sources and redactions underlying the DH is certainly a valuable endeavor and has provided scholars with a clearer picture of how this great work developed. However, those who search for sources must be careful not to obscure the unity of the work, Noth's real insight. Some recent treatments of the DH (Hoffmann and Van Seters) call for fresh studies of the creativeness of the Dtr in his use of traditions and in his own composition. Critical scholarship of the DH has a real need for specialists in

literary studies and historiography. But those who study the creativity of the Dtr must in turn not lose sight of the conclusions of older literary critics regarding the sources used by the Dtr.

A. The Name and Its Meaning

The Greek appellation of the book, *to deuteronomion* (hence Latin *Deuteronomium*), as well as the Hebrew appellation, *Mishneh Torah* (*Sipre*, section 160 based on Deut 17:18; Josh 8:32), means "repeated law" or "second law" and alludes to the fact that Deuteronomy is a (revised) repetition of the large part of the law and history of the Tetrateuch (the first four books), cf. Nahmanides to Deut 1:1 and Ibn Ezra to Deut 1:5. Although the words *mšnh htwrh hz᾽t* in Deut 17:18 may mean "a copy of this Torah" (see commentaries) and thus may be rightly considered of secondary nature, it is also true that Deuteronomy constitutes a second covenant besides the Sinaitic one (28:69). Although all the laws were delivered to Moses at Sinai, the people in fact received them only at the plains of Moab and a covenant, besides the one concluded at Sinai (28:69), was established there.

Deuteronomy indeed draws upon the previous traditions of the Pentateuch, but was revised according to the principles of the Hezekianic-Josianic reforms. Thus, for example, the laws of tithe, of *šĕmiṭṭah* (the year of the release of debts, 15:1–11) and the rules of the release of slaves (15:12–19), of the firstborn animal (15:19–23), and of the three festivals (16:1–17) are all ancient laws (Exod 21:1–11; 22:28–29; 23:10–11, 14–19; 34:19–26). They appear however in Deuteronomy in a new form, adjusted to the principles of centralization of cult as well as to the social-humane tendency which is characteristic of Deuteronomy.

There was thus an awareness of this book being secondary. A similar categorization of stabilized canonic tradition versus secondary, later-added tradition is found in Mesopotamia. There we find the term *šanû* ("second"/"another") for literary sacred material distinct from the original canonic one (Rochberg-Halton 1984). An Akkadian term which overlaps *šanû* is *aḫû* ("external") (140–44), an expression which equals late Hebrew *ḥiṣôn* for which one is to explain the expression *sĕparîm ḥiṣonîm*, "extraneous books," which defines noncanonical literature (*m. Sanh.* 10:1). In the Qumran literature, we find the term *seper hattôrâ hašenît* referring apparently to a noncanonical Torah (4Q*177:14*), 67–68 in Allegro 1968). Similar thematic appellations are found for the other books of the Pentateuch: Genesis (= Creation); Exodus (=

exit from Egypt); Leviticus (= priestly laws, cf. Hebrew *tôrāt kôhanîm*, "priestly laws"); Numbers (= the census of the Israelites, cf. Hebrew *ḥômeš hapĕludîm,* "one-fifth [of the Pentateuch] concerning census" [*m. Yoma* 7:1; *m. Soṭa* 7:7]).

Alongside the Hebrew name Mishne-Torah (Deuteronomium), the prevalent name for the book was *Dĕbārim* ("the Words"). This was taken from the incipit of the Hebrew book, as was the case with the names of the other books of the Pentateuch: *Bĕrēšît,* "In the beginning," for Genesis; *Šĕmôt,* "The Names," for Exodus; *Wayyiqā᾽,* "He called," for Leviticus; and *Bĕmidbar,* "In the Desert," for Numbers. The system for naming a literary creation after its incipit is very ancient; compare the Babylonian creation epic named after its opening: *enuma eliš,* "when above," and the so-called creation "Righteous Sufferer," the ancient title of which was *ludlul bēl nemēqi,* "I praise the lord of wisdom," after the opening words of the work.

B. The Literary Form of Deuteronomy

Deuteronomy is presented as a farewell speech delivered by Moses shortly before his death. The form of the "testament" given to the book looks peculiar but has possible antecedents in the Egyptian method of diffusing moral teaching. Most of the Egyptian wisdom instructions were dressed in the form of testaments of kings and viziers to their successors.

This technique may have exerted its influence on Israel's literature, especially since there exist affinities between Deuteronomy and the didactic Wisdom Literature (see L. below). Indeed the book of Deuteronomy is a kind of manual for the future kings of Israel (17:14–23), written by scribes just as were the instructions for the Egyptian kings as well as those for the Mesopotamian ones. As will be shown below, the valedictory speeches in the Deuteronomic corpus are linked to a ceremony of succession bound by covenant, a ceremony attested in the neo-Assyrian Empire in the vassal treaties of Esarhaddon (= VTE). This concept of covenantal succession is reflected in the Greek rendering of biblical *bĕrît, diathēke* or "testament." It seems that the basic sense underlying *diathēke* in the LXX is "imposed obligation" which is semantically true for the Hebrew *bĕrît.* It is hard to decide whether the valedictory speeches were modeled on the ethical wills of the Egyptian type or rather belong to the covenantal scene of royal succession of the Assyrian type.

At any rate Deuteronomy adopted the form of speech as a literary device for the dissemination of its message. The practice of ascribing religious-ethical valedictories to leaders and kings was also used by the editors of the Israelite historiography who were influenced by the book of Deuteronomy. Thus the Deuteronomic writers end the period of the Conquest with a farewell speech of Joshua (chap. 23), the period of the judges concludes with a valedictory speech of Samuel (1 Samuel 12), and the description of David's life in the Deuteronomic edition ends with a religious-ethical will of David (1 Kgs 2:3–4; Weinfeld 1972a: 10–14). Besides the valedictory speeches, the Deuteronomic school ascribed to the national leaders speeches of prophetic nature, liturgical orations, and military addresses (Weinfeld 1972a: 10–14).

A similar literary method is found in Greek historiography. Numerous speeches are cited in the works of Herodotus and Thucydides, supposedly delivered by national heroes. Thucydides himself declares that it was his habit to make the speeches say what, in his opinion, was demanded by them by the various occasions (i. 22.1) (Weinfeld 1972a: 51–53).

Expressing ideology by means of programmatic speeches put into the mouths of leaders and great personalities continued in Israelite historiography of the Second Temple period. Thus the Chronicles put into the mouth of King Abijah, the son of Rehoboam, a speech that emphasizes the eternity of the Davidic dynasty and the sole legitimacy of the Jerusalemite temple (2 Chr 13:4–12). This was done in order to show that the objection of the northern kingdom to the Davidic Kingdom and to the Jerusalemite temple is a rebellion against God.

The same system is found in the apocryphal literature. Two speeches are ascribed to Judith, the heroine, before acting against the enemy. The first speech (8:11–27) comes to implant faith and confidence in her action by citing the tests to which God put Israel in the past, while the second (9:2–14), which is a prayer, invokes the greatness of the God of Israel and his deeds in the past. Similarly, we find in the farewell

speech of Mattathias, the Hasmonean, an enumeration of the faithful ancestors and their keeping God's covenant (1 Macc 2:48–67). This system of programmatic speeches can be traced down to the speeches of Peter and Stephen in the Acts of the Apostles (2:14–16; 7:2–53). These speeches survey Israel's past (Weinfeld fc.) and thus serve a didactic purpose.

C. The Covenant at the Plains of Moab

The change of leadership in the ANE was accompanied by a pledge of loyalty on behalf of the people. The so-called vassal treaties of Esarhaddon (= VTE) which have so much in common with Deuteronomy are none other than fealty oaths imposed by the retiring king on his vassals concerning his successor (Assurbanipal). The covenant in the land of Moab, which is concluded at the time when Moses nominates Joshua as his successor (Deut 3:23–29; 31:1–8), resembles then formally the situation found in VTE. The difference is only that the contents of the Mosaic covenant are divine law and the sworn pledge refers to God whereas VTE is concerned with stipulations of a political nature, referring to the human suzerain. Formally, however, the two documents are of similar nature. Especially striking is the covenantal scene in VTE and in Deuteronomy. Both scenes have the entire population gathered: young and old (Deut 29:9–11, cf. 2 Kgs 23:1–3, and VTE 4–5; for the Assyrian covenantal ceremony, see Weinfeld 1976: 392–93). In both scenes the gathered take the pledge not only for themselves but also for the future generations (Deut 29:14, VTE 6–7, cf. Sefire treaty I A 1–5 [Fitzmyer 1967: 12–13]).

In fact, even before the discovery of the Esarhaddon treaties the particular formal structure of the book of Deuteronomy had been recognized. G. von Rad (1958: 1–78) inquired into the significance of the peculiar structure of Deuteronomy: history (chaps. 1–11), laws (chaps. 12:1–26:15), mutual obligations (26:16–19), and blessings and curses (chaps. 27–28) suggested that the structure reflects the procedure of a formal cultic ceremony. According to von Rad, this ceremony opened with a recital of history, proceeded with the proclamation of law, accompanied by a pledge, and ended with blessings and curses. Since according to Deuteronomy 27 the blessings and curses have to be recited between Mts. Gerizim and Ebal, von Rad identified Shechem as the scene of periodic covenant renewal in ancient Israel (Joshua 24). Although no real evidence for a covenant festival has been discovered so far, the observation made by von Rad that the literary structure of Deuteronomy reflects a covenantal procedure has been confirmed by subsequent investigations. It has become clear that the covenant form as presented in Deuteronomy was in use for centuries in the ANE. G. Mendenhall in 1954 (66–87) found that the Hittite suzerainty treaties have a structure identical with that of the biblical covenant. The basic elements are: titulary; historical introduction, which served as motivation for the vassal's loyalty; stipulations of the treaty; a list of divine witnesses; blessings and curses; recital of the covenant and deposit of its tablets.

However, the treaties of Esarhaddon (dated 672 B.C.E.), discovered in 1956, provided new material and a better understanding of the Deuteronomic covenant. It transpires now that like VTE, Deuteronomy is not a covenant between two parties but a loyalty oath imposed by the sovereign on his vassal. The demands of loyalty are expressed in Deuteronomy and in the VTE in identical terms. "Love" stands in both sources for loyalty and the subjects in both documents are commanded "to love" their suzerain "with all the heart and all the soul" (Deut 6:5; Weinfeld 1976: 384–85). The standard terms for being loyal to the sovereign in both documents are: *"to go after" (= "to follow"), "to fear," and "to hearken to the voice of."*

Furthermore, even in the contents there is identity between the Assyrian oath and that of Deuteronomy. The whole series of curses in Deut 28:23–35 is paralleled in VTE lines 419–30 and even the order of curses is the same in both documents. While the order of the curses, as for example, leprosy and blindness in the Assyrian treaties, can be explained in that the order follows the hierarchy of the gods Sin and Šamaš who are associated each with a specific curse (leprosy and blindness respectively), the order of the same curses in Deuteronomy cannot be explained, which shows that the curses originated in the Mesopotamian tradition (Weinfeld 1972a: 116–26). Indeed it has been suggested that the Deuteronomic covenant was a substitution for the Judean loyalty oath to the king of Assyria (the time of Manasseh) and hence the identity in the curses (Frankena 1965).

After the discovery of VTE, it became clear that a distinction should be made between a covenant between two equal parties and an oath of loyalty imposed by the suzerain on his vassals. The latter corresponds to the form of Deuteronomy, which is a loyalty oath imposed by God on his vassal, Israel. Such loyalty oaths were prevalent from the days of the Hittite Empire in the 15th–14th centuries through the Assyrian Empire down to the Roman Empire (Weinfeld 1976: 381–83). The Hittites included in their oath a historical introduction in which the benevolence of the suzerain toward the vassal was stressed, which came to justify their demands for loyalty. A similar element is found in Deuteronomy, which has a long historical introduction (chaps. 1–11), an element not attested in the usual Assyrian treaties. It seems that the Assyrian emperor who saw himself as king of the universe felt that it would be both unnecessary and humiliating to justify his demand of loyalty by referring to the benevolence of the suzerain to the vassal in the manner of the Hittite kings. This assumption may also explain the lack of the blessings in the Assyrian treaties on the one hand and the long list of curses on the other. The Hittites felt it necessary not only to justify their demands for loyalty but also to give promises of help in time of danger, as well as to bestow divine blessings for loyal service. The Assyrians neither gave promises to the vassal nor bestowed blessings but, on the contrary, increased and expanded the list of threats and curses in order to terrorize him.

The arrogance of the Assyrian king may also explain the lack of any sign of affection of the sovereign to his vassal. In the Hittite treaties and in the Israelite covenant (Weinfeld 1972a: 69), along with the demand of "love" (loyalty) on the part of the vassal come expressions of affection from the side of the sovereign. The Assyrian king, however, demands scrupulous "love" (= loyalty) from the vassals but no sign of affection on the king' side. In this matter of affection, Deuteronomy follows the Hittite line and not the Assyrian one.

Another parallel feature between the Assyrian oath of loyalty and the one of Deuteronomy is the theme of self-condemnation in connection with the violation of the oath. The end of Deuteronomy 29 reads: "And the generations to come … will ask: 'Why did YHWH do thus to this land?' and they will say: 'Because they forsook the covenant of YHWH' " (vv 21–24). The same motif is found in the neo-Assyrian texts concerning the breach of the oath. Thus the annals of Assurbanipal state: "the people of Arabia asked one another saying: 'Why is it that such evil has befallen Arabia?' and they say 'Because we did not observe the obligation sworn to the god of Ashur' " (IX, 68–72 in Streck 1916: 78–79; for an additional example see Weinfeld 1972a: 115).

The pattern which served a political need in the ANE came to serve a religious need in Israel. The religious use of this pattern was especially possible in Israel because the religion of Israel was the only religion that demanded exclusive loyalty to the God of Israel, a jealous God, who would suffer no rival. The religion of Israel therefore precluded the possibility of dual or multiple loyalties, such as were permitted in other religions where the believer was found in diverse relationships to many gods. So the stipulation in political treaties demanding exclusive loyalty to one king corresponds strikingly to the religious belief in one single, exclusive deity.

The idea of the kingship of God seems also to have contributed to the concept of Israel as the vassal of YHWH, the King. It is true that the idea of the kingship of God was prevalent all over the ANE (Frankfort 1948). There was, nevertheless, an important difference between the Israelite notion of divine kingship and the corresponding idea in other nations. Israel adopted the idea of the kingship of God a long time before establishing the human institution of kingship. As a result, for hundreds of years the only kingship recognized and institutionalized in Israel was the kingship of God. According to Israelite tradition (Crüsemann 1978 and Weinfeld 1981) during the period of the judges, YHWH was actually the King of Israel (Judg 8:23; 1 Sam 8:7; 10:19).

Because of the concept of the kingship of God, the relations between the people and their God had to be patterned after the conventional model of relations between a king and his subjects, a written treaty. It is no wonder, then, that the pattern of the vassal treaty found a permanent place in the Israelite religion; nor is it a coincidence that this treaty pattern was adopted in its entirety precisely by the book of Deuteronomy. The pattern of a state treaty based on the demand for exclusive allegiance is well suited to

a book in which the concept of the unity of God reaches the apogee of expression. Nicholson's skepticism about the ANE parallel to the covenant of God with Israel (1986) is based on a misunderstanding. The covenant of God with Israel is not to be paralleled to political pacts between states in the ANE but is to be compared with the loyalty oaths of vassals to their suzerains, as indicated above.

D. Composition and Structure

In spite of its apparent formal unity, the book is not a homogeneous piece of work. It has two introductions (1:1–4:40; 4:44–11:32), two different kinds of blessings and curses (27:11–13 with 28:3–6, 16–19, and the curses in the rest of chap. 28 [see below]). In addition we find appendixes of various kinds: the Song of Moses (32:1–33) and the Blessing of Moses (chap. 33) which are old poems ascribed to Moses and appended to the book by the editor of Deuteronomy. Similar appendixes were added by the Deuteronomic historiographer to the stories about David in the books of Samuel. The Song of David (2 Samuel 22) and his last prophetic blessing (2 Sam 23:1–7) were appended to the books of Samuel after they had assumed their basic structure (Weinfeld 1972a: 11–12). The Deuteronomic redaction of the Davidic stories ended the account of David's life with a farewell address (1 Kgs 2:3–4), which was incorporated in the old Davidic testament (1 Kgs 2:1–2, 5–9).

The Song of Moses (32:1–43) had been preceded by an elohistic introduction (31:16–22) which presented the song as a written prophetic *witness* (*ʿēd*) for the next generations when troubles might befall Israel as a result of violating the covenant. This stimulated the author of Deuteronomy to present also the Deuteronomic Torah as a prophetic *witness* for the future generations (32:26–29). Both the song and the Torah were said to be written by Moses (cf. 31:9 with 31:22) and taught by him to Israel (31:22; 32:46).

The composite nature of the book of Deuteronomy has been dealt with by many modern scholars, but no final solution has been reached. There is a general agreement in regards to chaps. 4:44–28:68. It is believed that these chapters constituted the original book, which was later supplemented by an additional introduction (1:6–4:40) and by variegated material at the end of the book (chaps. 29–30). The rest of the book is usually divided into two categories: (1) The Deuteronomic material dealing with the commissioning of Joshua (31:1–8), the writing of the Torah, its use in the future (31:8–13), the depositing of it at the ark (31:24–29; 32:45–47), and the death of Moses (chapter 34). (2) Ancient material appended to the book as indicated above such as the Song of Moses (32:1–43) with its elohistic introduction (31:14–23), the blessing of Moses (33:9–29), and the priestly passage in 32:48–52 which recaptures the priestly tradition about the death of Moses in Num 27:12–14 in order to connect it with chap. 34, the account of the death of Moses.

However, it should be recognized that chaps. 5–28 are also not homogeneous. The law code that constitutes the main part of the book was originally put into a framework of the ceremony of blessings and curses of Gerizim and Ebal. The theme of this ceremony appears at the opening of the code (11:26–32) and at its conclusion (26:16–27:26). This enclosure adds significance to the code of laws. The old Shechemite ceremony which is an act of foundation (Weinfeld 1988a) and which parallels the Gilgal tradition, which also has a ceremony of erecting monuments (Joshua 3–5), was linked by Deuteronomy to the covenant of the plains of Moab. Moses' proclamations about Israel becoming a nation "this day" (26:16–19; 27:9–10) are thus interwoven with the ceremony at Mts. Gerizim and Ebal. The first proclamation in Deut 26:16–19 comes before the command about the erection of the stones and building the altar at Ebal, while the second proclamation in 27:9–10 comes before the blessings and the curses at Gerizim and Ebal (27:11–26). By this combination the author makes it clear that the establishment of the people of Israel at the plains of Moab cannot be dissociated from the foundation ceremony at Mt. Ebal. Moses' farewell address in Deuteronomy is a kind of preparation for the ceremony at Gerizim and Ebal.

Deuteronomy 27 preserved a very old tradition about the establishment of the nation at Shechem, the capital of the house of Joseph. Foundation stories of the Greek world (Weinfeld 1988a) indicate that settlers whose colonization was based on divine instigation used to perform ceremonies accompanied by blessings and curses by writing the sacred laws on stelae and by building an altar and sacrificing. Deuteronomy 27 indeed revolves around the following elements: (1) erecting stones on Mt. Ebal in order to write upon them the words of the covenant (vv 1–4, 8); (2) building an altar and offering sacrifices on it

(vv 5–7); (3) the proclamation of the act of foundation (vv 9–10); and (4) blessings and curses (vv 11–13). In addition to these we find there curses for transgressors who perpetrate crimes clandestinely (vv 14–26). The blessings and curses in vv 11–13 actually refer to Deut 28:3–6, 16–19:

> Blessed shall you be in the city and blessed shall you be in the country. Blessed shall be the fruit of your womb, the fruit of your soil and the offspring of your cattle, the fruit of your herd, and the lambing of your flock. Blessed shall be your basket and your kneading bowl. Blessed shall you be in your comings and blessed shall you be in your goings.

Their reversal, i.e., the curses, occur in 28:16–19: "Cursed shall you be in the city …" That the ceremony of blessing and cursing on Mt. Gerizim and Mt. Ebal respectively refers to the series of blessings and curses in Deut 28:3–6, 16–19 was already observed by Ibn Ezra. It was also Ibn Ezra who saw that the curse proclamations in Deut 27:14–26 apply to transgressions perpetrated in secrecy.

It is indeed interesting that both types of public anathema—cursing the violators of the oath and banning transgressors—are attested in Greek amphictyonic oaths, concerning the temple of Apollo of Delphi. Thus, for instance, in the oath taken by the members of the amphictyony against Cirrha (the first "holy war," 590 B.C.E.) we read:

> If anyone should violate this, whether city, private man or tribe let them be under the curse … that their land bear no fruit; that their wives bear children not like those who begat them, but monsters; that their flocks yield not their natural increase; that defeat await them in camp and court and their gathering place.

(Aeschin. 3. 109–11)

Similarly in the Greeks' oath at Plataeia before the battle with the Persians (479 B.C.E.):

> If I observe what is written in the oath my city will be free of disease: if not it shall be sick …; and my [land] shall bear [fruits]: if not, it shall be barren; and the women shall bear children like their parents; if not they shall bear monsters; and the flock shall bear like the flock; if not [they shall be] monsters.

(Siewert 1972: 5–7)

These blessings and curses are strikingly similar to the series of blessings and curses in Deut 28:3–6, 16–19 quoted above.

As in the Greek oath at Plataeia, every blessing in Deut 28:16–19 has its corresponding curse. And the content of the series is identical with that of the Greek oath: fertility of the soil, women, and the flock. The element of coming and going in Deuteronomy is identical with the element of success and failure in camp, court, and agora in the Greek oath. Furthermore the element of sickness which occurs in the oath of Plataeia appears in an identical series of blessings and curses in the ancient epilogue to the Covenant Code in Exod 23:25–26:

> I shall remove illness from your midst. None will miscarry or go barren in your land.

This is elaborated in Deut 7:13–15 in a chapter which depends on the peroration of Exod 23:25–26. The passage in Deuteronomy reads:

> He will bless the fruit of your womb and the fruit of your soil … the increase of your herds, and your flock of sheep … there will be neither male nor female barren among you and your livestock and YHWH will remove from you all sickness.

To all appearance, this genre of blessings and curses has its origin in the tribal confederation based on covenant; hence the similarity to the blessings and curses of the amphictyonic oaths in Greece. The stereotyped series of blessings and curses in Deut 28:3–6, 16–19 thus belongs to the ancient Shechemite covenant ceremony which is elaborated by the Deuteronomic author of 28:7–14, 20–69. These Deuteronomic expansions have a lot in common with the Assyrian and Aramaic treaties of the 8th–7th centuries B.C.E. and thus are clearly later than the short stereotypic blessings and curses which have their parallels in the Greek tribal milieu.

The "curses" in 27:14–26 represent a different genre. These are not threats of punishment as are those in 28:16–19, but legal proclamations accompanied by a curse and addressed to those who commit crimes clandestinely which cannot be punished by the authorities. Such "curses" are also attested in the Greek tribal culture. In Greece those who violated the law were *eparatos*, "accursed." So, for example, it is

related of Alcibiades (Plut. *Alc.* 22) that he was found liable at law for desecrating the sacra of Demeter. After placing his property under the "ban," his judges decided that the priests and priestesses should curse him. Aristides is said to have suggested that the priests should cast curses on anyone who abandoned the war treaty with the Greeks (Plut. *Arist.* 10). As in Greece so in Israel it is the sacred group (the Levites) who have the authority to "revile," i.e., excommunicate, the transgressors.

However, early Israel's affinities to the Greek tradition are most clearly expressed in the foundation ceremony found in Deuteronomy 27. As indicated above, oath taking, erecting stones during foundation ceremonies, inscribing sacred laws on stelae, and building altars and sacrificing on them are attested in Greek colonization. Indeed, the Greeks as well as the Israelites had elaborate foundation traditions. Israel nurtured divergent traditions about their first settlements in the land. Besides the Shechemite tradition recounted in Deuteronomy 27, we find other versions describing foundation ceremonies linked to other places. According to a cycle of traditions crystallized at Gilgal, the children of Israel crossed the Jordan at Gilgal and erected stones there (Joshua 3–4). Instead of a written covenant, we find there the ceremony of circumcision, which is considered the sign of the covenant in Genesis 17, and the celebration of the Passover, which is the oldest ritual connected with the Exodus. The mentioning of Gilgal in Deut 11:30 in connection with the ceremony of Gerizim and Ebal might be a reflection of the divergent Benjaminite tradition about the foundation of Israel at its beginning.

In light of all this, it is clear that two different traditions are combined in chaps. 27–28. Deut 27:1–26; 28:3–6, 16–19, although slightly reworked by the Deuteronomic author (Weinfeld 1972a: 164–277), constitute an ancient Shechemite tradition of the premonarchic period, while 28:7–14, 20–68 reflect the neo-Assyrian period. The neo-Assyrian period is also reflected in Deut 29:9–28. The scene of the covenant in vv 9–14 resembles the Josianic covenant in 2 Kgs 23:1–3 and also the neo-Assyrian covenantal gatherings (see above), while the punishment for violation of the covenant in vv 19–28 has much in common with the Neo-Assyrian loyalty oaths to the Assyrian king (Weinfeld 1972a: 114–16). It seems that the exile referred to in 29:27 reflects the fall of the N kingdom, which serves as an example for the punishment of Judah in case of a violation of the covenant.

E. Deuteronomy and the Deuteronomic Historiographer

According to M. Noth (*ÜgS*, 12–18) Deuteronomy is a part of the Deuteronomic historiography which started with Deut 1:1 and concluded with 2 Kings 25. See also DEUTERONOMISTIC HISTORY. Deut 4:44–30:20, in his view, was incorporated en bloc by the Deuteronomic historiographer into his work. Deuteronomy 1–3 is, according to Noth, a historical account which has nothing to do with the code of law of Deuteronomy. Just as the book of Joshua is concerned with the conquest of the promised land in Cisjordan so is Deuteronomy 1–3 concerned with the conquest of Transjordan by Moses. Indeed, for the Deuteronomic historiographer, the beginning of the realization of the promise of the land is the crossing of the Arnon river (2:24–25) and not just the crossing of the Jordan as in the old conventional sources. Furthermore, Deuteronomy 1–3 is linked to 31:1–8 and both form a Deuteronomistic framework for 4:44–30:20. The central concern of this framework is the succession of Joshua. The commissioning of Joshua for the conquest of the land beyond the Jordan is repeated several times in Deuteronomy 1–3 (1:38; 3:21–22, 28) and appears as well in 31:3, 7–8 and this topic opens the book of Joshua. In Deuteronomy 1–3 and 31:1–8 we encounter the same phrases which occur in Joshua 1; compare especially the phrases in Josh 1:5–6, 7, 9 with those of Deut 1–3; 31:1–8: *ḥzq wʾmṣ*, "be strong and courageous" (Josh 1:9; Deut 3:28; 31:6, 7, 23); *ʾl tʾrṣ*, "have no dread" (Josh 1:9; Deut 31:6); *lʾ ʾrpk wlʾ ʾʿzbk*, "I will not fail you and not forsake you" (Josh 1:5; Deut 31:6, 8); *lʾ tyrʾ wlʾ tḥt*, "fear not and be not dismayed" (Josh 8:1; 10:25; Deut 1:21; 31:8); *ʾth/hwʾ tnḥyl/ynḥyl (hʾrṣ)*, "You/he [Joshua] will give the land as inheritance" (Josh 1:6, 7; Deut 1:38; 3:28; 31:7). By the same token the conquest of Transjordan by the two and a half tribes in Josh 1:12–18 corresponds to Deut 3:12–20, cf. especially Deut 3:18–20 with Josh 1:14–15.

The Deuteronomistic framework of the book should not be, however, limited to chaps. 1–3 and 31:1–8. Deut 4:1–40 and especially 4:25–31 correspond to Deut 30:1–10, 15–20. Both sermons foresee the repentance of Israel and the return to its land (4:25–31; 30:1–10). This is actually envisaged in the Deuteronomistic prayer ascribed to Solomon in 1 Kgs 8:44–53 (Wolff 1972).

One should, however, take account of the fact that chaps. 1–3, in spite of being historical in nature, are styled in the first person (as a discourse of Moses) just as are the other chapters of Deuteronomy. Besides, unlike the historiographic accounts of the Deuteronomist in Joshua 1:2ff. which mainly narrate events, chaps. 1–3 are homiletic in character and have much in common with the hortatory of chaps. 5–28. Thus we find here, as in chaps. 5–28, admonitions (cf. 1:26, 43 with 9:7, 23–24), examples of divine care (cf. 1:31 with 8:5), divine blessing (cf. 2:7 with 12:7, 14–24, 29; 15:4, 6, 10, 14, 18, etc.), and similes of different kinds, which are also found in the second introduction, such as "great numerous and tall" (cf. 1:28; 2:10, 21; 4:38 with 9:1–2; 11:23), "large cities fenced into heaven" (*ʿrym gdwlt wbṣrwt bšmym,* cf. 1:28 with 9:1), "it is forty years" (*zh ʾrbʿym šnh,* cf. 2:7 with 8:2, 4), "so much as foot can tread" (*mdrk kp rgl,* cf. 2:5 with 11:24). One must admit, therefore, that although Deuteronomy 1–4 is to be dated in the exilic period, that is the period of the crystallization of the Deuteronomistic literature, from the point of view of genre it belongs to Deuteronomy and not to the historiography of the Former Prophets.

F. "Singular" and "Plural" Layers

The composite nature of the book is recognizable not only in its framework but also in the code which forms the basic section of the book. Thus in chap. 12, two parallel sets of prescriptions about the centralization of the cult are found: vv 1–12 and 13–25. The two sets are distinguished by their styles: in the former the people are addressed mainly in the second person plural (exceptions: vv 12:1a, 7b) while in the latter the address in mainly in the second person singular (except v 24a). The distinction between the singular and plural addresses was observed and used as a criterion for establishing different layers in the book already in 1861 (Begg 1979). This theory was sytematically applied by W. Staerk (1894), by C. Steuernagel (1894; 1923), and later by G. Minnette de Tillesse (1962). Indeed one must admit that there are duplicates and overlapping in Deuteronomy which can be explained by the existence of two separate sources: "singular" and "plural"; compare Deut 6:7–9 with 11:18–20; 12:1–12 with 12:13-25. However, not all of the interchanges of second person singular and plural in Deuteronomy can be explained on literary-critical grounds. The change may simply be a didactic device to impress the individual or collective listener, or it may reflect the urge for literary variation. Certain changes in stylistic addresses can be explained by the supposition that an expression is being quoted (Begg 1980): e.g., 11:19b singular in a plural context which seems to be a quotation from 6:7b. Shifts from singular to plural and vice versa come often in order to heighten the tension, as the example in 4:19, where after the reference in singular to the apostate nations comes the address in plural to Israel which was chosen from other nations (v 20). The author shifts to plural in order to create a contrast between Israel and the nations.

The change in the form of address may be recognized also in the pre-Deuteronomic sources, such as Exod 22:21–23:

> A stranger shall *thou* not wrong, neither shall *thou* oppress him, for *you* were strangers in the land of Egypt … if *thou* dost afflict him … I will surely hear … his cry and my anger shall blaze forth and I will kill *you* with the sword …

The shift from plural to singular and vice versa is also found in the ANE covenantal documents, e.g., the Aramaic Sefire treaties III: 4, 16, 23: *šqrtm,* "*you* will trespass" and in the continuation III: 9, 14, 20 and 27: *šqrt,* "*thou* will trespass" (Fitzmyer 1967: 96–100). Even in places where the distinction between singular and plural forms of address seems to indicate layers like the repetition in chap. 12 (see above), there are still interchanges which cannot be explained by the literary-critical criterion. Repetitions are encountered within units of common style. Thus in the plural section of chap. 12, vv 11–12 repeat vv 4–7. Steuernagel considered these as two different sources and therefore maintained that there were three strands in the chapter. In truth a repetition appears also within the singular section itself: vv 15–16 = vv 20, 22–24; one may, therefore, postulate the existence of 4 layers in chap. 12.

Furthermore, within the plural sections of Deuteronomy 12, singular addresses may be found, as 12:1a and 7b, and vice versa the passage in singular (vv 13–25) contains an address in plural (v 16a). Similar inconsistencies are to be found in the parallel passage of 6:7–9, and in 11:18–20 a singular address is attested in 19b which might be seen as a quotation from 6:7b.

In some instances the verse would lose its sense completely if one isolates sources as, e.g., in 4:25: "when *thou* shall beget children and children's children and *you* shall be long established … in the land and *ye* shall act wickedly." The singular without the continuing plural does not make any sense. The singular of the first clause seems to be influenced by the previous verse, which is styled in singular.

In sum, although in some cases the interchange of singular and plural addresses may indicate the existence of different layers, in general the interchange reflects stylistic variations introduced by the same author.

G. Deuteronomy—The Archimedean Point of the History of the Pentateuchal Literature

1. Date of Deuteronomy. The existence of sources in the Pentateuch had been established since J. Astruc in 1753, but no clue for the dates of the composition of the sources had been found. The one who supplied the clue was W. M. L. de Wette in his work of 1805. Trying to trace the historical circumstances underlying the book of Deuteronomy, de Wette found a correspondence between the reforms of Hezekiah and Josiah and the legislation of Deuteronomy. Hezekiah was the first to centralize worship in Israel (2 Kgs 18:4, 22). Before the time of Hezekiah, places of worship throughout the land were considered indispensable for the religious life of Israel, so that, for Elijah, destroying altars of YHWH was tantamount to slaying his prophets (1 Kgs 19:10, 14). On the other hand, in the legislative literature in Israel the demand for cult centralization occurs for the first time in Deuteronomy. This book would therefore be a model or inspiration, or a reflection of them, for reforms of Hezekiah and Josiah. These reforms are reflected in Deuteronomy not only in the law of centralization but also in: (1) the prohibition against pillars in the worship of YHWH (16:22), which according to the older sources is legitimate and even desirable (Gen 28:18; 35:14; Exod 24:4; Josh 24:26); (2) the references to "astral worship" (*ṣbʾ hšmym*, Deut 4:19; 17:3), which is not mentioned in the earlier parts of the Pentateuch and seems to have been introduced into Judah through Assyrian influence in the 8th century B.C.E. (Weinfeld 1972b: 133–54); (3) the correspondence between the manner of celebrating Passover in the days of Hezekiah (2 Chronicles 30) and Josiah (see below) and the prescription in Deut 16:1–8. According to 2 Kgs 23:22, Passover had not been celebrated in such a manner since the times of the judges.

No less important for the date of Deuteronomy is the unique style of this book, both in its phraseology and manner of discourse (rhetoric). Style such as that was not found in any of the historical and prophetic traditions before the 7th century B.C.E. Conversely, from the 7th century onward almost all of the historical and the prophetical literature is permeated by this style. Theologically and stylistically Deuteronomy has become the touchstone for dating the sources in the Pentateuch and the historical books of the Old Testament. The legal codes which do not presuppose centralization of cult must therefore be from pre-Hezekianic times. On the other hand, the editorial passages of Kings which evaluate the kings of Judah in accordance with their observance of centralization of cult, and the passages in Joshua and Judges which are styled in Deuteronomic phraseology, cannot be from before the time of Hezekiah. An objective clue has thus been established for fixing the date of the editorial part of the historic literature.

A new dimension has been added to the dating of Deuteronomy by the discovery of the vassal treaties of Essarhaddon (= VTE) of the year 672 B.C.E. Many affinities between VTE and the Deuteronomic covenant have been established (see C. above) and these support the dating of Deuteronomy in the 7th century B.C.E.

2. The Book of Law (Torah). The term "Book of the Law" (*seper hattôrâ*) as a sanctified authoritative work which contains all the divine law is encountered for the first time in Israel's history in the account of the reform of Josiah (2 Kings 22–23). In the Pentateuch the term is attested only in Deuteronomy (17:19–20; 28:58; 29:19; 31:11–12) and from here it passed to the Deuteronomistic editorial framework in the Former Prophets (Josh 1:8; 8:34; 23:6; 2 Kgs 14:6). There it is also designated as "the book of law of Moses" (*seper tôrat Mošeh,* Josh 8:31; 23:6; 2 Kgs 14:6). Deuteronomy is, in fact, the only book of the Pentateuch to be ascribed to Moses (Deut 31:9) and the first book to have been sanctified publicly (2 Kgs 23:1–3). Only after the other books were appended to Deuteronomy was the term "Torah" applied to the whole Pentateuch. In the Tetrateuch the term "Torah" designates specific instructions such as "the Torah of the burnt offering/meal offering/sin offering" (Lev 6:2; 7, 18), "the Torah of the guilt offering/well-

being offering" (Lev 7:1, 11), "the Torah of the woman in confinement" (Lev 12:7), "the Torah of the leprosy/leper" (Lev 13:9; 14:2, 32, 54), "the Torah of jealousy" (Num 5:29), and "the Torah for the Nazirite (Num 6:13, 21), cf. also the *tôrôth* as general instructions in Gen 26:5; Exod 16:28; 18:20; Lev 26:46. The transition from Torah as a specific instruction to the sacred "Book of the Torah" of the Josianic period marked a turning point in Israel's spiritual life. The ritual instructions which were kept in priestly circles were written by scribes and wise men (Jer 8:8) and became part of the national lore. This enabled the transfer of the Torah from the priest to the scribe and the sage, as was the case in the Second Temple period. Indeed Ezra, who introduced the Book of Torah into Judah of the Second Temple period, functioned as a scribe (*sôpēr*) (Ezra 7:6, 11, 12; Neh 8:1, 4, etc.). In spite of being a priest, he is named scribe and he performs his religious functions as such. But one should keep in mind that Ezra's function as "scribe of the Torah" (Ezra 7:6, 11) is not a new phenomenon in Israel's life, as H. N. Schaeder (1930) contends, but rather an intensification of the process already started at the time of Josiah. It was the sanctification and publication of "the Book of the Torah" in the time of Josiah that gave rise to scribes with the ability and competence to handle Scripture. Although the real turning point in Torah teaching took place in the period of the Second Temple, it had its roots in the time of Josiah when the process of canonization of Scripture started.

There is a further analogy between Josiah and Ezra. Josiah enforced the law of the "Book of the Torah" both by his royal authority and by means of a pledge taken by the people (2 Kgs 23:1–3). Likewise in the period of Ezra and Nehemiah "the law of Moses" was enforced both on behalf of the Persian crown (Ezra 7:12–26) and on the authority of a pledge, to which the people had agreed in a formal ceremony (*ʾămānāh,* Nehemiah 10).

3. The Discovery of the Book of the Torah. The discovery of ancient sacred documents in a temple was always a thrilling event. Thus we read in the Hittite accounts of the 14th–13th centuries B.C.E. that King Muwatalli presents a prayer of confession for negligence in observing the laws of divinity, as written in the law of covenant (*išḫiul*) in the ancient scripture, and promises to do his utmost to rediscover the written covenant of the gods, and to fulfil it:

> Whatever I … now find from written records, this I shall carry out and [what] I have [not] brought into correspondence with the ceremonial rites (*šaklai*) of the gods, you, O storm-god, my lord, know it. And whenever I shall examine (*punušk-*) a venerable old man, as they remember a (certain) rite and tell it, I shall also carry it out … I shall follow the (covenantal) bond (*išḫiul*) of the gods that I am rediscovering, and it shall be henceforth carried on.

(*KB* xi, 1)

The written instructions of the gods which the king is to rediscover are defined here as *išḫiul*, which like Hebrew *bĕrît* represents the covenantal law imposed on the people.

Furthermore, just as Josiah, king of Judah, in the 7th century B.C.E., when he rediscovers the ancient law, promises to fulfill it and asks for forgiveness for the violations of the covenant written in the rediscovered book (2 Kgs 22:13), so also does Muwatalli, saying "I ask for forgiveness of the sin of the country."

Very instructive from the point of view of comparison with Hebrew traditions is the king's declaration that he will carry out whatever had been referred to him through the recollection of a venerable old man. This corresponds to the tradition preserved in the Mishnah tractate of *Eduyyot* concerning the collection of testimonies given by sages on legal matters and not attested to in the conventional written lore.

H. Deuteronomy as Turning Point in Israelite Religion

The Josianic reform revolutionized all aspects of Israelite religion. The centralization of the cult was in itself a sweeping innovation in the history of the Israelite cult, but its consequences were, as we shall see, decisively more revolutionary in nature, in that they involved the collapse of an entire system of concepts which for centuries had been regarded as sacrosanct. The elimination of the provincial cult made possible the transformation of Israel's religion into a religion which minimized external expression. Indeed the very purpose of the book of Deuteronomy was to curtail and circumvent the cult and not to extend or enhance it. The Deuteronomic conception of cult is, as we shall show, vastly different from that reflected

in the Tetrateuchal sources. It represents a turning point in the evolution of the faith of Israel. Let us start with the concept of the divine abode.

Deuteronomy defines the sanctuary as "the place where YHWH chose to cause *his name* to dwell there." It has been rightly observed (von Rad 1953: 38–39) that the expression "to cause his name to dwell" (*lškn šmw*) reflects a new theological conception of the Deity and that the repeated consistent employment of this and similar expression (*śwm šmw*; *i hyh šmw*; *qrʾ šmw*; *bnh lšmw*; *hqdyš lšmw*) by the author of Deuteronomy and his followers is intended to combat the ancient popular belief that the Deity actually dwelt within the sanctuary. The Deuteronomic school used this "name" phraseology in a very consistent manner and never made the slightest digression from it. There is not one example in the Deuteronomic literature of God's *dwelling in the temple* or the building of a *house of God.* The Temple is always the *dwelling of his name* and the house is always built *for his name.* This consistency is seen most clearly when a Deuteronomic text is interwoven with an earlier text which does not know the "name theology." Thus, for example, in the authentic part of Nathan's prophecy the main issue is the building of a house for God's dwelling (*lšbtw,* 2 Sam 7:5, 7) while the Deuteronomist (v 13a) (Driver 1913: 276 n. 1.; McCarter *2 Samuel* AB, 205–6) speaks about building a house for *his name.* Similarly the building account of the Temple and the ancient story of the dedication of the Temple speak plainly about building a house for God (1 Kgs 6:1, 2; 8:13) while the Deuteronomist, whenever he mentions the building, describes it as being built "for the name of God" (1 Kings 3:2; 5:17, 19; 8:17, 18, 19, 20, 44, 48).

The most definite expression of this theology is to be found in the Deuteronomic litany of Solomon in 1 Kings 8. According to the Deuteronomistic prayer (vv 14–69), the Temple is not God's place of habitation but serves only as a house of worship in which Israelites and foreigners alike may deliver their prayers to the God *who dwells in heaven*. The idea that God's habitation is in heaven is here expressed most emphatically in order to eradicate the belief that the Deity sat enthroned between the cherubim in the Temple. Whenever the expression "your dwelling place" (*mkwn šbtk*) is employed, it is accompanied by the word "in heaven" (vv 30, 39, 43, 49). The Deuteronomist is clearly disputing the view implied by the ancient song that opens the prayer (vv 12–13) and designates the Temple as God's exalted house (*byt zbl*) and a dwelling place (*mkn šbt*) forever. The Deuteronomist in the prayer ascribed to Solomon appended consistently to the expression *mkwn šbtk* the word "in heaven" (*hšmym*) in order to inform us that it is heaven which is meant here and not the Temple as the ancient song implies. In actual fact, however, the term "your dwelling place" (*mkwn šbtk*) in early sources as well as in Solomon's song (vv 12–13) denotes the sanctuary and it is the Deuteronomist who is here attempting to alter this meaning and thereby wrests the song from its original sense.

The theological corrective, i.e. the addition of "heaven" to the phrase "holy habitation," occurs in Deuteronomy itself. In Deut 26:15 the Israelite in his prayer says: "Look down from your holy habitation [*mʿwn qdšk*], from heaven." The words "from heaven" seem to be an explanatory gloss intended to prevent misconstruing the expression "holy habitation" as referring to the sanctuary. Indeed, the fact that the earlier, prevailing conception was that God's habitation (*mʿwn*) was in Zion may be inferred from Ps 76:3: "His abode has been established in Šalem, his habitation [*mʿwntw*] in Zion." This abstract view of the heavenly abode is also reflected in the Deuteronomic account of the Sinaitic revelation. In contrast to the account in Exodus 19 of God's descent upon Mt. Sinai (19:11–20) we read in Deut 4:36 "Out of heaven he let you hear his voice … and on the earth he let you see his great fire and you heard his words out of the midst of the fire." Deuteronomy has, furthermore, taken care to shift the center of gravity of the theophany from the visual to the aural plane. In Exodus 19, the principal danger confronting the people was the likelihood that they might "break through to the Lord to gaze" (v 21); it was to prevent this that there was need to "set bounds for the people round about" (v 12) and to caution them not to ascend the mountain. Indeed, the pre-Deuteronomic texts always invariably speak of the danger of seeing the Deity: "For man shall not see me and live" (Exod 33:20) and similarly in Gen 32:31: "For I have seen God face to face, and yet my life is preserved" (cf. Judg 13:22; Isa 6:5). The book of Deuteronomy, on the other hand, cannot conceive of the possibility of seeing the Divinity. The Israelites saw only "his great fire" which symbolizes his essence and qualities (4:24: "For YHWH your God himself remains in his heavenly

abode"). The danger threatening the people here, and the greatness of the miracle, is that of hearing the voice of the Deity: "Did any people even *hear* the voice of a god speaking out of the midst of the fire as you have *heard*, and survived?" (4:32; cf. 5:23).

This attempt to eliminate the inherent corporality of the traditional imagery also finds expression in Deuteronomy's conception of the ark. The specific and exclusive function of the ark, according to the book of Deuteronomy, is to house the tables of the covenant (10:1–5). No mention is made of the ark cover (*kprt*) and the cherubim which endow the ark with the semblance of a divine chariot or throne (cf. Exod 25:10–22 = P). The holiest vessel to the Israelite cult, in the Deuteronomic view, performs nothing more than an educational function. It houses the tablets upon which the words of God are engraved and at its side is laid the Book of the Torah, from which one reads to the people so that they may learn to fear the Lord (Deut 31:26; cf. vv 12 and 13). The ark does not serve as God's seat upon which he journeys forth to disperse his enemies (Num 10:33–36), but only as the vessel in which the tables of the covenant are deposited. This becomes quite clear when we compare Deut 1:42–43 with Num 14:42–44, a tradition on which the Deuteronomic account is based. In Num 14:44, we read that after the sinful incident of the spies "the ark of the covenant of YHWH departed not out of the camp" and this was the reason for the Israelites' defeat in their subsequent battle with the Amalekites and Canaanites. The Deuteronomic account, on the other hand, completely omits the detail of the ark and ascribes the Israelite defeat to the fact that God was not in their midst without referring to the whereabouts of the ark.

The author of Deuteronomy similarly relates that it was God who went before the people to seek out new resting places (1:33), whereas the earlier source, upon which Deuteronomy depends, relates that it was the ark which journeyed forth before the people to seek out new resting places for them (Num 10:33). The absence of the ark is especially striking in the Deuteronomic law of warfare (23:15). One would expect a passage which speaks of the presence of the Divinity within the military encampment to make some mention of the ark which accompanies the warriors on their expeditions, as in 1 Sam 4:6–7, "And when they learned that the ark of YHWH had come to the camp … they said, the gods have come into the camp." The Deuteronomic law, however, speaks of YHWH as moving about the camp (23:15), but does not make the slightest allusion to the ark or the holy vessels.

A similar conception is encountered in the book of Jeremiah, for instance at 3:16–17, "They shall say no more: 'The ark of the covenant of YHWH.' It shall not come to mind … At that time Jerusalem shall be called the throne of YHWH." In other words, the ark of the covenant shall no longer serve as God's seat, as the people were previously accustomed to believe, but all of Jerusalem shall be "the seat of YHWH," that is in a symbolic sense.

In another passage the prophet declares: " 'Do I not fill heaven and earth?' says the Lord" (23:24). This reminds one of the words of Deutero- (or Trito-) Isaiah when he expressly repudiates the notion of the sanctuary as the place of God's habitation: "Heaven is my throne and the earth is my footstool, what is the house which you build for me? and what is the place of my rest?" (66:1). This view is also met within the Deuteronomic prayer of Solomon: "Behold, heaven and the highest heaven cannot contain thee; how much less this house which I have built" (1 Kgs 8:27). The sanctuary is here conceived as a house of prayer and not as a cultic center. This tendency to minimize the cult is manifest in the book of Deuteronomy and signifies a religious turning point which occurred following the abolition of the high places and the provincial sanctuaries.

The first thing that strikes our attention when endeavoring to grasp the significance of sacrifice in the book of Deuteronomy is that we do not find sacrifice practiced for its own sake. The Deity, in the Deuteronomic view, has no need of the "pleasing odor," (*ryḥ nyḥḥ*) of sacrifices and no mention is made of the "food of God," which is amply attested in the Priestly Code (Lev 1:9, 13, 17; 21:6, 8, 17, 21). Neither is there any mention of the sin-and-guilt offerings designed to atone for involuntary sins, ritual impurity, perjury, theft, and deception (Leviticus 4–5). The author's view seems to be that spiritual purification and repentance—consisting of confession and prayer—and not sacrificial offerings expiate sin. The sole instance in which the book of Deuteronomy does mention a rite analogous in character to the sin-and-guilt offering is in the law of unsolved murder (Deut 21:1–9). Yet interestingly enough it is

precisely this law which reflects Deuteronomy's special attitude toward sacrifice. The rite conducted here does not consist of a sacrificial offering complete with ceremonial slaughter and blood sprinkling, but calls only for the breaking of the heifer's neck in an uncultivated valley. The priests are present during this act, not because they play any part in the execution of the ritual, for this is carried out entirely by the elders, but merely to guarantee the religious aspect of the ceremony by presiding over it. The entire act has a symbolic value: the heifer's neck is broken at the scene of the crime, as it were, and the elders cleanse their hands only as a purificatory expression of their innocence (Pss 24:4; 26:6–10; 73:13; etc.). There is no laying of the hands on the heifer nor a transference of the sin to it as in the case of the ritual scapegoat (Lev 16:21), because its beheading as such does not atone for the sin; expiation is effected only by the confession and prayer uttered at the close of the ceremony (vv 7–8). It is true, the custom itself originated in a rite of elimination (Wright 1987), however, in the present formulation nothing is said about removal of impurity or sin by the priest as in Lev 14:53, 16:22, or about transferring the evil to the open country as in Lev 16:22 and in the Mesopotamian incantations (Wright 1987). In this rite, God absolves the sin himself without recourse to any intermediary; whereas in P all expiatory sacrifices are executed by the priests, whose mediation alone effects the expiation of the sin (cf. the common priestly expression in the book of Leviticus: "and the priest shall make atonement for him"). In the Deuteronomic law, atonement is possible only through the confession of the elders of the city, who, as representatives of the guilty city, beseech absolution through prayers; in P expiation is effected through ritual sacrifice and incense burning which are mostly not accompanied by prayer on the part of the penitent.

Deuteronomic sacrifice consists primarily of offerings which are consumed by the offerer in the sanctuary and are designed to be shared with the poor, the Levite, the alien resident, the orphan, and the widow. The constant emphasis on the obligation to share the sacrificial repast with indigent persons creates the impression that the principal purpose of the offering is to provide nutriment for the destitute elements of Israelite society. The author of Deuteronomy alludes to this himself when, after prescribing that the joyful nature of the festival be shared with the *personae miserabiles,* he goes on to say: "You shall remember that you were a slave in Egypt; and you shall be careful to observe these statutes" (16:22). It is indeed remarkable that the very book which promulgates the law of centralized worship at the "chosen place" has not so much as a word to say about the presentation of communal sacrifices (the daily and seasonal offerings) which constituted the principal mode of worship at this exclusive sanctuary.

Sacrifice according to Deuteronomy is not an institutional practice but a personal one, which has two principal objects: (a) a humanitarian—to share the sacrificial repast with the poor, as noted above; (b) a private—to fulfill a religious obligation and express one's gratitude to the Deity by means of votive offerings (12:6, 11, 17, 26; 23:22–24). God has no need of the sacrifice itself; it is only an expression of gratitude to the Deity, and this constitutes its entire significance. We may perhaps note in passing that the expression *šlm ndr,* "to pay a vow," found in Wisdom Literature (Prov 7:14; Eccl 5:4) is not found in any book of the Pentateuch except Deuteronomy (23:22).

The same attitude is revealed in the only passage in Deuteronomy (12:27) that describes the manner in which the sacrifice is to be offered. The verse differentiates between nonburnt offerings and burnt offerings (*ʿwlh*), and ordains that the flesh and blood of the burnt offering be offered up entirely on the altar, whereas the blood of the nonburnt is to be poured upon the altar and the meat eaten. It is most surprising that the author makes no mention of the burning of the suet, the fat piece which is set aside for God and which thus renders the meat permissible for priestly and lay consumption (1 Sam 2:12–17).

Sacrifice, however, is not the only rite to be conceived differently by the book of Deuteronomy, for all laws pertaining to cult and ritual are here conceived more rationally than in the earlier sources. This is particularly evident in the laws contained in chaps. 12–19, laws which are a direct consequence of the implementation of cult centralization and form the legal basis of the religious reformation. These laws clearly mirror the change in religious beliefs and attitudes which occurred in the wake of the reform.

Chapter 12 promulgates the law of centralized worship at the chosen place, but alongside this law or as a result of it, we find the authorization permitting nonsacrificial slaughter. Whereas before the reform all slaughter—except that of game animals—was deemed to be a sacral act and was prohibited even for

nonsacrificial purposes unless the blood was sprinkled upon the altar (Lev 17:1–7; cf. 1 Sam 14:32–35), it was now permissible to perform nonsacrificial slaughter without being obliged to sprinkle the blood upon an altar (Deut 12:15, 16, 20–24). It need hardly be said that the sanctioning of profane slaughter freed a significant aspect of Israelite daily life from its ties to the cultus. The more crucial import of the law, however, is that by sanctioning nonsacrificial slaughter it repudiates the hallowed Israelite dogma which ascribed a sacral quality to the blood and prohibited one from pouring it upon the ground. According to the Priestly Document or, to be more precise, the Holiness Code, the blood of slaughtered animals potentially valid for sacrifice must be sprinkled upon the altar, whereas the blood of game animals—which are invalid for sacrifice—must be covered with dust (Lev 17:13): for all spilt blood, even of fowl and beasts of prey, cries out for vengeance and satisfaction, and if the shedding of blood cannot be atoned by offering it upon the altar, then it must be covered up. Uncovered blood begs, as it were, for an avenger (Job 16:18, "O earth, cover not my blood …" cf. Isa 26:21; Ezek 24:7–8), a role which, in the case of homicide, is assumed by the Deity. The author of Deuteronomy, on the other hand, declares that the blood of all animals slaughtered for nonsacrificial purposes may be poured upon the ground like water (12:16 and 24), thereby asserting that blood has no more a sacral value than water has. He does, to be sure, retain the interdiction on the eating of blood (cf. Deut 12:23 with Gen 9:4; Lev 17:11), but he absolutely repudiates the concept that the spilt blood of animals requires satisfaction.

The book of Deuteronomy also contains a less sacral conception of the tithes than the other Pentateuchal sources. The tithe, which the Priestly Document designates as "holy to the Lord" (Lev 27:30–33), and which according to a second tradition accrues to the Levites (Num 18:21–32), remains by Deuteronomic legislation the property of the original owner (14:22–27). Furthermore, it may be secularized and employed for profane purposes on payment of its equivalent monetary value (without the addition of the fifth part required by P [Lev 27:31]). This provision seems to be yet another expression of the liberation of the cultus from its intimate ties to nature. The sanctity of the tithe is not conceived as an inherent quality of the grain or animal, as in the Priestly Document (Lev 27:30–33); for it is man who consecrates it and may, if he wishes, secularize it through redemption. In the Deuteronomic view, sanctity is not a taboo that inheres in things which by nature belong to the divine realm but is rather a consequence of the religious intentions of the person who consecrates it.

Like the tithe, the firstling is also taken from the possession of the priest and is restored to the owner. According to JE (Exod 22:29; 34:19) and P (Num 18:15–17) the firstling is "holy to YHWH" whether it is given to the Lord (Exod 22:29) or presented to his servants (i.e., the priests, according to P, Num 18:17–18), while according to Deuteronomy it remains in the possession of its original owner, although he is obliged to consume it at the chosen place. Indeed, it is the law of the firstlings which informs us of the author's negative attitude toward holy taboo. In the earlier laws the regulations pertaining to the redemption of the firstlings of clean animals are always accompanied by regulations concerning the firstborn of humans and the firstlings of unclean animals (Exod 13:2, 12, 15; 22:28–29; 34:19–20; Lev 27:26–27; Num 18:15–18). The book of Deuteronomy, however, omits the laws of the human firstborn and the firstlings of unclean animals, because these regulations in no way advance its humanitarian purposes (the participation of the *personae miserabiles* in the consumption of the firstlings), and because they are based on mythical and magical conception which the author of Deuteronomy does not share.

The severance of these laws from the realm of myth and magic finds its clearest expression in the Deuteronomic ordinances concerning the paschal sacrifice. According to the JE and P documents, the paschal sacrifice is a domestic celebration accompanied by apotropaic rites of an animistic nature: the paschal blood is daubed upon the lintel and doorposts (Exod 12:7 [= P], 22 [= JE]), the animal must be roasted together with its head, legs, and inner parts (Exod 12:11). In the Deuteronomic law, however, not the slightest reminiscence of these magical prescriptions has been preserved. The paschal ritual has instead been converted into a communal sacrifice which must be offered up at the central sanctuary like all other sacrifices. The paschal offering—which is the most ancient sacrifice in Israel's tradition and which apparently originates from the tribes' former nomadic life—succeeded in preserving its early primitive character until it was here divested of its original import and recast in a form more consistent

with the spirit of the times. Even the earliest features of the sacrifice, such as the requirement that it be selected only from sheep or goats, or that it be roasted by fire—which attest to the nomadic origin of the ritual—have been completely obscured by the Deuteronomic law. The new provision allows the Israelite to select the animal from cattle as well as sheep and goats (Deut 16:2) and permits it to be cooked like any other ordinary sacrifice (v 7).

I. The National Renaissance at the Times of Hezekiah and Josiah

After the fall of Samaria, Hezekiah, king of Judah, made efforts to draw the northern population toward Jerusalem, as may be learned from 2 Chronicles 30. Although the book of Chronicles is a tendentious work we have no right to see the events themselves as fiction. The flow of northerners to Jerusalem in those days is now attested archaeologically. At the end of the 8th century B.C.E., Jerusalem underwent an expansion never encountered before; the same applies to the territory of Judah. As shown by Avigad (1980: 23ff.), Jerusalem of that time included the western hill of the city, now the Jewish quarter. By the same token, the settlement of Judah grew immensely at this period and the population doubled (Kochavi 1972: 20–21). The only explanation for this situation is that after the fall of the N kingdom Israelites began to migrate to the S to the territories under the control of their brethren (Broshi 1974: 23–26). People from the N were attached after the fall of the N kingdom to Jerusalem and its cult. This appears evident from the fact that after the destruction of the Temple of Jerusalem, people from Shechem, Shiloh, and Samaria made pilgrimages to the Temple site (Jer 41:5). It seems that in this period, the hatred between Judah and Israel vanished and some kind of symbiosis of the sister nations was established. This is reflected perhaps in Isaiah's consolation oracle of this time:

> Ephraim's jealousy shall vanish and Judah's enmity shall end, Ephraim shall not envy Judah and Judah shall not harass Ephraim.
> (11:13)

In the continuation of this oracle we read about the expansion of Israel and Judah toward the Philistine territory in the W on the one hand and Ammon, Moab, and Edom in the E on the other (v 14). The period of Hezekiah was indeed a period of great expansion. In 2 Kgs 18:8 we hear about Hezekiah overrunning Philistia as far as Gaza and, from 1 Chr 4:41–43, we learn about his incursion toward Seir in the S. It is this period that "the remnant of Israel … and the house of Jacob" return to the Lord and to "mighty God" (*ʾl gbwr*); this equals "Hezek-iah" and seems to allude to King Hezekiah (Isa 10:20–21). As has been recently seen by H. Cazelles (1982), the remnant which returns (*šʾr yšwb*) represents the Israelites from the N who join Judah and accept the authority of Hezekiah, styled—among other things—"El Gibbor" (cf. Isa 9:5). The same imagery is found in Micah 5:1. Micah speaks about the youngest of the clans of Judah, who will rule Israel (5:1–2). This rectifies the earlier situation when Judah was cut off from the other tribes (Deut 33:7: "Hear, O Lord, the voice of Judah and bring him back to his people"). Micah goes on to say that the leader of Judah "will stand and shepherd by the might of YHWH … Assyria with the sword" (vv 4–6). This suits Hezekiah, who rebelled against the king of Assyria and expanded the territory of his kingdom (before the invasion of Sennacherib).

This period of national revival may explain the nationalistic and patriotic atmosphere prevailing in Deuteronomy and Deuteronomic literature. The book of Deuteronomy abounds with military speeches aimed at strengthening the people in their future wars with their enemies (Weinfeld 1972a: 45–59). These in fact reflect the national fervor of the times of Hezekiah-Josiah. Remarks such as "be strong and courageous" (*ḥzq wʾmṣ*), "no man shall be able to stand against you" (*lʾ ytyṣb ʾyš bpnykm*), "every spot on which your foot treads shall be yours," and "YHWH your God will put the dread and the fear on you over the land in which you set foot" (11:24–25) seem to express the national enthusiasm of the period of Hezekiah-Josiah. I refer to the Hezekianic or Josianic period because it is very hard to date the various layers of Deuteronomic literature. Since the book of Deuteronomy was discovered in the days of Josiah (622 B.C.E.) we must suppose that the main layout of the book was existent long before that time—that is, at the time of Hezekiah. However, we still do not know what belongs to later Josianic elaboration and what existed before.

The idea of the ban on all Canaanite population also seems to have crystallized at this time. According to the book of Deuteronomy, the Israelites are commanded to exterminate all the Canaanites and not to leave a soul of them living (Deut 7:1–2; 20:16–17). Such a policy, obliging the extermination of the whole population of the land whether fighting or passive, is utopian and is indeed unheard of in the historical accounts of Israel. On the contrary, from 1 Kgs 9:21 we learn that the Israelites were unable to annihilate the inhabitants of Canaan, and Solomon subjected them to corvée labor. The command of ban (*ḥerem*) of all the Canaanites in Deuteronomy is a utopian program which reflects the bitter struggle with the Canaanite religion and culture ongoing from the time of Elijah until the time of Josiah. Indeed the reason for the annihilation of the Canaanites in Deut 20:18 is one of *Kulturkampf:* "lest they [the Canaanites] lead you into doing all the abominable things that they have done for their gods and you shall be sinful to YHWH your God." One should acknowledge that the *ḥerem* as such was practiced in ancient Israel as elsewhere in the ancient world. It is found in connection with Jericho (Josh 6:17), Amalek (1 Samuel 15) and is also applied to apostate or treacherous cities within Israel such as the city condemned for idolatry in Deut 13:16 and the cities of Benjamin which were banned because of the sin of Gibeah (Judg 20:40, 48). It seems that Deuteronomy adopted the ancient doctrine of *ḥerem* from the North (cf. also 1 Kgs 20:42) and applied it theoretically toward the seven nations of the land of Canaan. The original *ḥerem* referred to hostile cities, banned by means of votive proclamations (Josh 6:17; Num 21:2–3), whereas Deuteronomy conceived *ḥerem* as an automatic decree which applied to a whole country and its inhabitants. This sort of *ḥerem* is not dependent on any vow or dedication, but is an a priori decree which belongs more to theory than to practice.

The national patriotic attitude of Deuteronomy may also be recognized in its conception of the extent of the promised land. According to the ancient sources of the Pentateuch and, especially, the list of boundaries in Num 34:1–15, Transjordan was not part of the land of Israel. The request of the Gadites and Reubenites to settle in Transjordan was considered by Moses as a sin (Num 32:14), and from Josh 22:19 we may deduce that Transjordan was considered "impure land." The stories of the Conquest in Joshua 2–9 also make it clear that the Conquest started with the crossing of the Jordan. The passage of the Jordan and the erecting of the stones at Gilgal actually commemorate the entrance into the promised land (Josh 3:10; 5:1 etc.). This old conception about the Jordan being the border of the land was not accepted by Deuteronomy. According to Deuteronomy 1–3, the Conquest of the land started with the crossing of the river Arnon (Deut 2:24) at the border between Moab and the Mishor, the territory of King Sihon. In accordance with this view, the Israelites apply the law of *ḥerem* to these territories (2:34; 3:6) just as they are commanded to do to the peoples of the western side of the Jordan (Deut 20:16–17). The conquered territories of the eastern side of the Jordan are divided among the tribes as are the other parts of the promised land, and are not just a gift on condition as in Numbers 32. The author of Deuteronomy accepted the ideal borders of Gen 15:18, which reflected the borders of the Davidic kingdom, as binding borders (Deut 1:7; 11:24); for him, therefore, Transjordan was an integral part of the land (Deut 34:1). In this manner, the author of Deuteronomy affords Transjordan a status equal with that of Cisjordan; this looks like an endeavor to restore Israel to its ideal borders of the Davidic-Salomonic period (Weinfeld 1983).

The national resurgence of the period of Hezekiah and Josiah explains the feelings of superiority expressed in Deuteronomy. Israel is promised exaltation above all nations of the earth (26:19), to be always at the top and never at the bottom (28:13); people who hear the laws of Israel will say: "That great nation is a wise and understanding people" (4:6); "Israel will rule many nations but they will not rule it" (15:6). The book of Deuteronomy depicts Israel as a proud nation unfearful but feared. In accordance with this, it changes and reworks old sources. In Numbers, the Israelites asked permission from Edom to cross its territory. The Edomites refused and went out against the Israelites in force (Num 20:14–21). In the book of Deuteronomy, the opposite happens: not only do the Israelites pass Edom and buy food there (2:6, 29), but the Edomites fear the Israelites and the Israelites are asked not to exploit this fact in order to provoke the Edomites (2:4–5) (Weinfeld 1967).

The national pride prevailing in Deuteronomy comes to bold expression in the account of Moses' appointing officers for judging the people. According to Exodus 18 the appointment arose from the advice of Jethro the priest of Midian. In Deut 1:13–17, Moses appoints the officers on his own initiative. Jethro is not mentioned at all because, as A. B. Ehrlich says in regard to Deut 1:9: "in the Deuteronomist's days it was not glorious to tell the people that a foreigner contrived such a plan" (1908–14).

J. The Land in Deuteronomy

The gift of the land to Israel, according to the old sources, is a perpetual, unconditional gift (Gen 13:15; 17:8; 48:4). Similarly David was given a dynasty forever (2 Sam 7:13, 16; 23:5; Ps 89:30, etc.) because he served God with loyalty (1 Kgs 3:6; 9:4; 11:4, etc.). As I have shown elsewhere (Weinfeld 1970), the promises to Abraham and to David belong to the type of "grant" to royal servants who devoted themselves to their master, the king. These "grant" documents were common in the ANE from the middle of the second millennium onward, and like the biblical promises (Gen 17:8; 48:4) contained the phrase: "I grant it to you for your descendants after you throughout the generation" (Gen 17:7–8) or "for your descendants forever" (*lzrʿk ʿd ʿwlm*) (Gen 13:15); compare Deut 1:8 (for these legal formulae in Alalakh, Ugarit, and Elephantine, see Weinfeld 1970). In contrast to the vassal treaty, which constitutes an obligation of the vassal to his sovereign, the royal "grant" constitutes an obligation of the sovereign to his vassal.

However, following the fall of the N kingdom an explanation was sought for the failure of the promise and the explanation given was that the realization of the promise to the patriarchs was conditioned a priori by the fulfillment of the obligatory covenant of the Israelites at Sinai in which they committed themselves to keep the laws of God. Two covenants which existed separately—the covenant of God with the patriarchs on land (grant type) and the covenant of Israel with God on law (vassal type)—were thus combined and were seen as dependent on one another (4:25–27; 8:19–20; 11:8–10, 13–17, 22–25; 28:63; 29:24–27; 30:17–18). The same thing happened with the Davidic covenant. After the fall of Jerusalem the divine promise for an eternal dynasty to David which was originally unconditioned (2 Sam 7:13–15) was understood as conditional by the fulfillment of the Sinaitic covenant (1 Kgs 2:3–4; 8:23–25).

Although the loss of land is a punishment for the violation of the covenant, which means abrogation of the law in general, principal sins are specified for which the people will go into exile. Thus, according to the Holiness Code, the land will be desolate and the people will go into exile because of not keeping the laws of land release (Lev 26:34–35). Deuteronomy, however, specifies idolatry as the principal sin for losing the land: "Beware lest your heart be seduced and you turn away to serve other gods … for YHWH's anger will flame up against you and he will shut up the skies and there will be no rain and the land will not yield its produce and you will perish from the good land that YHWH is giving you" (11:16–17, cf. 4:25–28; 29:23–27; 30:17–18).

Going in exile and desolation of the land are also specified as punishment for betrayal in the vassal treaties. Thus we read in VTE liness 538–44: "may your seed and the seed [of your sons] and daughters perish from the land (if you violate the treaty)" (Weinfeld 1972a: 133). Similar threats occur in the Hittite treaties with their vassals: "may they break you like reeds, may your name and your seed … perish from the land" (Weidner 1923: 34–35, lines 64–66). The latter two curses: "breaking like a reed" and "perishing from the land" are found both together in Deuteronomic historiography: "YHWH will strike Israel … like a reed in water and will uproot Israel from this good land which he gave to their fathers" (1 Kgs 14:16).

The whole Deuteronomic corpus actually revolves around the fate of the land of Israel. As has been indicated above, the Deuteronomic law is given to the people for its observance after the entrance into the land (Deut 12:1). The promised land and the occupation of the land is dependent upon the observance of the law (4:26; 11:17; 28:63; 30:19). The aim of the Deuteronomic historiography is to describe the fate of the land of Israel following the sins of the nations. The sins of the period of the judges caused the curtailment of the land in its ideal borders. The "remaining land" (*hʾrṣ hnšʾrt,* Josh 13:2), i.e., the coastal area and the Lebanon (Josh 13:2–5; Judg 3:3) was taken away from the Israelites forever because of their sins after the Conquest (Josh 23:12; Judg 2:21–29). By the same token, the sin of the northern Israelites

caused the loss of the territories of the north (2 Kgs 17:7–23) while the fall of Jerusalem and the exile of Judah was caused by the sins of Judah (2 Kgs 21:12–15; Weinfeld 1984: 120–22). It is this consciousness of sin of the Israelites from the Conquest to the Exile that motivated the writing of the Deuteronomic historiography.

It should be remarked, however, that the loss of land is not presented in Deuteronomy as final. If Israel returns to God in the Exile God will recall the promise to the patriarchs and will bring them back to their land (Deut 4:27–31; 30:1–10). It is true that these are late texts (see above) but the idea itself may be of early origin (Hos 13:2–8).

In Deuteronomy the land is depicted not just as "a land of milk and honey" as in the previous sources (Exod 3:8, 17; 13:5; 33:3; Lev 20:24; Num 13:27; 14:8) but as a rich land in every respect: a land of grain, wines, and all sorts of fruits and also of natural resources as iron and copper (8:7–9). Unlike Egypt, which is flat, rainless with only the Nile incessantly flowing through a monotonous landscape, the promised land has a nice variegated landscape: "hills and valleys" through which brooks spring forth (8:7), soaking water from heaven (11:11). The comparison is a theological and not an empirical one: the rain from heaven expresses divine providence. The Egyptians developed a theology of opposite nature. According to their view, the barbarians and the animals depend on the water from heaven, whereas for the Egyptians the water comes from the underground (see notes to 11:10–12 in *Deuteronomy* AB). Moreover, Deuteronomy's view on Egypt stands in opposition to the other sources of the Pentateuch where Egypt is represented as a most fertile land: "as the garden of YHWH" (Gen 13:10, cf. Exod 16:3; Num 16:13; 20:5).

K. The Idea of the Election of Israel

The particularity of Israel was expressed in the ancient Israelite sources by expressions such as "knew" (*yd*ʿ) and "separated" (*hbdyl*). Thus Abraham was "known" by God, which means "singled out" in order that his descendants will keep justice and righteousness (Gen 18:19). The same expression is found in Amos 3:2: "you alone have I known [= singled out] from all the families of the earth." In the Holiness Code the particularity of Israel is expressed by the phrases "separate"/"set apart" (*hbdyl*): "I have set you apart from other peoples to be mine" (Lev 20:26). In Deuteronomy this idea is for the first time expressed by the verb "elect" (*bḥr*). This is linked here (7:6; 14:2; 26:18) to the idea of *sĕgullāh* ("special possession," *sigiltu* in Akkadian) which is rooted in the ANE political sphere where the sovereign singles out his vassal by giving him a status of *sglt* (*PRU* V No. 60:7–12, see note to 7:6) which means *peculium*, "special property." Theologically, the peculiar status of the people was defined as "holy people" (*mqdwš,* Deut 7:6; 14:1, 21). In Exod 19:5–6 the *sĕgullāh* is linked to *gôy qdwš,* "holy nation," but there the special status of the people serves as reward for being loyal to the covenant (19:5a) while in Deuteronomy the election serves as a motivation for observing the laws and especially laws of purity and rejection of pagan practices: "You shall not eat *nebelah* … because you are a holy people to YHWH your God" (14:21; cf. 14:1–2 against self-mutilation and 7:1–5 against idolatry).

A distinction should also be made between the Holiness Code concept of holiness and the Deuteronomic one. While the Holiness Code urges the people to sanctify themselves and to be holy: "you shall be holy" (*qdšym thyw,* Lev 19:2) or "you shall be holy to me" (Lev 20:26), "you shall sanctify yourselves and be holy" (*whtqdštm whyytm qdšym,* Lev 11:44)—hence not to contaminate their souls with impurity, Deuteronomy reverses the order and urges the people not to contaminate themselves because *they are holy to God* by virtue of their election "because you are holy people to YHWH your God" (*ky* ʾ*m qdwš* ʾ*th lYHWH* ʾ*lhyk,* 7:6; 14:1, 21). In the Holiness Code holiness depends on observing purity (Exod 22:30: "You shall be holy to me, you should not eat flesh torn by beasts …"), whereas according to Deuteronomy observance of purity is bound to the holiness of the people which is an established fact. It is true, from the point of view of piety, that the concept of holiness in the Holiness Code is more intense: Israel has to deserve to be holy and is not holy automatically (Milgrom 1973: 158), whereas in Deuteronomy the holiness is inherent in the people and is not conditioned by preserving purity. One should admit, however, that in both cases the privilege of being holy involves obligation: *noblesse oblige*.

This applies also to Gen 18:19 and Amos 3:2 where the singling out of the people means responsibility and self-perfection.

It should be added here that there was awareness of the moral danger that the election might involve. The consciousness of election is apt to foster a superiority complex and therefore the author of Deuteronomy, when speaking about election, is eager to add that it is not the virtue and strength of the nation that caused the election, but that the love of God to the patriarchs is the main reason for choosing their descendants (Deut 7:7–8; 9:4–5).

In the Second Temple period the election of Israel was interpreted as God's giving of Torah and Sabbath to Israel. God's bestowal of Torah and Sabbath upon Israel was seen as a graceful act and a sign of election (Neh 9:7–14). This is also attested in a passage from the book of *Jubilees* of liturgical nature (2:31–33) and constitutes an important element in the festive prayers of Qumran (4Q*503:24–25* in Baillet 1982) and in the conventional Jewish liturgy for Sabbaths and festivals (Kosmala 1959: 339; Weinfeld 1988b).

L. Deuteronomy and Wisdom Literature

The book of Deuteronomy has a lot of verbal and conceptional affinities to Wisdom Literature. Thus, for example, the term "abomination of YHWH" (*tw*ʿ*bt* YHWH), which is found in the OT only in Deuteronomy and in the book of Proverbs, has its parallels in Sumerian wisdom literature, in the Akkadian proverbs (Hallo 1985), and in the Egyptian wisdom instructions of Amenemope (Weinfeld 1972a: 265–69).

As R. Yaron (1985) has demonstrated, many abomination proverbs are structured as tricolons, as for example Prov 17:15:

> he that justifies the wicked
> and he that condemns the just
> both are an abomination for YHWH

which is to be compared with the Mesopotamian proverb:

> the one who perverts justice
> the one who loves an unjust verdict
> it is an abomination to UTU (Šamaš).

(Young 1972)

Especially relevant for our purpose is Prov 20:10:

> alternate weight (ʾ*bn w*ʾ*bn*)
> one alternate measure (ʾ*yph w*ʾ*yph*)
> both are abomination to YHWH.

The latter has been legally formulated by Deuteronomy:

> You shall not have in your bag alternate weight (ʾ*bn w*ʾ*bn*), great and small …
> for abomination to YHWH is everyone who does such things.

(25:13–16)

In order to adjust the matter to the spirit of the book Deuteronomy adds the motive clause of retribution (v 15).

There are also other significant overlappings in content between Deuteronomy and Wisdom. Laws which have no parallels in the Tetrateuch have their parallels in Wisdom Literature. Thus the injunctions about "neither adding nor detracting" of the word of God is found only in Deut 4:2; 13:1; and in Prov 30:5–6 (cf. Eccl 3:14; Weinfeld 1972a: 261–65). The injunction about removal of boundaries (Deut 19:14; 27:17) and falsification of weights and measures (25:13–16) have their verbal parallels in Prov 22:28; 23:10; 11:1; 20:10, 23 and in Egyptian wisdom (Amenemope XVII:15–XIX:3; Lichtheim, *AEL* 2:157). Furthermore, like in Deuteronomy and in Proverbs the Amenemope exhortations about falsifying weights and measures are motivated, as indicated above, by the same rationale: "for it is an abomination to YHWH" (Deut 25:13–16; Prov 11:1; 20:10, 23) and "abomination of Re" in the Egyptian wisdom of Amenemope (XVIII:15–XIX:3).

The warning against vows and cultic commitments in Deut 23:22–26 has its parallel in Eccl 5:1–5. Although Ecclesiastes is a late book it contains a great deal of early material (cf. 9:7–9 with the Gilgamesh epic, *NET* 90, and with the Egyptian Song of the Harper [Lichtheim, *AEL* 1: 193–97] and cf. the Mesopotamian parallel to Eccl 4:9–12 [Shaffer 1967; 1969]). Warnings against rash declarations and vows are a frequent topic of Israelite wisdom (Prov 20:13; 18:7) and non-Israelite wisdom as well, cf. the Babylonian injunction: "guard your lips, do not utter solemn oaths … for what you say in a moment will follow you afterwards" (*BWL* 104, 131–33). The motivation for restraint in this area is distinctly utilitarian, typical of sapiential literature. There is consequently no reason to see Pentateuchal influence on this passage in Qoheleth. The style of the exhortation in Qoheleth: "It is better (*ṭwb*) that you should not vow than that you should vow and not pay" (5:4) is sapiential and is characterized by the gnomic dicta which begins with the word "better" (*ṭwb*) (on the *ṭwb* sayings see Zimmerli 1933: 192–94). While using this maxim, Deuteronomy reworked it in order to accommodate it to the religious aims of the book. In place of the neutral sapiential rationale: "for (God) has no pleasure with fools" (5:3) the author of Deuteronomy supplied it with a religious rationale: "for YHWH your God will surely require it from you" (23:22).

Another law which parallels a sapiential exhortation is Deut 23:16: "You shall not extradite a slave to his master," which corresponds to Prov 30:10: "do not slander a servant to his master" (LXX, Syriac, and Weinfeld 1972a: 272–73). Such prescriptions of humane nature are characteristic of Wisdom Literature and are quite strange to be found in a legal code which by nature is concerned with stabilizing interclass relationships rather than prescribing laws which would undermine them (for the duty to extradite slaves, see *ANET*, 166–167 [#15–20], 190 [#22–24]).

The predilection for wisdom in Deuteronomy is recognized in several other places:

(1) Observance of the commandments equals wisdom and understanding (4:6) and the people of Israel who observe the laws and the commandments are considered "a wise and understanding people" (*ʿm ḥkm wnbwn*; 4:6b). (The same term is applied to Joseph [Gen 41:39] and to Solomon [1 Kgs 3:12].) This equation implies some kind of identification of wisdom with law which took place in Israel in the 7th century B.C.E., the period in which scribes and wise men began to take an active part in the composition of legal literature (Jer 8:8; see above; Weinfeld 1972a: 150–51).

(2) According to Deut 1:9–18, Moses appoints "men of understanding and full of knowledge" (*ḥkmym, nbwnym, ydʿym*) in order to judge the people. In the old tradition of Exod 18:13–27, the appointed judges are to possess different qualities: "capable men who fear God, trustworthy men who hate gain." According to Deuteronomy leaders and judges must possess intellectual qualities: wisdom, understanding, and knowledge—traits which characterize the leader and judge in Wisdom Literature (Prov 8:15–16). The same attitude is revealed when Deut 16:19 is compared with Exod 23:8. While Exodus 23 reads: "You should take no bribes for a bribe blinds them *that have sight*" (*pqḥym*), the parallel in Deuteronomy 16 reads: "You shall take no bribes for a bribe blinds *the wise*" (*ḥkmym*). The author of Deuteronomy believes that the qualification of a judge must be intellectual in character.

The same conception is met in the Deuteronomic historiography. Solomon is given wisdom and understanding so that he might judge the people (1 Kgs 3:4–15). Like Moses who complains of the burden of governing a people who are "as the stars of heaven for multitude" (Deut 1:9–10), Solomon speaks of the difficulty to judge a people "that cannot be counted … for multitude" (1 Kgs 3:8–9). Like the author of 1:9–18, the Deuteronomic editor in 1 Kgs 3:4–15 regards wisdom as the principal requisite for the complete functioning of the judiciary.

MOSHE WEINFELD

DEVIL [Gk *diabolos* (διαβολος)]. The LXX and NT translation of the OT *sātan*. *Sātan* is a judicial term referring to an "accuser," "slanderer," "calumniator," or "adversary" in court (cf. Ps 109:6). The NT also uses the transliteration *satanos,* which is synonymous with *diabolos* (cf. Rev 12:9). *Diabolos* is rare outside the LXX and the NT. It is found in Wis 2:23–24, which identifies the serpent of Genesis 3 with the Devil (see *TDNT* 2:71–81).

SATAN as a supernatural accuser of humankind in the heavenly court and working for God occurs three times in the OT. In Zech 3:1–10 Satan stands at God's right hand to accuse Joshua the High Priest, only to

have his accusation spurned. In Job 1–2 Satan questions the sincerity of Job's righteousness before God in the midst of the heavenly council. Here his office is expanded beyond accuser, for he is given control over sickness, death, and nature in the testing of Job. In 1 Chr 21:1 Satan incites David to sin by taking a census. Here the anarthrous form of *Sātan* becomes a proper name. Also apparent here is the tendency to divorce temptation from God and assign it to Satan, for in the earlier version of the census of David, God, not Satan, is the agent of the temptation (2 Sam 24:1; cf. Jas 1:13).

The notion of the Devil as an independent evil power no longer in heaven but ruling a demonic kingdom and headed for judgment is absent in the OT. This move from a subordinate accuser to an independent tempter was a development of the intertestamental period and has been attributed to a number of factors. In limited favor in current scholarship is the proposal that the Hebrew notion of Satan was borrowed or heavily influenced by the dualism of Persian Avestan Zoroastrianism, in which Angra Mainyu, the evil god, opposes Ahura Mazda, the good god. However, in Hebrew thought Satan is always subordinate to God and Angra Mainyu does not function as an accuser in Zoroastrianism. Still, a development of Zoroastrian concepts cannot be ruled out.

The shift in the role of the Devil may have arisen in apocalyptic literature as a way to explain the subjugation of Israel by foreign nations, that is, the rule of evil over the righteous covenant people. This would help to solve the theological tension between the presence of evil in the world and God's absolute sovereignty.

All the features of the Devil in Judaism, including names, functions, and the semi-dualism, are present in the NT. The Devil is a supernatural adversary of God and a tempter of humankind. He goes by a number of names, including "BEELZEBUL, prince of demons" (Matt 12:24 par.), "BELIAL" (2 Cor 6:15), "dragon, ancient serpent" (Rev 12:9; 20:2), "enemy" (Matt 13:39; Luke 10:19), "evil one" (Matt 13:19; Eph 6:16; 1 John 2:13–14; 5:18), "god of this world" (2 Cor 4:4), "prince of the power of the air" (Eph 2:2), "ruler of this world" (John 12:31; 14:30; 16:11), and "the tempter" (Matt 4:3; 1 Thess 3:5).

The Devil brought sin into the world (cf. 2 Cor 11:3) and is the ruler of this world (Luke 4:6; Eph 6:11–12; cf. John 12:31; 14:30; 16:11; 2 Cor 4:4; Eph 2:2). In this capacity he tried to tempt Jesus (Matt 4:1–11 par.) and tempted Judas to betray him (John 13:2, 27; cf. Luke 22:3, 31). He is a murderer and a liar (John 8:44; Rev 12:9) disguised as an angel of light (cf. 2 Cor 11:14). He keeps the gospel from unbelievers (Luke 8:12 par.; cf. 2 Cor 4:4), who are under his lordship (cf. Acts 26:18; Eph 2:2; Col 1:13), oppresses humankind (Acts 10:38), causes illness (cf. Luke 13:11–16; 2 Cor 12:7), and those under his control are his children (John 8:44; Acts 13:10; 1 John 3:10). He is working to lure Christians to him and trap them in sin (Eph 4:27; 1 Tim 3:7; 2 Tim 2:26; 1 Pet 5:8), to hinder their work (cf. 1 Thess 2:18), and to accuse them (1 Tim 3:6–7; cf. Rev 12:10). The Church must be on guard against his wiles (Eph 6:11; Jas 4:7; cf. 2 Cor 2:11). He has the power of death over those outside the Church (Heb 2:14; cf. 1 Cor 5:5), but not the Christian (cf. 1 John 4:4; 5:18).

Christ came to destroy the works of the Devil (Heb 2:14–15; 1 John 3:8; cf. Eph 1:21–22) and to cast him from heaven (Luke 10:18; Rev 12:9; cf. John 12:31). Christ's victory is yet to be consummated (cf. 1 Cor 15:24–26; Heb 10:12–13). The Devil will intensify his work against humankind and God in the last days (Rev 12:12; cf. 2 Thess 2:9–10), only to be hindered by Christ (Rev 20:2) and be thrown into eternal fire with his angels (Matt 25:41; Rev 20:10).

DUANE F. WATSON

DEVOUT [Gk *sebomai* (σεβομαι), *eusebes* (εὐσεβες), *eulabes* (εὐλαβες)]. This word group (also translated as "pious," "godly," "religious," and "worshipful") derives from the Hellenistic milieu, where it came to mean a reverent and wondering awe at the lofty and pure world of the divine; as such, it is a typical expression of Greek piety. These words have no direct Hebrew equivalent: they are generally avoided in the LXX and the Pseudepigrapha, occurring most frequently in those works composed in

Greek (see especially *4 Maccabees* where the entire word group is used extensively). In the NT these words occur most prominently in Acts, the Pastoral Epistles, and 2 Peter (*TDNT* 7:168–96).

The Pastoral Epistles and 2 Peter use this word group to characterize Christian faith and life. It denotes a life which exhibits a pious attitude toward God and his creation; it is a gift of God (2 Pet 1:3) and extends to the entire life of the Christian (1 Tim 2:2; 4:8). Such piety is at the center of the Christian faith (3:16; 6:3); it stands in contrast to "godless and silly myths" (4:7) and to "irreligion and worldly passions" (Titus 2:12). This attitude is peculiarly Christian, unlike both Jewish piety, which is based on the observance of the law, and Greek piety, based in the cultus.

Luke-Acts presents a different understanding of these words. Here it is not Christians who are called devout; rather for Luke the gospel originated in a devout and righteous community and had its greatest appeal to those who were devout, both Jews and gentiles. Simeon was both "righteous [*dikaios*]" and "devout [*eulabes*]" (Luke 2:25). Zechariah and Elizabeth were likewise righteous (1:2), while Anna worshiped [*latreuousa*] in the Temple daily (2:37). Pious Jews were gathered in Jerusalem at Pentecost (Acts 2:5); devout men buried Stephen (8:2); Ananias was likewise devout (22:12). Cornelius, the first gentile convert, was not only devout (10:2; as was one of his soldiers, 10:7), but also was righteous (10:22) and he feared God (10:2, 22). Only rarely does this word group have a negative connotation. Peter denied that his "piety [*eusebeia*]" enabled him to perform a healing (3:12); Paul was accused of persuading people "to worship [*sebasthai*]" God contrary to the law (18:13). Pagan gods are also said to be worshiped (17:23, 19:27).

The major controversy surrounding the use of this word group arises with the "devout persons [*sebomenoi*]" (Acts 13:43, 50; 16:14; 17:4, 17; 18:7), who have been considered to be the material equivalent of the "fearers of God [*phoboumenoi ton theon*]" (10:2, 22, 35; 13:16, 26). When these phrases are understood in the context of certain literary and epigraphic evidence, they can be understood to refer to gentiles who were interested in the teaching and practice of the synagogue. These so-called "God-fearers" functioned as a bridge between the Jewish and gentile communities and were among Paul's first converts (Lake 1933: 96). Kraabel has emphasized the theological role these gentiles play in Luke's narrative and has questioned the historical existence of such a class of gentiles (1981: 113–26). Even though this argument has not received wide acceptance, it has prompted a reexamination of the evidence. These gentiles do not represent a class with specific requirements or with a clearly defined status in the synagogue of the 1st century (Collins 1985: 184). However, by whatever name they are called, the evidence suggests that there were gentiles who were in some way attracted to Judaism without becoming converts, and at least in some places they formed a defined group (Millar *HJP³* 3/1: 169; Jervell 1988: 11).

DAHAHR MIRZBÂNEH (M.R. 156182). The traditional Arabic-Persian name (meaning something like "Ridge of the Persian Governor") of a rocky ridge (450–600 m altitude) just N of the copious spring

at ʿAin es-Sâmiyeh, E of the modern village of Kufr Mâlik, ca. 9 miles NE of Ramallah. The site overlooks the small valley around the spring, the Wâdi es-Sâmiyeh, which opens out eastward into the Wâdi ed-Dâliyeh and then plunges down precipitously all the way to the Jordan Valley N of Jericho (on the Wâdi ed-Dâliyeh caves, see DÂLIYEH, WADI ED- [M.R. 189155]; and for the EB pottery contemporary with the Mirzbâneh tombs, see Dever 1974).

Although the name "Dhahr Mirzbâneh" denotes specifically the ridge N of the spring, we shall include here the general vicinity around the spring, which has remains of a number of interrelated settlement sites and cemeteries from various periods, investigated by several archaeologists over the past 75 years.

A cemetery ca. 400 m E of the ʿAin es-Sâmiyeh spring, Cemetery D (this and the following cemetery designations are from Lapp 1966), was first investigated by D. G. Lyon for the American School of Oriental Research in Jerusalem in 1907, then again by P. W. Lapp under the same auspices in 1963. At least 100 shaft tombs of the EB IV period (ca. 2300–2000 B.C.) are located here, but in the past century and earlier these had been robbed by villagers from Kufr Mâlik; consequently, the known pottery has been widely scattered in several collections (Lapp 1966; Dever 1972). These collections also contain MB, LB, and probably Iron Age pottery as well (Dever 1972; 1975), so this cemetery was reused, and it probably served the main early settlement at Khirbet el-Marjameh. Both Lyon and Lapp report a considerable number of Roman and Byzantine tombs as well.

Khirbet el-Marjameh, ca. 200 m N of the spring on a rocky promontory, has EB, MB, LB, and Iron Age sherds (especially 8th–9th centuries B.C.), plus Hellenistic-Roman on the surface, as well as visible terrace and domestic walls (Zohar 1980). It is probably the major settlement site near the spring. Albright, Lapp, and others have identified it, rather than et-Taiyebeh, with Ephraim/Ophrah in the tribe of Benjamin (2 Chr 13:9; cf. Albright 1923; Lapp 1966), but Kallai has suggested identifying it with Baal-shalishah (2 Kgs 4:42; cf. Zohar 1980).

Khirbet Sâmiyeh, ca. 300 m SSE of the spring, has mostly Ummayed and later material (Albright 1923; Lapp 1966). The more outlying sites are relatively isolated and are characterized mostly by EB IV shaft tombs. Stretching some 400–1200 m along the Dhahr Mirzabâneh ridge to the N are Cemeteries A, B, and C, where Lapp cleared nearly 100 tombs in 1963 (Lapp 1966). Khirbet el-ʿAqibat, ca. 800–1000 m SSE of the spring along the modern road, was investigated by Lyon in 1907, by Lapp in 1963 (his Cemetery E), and again in 1968–70 (cf. Lapp 1966; Shantur and Labadi 1971). Among the 50 or more EB IV tombs was one that produced a unique imported silver goblet, probably Syrian, with a Mesopotamian-style frieze of deities and animals (Yeivin 1971). Both Lyon and Lapp report Roman-Byzantine tombs as well in Cemetery E. At el-Qasr, ca. 1300 m SE of the spring, was found Cemetery F, described briefly by Lapp (1966); little is known about it.

From even the cursory archaeological investigation of the Dhahr Mirzbâneh–ʿAin es-Sâmiyeh area, it is clear that this location, now so isolated and desolate, was once a major attraction. This was no doubt due to its secure location and perennial spring at the head of an important wadi leading up into the central hills of Palestine (cf. the summary in Dever 1972).

DIALOGUE. A literary form used since antiquity, in which two or more characters are represented as conversing or reasoning about some topic.

A. Greek Sources
B. Latin Sources
C. Old Testament
D. New Testament
E. Greek Christian Literature
F. Latin Christian Literature
G. Hermetic and Gnostic Literature

A. Greek Sources

As a literary genre, the Greek dialogue has its origins in *mimesis,* or the art of "imitating" real-life conversations. Such dialogues or conversations can be found in Greek drama, history, and oratory. It was Plato, however, who developed the philosophical dialogue as a distinct and separate literary form. Although the Platonic dialogue grew out of the real-life conversations of Socrates with his friends and students, in the hands of Plato, these conversations were transformed from "imitations" of real-life situations to creative "inventions" which incorporated various dramatic elements for the purpose of progressing toward a philosophical truth.

A typical Platonic dialogue has a lengthy preliminary "scene" in which three or four characters are introduced. As the dialogue progresses, the "scene" disappears and the "action" now centers exclusively on debating a specific philosophical problem, e.g., what is piety? What is temperance? What is beauty? In Plato's early dialogues, it is Socrates who directs the discussion, leading the participants toward the resolution of a certain problem through the technique of dialectic or skilled questioning. Over time, however, the dialogues move away from this lively Socratic method of intellectual "midwifery" toward a more dogmatic presentation of various ideas, utilizing the techniques of analysis and interpretation that were characteristic of Plato's own teaching in the Academy. In the *Laws*, Plato's last dialogue, only the form of the dialogue remains. Socrates has disappeared as have the dramatic elements, and the discussion among the various "characters" has become didactic and methodical.

It was under the influence of these later Platonic dialogues that Aristotle made his contributions to the genre. Although Aristotle's dialogues are extant only in fragmentary form, two innovations are worth noting: the use of the Skeptic practice of "arguing both sides" (*disputatio in utramque partem*) and the presence of Aristotle himself as one of the participants in the discussion. (Plato, in contrast, never "appeared" in any of his dialogues, as it was Socrates who, in most instances, functioned as his mouthpiece.)

Following Aristotle, the dialogue was abandoned in the Academy but kept alive among the Peripatetics, notably in the writings of Heraclides Ponticus. Heraclides was especially noted for his elaborate introductions or *proems.* He also changed the internal structure of the dialogue by placing the action in the past and then introducing a number of noted historical persons (e.g., men of state, generals, philosophers) as discussants on a wide range of issues (e.g., ethics, politics, literature, history, physics). By setting the action in the past, Heraclides—unlike Aristotle—never appears "on the scene." Heraclides is also noted for deriving the titles of his dialogues from their content rather than from one of the interlocutors, as was the practice of Plato.

The Greek tradition of dialogue disappeared for some time during the late Hellenistic and early Roman periods, but was revived in the 2d century C.E. by Plutarch and Lucian. Plutarch is noted for using the traditional dialogue form to explore various religious, moral, and philosophical themes. Lucian, however, is credited with creating an entirely new form: the satiric dialogue. Lucian's genius was in skillfully combining the dialogue with elements of Old and New Comedy to express a basically Cynic view of all human affairs, especially as they related to philosophical and religious beliefs. In Lucian's satires, no one is spared, not even the gods. It is generally claimed that Lucian developed his satiric style from the diatribes of the 3d century B.C.E. Cynic and Menippus, but, as Bompaire argues (1958: 550–60), his debt to Menippus is primarily in appropriating the Menippean "spirit" or "attitude," not in slavish imitation. In

general, Lucian's satiric dialogues are a unique contribution to the form and reflect his ability to transpose successfully elements of one genre (comedy) to another (dialogue).

B. Latin Sources

Among Latin writers, Varro experimented with the dialogue, as did M. Junius Brutus. Varro wrote satiric pieces (in the manner of the Cynic diatribe) as well as a collection of philosophical-historical dialogues which explored a variety of general subjects, e.g., health, the education of children, peace, and religion. Unfortunately, these works exist only in fragmentary form, so it is difficult to assess to what extent Varro may have made original contributions to the genre. In one area, however, he clearly was innovative: he included autobiographical elements in his dialogues as well as a kind of "interior" dialogue in which he conversed with himself. As for Junius Brutus, his contribution to the form was the construction of lengthy didactic discourses presented as "dialogues" between his son and himself. The subject matter and *locus dialogi* were distinctly Roman: father and son discoursed on various civil and juridical issues in the leisurely setting of the Roman countryside.

It was Cicero, however, who was clearly the master of the Latin dialogue form. Building on both Greek and Roman influences, Cicero used the dialogue as a literary means for exploring his interests in politics, rhetoric, philosophy, and theology while promoting the moderate Skepticism of the New Academy. Thus, in a Ciceronian dialogue, argumentation becomes an end in itself, with the "characters" in a given dialogue arriving at a "probable" truth vis-à-vis a given proposition, not seeking an "absolute" truth in the Platonic sense. Cicero, then, unlike Plato, is content to exist in the realm of beliefs and opinions. Other contributions of Cicero to the dialogue are: (a) the inclusion of prominent persons, past *and* present, with the author himself "on the scene"; (b) the ideal of learned *otium* as exemplified in the *Tusculanae Disputationes*; (c) the development of the prologue or *proem* as a philosophical essay in which Cicero skillfully locates himself in the wider current of Greek and Roman thought. Ruch (1958: 419–20) argues that these Ciceronian *proems,* in effect, constitute a literary genre of their own. It was Cicero, then, with his eclectic interests and superb literary skills, who would most influence the later Latin tradition of the dialogue, notably among a number of Latin Christian writers (see below).

C. Old Testament

Among the OT writings, the book of Job is the chief example of a literary work in dialogue form, but a type of dialogue that is influenced by literary precedents in ancient Mesopotamia and Egypt. In certain of these texts, the "Job motif" of undeserved human suffering is presented as a dialogue in verse form in which an unnamed sufferer laments his misfortunes to a friend, a servant, his "personal" god, or, in one instance, to his own soul. In each case, the response to this lament is basically the same: no man is sinless; the will of the gods cannot be known; one must endure life without complaint.

The book of Job follows a similar pattern of structure and theme, but with greater literary polish and theological profundity. The opening "scene" is set in heaven, where God agrees to let Satan "test" Job's faith. The result is a series of disasters that destroy Job's health, family, and livelihood. When three of Job's friends come to comfort him, Job bemoans his fate in a lengthy verse lament. Each of Job's friends, in turn, offers consolation in the form of the conventional wisdom: God punishes the wicked and rewards the just; if Job is suffering, then he must have "sinned" in the eyes of God. Job, however, unlike his counterparts in the Mesopotamian and Egyptian dialogues, rejects these pieties and continues to insist on his innocence and God's injustice. The climax of this drama is the appearance of God himself in a whirlwind; he offers no answers to Job's pleas but only a series of ironic questions that render Job's laments irrelevant. For the writer of Job, the mystery of undeserved human suffering ultimately remains unanswered. (The prose epilogue, where Job's fortunes are restored, was apparently tacked on to provide a "happy ending." Such "happy endings" are a stock element in the parallel material from Mesopotamia and Egypt.) The subject matter of Job, then, as well as its form, do not fit the classical tradition of Greek dialogue nor other Greek literary styles (notably epic and tragedy), although arguments have been made in each case. As Pope notes (*Job* AB, xxx–xxxi), Job is essentially a piecemeal work that lacks the kind of literary unity that might classify it strictly in one category or another.

D. New Testament

In the NT, there is no particular text that can be designated as a dialogue in the strict sense. However, the conversations between Jesus and various interlocutors in the Gospels approach the dialogue form but in a specific "question and answer" format (e.g., Mark 10:23–31 = Matt 19:23–30 = Luke 18:24–30; Mark 12:13–34 = Matt 22:15–46 = Luke 20:20–40; John 3:1–21; 4:7–30; 6:25–40). Dörrie and Dörries have termed this literary style *erotapokriseis* (*RAC* 6:342–70). What distinguishes this "question and answer" style from the traditional Greek dialogue is that the questioner does not participate in the conversation as a true discussant with a developed point of view but is limited to the role of "student" who asks questions and is often "amazed" or "astonished" at the wise response of the "teacher." Dialogues of this type (especially the longer dialogues in the gospel of John) are close in style and form to similar dialogues found in the Hermetic and Gnostic literature (see below). Dialogical elements have also been isolated in the epistles of Paul, notably Rom 3:27–4:2, where there is an implied exchange between Paul and an interlocutor on the subject of boasting in relation to faith and works. The style here is based on similar dialogical exchanges in the Hellenistic diatribe (Stowers 1981: 155–84).

E. Greek Christian Literature

It was among Christian apologists in the 2d century that the Greek dialogue, in its traditional form, was appropriated for purposes of defending the faith. Many of these dialogues were constructed as conversations between Christians and Jews, with the Christian converting the Jew by demonstrating how the prophecies of the OT regarding the Messiah applied to Jesus. The model for dialogues of this type was evidently Aristo of Pella's *Dialogue of Jason and Papicus,* written ca. 140 C.E., but no longer extant.

The most important apologist of the 2d century to write in dialogue form, however, was Justin Martyr. His *Dialogue with Trypho,* written ca. 155 C.E., is innovative in that Justin abandoned the Aristotelian method of "arguing both sides" in favor of a mutual understanding of the other's position. At the end of the dialogue, Trypho, the Jew, is not converted; rather, he and Justin depart with goodwill on both sides. Further, this dialogue was written with a specific audience in mind, namely the educated pagan familiar with Greek philosophy. By demonstrating how each of the philosophical schools of the period (e.g., Stoic, Pythagorean, Peripatetic, Platonic) was unable to satisfy him intellectually until he was persuaded of the truth of Christianity, Justin is arguing for the viability of Christianity as a philosophy rather than a religion.

F. Latin Christian Literature

Among Latin Christian writers, Minucius Felix was the first to write an apology in dialogue form—the *Octavius*—evidently written as a reply to the Roman orator Fronto, who had attacked Christianity in a speech to the Senate sometime in the mid 2d century. Although Fronto's speech is lost (apparently this address was the only literary attack on Christianity written in Latin) his arguments are preserved in the remarks of Caecilius, one of the participants in the dialogue. The Christian side is argued by Octavius (for whom the dialogue is named), with Minucius (or Marcus) functioning as a kind of referee. As a literary work, the *Octavius* is clearly indebted to Cicero. The setting of the dialogue is a leisurely outing of three friends en route to Ostia to enjoy the sea; the author, Minucius, is "on the scene"; the arguments presented for and against Christianity are equally balanced and persuasively presented. However, in the end, following the usual apologetic model, Caecilius admits himself defeated by Octavius' defense and henceforth converts to Christianity. Of particular interest is the fact that the *Octavius* contains no biblical references nor even direct mention of Christ. Instead, the arguments in favor of Christianity are made on the philosophical basis of its monotheism and ideas of divine providence coupled with an attack against pagan mythology. Again, these arguments are designed to convince the educated pagan of Christianity's philosophical respectability. Whether Tertullian modeled his *Apology* on the *Octavius* or vice versa has never been satisfactorily settled. Consequently, the *Octavius* is variously dated in either the mid 2d or early 3d century.

Augustine was also a writer of dialogues in the Latin Christian tradition, most of which were written during his contemplative retreat at Cassiciacum following his conversion (386–87 C.E.) or shortly thereafter. These dialogues, although clearly influenced by the Ciceronian model, are minor works in the Augustinian corpus. They represent an early attempt on the part of Augustine to integrate the ideal of

contemplation—especially contemplation of the trinity—with preliminary training in the liberal arts. Since the participants in these dialogues are those friends and family who accompanied Augustine to Cassiciacum, the overall impression is one of talk between "amateur philosophers" who are intellectually curious but not terribly profound.

In terms of Augustine's literary style, Voss (1970: 198–280) distinguishes two types of dialogue: the "scenic," or that type in which Augustine situates several participants in a physical location (e.g., *Contra Academicos, De Beata Vita, De Ordine*) and a "nonscenic," or that type which has no specific location and is essentially a discussion between a teacher and student (e.g., *De Magistro, De Musica*). Voss also notes a "hybrid" form as represented in the single instance of Augustine's *Soliloquia.* In this dialogue, the conversation is between Augustine's "Reason" as teacher and his "Soul" as student; as such, the work is constructed as a form of "internal" dialogue in which the mind converses with itself. The Soliloquia was evidently an important model for Boethius' later work, *The Consolation of Philosophy*, which is similarly constructed as an "internal" dialogue, although direct dependence is problematic (Lerer 1985: 46–56).

G. Hermetic and Gnostic Literature

A good number of Hermetic and gnostic writings can also be classed as dialogues, but in the specific sense of "revelation" or "initiation" dialogues. The emphasis in these texts is not on philosophical debate or argumentation but on the imparting of secret, esoteric knowledge ("gnosis") by a divine, revealer figure to a disciple-devotee (e.g., *Corp. Herm.* I, II, X, XI, XII, XIII; *Asclepius*; Ap. John; *1 Apoc. Jas.*; Apoc. Paul; Dial. Sav.; Eugnostos; Soph. Jes. Chr.; Pist. Soph.; Gos. Mary; Disc. 8–9). The reception of this "gnosis" by the disciple (sometimes coupled with specific ritual/cultic acts) often engenders a spiritual "rebirth" or "regeneration" which culminates in the disciple's "salvation" (e.g., *Corp. Herm.* I, XIII, *Disc. 8–9*). Most of these texts are close in style to the "question and answer" format discussed above; Rudolph argues (1968: 88–89) that these texts should properly be termed dialogues only when the repeated questions of the disciple approach a real conversation and a physical "setting" is provided (e.g., *Soph. Jes. Chr.; Apoc. Paul; 1 Apoc. Jas.; Pist. Soph.; 2 Jeu; Gos. Mary*). In general, no one term adequately covers all the extant examples; however, it is clear that the writers of these texts were familiar with the traditional Greek dialogue but reshaped it to suit their own instructional and polemical purposes. For further discussion see *RAC* 3: 928–55.

RUTH MAJERCIK

DIALOGUE OF THE SAVIOR (NHC III,*5*). The *Dialogue of the Savior (Dial. Sav.)* is the fifth and final treatise preserved in Codex III of the Nag Hammadi Library, discovered in Upper Egypt in 1945. See NAG HAMMADI (CODICES). Originally written—or better, compiled—in Greek, perhaps early in the 2d century C.E., it is preserved only in a Coptic translation made before the end of the 4th century. Only recently has a critical edition been published (Emmel 1984); scholarship on this important document is in its infancy.

The *Dial. Sav.* (the title is present at the beginning [*incipit*] and end [*explicit*] of the work) is a compilation of several earlier sources of differing length and purpose. These sources, detected on the basis of form and content, are probably four in number: (A) a dialogue between Jesus and his disciples;

(B) a fragment of a creation myth; (C) a cosmological wisdom list; and (D) a fragment of an apocalyptic vision (Koester and Pagels 1984: 2–9). The four have, however, been woven together, so that the dialogue is now in four parts (4–14; 19–20; 25–34a; 41–104a; Koester and Pagels 1984: 2; paragraph numbers as in Emmel 1984), the creation myth in two (15–18; 21–24), while the wisdom list (34b–35) and apocalyptic vision (36–40) follow part three of the dialogue. The compiler has supplied an introduction (1–3) and a conclusion (104b) to the work.

The critical task therefore has several facets: to distinguish between tradition (oral or written sources) and redaction; to determine the probable origin and life setting of each of the sources; and to isolate the redactional theology of the *Dial. Sav.* so as to propose a life setting for the present work as a whole. The fragmentary state of the single extant ms hinders progress at every stage; nevertheless, some preliminary conclusions may be drawn.

The *dialogue* presents traditional sayings of Jesus together with introductory questions or interpretations and expansions. For example, in *Dial. Sav.* 9 (126.6–8) the disciples ask, "[Lord], who is it who seeks, and … reveals?"; the Lord replies, "He who seeks … reveals …" (10 [126.9–10]). Thus the dialogue, a putative "conversation" between Jesus and three disciples (Matthew, Judas, and Mary), is the literary platform not for extended theological discourse but for an authoritative presentation of sayings and exegesis (Koester 1979: 544–56). Since the writings closest to this compositional model include the NT gospel of John and the *Gospel of Thomas* (NHC 2, 2), works with which the *Dial. Sav.* also has sayings materials in common, it has been argued that the dialogue source in the *Dial. Sav.* may be dated in the late 1st century C.E. (Koester and Pagels 1984: 16).

Comparison with the *Gospel of Thomas* suggests a further connection with the *Dial. Sav.* In *Gos. Thom.* 2 (32.14–19) Jesus announces the steps to salvation: seeking, finding, being troubled, being astonished, ruling (*P. Oxy.* 654 adds "resting"). This sequence seems to be referred to in the *Dial. Sav.*, and has perhaps supplied the principle according to which the topics are arranged. The present for the disciples, and hence for the readers, is an interim before ruling and resting. At the same time, the *Dial. Sav.*'s introduction (1 [120.2–6]) offers an assurance that "already" the time has come to rest (1 [120.6–8]). This tension, between the rest as present and as future, finds its resolution in the probable setting of the writing: baptismal initiation, into which "the opening introduction invites the believer" (Koester and Pagels 1984: 11). In baptism the believer, now empowered to "save that [which] (or: him [who]) can follow" (44 [137.16–17]), anticipates rest from the labors that characterize life in the flesh (cf. 28 [132.9–12]).

The *creation myth,* in question and answer form, reflects upon the generative power of the divine word through water. The *wisdom list,* in the form of a monologue punctuated by rhetorical questions, emphasizes the need for an understanding of the natural elements; these are interpreted soteriologically, with explicit reference to baptism (35 [134.5–8]). The *apocalyptic vision,* in which the disciples are granted a view of "an exceedingly high place" and of "the abyss" (36 [135.4–10]), presents "the Son of Man" (37 [135.16–17]) as the "interpreting angel" (a standard feature of apocalypses). In the *Dial. Sav.* this figure is identified with Jesus during an exchange which anticipates later discussions of the double presence (on earth and in heaven) of the Lord (38–40 [136.5–137.3]; cf. Hippolytus *Contra Noetum* 4.11, and esp. *Gos. Bart.* 28–35).

Although typically gnostic terminology and concepts permeate the *Dial. Sav.*, the work "cannot be understood as the simple product of gnostic theology. Rather, it resembles the gospel of John in its attempt to interpret the sayings of Jesus in the horizon of gnostic thought" (Koester and Pagels 1988: 244).

JULIAN V. HILLS

DIATESSARON. Diatessaron (Greek: *dia tessaron* (δια τεσσαρον)*:* "through [the] four [Gospels]") is the name given by Eusebius (*Hist.Eccl.* 4.29.6) to a "combination and collection" of the Gospels created by TATIAN about the year 170 C.E. As one of the earliest witnesses to the text of the Gospels (it is rivaled only by the quotations of Justin, Marcion, and Clement), it occupies a preeminent position in NT textual studies.

Employing the four canonical Gospels and, perhaps, one or more extracanonical sources, Tatian wove a single, continuous narrative. He omitted doublets, harmonized discrepancies, and "corrected" omissions found in his source gospels. Although some scholars have seen Tatian's theology as the impetus for creating a harmony (so both Elze 1960 and Baarda 1969), the idea was patently "in the air," for we know that Justin used a gospel harmony (Bellinzoni 1967: 140), and that gospel harmonies or synopses were created by Ammonius of Alexandria (Eus., *Ep. ad Carp.*) and Theophilus of Antioch (Jerome, *Ep. ad Algasiam*). Practical advantages must also be considered: a harmony would have—perforce—a unified point of view and, thus, been ideal for evangelization; as a compact epitome it would have been easier to transport and cheaper to copy than the separate Gospels.

The Diatessaron proved itself one of the most popular editions of the Gospels ever produced. It was used by Catholic Christians, such as Ephrem Syrus, by Judaic Christians (Epiph., *haer.* 46.1.8–9), Manicheans, and missionaries, who took it to the furthest reaches of Christendom. Its greatest impact, however, was in Syria, where as late as the 5th century it was the standard gospel text. This is demonstrated by the fact that the *Canons of Rabbula* specifically direct that the "Euangelion da-Mepharreshe" ("separated gospel," i.e., canonical Gospels) be read in the churches, and that Theodoret, bishop of Cyrrhus from 423 to 457, reports impounding over 200 copies of the "Euangelion de-Meḥalleṭe" ("gospel of the mixed," another name for the Diatessaron) from the churches in his diocese.

Reconstruction of the Diatessaron's text is necessary, for no copy has come down to us. Witnesses to its text are diverse: translations (often rearranged), commentaries, and quotations. On the basis of provenance and language, these witnesses are classified as Eastern and Western. The most important include (in the East): Ephrem's *Commentary* (extant in both the Syriac original and an Armenian translation; both 4th century); the gospel quotations of Aphrahat (Syriac, 4th century); an Arabic Harmony (Arabic, 12th–13th century); a Persian Harmony (Persian, 1547 C.E., a copy of a 13th century ms); Isho‘dad of Merv's *Commentary* (Syriac, 9th century). Further, since the Diatessaron preceded and influenced all extant versions of the separated Syriac gospels (Black 1972: 142), the most ancient Syriac verions ($syr^{s.c.p.pal}$, 4th century and later) also contain numerous Diatessaronic readings. In the West the most important witnesses include: Codex Fuldensis (Latin, 6th century); a poem, *The Heliand* (Old Saxon, 9th century); the Liège Harmony (Middle Dutch, 13th century); related to the Liège Harmony are the Stuttgart, Cambridge, Haaren, and Haagse Harmonies (all in the Middle Dutch, 14th–15th century) and the Middle German *Leben Jhesu,* or Theodiscum Harmony (14th century); the Tuscan Harmony (Middle Italian, 13th–14th century); the Venetian Harmony (Middle Italian, 13th–14th century); and the Pepysian Harmony (so named, for it was once owned by Samuel Pepys; Middle English, ca. 1400 C.E.). This diverse array of sources bears witness to the popularity of Tatian's creation among the common folk wherever it went.

The problems in reconstructing the Diatessaron's text are twofold. First, all of the witnesses have been "Vulgatized" to some degree; that is, the nonstandard Diatessaronic reading (exactly what the text critic prizes) has often been replaced with the standard ("Vulgate," regardless of the language) reading of the language. Second, since each witness has its own textual history, variants in them cannot automatically be regarded as Diatessaronic. This has led some scholars to dispute whether certain "witnesses" or readings

actually are Diatessaronic (de Bruin 1980: 204; Fischer 1972: 48, n. 158). Research, however, has now convinced most experts of their relationship to the Diatessaron, for only in this manner can their singular agreements be explained (van den Broek 1974; Quispel 1975; Petersen 1985). The question of where Tatian composed his harmony remains open. Rome, where he studied with Justin, is possible, as is the Syrian East, where he returned after having been expelled by the Roman Church as a heretic (in the East he is first called a heretic in the 4th-century Syriac translation of Eusebius' *Hist.Eccl.*). On the basis of the text it uses in its OT citations and certain Semitic syntactic features—present even in the Western witnesses—it seems quite certain that Syriac was the original language of the Diatessaron (Petersen 1986). The number and identity of the sources employed by Tatian remain unclear. Numerous readings attributed by Church Fathers to "the Gospel of the Hebrews" or "the Jewish Gospel" appear in the Diatessaron. An example is the "light" which shines in the Jordan at Jesus' baptism. Epiph. (*haer.* 30.13.7) says this stood in the "Hebrew Gospel"; the reading is also in Justin (*Dial.* 88.3) and at Matt 3:16 in two Old Latin mss (*a* and g^1, 4th and 9th century, respectively). Whether a "fifth source," such as Epiphanius' "Hebrew Gospel," is Tatian's source for this reading, or whether it came from a variant ms of the gospel of Matthew, as represented by the two Old Latin mss, cannot be determined until we have a clearer picture of the Gospels in the mid 2d century. Nevertheless, a strong prima facie case can be made that Tatian employed sources other than the canonical Gospels, for there are numerous examples of such extracanonical readings in the Diatessaron (Phillips 1931).

Textually speaking, the Diatessaron is a gold mine of early readings, some of which may, arguably, antedate the reading offered by the canonical Gospels (Petersen 1983; 1985: 165–67). The Diatessaron's text is related to the so-called "Western Text" (which is actually of Eastern origin); Codex Bezae Cantabrigiensis (D) and Washingtonianus (W) sometimes follow its readings. Even more remarkable, however, are the number of agreements offered by the Old Latin mss—a greater number of agreements than with the Greek mss, although from a far smaller number of mss. This phenomenon was first noted by Vogels (1911), and remains unexplained. Whether the agreements are due to Tatian's appropriation of the text used in Rome in the mid 2d century (Klijn 1969: 54–55), or whether the agreements indicate that the Diatessaron preceded and influenced the earliest Latin translation of the Gospels, is unclear. Von Soden's (1911–13) hypothesis that the Greek Gospels owed most of their cross-gospel harmonizations to the influence of the Diatessaron is discredited today, for such harmonizations appear to have been a common tendency of scribes, and many of the harmonizations present in the Greek gospel mss are absent from the Diatessaronic witnesses.

WILLIAM L. PETERSEN

DIATRIBE. Diatribe had several technical senses in antiquity. It was used for the teaching activity of philosophers and sophists. In this sense it can be translated as "conversations," "lecture," "a class," or "seminar." Plato used the word for Socrates' teaching by informal conversation (*Ap.* 37c–d; *Grg.* 484e; *Chrm.* 153a). Writers could speak of a teacher giving a diatribe or students participating in a diatribe. The word could also be used as an equivalent to *scholē* in the sense of an institution or sect, a school of philosophy. The modern scholarly concept of the diatribe is most closely linked to the use of the word for the records, literary by-products, or imitations of such teaching activity. This usage is attested as early as the 4th century B.C. At the end of the 1st or beginning of the 2d century A.D., Arrian took notes of the lecture-discussions of his teacher Epictetus. The oldest manuscripts give the title "diatribes" to Arrian's record of Epictetus' teaching discourse.

A. Matters of Definition

The modern scholarly concept of the diatribe has often been imprecise and unduly broad. It has been closely tied to the idea of popular philosophy. In the earlier part of this century, scholars developed the idea that the diatribe was the primary oral and literary genre of the supposed popularization of philosophy for the masses in the Hellenistic period. They often claimed, but without warrant, that Bion of Borysthenes (ca. 324–255 B.C.) was the originator of this genre. Modern writers have frequently described the diatribe as a sermon for the common man developed by the Cynic and Stoic street preachers. The main criteria for classifying a work as a diatribe in the early part of this century was that it contain moral teachings advocated by the Hellenistic philosophies and that it employ a lively popular style.

Scholars have at one time or another called a variety of genres diatribes because they are works which seek to teach individuals the attitudes and ways of life advocated by the Hellenistic philosophies. The iambic poems of Hipponax, Cercidas, Phoenix of Colophon; the satires of Varro, Horace, and Lucian; the epideictic and deliberative speeches of Dio Chrysostom; and the philosophical treatises of Cicero—all have been called diatribes. This broadening of diatribe to mean nontechnical and moral-philosophical literature has been strongly criticized by classicists. It is better to use diatribe only for moral lectures and discussions in the philosophical schools, written records of that activity, and literary imitations of that kind of pedagogical discourse. It is also appropriate to speak of other genres employing features of style and rhetorical techniques from this tradition.

B. A School Method

First, it is important to understand the nature of ancient philosophical schools. Indeed, the term school can be misleading since it often means a continuing institution with a permanent location and a formalized organization. Aside from the traditional schools in Athens which had some organization and institutional continuity, most schools consisted only of a teacher and students. These circles of teachers and disciples met either in the teacher's home or in public places such as a gymnasium or stoa. In Hellenistic and Roman times the teacher was above all the guide, mentor and model for the students' character formation. The diatribe was a tradition of rhetoric for such moral-pedagogical purposes. See SCHOOLS, HELLENISTIC.

Most of the authors of diatribes whose works are extant look back to Socrates as a model for their own teaching activity. Records with minimal literary shaping of actual dialogues among individuals in the

setting of a class or larger audience are extant from Epictetus and Dio Chrysostom. The dialogical style associated with the diatribe is more typically simulated rhetorically in a lecture or informal discourse. This philosophical-school style was an attempt to adapt the "Socratic" elenchus and protrepticus to the rhetoric of a speech. The elenchus was Socrates' method of critical questioning by which he attempted to expose the ignorance and moral inconsistency of his discussion-partner. The elenchtic method is especially prominent in Plato's earlier dialogues. The protrepticus is Socrates' positive exhortation to virtue or the philosophical life (*Euthydemus* 278E–282D). Both elenchtic and protreptic discourse have the character of direct address to an individual.

C. Rhetoric and Style

The diatribal authors simulate direct address in their discourses by creating an imaginary discussion partner and by employing direct address to their audiences. The dialogical element in the diatribe takes several forms and within limits varies considerably from author to author. One method consists of short exchanges of questions and answers. Often this is in the Socratic manner with the teacher leading the fictitious interlocutor by means of pointed questions frequently posing absurdities which the interlocutor must strongly reject. This method is prominent in Teles, Epictetus, and Dio Chrysostom. Paul employs it in his letter to the Romans (3:1–9; 3:27–4:2). Sometimes the interlocutor asks the questions and the teacher answers. A technique of many authors is to string a series of objections and false conclusions from the interlocutor throughout the lecture or treatise. The interlocutor's question draws a false inference from which the author wishes to guard himself or poses a typical objection to the author's line of reasoning. The teacher's answer, then, serves as a transition to a new topic or step in the argumentation. A series of such objections may become a structuring principle for a discourse (Rom 6:1, 15; 7:7, 13; 9:14, 19; 11:1, 11, 19). In objections and other forms of imaginary speech (Rom 7:7–25), the diatribe made much use of the rhetorical techniques of *prosōpopoiia,* character delineation.

Diatribes also effect their style of direct address by means of brief speeches were the teacher turns from his real audience to address an imaginary individual. Typically but not always, these are sharp censorious words which rebuke the interlocutor for some vice or pattern of behavior (Rom 2:1–5, 17–24; 9:19–21; 11:17–24). These apostrophes tend to function as characterizations of the interlocutor and employ the techniques of *prosōpopoiia.* Addresses to an interlocutor employ vice-lists, rhetorical questions, and vocatives such as "O man" (Rom 2:1), "fool" (1 Cor 15:36), and "sir". They are usually spoken in the 2d person singular. The writer or speaker tends to maintain contact at various points with the audience in a way which is similar to letter-writing style. Diatribal and epistolary styles combine easily. The author may turn from the interlocutor or general argumentative discourse to exhort the audience or address a question to it.

Other elements of style vary widely according to the cultural-educational backgrounds, philosophical stances, and immediate purposes of the particular authors. Nevertheless, there are a number of rhetorical features which characteristically serve the didactic and hortatory purposes of the diatribe. The style tends to be conversational with parataxis and elliptical expressions, although some authors use periods. Rhetorical figures such as isocola, parallelism, and antithesis are popular. The style is certainly didactic and sometimes hortatory. Thus, much use is made of quotations from poets and philosophers in the form of maxims and brief citations. Anecdotes or *chreia,* comparisons, and especially examples from history and legend are very important. Irony and sarcasm, especially in connection with the imaginary interlocutor, are prominent. A number of authors personify abstract ideas such as death, poverty, and wealth (Rom 10:6–8; 1 Cor 12:15–16).

D. Subject Matter

A great number of themes are found in diatribes and literature influenced by the diatribe. The style is appropriate to almost any topic related to morality and manner of life. There are certain topics, however, which recur in the diatribal literature. These became standard topics for moralists from many schools and various points of view. Such topics largely constitute the content of what has been known as Hellenistic popular philosophy. Among these topics which are prominent in diatribes, other genres of moral literature and Christian writers from the 2d century onwards are: poverty and wealth (Jas 2:1–7; 5:1–6); exile; death

not to be feared (1 Thess 4:13–18; 1 Cor 15:12–56); contentment and self-sufficiency (1 Cor 9:1–27; Phil 4:11–13); freedom (1 Cor 6:12–20); luxury; passions (Rom 1:24–29; 7:7–25; Jas 4:1–3); divine providence; fate; anger (Jas 1:19–20); happiness; covetousness; self-control (1 Cor 9:24–27); old age; tranquility (1 Thess 4:9–12); pleasure; ascetic training; the wise man's speech (1 Thess 2:1–12); and moral armor (2 Cor 10:1–6).

E. History

The evidence is insufficient to write a history of the diatribe showing consistent lines of influence and development. Rather, a more modest survey of diatribal authors and the use of the diatribe by early Christian writers is possible and appropriate to the evidence.

1. Non-Christian Authors. We have the portrayals of Socrates' teaching activity by Plato and Xenophon but it is not until later Hellenistic times that the typical teaching style of the diatribe appears. Whereas the classical philosophies of Plato and Aristotle focused on the reform of the city-state, the Hellenistic schools tended to focus on the character development of individuals and a corresponding alternative style of life. This is true especially of the Stoics, Cynics, and Epicureans. Nontechnical and nontheoretical ethics, which emphasized practice and methods of moral training, became increasingly important into the early Roman Empire.

Teles, who lived in the mid-3d century B.C., is the author of the earliest extant diatribes, although references exist to the "diatribes" of many individuals who lived from the time of Socrates onwards. Teles was a Cynic teacher who conducted a school for young men, probably in Megara. Teles employs fictitious exchanges of question and answer with an unnamed interlocutor and censorious address in his lectures. His diatribes are full of quotations and paraphrases from philosophers and various moral authorities. Because he quotes Bion of Borysthenes, whose witty style is mentioned by a number of later writers, many scholars at one time accepted the thesis of Otto Hense that Teles' diatribes were merely copies of Bion, the originator of the style. Paul Wendland even outlined a history of the diatribe based on the assumption that the rhetorically and philosophically eclectic Bion had invented the diatribe. Wendland believed that the lively and entertaining diatribe of Bion had evolved into the duller and more serious diatribe of Roman times. It is now clear that Bion did not invent the diatribe and that the dialogical style found in Teles belongs to him and not Bion.

Most of the extant evidence for the diatribe comes from the period of the early 1st century B.C. to the early 2d century A.D. Philo of Alexandria (ca. 30 B.C.–A.D. 45) employs many of the typical themes of the diatribe and sometimes elements of diatribal style in his peculiar exposition of Judaism. The Epicurean, Philodemus, earlier in the 1st century B.C., came from Palestine to Italy where he gathered a circle of aristocratic Roman followers. His treatise on death (*de Morte*) employs the style of the diatribe and his *de Ira* "On Anger" has been variously called a diatribe or a treatise in diatribe style. His use of the first person plural in connection with dialogical features shows interesting similarities to Paul's style. Seneca, the contemporary of Paul and tutor of the young Nero, makes significant use of the diatribe's didactic dialogical style in several of his letters to Lucilius and certain of his moral essays. Seneca's letters illustrate how diatribal and epistolary styles, both of which are dialogical and employ direct address, could be effectively integrated.

The Stoic teacher Musonius Rufus (ca. 30–101 A.D.) conducted a school in Rome and then on the desolate isle of Gyaros where Nero had banished him. His extant diatribes are based on the notes of a student who, by paraphrasing and summarizing, has obscured much of the originally lively style. One of Musonius' students was Epictetus, who began a school in Nicopolis when banished from Rome by Domitian (89 A.D.). His "discourses" were stenographically recorded in shorthand and edited by Arrian. They provide the most extensive and detailed picture of a teacher's diatribes in the context of a school. We see him explaining doctrines, censuring and exhorting students, often using imaginary discussion and address to various interlocutors. He can move from conversations with people in his school to lecturing discourse with a full array of rhetorical techniques.

Dio Chrysostom began as a rhetorician but later turned to philosophy and took up the life of an itinerant Cynic when exiled by Domitian (82 A.D.). Many of his speeches are representative of the style and ethos

of the Second Sophistic. Some, however, are informal lecture-conversations which purport to record his teaching activity with a small group of listeners. These are diatribes which combine Dio's version of what he considered a Socratic teaching style with moral lecture. His diatribes often begin with short dialogues and make frequent use of objections from imaginary interlocutors. Dio's contemporary, Plutarch (ca. 50–120 A.D.), headed a school of philosophy at his home in Chaeronea. A number of Plutarch's moral treatises are based on school lectures or reflect the discussions of the school. Although these treatises have been given literary form, they often contain dialogical and other stylistic features of the diatribe. From the second half of the 2d century, 41 discourses are extant which the eclectic philosopher and sophist Maximus of Tyre gave to a class of aristocratic young men. Maximus mixes popular-philosophical themes, the style of the diatribe, and sophistic oratory in these discourses.

Other evidence for the diatribe is scattered over several centuries and needs further study. Certain discourses of Favorinus (ca. 80–150 A.D.) and Themistius (317–88 A.D.), for instance, have been described as diatribes. Some letters, as for example, certain of those ascribed to Apollonius of Tyana (died ca. 97 A.D.), employ diatribal style. There are also papyrus fragments of writings from Egypt which appear to be diatribes.

2. Christian Authors. The letters of Paul are the earliest pieces of Christian literature to show the influence and use of the diatribe. Some have suggested that Paul acquired the style through Hellenistic Judaism and "the sermon" of the Hellenistic Synagogue. We have no evidence for the latter, but any artisan and traveler of the cities in the Greek East could be expected to know of the diatribe. Schools often operated in public view, a teacher gathering a circle of students in a market, gymnasium, or stoa. There are many descriptions of passersby stopping to listen to a philosopher lecturing to his disciples in a public place. Satirists, comic playwrights, and moralists parodied the philosopher's teaching style assuming that their audiences were familiar with it.

As any other writer, Paul's employment of diatribal techniques is an adaptation to his own purposes and rhetorical style. The dialogical style of the diatribe is most prominent in Romans. He uses it to present himself as a teacher to a church where he wants to preach his own particular gospel concerning the redemption of the gentiles. In 2:17–29 Paul introduces and characterizes a Jewish interlocutor whom he censures for failing to be a light to the gentiles. Diatribal dialogues with this interlocutor ensue in 3:1–9 and 3:27–4:2 where Paul urges him to give up his boastful attitude toward gentiles. A series of objections and false conclusions are raised in chaps. 6–11 (6:1, 15; 7:7, 13; 9:14, 19; 11:1, 11, 19). These false inferences, which pose possible objections to Paul's line of argument, are usually rejected by the phrase *me genoito* (by no means!); then reasons are given for the rejection. Address in the second person singular to imaginary interlocutors also occurs (2:1–5, 17–29; 8:2; 9:19–21; 11:17–24; 14:4, 10). As in the diatribe, Paul uses censorious rhetorical questions, the expression "O man" and other typical elements of such apostrophes. The address in 11:17–24 is to a gentile interlocutor who boasts over Jews. Paul also employs a number of other rhetorical features typical of the diatribe including: lists of virtues and vices (Rom 1:29–31; Gal 5:19–23; 1 Cor 6:9–11), personification (Rom 11:17–24), comparisons (Rom 7:1–6; 1 Cor 12:12–26, and frequently), examples (1 Cor 3:5–4:7; 9:1–27; 10:1–13; Phil 2:1–11; Gal 1:10–2:21), and rhetorical questions (1 Cor 4:7–9 and frequently).

The methods of the diatribe are not of such central importance to any of Paul's other letters although the style appears at various places. In 1 Cor 6:12–20, for example, Paul dialogues with a sloganeering interlocutor. Many diatribal features are clustered in 1 Cor 15:29–35: rhetorical questions, direct address and exhortation to the audience, a proverbial saying, a quotation from the poet Menander, a question from an imaginary objector, censorious address to the objector, a comparison. In addition, Paul uses the metaphor of fighting the wild beasts which was used by philosophers for the struggle with their passions.

The hortatory letter of James employs both themes and rhetorical techniques of the diatribe. These include: indictment through the use of rhetorical questions (2:2–7, 14–16; 3:20–21; 4:4, 12), dramatic characterization (2:3, 16; 4:13–16), objection of an interlocutor (2:18), censorious address to an interlocutor (2:19–23; 4:13–5:6), examples (2:21–24, 25; 5:10, 17–18), comparisons (1:11, 23–24; 3:2–8, 11–12), quotations (2:8, 11; 4:5–6), control of the tongue (3:3–12), word versus deed (1:22–27; 2:14–26),

censure of pretentiousness (4:13–17; cf. 6–10), and the passions as the basis for vice (4:1–3). In James, as in any other writing, it is not the occurrence of isolated stylistic phenomena but the combination of multiple features in typical ways which identifies the style as diatribal.

The style of the diatribe was employed by many later Christian writers and in Christian preaching. In 2d century N Africa, Tertullian (ca. A.D. 160–ca. 240) employed the style with vigor (*De pallio; De cultu fem.; De spect.*). Clement of Alexandria (b. ca. 150) quotes large portions of Musonius Rufus' diatribes almost verbatim. In the 4th century, Basil (ca. 330–79) and especially Gregory Nazianzus (329–89) reflect not only the highest philosophical and rhetorical training but also themes and stylistic methods of the diatribe in many of their works. John Chrysostom (ca. 354–407) and Asterius of Amasia (fl. ca. 400) very effectively acculturated the style and themes of the diatribe to the rhetoric of their sermons.

In the diatribe, then, early Christian speakers and writers adapted a style of teaching and exhortation which had developed in circles of philosophical teachers and their students. By the 1st century A.D. this style had been widely influential in moral literature and philosophical rhetoric. In the NT the style of the diatribe is most important in Paul's letters, especially Romans, and the epistle of James. An understanding of its features and functions is invaluable for the exegesis of these texts.

DIBLAIM (PERSON) [Heb *diblāyim* (דִּבְלָיִם)]. Father of Gomer, the wife of the prophet Hosea (Hos 1:3). Especially among those who interpret the first 3 chapters of Hosea allegorically, attempts have been made to find a figurative meaning in "Diblaim." The name has been understood as a dual form of the word "*dĕbēlâ*" (that is, compressed cake). "Daughter of Diblaim" is then taken either to mean that the prostitute Gomer could be hired for the price of two fig cakes, or (given the association of raisin cakes with the Baal cult) to refer to her association with Baal. However, such allegorical interpretation of the name is unlikely. Each of the three unambiguous sign names in Hosea 1 is accompanied by an interpretation of its meaning; in the absence of such explanation, it is best to take "Diblaim" as a concrete historical detail. "Daughter of Diblaim" might refer to Gomer's hometown (cf. the Moabite town, Diblatayim). However, it is most likely simply the name of Gomer's father, about whom nothing else is known.

CAROLYN J. PRESSLER

DIBON (PLACE) [Heb *dîbôn* (דִּיבוֹן)]. One of the cities of the Moabites, which, according to Num 21:26–30, was captured by Sihon, king of the Amorites, in his campaign against Moab shortly before the arrival of the Hebrews on their traditional movement from Egypt to Canaan. Literary documentation for Dibon is found mainly in the OT and the Mesha stele (see *ANET,* 320–21). The former, insofar as it concerns Moab's role in Israel's own settlement traditions, and as colored by mutual hostility and ignorance over centuries, must be treated with caution.

A. History

The Israelites captured this territory N of the Arnon (Num 21:21–25, 31) and it was assigned to the tribe of Reuben (Josh 13:15–23). In Num 32:34, however, it is said that Dibon, ʿAtaroth, and Aroer were built by Gad, even though its traditional allotment was further N, extending to the Jabbok river (modern Wâdī Zerqā). Reuben's displacement of Gad in this territory is supported by the term "Dibon-Gad," that is "Dibon of Gad" in Num 33:44–45 and the statement of the Mesha stele (lines 10–11) that "the men of

Gad dwelt in the land of ʿAtaroth from of old and the king of Israel had built ʿAtaroth for himself" (ʿAtaroth is probably to be identified with Khirbet ʿAṭrūs, 14 km NW of Dibon). Dibon is on the ancient main route ("The King's Highway" in Num 20:17; 21:22) running N from ʿAqabah via Kerak to ʿAmman, and probably onward to Damascus. Its site is localized by the name of the village of Dhībān, situated on a low mound (M.R. 224101) 64 km S of ʿAmman and 3 km N of the biblical Anon river (the Wâdī el-Mūjib). However, the ancient city stood on a prominent mound N of the modern village, cut off by a deep wadi on the W and N, and by a shallower depression on the E, from the tableland surrounding it. This part of the mound, until recently, supported extensive ruins of the Byzantine and Arab periods. On the S, the mound descends gradually into a bay flanked on either side by slight elevations where, reportedly, the Moabite Stone (the stele of Mesha, king of Moab) was found in 1868. Finally, it merges into a low saddle with joins it to the S mound.

The book of Judges recounts that the children of Israel served Eglon, king of Moab, for 18 years, until delivered by Ehud (Judg 3:12–30); later, apparently, it was necessary for Jephthah to deliver the land N of the Arnon from an Ammonite occupation (Josh 11–12:7). A Moabite domination is referred to, also, in 1 Sam 12:9. King Saul warred against his neighbors, including Moab (1 Sam 14:47), to ensure that they would not pose a threat to his newly founded kingdom. David conquered Moab and put it under tribute (2 Sam 8:2); his census of his kingdom included the lands from the Arnon river N (2 Sam 24:5). Dibon was certainly included within the dominion of Israel at this time, but it is probable that Moab regained its territory N of the Arnon after the death of Solomon when the N tribes seceded. To this period, during the reign of Jehoshaphat, we should ascribe the strange account of an invasion of Judah by Transjordanian states, including Moab (under Mesha's father, *KMŠYT*?) which was repulsed only by divine intervention (2 Chr 20:1–30). It was, however, Omri of Israel according to the Mesha stele (lines 4–5) and 2 Kgs 3:4, who led a successful attack against Moab N of the Arnon, took "possession of all the land of Medeba," and exacted a heavy tribute.

After Ahab's death, Mesha revolted. Jehoram, the grandson of Omri, Jehoshaphat of Judah, and the latter's vassal-king of Edom (1 Kgs 22:47; 2 Kgs 3:4–27) launched a joint campaign against Mesha from the S around the Dead Sea. His army was defeated, his land laid waste, and his city, Kir-hareseth (usually identified with modern Kerak) besieged. Mesha resorted to the ultimate sacrifice of his eldest son as a burnt offering on the wall of the city to appease the divine powers; the desperate act achieved the result he desired—the allied forces lifted the siege and retired, leaving him in control of Moab.

Threatened from N and S, Mesha appears to have decided that his N border was the most vulnerable and launched an attack on the Israelite-held towns N of the Arnon. The Mesha stele gives very detailed information on his campaigns: his assault on Ataroth, rebuilt by the king of Israel, and the slaughter of its Gadite inhabitants; his capture of Nebo, the sacrifice of its populace, and the devotion of the ritual objects of Yahweh to Chemosh, his god; and his seizure of other cities culminating in the capture of Jahaz, the stronghold built by the Israelite king when he came to the aid of the Israelite inhabitants (Mesha stele, lines 4–21; cf. *ANET*, 320).

As Mesha was a "Daibonite," he established Dibon as his capital adding or rebuilding, at its S extremity, a new quarter called *Qrḥh* (possibly pronounced, *Qarḥoh*): "I made this sanctuary for Chemosh in Qrḥh" (line 3); "I built Qrḥh, the wall of the parks and the wall of the acropolis. I built its gates, I built its towers, I built a palace, and I made the retaining walls of the reservoir inside the town" (lines 21–24). As the new quarter had no cisterns, Mesha directed the inhabitants to make cisterns for themselves (lines 24–25). The stele with its triumphant declarations was probably set up in the sanctuary of Chemosh in Qrḥh, near where it was found in 1868.

Mesha's successes may not have been lasting. Hazael of Damascus is said to have conquered Israel's territory E of the Jordan as far as the Arnon (2 Kgs 10:32–33), which may mean that this part of Moab had been lost, perhaps to King Jehu, before this time. On the other hand, there are hints in the OT that Moab maintained a precarious existence including even its territory N of the Arnon. The references in Isa 15:2 and, perhaps, in Jer 48:18, where Moab is called "the daughter of Dibon" suggest that Dibon might still have been the capital. The oracles against Moab of Isaiah 15–16 and 25:1–12, of Jeremiah 48, and

Ezekiel 25:8–11 name not only Dibon but other towns N of the Arnon as though they still belonged to Moab: Heshbon, Aroer, Nebo, Medeba, Jahaz, and others. This was the period of Assyrian and Babylonian expansionism and the states of Syria, Palestine, and Transjordan were forced to submit or be destroyed. By submitting to this foreign domination and paying its tribute, Moab was allowed to keep its own shadow government and kings; four of these are named in the Assyrian annals. That it should be at peace—and no doubt gleefully witnessing Israel's and Judah's travails, in spite of their prophets' dire warnings—was a very sore point with those prophets and made their oracles against Moab bitter and gloating. Finally, Moab, too, committed the fatal mistake: It joined a widespread rebellion against the Babylonians and lost all semblance of independence, probably at the hands of Nebuchadnezzar (582 B.C.).

Moab (and Dibon) play no important role in the centuries that followed, but with the rise of the Nabatean power and the growth of trade, Moab must have flourished. However, Judah, as a result of the Hasmonean triumph over the Greek rulers of Egypt and Syria and the establishment of a strong state, once more turned its eyes to its former territories in Transjordan. Both John Hyrcanus and Alexander Jannaeus warred against the Nabateans, winning back some of the lost cities. Whether Dibon was one of these we are not told, but one coin of Hyrcanus II (63–40 B.C.) found at the site, suggests that Dibon was included within the Peraea, "the land beyond (the Jordan)," an adjunct of the Jewish state. If so, it is probable, on the basis of the archaeological evidence, that it reverted to Nabatean rule at least as early as the 1st century B.C. and was incorporated into the new Roman province of Arabia in A.D. 106.

Two inscriptions found at Dibon suggest strongly that there was a Roman garrison here in the latter part of the 2d century and much of the 3d. Eusebius, in the 4th century, notes Dibon as a "very large town." Yāqūt, the Arab geographer, writing in the first quarter of the 13th century, mentions "Dhibyān." By Ottoman times, the village had moved to the S hill and closer to the main road.

B. Excavations

A preliminary sounding was conducted in 1950 with full excavations the following year under the direction of F. V. Winnett. His report provides valuable insights into the interpretation of the Mesha stele and the other documentary sources. The field work was continued in 1952 by W. L. Reed; in 1952–53 by A. D. Tushingham; and finally in 1955–56 and 1965 by W. H. Morton. The first 3 expeditions were confined to the SE part of the mound; those of Morton consisted of soundings to bedrock on higher and hitherto untouched parts of the mound—the NE, NW, and summit.

1. The Bronze and Iron Ages. Morton's reseaches filled serious gaps in the city's archaeological record. For the first time, excavations to bedrock revealed undisturbed EB Age deposits. In his section H–VII were found bonded walls, 1.40 m thick, running E-W and N-S, resting on bedrock and enclosed within a fill whose ceramic content was consistently EB; their proximity to a gateway of the Iron Age and segments of other walls to the W and N attributed to the EB make it possible to infer a defensive system of this period. While the duration of this early occupation may encompass EB II–IV, there is absolutely no evidence for the MB and LB Ages at Dhiban.

Settlement begins once more in the Iron Age. Pottery characteristic of the early Iron Age has been found, but it is still not possible to assign any structures to this period. At least two Iron Age II stages of a major gateway are represented in Morton's section H. The earlier is built of stone and mudbrick and is approached by a curved, sometimes stepped, pathway on bedrock. Probably to the destruction of this wall is to be ascribed the charred grain found resting on bedrock outside it, which can be compared with the grain found by Reed in a house at the S end of the mound, dated by radiocarbon and ceramic evidence to ca. 850 B.C. The later Iron Age city wall stands to a height of 3.5 m; the gateway as found, however, represents a reworking in the Nabatean period. Outside this wall were large circular grain silos with plastered stone sides and bottoms which may belong to the time of Mesha. They indicate the city's prosperity and the importance of grain as a major staple crop of the kingdom (Ruth 1:1), as of Transjordan generally (for Ammon, 2 Chr 27:5). To this same period may be ascribed a large public building in section L, referred to as a "palace," measuring 42.9 × 21.1 m. Its stone walls rest on bedrock, cutting through 30–40 cm of EB deposits. Its E end may have been a sanctuary; in this area were found pieces of

an Iron Age I incense stand and nearby 2 "fertility" figurines. The "palace" and "sanctuary" may be the buildings referred to in the Mesha stele (lines 3 and 23).

It seems more likely at present, however, to seek Mesha's new royal quarter of Qarhoh in the area partially investigated in the 1950–53 expeditions, even though this area was generally low-lying and difficult to enclose within the city's main defenses. Yet it was here, tradition holds, that Mesha's memorial stele was found—a logical site if it was set up originally in or adjacent to "this high place in Qarhoh" (Mesha stele, line 3). Its subsequent development as the citadel of the city involved great labor and expense which may confirm its identification with Mesha's royal quarter.

Three building stages in this area have been distinguished. The earliest, resting on or immediately above bedrock, contains traces of occupation and city walls, but no fills to raise the occupation level towards that of the main settlement to the N It probably represents a lightly fortified suburb outside the city's main walls. Occupation there can be dated to about 850 B.C.

A major redevelopment of this area included heavy walls along the S, SE, and E (the W part of the area has not been excavated) and an impressive square tower at the SE corner. These supported a great fill which elevated the S quarter to at least the threshold level of the tower 13 m above bedrock. A second tower or other major building may lie beneath an unexcavated knoll to the W. What appears to be a casemate wall in part underlying the S and part of the E podium of the later Nabatean temple, together with other fragments of walls, may be related to the "high place for Chemosh" and palace referred to in the Mesha stele (lines 3 and 23); this may be inferred from the tendency in the Near East for holy places to retain their sanctity and power through a series of shrines. It seems possible that this major building program, although still not completely excavated or defined, represents Mesha's work.

The latest and most spectacular building project at Dibon consists of a great battered wall of roughly dressed blocks averaging 1 × 0.5 m laid horizontally, revetting and supporting the earlier constructions. Where revealed, it still stands up to 10 m above bedrock. Dibon's impressive citadel, when completely visible, must have resembled the podium of David's citadel at Jerusalem recently excavated by Yigal Shiloh. Such expensive works, and permission to build them, suggests that a ruler of Dibon had won special favor from his overlord; such an occasion may be the "defeat in an open battle" inflicted by "Kamashaltu, king of Moab," vassal of Ashurbanipal, on an Arab king who had revolted. Apart from the defenses, archaeology has revealed little of architectural significance; the excavated tombs of the Moabite period, however, reveal that in material culture, at least, Moab differed little from its neighbors E and W of the Jordan.

Dibon's security and prosperity came to a sudden end when Moab joined in a general revolt against Nebuchadnezzar, the new Babylonian overlord. Moab lost all independence in 582 B.C., although there is no evidence that Dibon itself was destroyed. However, apart from some Hellenistic pottery there is no structural evidence of occupation during the Persian and Hellenistic periods which followed.

As we have already noted, the discovery at the site of one coin of Hyrcanus II (63–40 B.C.) may suggest that Dibon formed part of the Peraea, ruled from Jerusalem by the Hasmonean priest-kings of a resurgent Judea. If so, evidence of occupation at this time must be elsewhere on the site, perhaps on the summit of the tell.

2. The Nabatean Period. Dibon enjoyed a renaissance with the rise of the Nabatean kingdom. Excavations on the summit have revealed a rich Nabatean deposit, including a city gate, closely dated by the typical fine, thin, sometimes painted and dimpled Nabatean pottery. The chief monument that we can speak about with some assurance is the temple built at the SE corner of the mound. As reconstructed, it is of *distyle in antis* form, and consists of pronaos, naos, and tripartite adytum; the podium walls project northward on either side of a broad flight of steps leading to the entrance. Its overall width, with podium walls, is 19 m; its length, with staircase, is 28 m. Fragments of capitals, columns, pedestals, and entablature permit us to visualize the building. In many respects, it is similar to the Qasr Bint Far'un in Petra and was probably built in the early part of the 1st century A.D., perhaps under Aretas IV. The temple was surrounded by a flagged pavement supported by walls to the S and E. Running parallel to its S wall was an aqueduct, carried on arches. There was no defensive wall surrounding the temple precincts;

instead, a monumental flight of stone steps (originally 8 m wide) led from the S over the ruins of the Moabite defenses. There are evidences for modifications in this plan, but there is no evidence of destruction; it is probable that the temple was abandoned about the time the Nabatean kingdom was absorbed into the Roman province of Arabia in A.D. 106.

3. Roman, Byzantine and Arab Periods. A few coins, and particularly 2 inscriptions establish a Roman presence at Dibon: One inscription, probably to be dated to A.D. 201, may mark the establishment of a Roman military post to guard the main N–S road through the province; the other commemorates the construction, in A.D. 245/46, of a tower (?) and refers to a Roman governor (Claudius Capitolinus), hitherto unknown. A bath complex (mostly unexcavated) and what may be a contemporary city wall have been tentatively assigned to this period.

Eusebius knew Dibon in the 4th century as a large, unwalled town, but it obviously shared the general prosperity of Transjordan and Palestine, particularly in the 6th and 7th centuries. Excavation revealed a vaulted hall and an open courtyard to its E, a structure of unknown purpose on the old Nabatean temple podium, a piazza area which was modified to provide vaulted baths, and 2 churches (neither comparable with those at Nebo and Medeba), but no city wall. Three phases of construction or repair have been distinguished running from the middle of the 6th century to the Arab conquest. Tombs of the period give us an insight into the personal lives of Christians in this somewhat remote region of the empire.

The first Muslim occupation appears to have occurred almost immediately, under the Umayyad caliphate. A complex of vaulted rooms overlying the "Gateway" church, W of the Nabatean temple platform, may represent the manor house of a local chief. Its defense wall enclosed the Byzantine bath rooms, converted into vaulted dwellings, as well as the reoccupied Byzantine hall. Morton also reports 2 vaulted Umayyad buildings on the summit of the tell. There is also numismatic and stratified ceramic evidence for an 8th–9th century Abbasid settlement.

The manor house was reused, and a scattering of fragmentary walls over the N church and its atrium suggest a rather extensive occupation in the medieval Ayyubid and early Mamluke period. On the summit of the mound, very substantial remains (some of them originally Byzantine) are probably to be dated to this period.

A. D. TUSHINGHAM

DIBRI (PERSON) [Heb *dibrî* (דִּבְרִי)]. Member of the tribe of Dan whose grandson is stoned to death for blasphemy against the Name of Israel's God (Lev 24:11). Nothing is known of his life, but his daughter is mentioned by name, Shelomith, and it is noted that she was married to an Egyptian. There is

some ambiguity as to the exact nature of the crime of Dibri's grandson, but it seems that at issue in the story is the extension of the law against blasphemy of God (Exod 22:28) to include the utterance of the Name, as well as blasphemy, by one who is only half-Israelite (see Porter *Leviticus* CBC).

PAULINE A. VIVIANO

DIDACHE. An early work on Christian discipline, known also as the *Teaching of the (Lord through the Twelve) Apostles (to the Nations).* The only independent Gk manuscript (dated to 1056 C.E.) of this relatively compact handbook of Christian ethical (chaps. 1–6) and liturgical-community (chaps. 7–15) instructions, concluded by a brief eschatological admonition (chap. 16), was "discovered" (recovered) by P. Bryennios in 1873 and quickly brought to the attention of modern western scholarship. Related forms of part or all of this material were already available in such compilations as the Apostolic Constitutions (7:1–32), the Apostolic Church Order traditions (especially Ethiopic), and the Epistle of Barnabas (chaps. 18–20), although recognition of this fact was not achieved until the Bryennios text became available. Fragments of the Didache tradition have also been found in Latin ("Doctrina"), Coptic, and Georgian, as well as in a Gk papyrus remnant, and there are various patristic references from the time of Eusebius onward to a writing or writings called the "Teaching(s)" of the Apostles.

Didache and these associated materials provide an excellent example of early Christian "evolved literature" of which snapshots of various stages in the development have haphazardly survived. Clues to the existence of earlier strata are abundant in the text of Didache, and have provoked much scholarly discussion. There seems to be a general consensus that the "two ways" material in chaps. 1–6 has a prehistory that connects with Jewish ethical concerns (see Harnack 1896) which probably took shape in both Greek and Semitic formulations. This helps to explain the similarities and differences between the two ways in Didache, Barnabas, Doctrina, and elsewhere (e.g., Goodspeed 1945; Rordorf 1972). To this basic substratum, the Didache form of the two ways has attracted the additional sections in 1:3b–2:1 (gospel sayings and related admonitions; see especially Layton 1968; Mees 1971) and 3:1–6 (the "fences" tradition).

Similarly, the apparent intrusion of such sections as 12:1–5 (compare 11:4–6) and 14:1–3 into the flow of the community instructions, and the evidences of developmental language even within the existing instructions (e.g., the concessions in 6:2 and 7:2–3, the change from itinerant to local ministry in 15:1–2) illustrate the evolving nature of this material even outside the two-ways section. It is no wonder that scholars have found in the Didache a formidable challenge for their analytical and synthetic skills at the level of text and tradition analysis (see especially Audet 1958; Giet 1970; Rordorf and Tuilier 1978).

Assigning firm dates and locations to this type of material has proved especially challenging. Clues that help unlock the mysteries of one part of the composite do not necessarily apply to the whole. Indeed, in such discussions it is important to be very clear about what is identified as the "text" receiving focus (Didache) and what constitute "sources," "recensions," "interpolations," and the like. Thus it may be that the reference to wheat (bread) scattered on the mountains in the prayer language of 9:4 suggests imagery from somewhere (Syro-Palestine?) other than Egyptian wheatflats, but that does not necessarily mean that the person who embedded this prayer in the Didache, or the people to whom the instruction was directed, were located in hilly country. Similarly, the fact that Didache often seems to have an archaic flavor, as with the prayers in chaps. 9–10 or the references to itinerant "apostles and prophets" (and "teachers") in chaps. 11–15, does not necessitate that the surviving form was "published" at an early date, although it may suggest that certain sections of the surviving form have a significant prehistory.

Some commentators argue for a date of effective origin as early as around 70 or soon thereafter (Kleist 1948; Rordorf and Tuilier 1978), and others as late as the later 2d century (Vokes 1970) or even the 3d century (Peterson 1959). The fact that Christian witnesses from the 4th century onward, especially in the vicinity of Egypt, provide the strongest evidence for the existence of the Didache tradition, is the necessary starting point for controlled discussions of its origin and date. That most commentators now seem to opt for Syria (Audet 1958; Hazelden Walker 1966; Rordorf and Tuilier 1978) or Syro-Palestine

(Niederwimmer 1977) as the place of origin is not in itself an indication that the supporting evidence is compelling; Egypt (Kraft 1965) and Asia Minor (Vokes 1970) also have their supporters.

The Didache has provoked an enormous amount of scholarly interest, not only with reference to the text and traditions it represents, or the circumstances of its origin, but also concerning its evidence for reconstructing aspects of early Christian thought and practice. The two-ways material seems to be presented in the larger framework as prebaptismal instruction (7:1) and perhaps also as a criterion for evaluating itinerant teachers (11:1). Although the baptismal rite described in chap. 7 may have been an annual event, the immediately subsequent instructions on fasting and formal prayer explicitly refer to weekly and daily observances. There is much debate about the relationship of chaps. 9–10 (on how to give thanks, *eucharistein*) and the prayers prescribed therein to such early Christian practices as *agape* meals and "eucharistic" celebrations (annual as well as more frequent; see also chap. 14 on possibly weekly "eucharists," and 16:2), and to related uses of ointment/incense (10:8 in some texts; see Peterson 1959; Kraft 1965; Gero 1977; Niederwimmer 1982). And the allegedly "primitive" language (christology, eschatology) of the prayers has also received much attention in various connections (Peterson 1959; Clerici 1966; Niederwimmer 1982).

Equally fascinating has been the Didache's treatment of early Christian leadership (chaps. 11–15), with the focus on itinerant ministry of apostles/prophets and others ("teachers," coreligionists), but also with reference to settled "bishops and deacons" who are in danger of being considered inferior to the itinerants (15:1–2)! How this all relates to similar issues in the sweep of early Christian evidence from Paul through the Montanist crises of the later 2d century has produced much discussion and debate (Niederwimmer 1977; Halleux 1980; Stempel 1980).

Finally, the relationship of the apocalyptic "appendix" in chap. 16 to early Christian traditions (Kloppenborg 1979) and to the remainder of Didache has been subjected to close scrutiny. The relative absence of apocalyptic interests or language elsewhere in the document is noteworthy (compare the more general eschatological phrases and ideas in the prayers of 8:2; 9:4; 10:5–6), as is the general absence of traditional Christian theological and soteriological concerns. The significance of apparent parallels between Didache and the canonical Synoptic Gospel traditions, in chap. 16 and elsewhere, have been widely debated (Hazelden Walker 1966; Kloppenborg 1979). In general, the analyses of the internal contents and concerns of Didache have functioned hand in hand with the external and textual evidence to fortify the impression that a variety of layers underlie the form of the tradition that happens to have survived in the Bryennios manuscript. It is no wonder that, more than a century after its resurrection, the Didache continues to frustrate those who try to fit it into a neat and consistent picture of early Christian history and thought.

ROBERT A. KRAFT

DIDYMUS. See THOMAS (PERSON).

DIET. See MEAL CUSTOMS; ZOOLOGY.

DIKLAH (PERSON) [Heb *diqlâ* (דִּקְלָה)]. A son of Joktan and hence the name of a S Arabian locality or region (Gen 10:27; 1 Chr 1:21). The name is to be explained in accordance with Jewish Aramaic *diqlâ,* Syriac *deqlâ,* Middle Hebrew *deqel,* "date palm," and in biblical Hebrew is probably an otherwise unattested word for the same species. Hence, it follows that the name refers to a region rich in palms or to an oasis with groves of date palms (comparable to this is Heb *tāmār,* "date palm," which likewise occurs as a place-name, or *ʿîr hattĕmārîm,* "city of palms," as an epithet of Jericho (Judg 3:13). Since a root *dql* is not attested in Epigraphic South Arabic either as a proper name or as a noun, it can be assumed that *diqlâ* is the translation of an Old South Arabic word, probably *nḫl,* "palm grove, palm plantation" (cf. Ar *naḫl,* "date palms"). Since in Hebrew *naḥal* normally designates a valley with a brook and *tāmār* was already being used for a place in Palestine, another word had to be chosen.

With regard to a possible location in S Arabia, E. Glaser (1890: 435) proposed the region around Ṣaʿda or the Tihāma, i.e., the Yemenite coastal plain. The most numerous references to *nḫl* in the Old South Arabian inscriptions originate, however, from the oasis of Mārib (e.g. CIS IV 375 = Ja 550,1, where no less than 12 palm groves in the Wadi Aḏanat are mentioned by name) and from the region around Ṣirwāḥ (cf., e.g., Höfner 1973: 10–20, where 5 inscriptions are published in which reference is made to one, two, or even more palm groves). Ṣirwāḥ, which is situated WSW of Mārib, was (next to the capital city) the second most important town of the early Sabaean kingdom. Somewhere in the vicinity of that town was a place whose name contained the word for palm grove, *ʾrḍhmw nḫl ḫrf,* "their land *Naḫl Ḫar (ī)f*" (CIS IV 398,14 and CIS IV 544,100: the donors of these two inscriptions designate themselves as inhabitants of Ṣirwāḥ). In the plain of Raḥāba on both sides of the Wadi Aḏana above the former dam of Mārib in the direction of Ṣirwāḥ there were (as late as in the 10th century A.D.) large palm groves from which most of the dates originated which were sold in Ṣanʿāʾ (al-Hamdānī 1884: 102).

The inscription CIS IV 601 is the decree of a Sabaean king prescribing taxes which had to be paid by the country people from the produce of the soil. The passage *sbʾ wyhblḥ, Sabaʾ and Yuhabliḥ* occurs in this text (lines 5–6), which likewise originates in Ṣirwāḥ. Hommel (1926: 145) explained *Yuhabliḥ* (which he, however, localized in N Arabia) as *regio dactylifera,* i.e., as Diklah of the OT. The explanation of *yhblḥ* is based on Ar *ablaḥa,* "to bring forth green dates." In the inscription CIS IV 601, *Yuhabliḥ* is mentioned side by side with *Sabaʾ,* i.e., the Sabaeans in the oasis of Mārib, and it is possible that *Yuhabliḥ* designates the inhabitants of the land on both sides of the Wadi Aḏana and its tributary valleys above the

great dam of Mārib, a region in which dates were cultivated. The epigraphic testimony of the early Sabaean period—with its frequent attestation of date groves in the district of Mārib and Ṣirwāḥ and the occurrence of *nḫl* as name of a place in the vicinity of Ṣirwāḥ—seems to indicate that *diqlâ,* " (the land of) the date palm," must be located in the region around Ṣirwāḥ.

DILEAN (PLACE) [Heb *dilĕʿān* (דִּלְעָן)]. A town situated in the Shephelah, or low country, of Judah (Josh 15:38), within the same district as Lachish and Eglon. This settlement, whose name perhaps means "protrusion" (from *dlʿ*, "to protrude"), is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). The location of the ancient settlement is uncertain.

WADE R. KOTTER

DILL. See FLORA.

DIMNAH (PLACE) [Heb *dimnâ* (דִּמְנָה)]. Var. RIMMONO. One of the cities in the tribe of Zebulun given to the Levitical family of Merari (Josh 21:35). The apparent parallel in 1 Chr 6:62 [—Eng 6:77] reads Rimmono (Heb *rmwnw*), suggesting that the original may have been RIMMON, a Zebulunite town mentioned in Josh 19:13, and that "Dimnah" is an erroneous form resulting from a misreading of the initial *reš* as a *dalet.*

GARY A. HERION

DIMON (PLACE) [Heb *dîmôn* (דִּימוֹן)]. On the basis of the MT, the KJV reads "the waters of *Dimon* are full of blood" in Isa 15:9. Following the Dead Sea Scrolls (1QIsa[a,b]) and the Vulgate, the RSV has *Dibon.* Some scholars suggest that *Dimon* represents a scribal corruption, while others believe that *Dibon* was deliberately changed to *Dimon* to create a play on words between the sounds of *Dimon* and *dām* (Heb "blood"), included in this same verse.

This textual problem occurs in Isaiah's oracle against Moab (chapters 15–16), which has parallels with Jeremiah 48. In fact, the place-name *Madmen,* mentioned in Jer 48:2, is often emended to *Dimon,* since the initial *m* could have resulted from dittography. Dimon, in Isa 15:9, and the emended Madmen (= Dimon) of Jer 48:2 have been identified with Khirbet Dimneh (M.R. 217077), located ca. 21/2 miles NW of Rabbah, in Moab. A recent surface survey was conducted at modern Dimneh, with virtually no Iron Age pottery being recovered.

Two other factors should be considered in selecting the correct reading for Isa 15:9. (1) It has been argued that Dibon is not on a large stream, as would be required by the phrase "the waters of Dibon," although it does sit at the head of a wadi. On the other hand, Dimneh is located on the Moabite plateau overlooking Wadi Ibn Hammād, a major wadi system that could qualify as "the waters of Dimon." (2) More importantly, Dibon was already mentioned in Isa 15:2. Since no other place-name occurs twice in this chapter, it seems likely that a different town was intended in v 9, a place named Dimon.

GERALD L. MATTINGLY

DIMONAH (PLACE) [Heb *dîmônâ* (דִּימוֹנָה)]. A settlement of the tribe of Judah. Dimonah is only mentioned once, in Josh 15:22, where it is listed among the settlements occupied by Judah in the aftermath of the conquest. Though the present literary context of the Judean town list is set in the period of Joshua, its original setting was part of a post-Solomonic administrative division of the S kingdom. The

date for the establishment of this system is debated, with suggestions ranging from the early 9th to the late 7th centuries B.C. Dimonah is in the southernmost district of Judah, the Negeb.

The location of Dimonah is problematic. In the list it is placed between Kinah and Adadah (probably a mistake for Aroer), which would place it in the E Negeb. It may be that Dimonah is to be equated with the Dibon of Neh 11:25 which was one of the sites settled to the S of Jerusalem by the exiles returning from Babylon. If this suggestion is valid, a possible location could be Khirbet edh-Dheiba, (*GP* 2: 305) 3.5 km NE of Tell Arad (Hebrew Khorvat Taiyib, M.R. 164079).

JEFFREY R. ZORN

DINAH (PERSON) [Heb *dînâ* (דִּינָה)]. Daughter of the patriarch Jacob. She is the only female descendant mentioned in the Genesis account of Jacob and his 12 sons (but cf. Gen 46:15, which mentions both Dinah and daughters [plural] of Jacob). Announcement of Dinah's birth (Gen 30:21) stands out in the narrative both because it presents a female child and because it lacks an explanation of her name, in contrast to the etiologies present for all the 12 brothers. Because of these features, the authenticity of Dinah's place within a unit of Genesis (29:31 to 30:24) that lists the birth and names of eleven of Jacob's sons has been called into question. However, other aspects of Dinah's position in this matriarchal section may mitigate the apparent strangeness of the Dinah verse.

Dinah's birth to Leah follows the announcement that Leah had borne 6 sons to Jacob. Her 7th child is thus a daughter; and, with a female, her childbearing comes to an end. The 7th position, considering the symbolic value of that number, represents the fulfillment of Leah's maternal role, one that includes at least one female child. Furthermore, the birth of Dinah occupies the pivotal spot in the transition between Leah's childbearing and that of the previously barren but favored wife, Rachel. Once Leah's part of the Jacob family is complete, God "remembered" Rachel and opened her womb for the birth of Joseph.

The lack of an etiology for Dinah, a name that, like the name of her brother Dan, is from a Hebrew word meaning "to judge" must be seen in the context of the eponymous nature of the 12 sons of Jacob. All represent tribal groups, and the presence of name explanations contributes to the ancestor traditions surrounding the 12 sons. Because Dinah is not an eponymous ancestor, an elaboration of her birth announcement would be inappropriate.

Dinah's presence in the birth account of Jacob's family also anticipates her appearance in the unusual narrative of Genesis 34, which recounts the rape of Dinah by a local Canaanite named Shechem (son of Hamor), the attempt of Hamor to arrange a marriage between his son and the woman he has violated, the resistance of two of Dinah's brothers (Simeon and Levi) to the proposed arrangement, and the subsequent deceit and slaughter of the prospective bridegroom, and all the men in his city, by the vengeful brothers.

This story departs from the previous narratives in the way it moves from the stories of individuals to personalized history (see Speiser *Genesis* AB, 266–68). As such it deals with two interrelated and complicated aspects of proto-Israelite existence.

Insofar as Shechem represents a Canaanite city and the two antagonistic brothers depict the ancestors of two Israelite tribes, the tale apparently reflects a proto-Israelite struggle and perhaps also the special position of Shechem as both a congenial and a troublesome place in pre-monarchic Israel. Unlike most of the Canaanite cities, it apparently became part of Israel without military conflict; it is the site of the great covenant gathering described in Joshua 24; it is the site of an early monarchic move by Abimelech that results in the destruction of the city (Judges 9).

The second aspect of the story is related to the tension involved in Shechem's status as part of Israel, yet it is different. The personalized tale dealing with marital customs confronts the difficult problem of ingroup (endogamous) vs. outgroup (exogamous) marriage. Israel struggled with the advantages and disadvantages of limiting marriage possibilities to endogamy throughout most of its history. As anthropologists (Pitt-Rivers 1977; cf. Gottwald 1979: 301–15) have pointed out, the shock value of the story draws attention to a sensitive issue. Marriage alliances are useful in territorial expansion or in

compensation for demographic shortages; but they also involve the threat that divergent cultural values will be brought into the group and threaten the group's stability.

The story of Dinah is thus a reflection of both the political history of proto-Israel and early Israel and the social history of all Israel. This interweaving of themes is reflected in the long-recognized complexity of the literary sources and structure of Genesis 34.

CAROL MEYERS

DINHABAH (PLACE) [Heb *dinhābâ* (דִּנְהָבָה)]. The residence of the Edomite "king" Bela (Gen 36:32; 1 Chr 1:43). See BELA. Bartlett (1965: 302–4), following Eusebius, located Dinhabah in Moab at either Dannea/Kh. ed-Denn (M.R. 221087), 7.5 miles N of er-Rabbah, or Danaba/Kh. el-Mhatta, W of Heshbon (see Mittmann 1971). These identifications are unlikely on both historical (Weippert 1971: 428–29) and linguistic grounds (Knauf 1985: 250, n. 27). The name has not satisfactorily been explained. Tentatively, one may suggest deriving the name Dinhabah from a clan or tribal name *Ḏahhaba (t), attested as a personal name in Safaitic and Qatabanic (Harding 1971: 259), by dissimilation of the geminate *h.* Dissimilation of geminates is fairly widespread in Aramaic and Arabic.

ERNST AXEL KNAUF

DIOGNETUS, EPISTLE TO. A late 2d century apology addressed to a certain Diognetus who is otherwise unknown. Diognetus was a tutor of the emperor Marcus Aurelius, who admired him for his freedom from superstition and sound educational advice (*Meditations* 1.6), but he is not likely to be the recipient, or even the assumed recipient, of this apology from around A.D. 200. The work itself survived (with other writings ascribed to Justin) only in a 13th century manuscript, formerly at Strasbourg but burned during the invasion of 1870.

The apology is relatively simple and straightforward, though it consists only of the first 10 chapters; the last 2 come from another work, presumably a sermon, composed in the style of Melito of Sardis. In theory it answers several questions raised by pagans about (1) the God of the Christians; (2) the nature of their religion, which results in disregard for the world, the despising of death, and the rejection of pagan gods as well as the superstition of the Jews; (3) the character of their mutual love; and (4) why the religion arose when it did and not earlier. The author deals with the first 2 questions together (chaps. 1–2), then with Judaism (3–4), with Christianity (5–7) and with the appearance of Christ (7–10). Mutual love is discussed only indirectly. The last two chapters (11–12) are also concerned with the appearance of the Logos-Son, but in a rhetorical-homiletic manner.

The treatise *Epistle To Diognetus* resembles the *Exhortation* by Clement of Alexandria and has the same drive toward generalities, lacking the detailed precision of earlier apologetic works. While the work was especially admired in the century after its first publication (Henricus Stephanus, 1592), its lack of historical attestation and its remoteness from a historical setting have led to a neglect that is partly deserved. On the other hand, the pictures of Christians in the world, comparable to soul within body (chaps. 5–6), of divine providence at work (7.2), and of the coming of the king's son—"persuading, not compelling, for force is no attribute of God" (7.3–4)—remain impressive. The discourse is basically moral, not theological.

There are no biblical quotations and relatively few allusions. In chap. 5, the author evidently relies on Paul's self-description in 2 Corinthians 6 for his picture of Christians in general, but he does not mention

the apostle. He does not name Jesus and is rather fond of the archaic and liturgical term "child" (Gk *pais;* chap. 8), though he also calls him Logos, maker (7.2), king, God, man (7.3), and indeed "nurse, father, teacher, counselor, physician, mind, light, glory, strength, life" (9.6). Such lists are rhetorical rather than theological in nature; some have Platonic antecedents, some biblical.

ROBERT M. GRANT

DIONYSIUS (PERSON) [Gk *Dionysios* (Διονυσιος)]. A Gk name derived from Dionysus, the god of vegetation, wine, and drama. In the NT, an individual named Dionysius was an Athenian and a member of the prominent Areopagus who was converted along with others by Paul's preaching (Acts 17:34). Although Paul's address to the Areopagus is usually viewed as less than successful, Dionysius' response suggests that Paul's message was not a complete failure. The conversion of such an important official no doubt gave the young church a good start, but little is known about the subsequent development of Christianity in Athens.

Eusebius reported that a bishop of Corinth also named Dionysius (ca. 175 C.E.) stated that Dionysius the Areopagite was the first bishop of Athens (*Hist.Eccl.* 3.4.11; 4.23.3). Eusebius's tradition is difficult to verify, but it would not be unusual for such an important individual to become a leading figure in a young church. The Neoplatonic literature of the 5th and 6th centuries attributed to Dionysius is an obvious pseudonymous attempt to acquire acceptance of a body of literature by an unknown author.

FRANK E. WHEELER

DIONYSUS (DEITY) [Gk *Dionysos* (Διονυσος)]. The Greek god of wine and ecstatic experience generally, and to some extent also of vegetation, and of death and rebirth. He was also remarkable as being subject to birth (from a mortal woman), death, and resurrection.

He is a peculiar phenomenon and something of an intruder into the Olympic pantheon. Known to Homer, but not, apparently, part of the epic tradition on which Homer is drawing (though the name has now been found on Mycenean tablets), Dionysus comes into his own as a god in Greece only in the Archaic Age (7th–6th centuries B.C.E.). Traditionally son of Zeus and a mortal mother, Semele, daughter of King Cadmus of Thebes, he should strictly have been classed as a "hero." That he was not was owing to an unfortunate misunderstanding, arising from the machinations of the jealous Hera, as a result of which his mother was blasted to ashes by the onset of Zeus some time after he was conceived; the embryo was snatched up by Zeus and lodged in his thigh, to be born again from there, at the due time. In fact, however, his mother's name betrays her origin as the Phrygian earth goddess Zemelo, and the curious primitiveness of the legend marks it as of Asia Minor origin (he himself was worshipped in Phrygia as *Diounsis,* a god of vegetation, who died and was resurrected). Semele became connected with Thebes only after it became a center of Dionysiac worship (probably in the early Archaic Age).

Universal tradition in fact presents Dionysus as an intruder into Greece, from Phrygia by way of Thrace. His other main title, Bacchus (Gk *Bakchos*), is originally Lydian, as we can see from inscriptions in that area. This probably reflects some historical reality, though the "resistance tales" associated with this—the one concerning Thebes, immortalized in Euripides' *Bacchae,* is the most famous—are perhaps best taken as dramatized rationalizations of the antagonism between the sexes stirred up and mediated by the introduction of Dionysiac worship. However that may be, Dionysus always remains to some extent a god worshipped on the fringes of society, or in "liminal" situations.

Dionysus is essentially the god of ecstasy, in particular that induced by wine, of which he is celebrated as the inventor. Particular festivals at Athens celebrated this aspect of him. At the Anthesteria, in late February, the new wine was blessed in the presence of a mask of Dionysus. There were wine-drinking competitions, and a procession took place recreating the arrival of the god from overseas, a ceremony matched by many others, called *katagogia* ("bringing home") in various Ionian cities. At the Lenaea (in January), and the City Dionysia, or Great Dionysia (early April), the ecstatic element was also in

evidence, though in classical times this was primarily expressed in the form of dramatic performances, comedy (predominantly) at the Lenaea, tragedy and comedy at the Dionysia. There were also local Dionysiac festivals, the rural Dionysia, celebrated throughout Attica in December, the central feature of which was a procession escorting a phallus, presumably to promote fertility among the slumbering seeds in midwinter.

After the conquests of Alexander, Dionysiac worship spread throughout the Middle East. There is abundant inscriptional evidence of Dionysiac cults and associations, with initiation rituals, where the underworld aspect of the god, his connection with death and resurrection, is often prominent. In these Hellenistic Dionysiac clubs, social wine-drinking was raised to the level of ritual, with elaborate rules regulating the members' conduct. The lobakchoi of Athens are a good example; besides ritual drinking, they on occasion performed a kind of sacred drama, featuring Dionysus and such figures as Kore and Aphrodite.

These were all-male associations. For the women, there was ritual maenadism, again well attested in inscriptions. This involved festivals every other year, when both maidens and married women took up the thyrsus, donned the fawnskin, and retired "to the mountain" to dance ecstatically, handle sacred objects, and eat raw meat (*ōmophagia*)—but not, it seems, drink wine, despite what many men believed. Whatever the remote origins of the phenomenon of maenadism, in Hellenistic times it seems to have been a well-controlled periodic demonstration of female self-assertion, comfortably contained within the confines of civilized society.

There are also attested in the Hellenistic and imperial periods sexually unrestricted Dionysiac groups, in which sexual intercourse, cultic or otherwise, may have been a feature, but there is no evidence of large-scale promiscuity, though it was alleged in hostile sources (leading to the banning of Dionysiac worship in Rome in 186 B.C.). Otherwise men and women continued to celebrate together at the major public festivals, such as the Anthesteria and rural Dionysia in Attica.

As Dionysus spread through the Mediterranean in Hellenistic and later times, he inevitably came up against various Semitic and other gods who filled some or all of the same roles in their society. Liber Pater in Rome, Sabazios in Phrygia, and Osiris in Egypt are obvious examples, but one more relevant to the present article is the "Dionysos" who was worshipped in Sidon, whose cult myth, involving the changing of water into wine, has significant analogies to the Johannine story of the Marriage Feast at Cana (Smith 1975). This was in fact a common feature of Dionysiac legend. Every year on the day of the Dionysus feast, the temple springs in Andros and Teos were said to have poured out wine instead of water, and in Elis, on the eve of the feast, 3 empty jars were set up in the temple, which were then found full of wine on the next morning.

Distinctive features of Dionysiac worship in the Hellenistic era (and earlier) may be summed up as follows: a set of cult objects and symbols (phallus, thyrsus, ivy, grape cluster); a cult language of passwords and symbola, recognizable only by an initiate; ceremonies intended to stimulate a sense of identity with the god, originally, at least, by ceremonially eating an animal (properly a bull) representing the god; a breaking free from, or even reversal of, societal roles; and a belief in a happy life after death for initiates. Many of these features are shared with other cults or movements, such as Pythagoreanism or Orphism, but the totality is distinctive of Dionysiac worship.

JOHN M. DILLON

DIOSCORINTHIUS [Gk *Dios Korinthiou* (Διος Κορινθιου)]. Name of the month dating the first of four official documents (2 Macc 11:21). While all the Greek witnesses and La^{B} contain this reading of the name, the fact that it is not attested elsewhere in antiquity has raised questions concerning its authenticity. Katz (1960: 15) and others prefer to read *dioskoridou,* the genitive of *dioskorides,* at this point as well as for v 38, based on the Latin versions which sometimes attest to older forms of the text. Hanhart (1961: 473–74) rejects such a proposal, arguing that it creates additional difficulties in reading and understanding v 38, thus is not valid for v 21 either. While pointing out that one of the Greek cities could have named a month after the *Dioskouroi* (or *dioskoroi*), the twin sons of Zeus (cf. Acts 28:11), Goldstein (*2 Maccabees* AB, 413) notes that there is no known Greek month with an *-ides* ending. *Dioskouros* is attested during the time of the Roman Empire in the Cretan calendar.

Dios, derived from the genitive form of *Zeus* and also found in *Ant.* 1.80, is used as the name for the first month in the Macedonian calendar (Bickerman 1980: 20), coming at the beginning of autumn. This would seem to be the most likely date which the epitomist and probably Jason had in mind. More puzzling is the additional *Korinthiou.* While Corinthian Zeus as a deity does appear in Gk literature, it is not found in any recorded calendar (Goldstein *2 Maccabees* AB, 413). One suggestion has been that the extra term, whatever its original form, was used to designate an intercalary month, as suggested by the Syriac text. Any good explanation for this term eludes present-day scholarship.

The foregoing discussion is based on the premise that the letter in which it is found is authentic. While most recent scholarship has accepted this argument, there remains marked differences in the interpretation of the relationship between the four documents preserved in 2 Maccabees 11 (cf. Habicht 1976 and Goldstein *2 Maccabees* AB, 408–9).

JOHN KAMPEN

DIOSCURI [Gk *Dioskouroi* (Διοσκουροι)]. The combined form of *Dios kouroi*, "The Sons of Zeus." It was the title (first used in an archaic inscription, *IG* 1898: no. 359, Thera; in script, *Homeric Hymns* 33.1) of Kastor and Polydeukes (Pollux) that formed the insignia (*parasēmon*) of the Alexandrian ship in which Paul sailed from Melita (Acts 28:1) to Puteoli (v 11). The two brothers of Helen (*Iliad* 3.236–42) and Klytemnestra were first located in Lakonia and are frequently referred to as the Tyndaridai, after Tyndareos, husband of Leda and king of Lakedaimon. Already according to Homer (*Od.* 11.298–304) they are the sons of Tyndareos and Leda (Terpandros, fragment 3 Bergk), but Pindar (*Nemean Odes* 10) isolates Kastor as the son of Leda by Tyndareos, and Polydeukes as the son of Leda by Zeus. (See Cook 1914, 1: 760–75; Bethe PW 5: 1087–123; Nilsson 1967: 406–11; Rose and Robertson *OCD,* 354.)

In reprisal for Theseus' kidnapping of Helen, the Dioskouroi invaded Attic and carried off Aithra, mother of Theseus. Later, during the expedition of the Argonauts, Polydeukes earned his reputation as a boxer. Challenged by Amycus, king of the Bebrykes, to a match, with winner take all, Polydeukes proved that skill could overcome brute strength. Destiny's turn finally came for the brothers after they carried off Hilaeira and Phoibe, daughters of Leukippos (Farnell 1921: 175–233). In his 10th *Nemean Ode,* Pindar relates that Idas and Lynkeus, nephews of Leukippos and sons of Aphareus, were irate over the loss of some oxen and stabbed Kastor. Polydeukes came to his brother's aid and slew Lynkeus, whereupon Zeus struck Idas down with a thunderbolt. Polydeukes pleaded with Zeus for his dying brother, and Zeus offered him the choice of full time spent in heaven or half the year with Kastor in Hades (Homer *Od.* 11.301–4).

In time, Kastor was revered for his equestrian skill and Polydeukes became the patron of wrestlers. Their astral associations (Euripides *Hel.* 137–40, 1499; *El.* 990; *Orestes* 1636–37) were connected with

the prestige they enjoyed, especially in later times, as the "Savior Gods" (*hoi sotēres*). Epictetus (2.18.29) notes that voyagers call upon them in a storm. In gratitude for their help, Catullus dedicated a poem to them (*Carmina* 4.27). And Horace, taking note of their constellation known as the *Gemini,* prays for a safe trip (*Odes* 3.29.64). With the words *lucida sideras* (bright stars) in *Odes* 1.3 the same poet appears to refer to the phenomenon known as corposant, which gladdened the hearts of sailors when it seemed to dance double on the masts and yards of a vessel. In the poem *The Battle of the Lake Regillus* (canto 40), Macaulay recalls the phenomenon of "St. Elmo's fire" as he celebrates the role of the Dioskouroi in a victory won by the Lokrians:

> Safe comes the ship to haven
> Through billows and through gales,
> If once the Great Twin Brethren
> Sit shining on the sails.

In his *Evangelica Praeparatio* (1.10.14), Eusebius documents the Twins' reputation for both medical skill as well as naval acumen. According to the scholiast of Pindar *Pythian* 5.6, their cult was vigorously pursued "in the district of Cyrene, near Alexandria," the port of origin of the ship cited by Luke.

Since the Twins were tutelary deities of mariners, their insignia (Acts 28:11) was displayed on the prows of ships, and probably on both sides in the manner of *The Isis,* as described by Lucian (*Nav.* 5; other references in BAGD, s.v. *parasēmos*).

As their appearance on Roman sarcophagi attests, even more important than the Brothers' reputation for tutelary functions is the stimulus their cult gave to belief in personal immortality. Also, they encourged fidelity to friends (Theognis 1087) and respect for long-standing traditions of hospitality (Pindar *Nemean* 10.49–50 and *Olympian* 3.38–40).

Two works by Harris (1903, 1906) trace the Twin Brothers motif in a variety of folklore.

FREDERICK W. DANKER

DIOTREPHES (PERSON) [Gk *Diotrephes* (Διοτρεφες)]. An early churchman who asserted authority over all in his local church, rejected the authority of the elder who wrote 3 John, attacked the elder in public, forbade anyone to receive the elder's emissaries, and excluded all who did (3 John 9–10). The name Diotrephes, which means "nourished by Zeus," occurs in the NT only in this one passage.

Some consider Diotrephes as a representative of the same docetic interpretation of Jesus as 1 and 2 John reflect (Bauer 1971: 93). The author of 3 John, however, never charged Diotrephes with heresy. The conflict was over authority in the church instead of theology.

According to one view, Diotrephes was a monarchical bishop (Zahn 1909, 3: 374–81). On the other hand, he could have been an elder or a deacon who abused his authority. Or he may have exercised authority over the entire church by the dominance of his personality without holding any office.

The conflict between the elder and Diotrephes probably represented a transition period in church government. In that case the elder represented the older, centralized leadership of an elder over a number of churches in the region. Diotrephes represented a younger generation that sought greater local autonomy and moved in the direction which eventually led to the monarchical episcopacy (Dodd *Johannine Epistles* MNTC, 163–64).

VIRGIL R. L. FRY

DIRECTION AND ORIENTATION. Orientation is the means by which persons determine direction. From earliest antiquity, there seem to have been the 4 cardinal directions: north, south, east, and west (N, S, E, and W). This is true of Hebrew, Akkadian, and Sumerian culture. It is also true for Egyptian. Directions were usually related to specific spatial phenomena. Often astronomical or terrestrial features served as the basis for orientation. Astronomical features would make use primarily of the sun for one's point of reference; secondarily, specific stars or constellations might play a role in getting bearings. The rising and setting of the sun served as primary indicators of E and W in Mesopotamia and in Syria/Palestine. Terrestrial features such as mountains and seas served as indicators of direction. Heb *yam,* "sea," referring to the Mediterranean, was one indicator of "west." In a similar manner Akkadian *šadū,* "mountain", was one indicator for "east."

In other instances, once the primary bearing was determined, the individual faced that direction and used the body as a simple compass to locate other directions (when one faces N, the right hand is to the E, the left to the W, south is behind). Since the development of the magnetic compass, N has been the primary direction. Yet the very words *orientation* and *orient* point to the E, probably using the rising sun, as the primary reference point. From the OT itself there are numerous indicators that E served as the primary direction for bearings. In biblical Hebrew the related word group *qedem, qēdmâ,* and *qādîm* appears most frequently for "east." These words literally mean "in front, before." Thus E was the direction in front of one, the direction by which one gained one's orientation and bearings. This usage of the root *qdm* to indicate E is not limited to Hebrew; it has a similar usage in Ugaritic, indicating E or the E wind. One of the Hebrew word groups for "west" was *ʾāhôr* and *ʾahărôn.* The "western sea" (*yam ʾahărôn*) referred to the Mediterranean Sea. Literally, *ʾāhôr* and *ʾahărôn* meant "ack" or "behind." Hebrew also used *śĕmoʾl,* "the left hand," to indicate north and *yāmîn,* "the right hand" to indicate S.

However, not all ANE cultures used the same pattern of orientation as the Hebrews. The Egyptians, for example, had S as their primary reference point, probably because it was the direction of the source of the Nile, their lifeblood. Although they also used the body as a compass, different directions resulted from a different orientation. Facing S, the right hand (*wnmy, ʾimn*) indicated W (*ʾimnt*) and western (*ʾimnty*). Likewise, for the Egyptian, left and left hand (*ʾi€ by* and *ʾi€ bi*) indicated E (*ʾi€ bt*).

Using an astronomical basis for directions, most Semitic peoples used the rising of the sun for the primary direction and bearing. In Akkadian, *ṣitū šamši,* "the rising of the sun," was a common expression used to describe E. Likewise in Hebrew, *mizrāḥ (haš)šemeš,* "the rising of the sun" indicated E, as did *mizrāḥ* alone. Similarly, Akkadian *erēb šamši,* "the setting of the sun" was a phrase to indicate W. The Hebrew *maʿărāb* also means "west," and is cognate with the Akkadian. Hebrew also uses the phrase *mābôʾ (haš)šemeš,* lit. "the entrance of the sun," as the opposite of sunrise, as sunset, and as the direction W.

JOEL F. DRINKARD, JR.

DISCHARGE. An emission or secretion of semen, pus, or blood from the genitalia which is considered ritually impure. The main discussion of these conditions is in the Priestly legislation (= P) of the Pentateuch (Leviticus 12, 15). The cases may be classified into normal discharges (seminal emission, menstruation, and lochial discharge after birth), and abnormal discharges (purulent discharge because of urethritis in males and irregular menstrual flows). The cases of menstruation and abnormal discharges are described with the Hebrew verb *zwb* "to flow, stream; to have a discharge" and the noun *zôb* "discharge, flux."

———

A. Impure Discharge
   1. Seminal Emission
   2. Menstruation
   3. Lochial Discharge

4. Irregular Male Genital Discharge
5. Abnormal Menstrual Flow

B. Other Bodily Excretions

C. Rationale for the Impurity of Discharges

———

A. Impure Discharge

1. Seminal Emission. In ritual terms, a seminal emission is the least severe of all the discharges (Lev 15:16–18, 32). It causes the emitter to suffer a one-day impurity ("until evening"). Any clothing the semen touches is also unclean for one day. Sexual intercourse brings a one-day impurity to the woman involved as well as the man.

Those contaminated by semen are to purify by bathing in water and waiting until evening. Polluted clothing becomes clean after it is laundered and evening passes.

In the context of P, those persons and things polluted by semen cannot pollute other persons and things of a profane (i.e., non-holy or common) nature. Hence semen-polluted persons and things need to be restricted only from the sphere of the holy (i.e., the sanctuary area and holy items extant outside the sanctuary such as sacrificial meats; cf. Lev 22:4–7); they are presumably allowed free access in the community's area of habitation. Outside of P, Deut 23:10–12 requires one who has an emission to leave a war camp until the next evening when, after bathing, he becomes pure. This is because the entire camp is holy—God's presence is there—and therefore no "abhorrent thing" can remain there lest God leave and the army fail in battle. Other passages talk of abstinence from intercourse in preparation for encountering what is holy or in war (cf. Exod 19:10–11, 14–15; 1 Sam 21:4–7; 2 Sam 11:11). For a more rigorous scheme of exclusion for emissions, as well as other impurities, see the Temple Scroll cols. 45–48 (cf. Wright 1987: 178–79 n. 33).

2. Menstruation. The impurity of menstruation is more severe than that of an emission (Lev 15:19–24). A woman in this state suffers a communicable impurity for 7 days from the beginning of blood flow (not 14 days, contra Krause 1983). Persons or objects touching her become impure for one day. Beds and chairs on which she lies or sits become polluted, and they can in turn pollute other persons and things for one day. An object that is on a piece of furniture on which she is sitting or lying can pollute persons or things touching that object (v 23). A man who has sexual intercourse with a menstruant contracts an impurity equal in strength to that of a menstruant.

P does not explicitly state how a menstruant is to be treated in her contacts with the profane sphere. It is doubtful if she was required to leave the area of habitation (cf. Num 5:2–3), but she would probably be required to restrict herself within the habitation (i.e., to stay at home) during the 7-day period so that she would not pollute others in the community generally. Non-P writings display the abhorrence that was felt toward menstruants (Isa 30:22; Ezek 7:19–20; 36:17; cf. Gen 31:35). Moreover, it was considered a sin to have intercourse with a menstruant (Lev 18:19; 20:18; Ezek 18:6; 22:10; and perhaps 2 Sam 11:4–5). Later Jewish tradition, to some extent at the time of the Mishnah and Talmud, but to a greater extent later, developed rather extensive restrictions for the menstruant (cf. the tractate *Niddah* in the Mishnah and Talmud; also Dinari 1980).

P does not prescribe purification rites for the menstruant, but, in view of other examples of purification, it seems that she would have to bathe and launder on the 7th day and wait until evening (cf. 2 Sam 11:4). Note that no sacrifices were required as with more severe sexual impurities (see below).

3. Lochial Discharge. An impurity more severe than menstruation is that of a lochial discharge in a woman after birth. (Note it is the discharge, not the birth itself, that is polluting.) Leviticus 12 distinguishes between 2 stages of impurity after childbirth. The 1st stage is immediately after birth, for 7 days if the child is a male and 14 days if it is a female. The impurity of this initial period is like that of a menstruant (vv 2, 5). Socially and cultically she would be treated as a menstruant. The 2d stage, an additional 33 days for the male or 66 days for a female, is a lighter impurity where the woman, though still a threat to holy things and therefore restricted from them (v 4), can presumably mingle with the profane sphere. At this time, intercourse with her husband is presumably permissible. Thus the P system

differs radically from other cultures in having a short postpartum sex taboo. The distinction in the length of impurity for a male child versus a female is not unique to the Bible (Macht 1933). The basis for the distinction appears to be founded in the dominance of the male in Israelite society (Selvidge 1984: 620–21; Macht's attempt to find a physiological basis must be rejected). It should be noted that though the mother is impure, there is no indication that the new child is impure. Except for the circumcision of the male (v 3) the legislation totally ignores the child. This contrasts with customs in many other societies where both mother and baby are impure after birth.

The purification of a puerperal woman is accomplished in stages. Much of this must be deduced. At the end of her initial stage (7 or 14 days) she probably launders her clothes and bathes. After these ablutions at evening she presumably enters into her 2d stage of impurity. On the last day of this stage she presumably launders and bathes and at nightfall is pure in regard to not only the profane sphere but the holy sphere as well. Finally, supposedly on the day after these final ablutions (i.e., on the 41st or 81st day) she brings sacrifices (a lamb or bird for a burnt offering, and a bird for a purgation offering) which complete and confirm her purification process (12:6–8).

4. Irregular Male Genital Discharge. An impurity similar in ritual effect and strength to that of the parturient is that of a male with an irregular genital discharge (the *zāb;* Lev 15:2–15). The physical symptoms in these verses appear to be those of urethritis with an accompanying discharge of pus. Urethritis is commonly associated with the sexually transmitted disease gonorrhea, caused by the bacterium *Neisseria gonorrhoeae.* Though some have argued that gonorrhea did not exist in biblical times (Kinnier-Wilson 1982; Vertue 1953), evidence suggests that in fact gonorrhea was an endemic disease of great antiquity (Hare 1967; Felton 1979). Therefore, gonorrhea still must be considered one of the causes of the discharge described in these verses of Leviticus 15. But though gonorrhea is a major cause of urethral discharge, it is not the only cause. Consequently translation of Hebrew *zāb* as "gonorrheic" should be avoided.

Understanding the ailment as urethritis allows the symptom of being "stopped up" in v 3 to be explained. Here may be indicated an inability to pass urine due to swelling and inflammation of the chronically infected urethra. This is a common complication of untreated urethritis seen in gonorrhea and other infections (e.g., Osaba and Alausa 1976; Kibukamusoke 1965).

The effect of the pollution of a *zāb* is similar to that of a menstruant. Every bed, chair, or saddle on which he sits becomes communicably impure so that it can pollute other persons or things with a one-day impurity. Anyone touching the *zāb* directly, or anyone whom the *zāb* touches when his hands are not washed, becomes impure for a day. Moreover, if the *zāb* spits on another person, the latter becomes impure for one day. Inanimate objects that the *zāb* touches also become unclean for one day.

The treatment of the *zāb* in regard to the profane sphere varies in different texts. In Num 5:2–3, the *zāb* (this includes not only the male, but the female equivalent, the *zābâ;* see below), corpse-contaminated persons, and those with scale disease (see LEPROSY) were to be excluded from the sanctuary camp. Leviticus 15, by its silence, implies that, in contrast, the *zāb* and *zābâ* were not excluded (Numbers 19 similarly implies that corpse-contaminated persons could remain in the habitation). The difference in this conception is probably due to the fact that the sanctuary camp, a type of war camp, was subject to stricter rules of purity than a settled habitation in Lev 15 (Wright 1987: 172–73). The stigma attached to those with severe fluxes is intimated in David's curse of Joab and his house (2 Sam 3:29).

When a *zāb* recovers from his physical affliction, he waits 7 days before beginning his regimen of purification. This was probably to make sure that he has really recovered (cf. a similar waiting period for one recovered from scale disease, Lev 14:8–9). On the 7th day, he launders his clothes and bathes. Presumably when evening passes after this set of ablutions he is pure in regard to both the profane and sacred spheres. On the 8th day he brings sacrifices (2 birds for a burnt offering and purgation offering) to complete his purification process.

5. Abnormal Menstrual Flow. The female counterpart of a *zāb* is the *zābâ,* a woman with an abnormal menstrual flow (i.e., bleeding outside the normal menorrheal period or bleeding beyond the normal duration of menstruation; Lev 15:25–30). In the context of underdeveloped societies in the Middle East, a

variety of causes for this condition are found including parasitism, malnutrition, and anemia. It is well-known that some apparently normal women menstruate irregularly with some unpredictability of flow (for example, El-Kholi, et al. 1971).

Note that this condition is not medically equivalent to that of the *zāb.* Here it is an irregular blood flow, not a discharge of pus. That a purulent discharge is apparently not considered impure in women may be due to the difficulty in detecting such a discharge in females.

A *zābâ* pollutes exactly like a *zāb.* However, in addition it is logical to suppose that one who had intercourse with her contracted an impurity equal to hers, as in the case of a menstruant. The *zābâ's* course of purification is like the *zāb's.*

In the NT a woman with an irregular blood flow as healed after touching Jesus' hem (Mark 5:25; Matt 9:20; Luke 8:43). For him to make contact with her was startling in the cultural context (see Selvidge 1984). On those with abnormal discharges in Jewish tradition, see the Mishnaic tractate *Zabim.*

B. Other Bodily Excretions

Urine and excrement are not impurities in P's system. This is perhaps due to their normality and regularity. Deut 23:13–15, however, treats excrement as an impurity in the context of a war camp. Also, Ezekiel puts food cooked on human dung in the same category as improperly killed animals and desecrated sacrificial meat (Ezek 4:12–14). Moreover, though P does not concern itself about perspiration, Ezek 44:18 requires the priests to not wear any clothing that causes sweat. This prescription, however, does not indicate that perspiration was considered impure. Finally, though the *zāb's* spittle was considered impure, that of a clean person was not defiling.

C. Rationale for the Impurity of Discharges

Two questions must be addressed in respect to the question why these discharges were considered defiling. The first is quite easy to answer: Why were some discharges more severely polluting than others in the context of P? The factors that seem to determine this are the normality, duration, and frequency of the conditions. For example, a seminal emission is a normal, nonpathological condition; it is short-lived; and it is the most frequent of the conditions. Consequently, it is the least severe. On the other hand, urethritis is abnormal and pathological; it can be rather long-lived; and, relatively speaking, it was rather infrequent. Hence urethritis, with the irregular blood flow of a woman, is the most severe. The other discharges fit in this spectrum according to these criteria.

The second question is more difficult to answer: Why are these discharges considered impure in the first place? Anthropologists have studied in depth the rationale for sexual impurities, especially that for menstrual impurity. A survey of their views on the rationale behind catamenial impurity indicates the possible directions that interpretations of sexual impurities may take. Some explain menstrual taboos in psychological or social psychological terms: They are a reflection of vagina envy or castration anxiety in males; they are a justification men invent to assuage their guilt for being the dominant sex; they arise from mere disgust or aversion; or they arise from the perception that menstruation is a liminal or marginal state inasmuch as it is a relatively infrequent occurrence in preindustrial societies. Others see a biological basis for menstrual taboos: Menstrual blood is impure because it contains a "menotoxin" which is claimed to have an adverse effect on the growth of certain plants. An ecological or population management basis has been advanced: The taboos serve as a form of birth control or, the reverse, they increase population by increasing coitus during the fertile period due to abstinence during menstruation. Some argue for an ethological basis: Menstrual blood can be smelled by game animals; hence women are restricted so that hunts will succeed. Historical causation is considered a significant rationale: Menstrual taboos appear because they have been learned from another culture or from tradition. Most tend to explain menstrual impurity in social terms: It is often seen as an expression of male dominance and a means of separating between male and female spheres. It has been observed that women can secondarily use pollution rules to manipulate men. It has also been argued that menstrual pollution rules act as a means for a couple to express their commitment to a sound marriage and to living up to society's expectations in marriage. (See Balzer 1981, Douglas 1975, and Montgomery 1974 for summaries and bibliographies of most of these views.)

Many of these views cast significant light on the understanding of menstrual and other pollution practices, but a major failing in the studies presenting them has been a focus on only menstrual pollution, with a general exclusion of other sexual impurities and the larger system of purity of a particular culture. Another failing has been the one-sided approach of many of the studies. Certainly menstrual and other impurities are to be explained by several rationales working together—not by just a single rationale.

Apart from anthropologists, OT scholars have advanced other rationales: Discharges are impure because they are considered demonic; they arise from the Hebrew feeling of sexual shame; they are unhealthy; or they are connected with sin. Another rationale for sexual and other impurities, not new to biblical scholars, has been reopened by G. Wenham (1983). He modifies M. Douglas' explanation that purity or holiness is what is whole or normal and that impurity is what is not whole or normal. He argues that the polarities of holiness/purity and impurity are to be explained by issues and conditions of life and death, respectively. Seminal emission, menstruation, and childbirth are normal conditions, but since they involve the loss of vital liquids, they are associated with death. Hence they, too, become the focus of various pollution rules with the abnormal discharges which are more clearly associated with the idea of death. See also HOLINESS; UNCLEAN AND CLEAN.

A. Usage and Occurrence

B. Historical Reconstruction of Discipleship

1. Main Characteristics of Discipleship
2. Comparable Phenomena
3. Sociohistorical Aspects

C. Understanding of Discipleship in the Gospels

D. Toward the Understanding of Discipleship in Acts

———

A. Usage and Occurrence

The concept of disciple is expressed in the NT through the word *mathētēs*. The substantive meaning "discipleship," however, does not occur. The verb *mathētēuō* (in most cases in the active voice) "to make someone into a disciple" seldom appears. However, *akolouthein* "to walk behind, to follow" (frequently used in the NT as a specialized term for following Jesus) must also be considered. This verb characterizes the central quality of existence as a disciple. All 261 references to "disciple" in the NT are found in the Gospels and Acts. The emphasis clearly lies in the Gospels, inasmuch as only 10 percent of the references occur in Acts. The case is like that of the word *akolouthein* "to follow after": Of the 90 occurrences, 79 are found in the Gospels, the rest in Acts (4), Revelation (6), and 1 Corinthians (1). This discovery already indicates that discipleship is a phenomenon which demonstrates a close association with Jesus himself.

B. Historical Reconstruction of Discipleship

1. Main Characteristics of Discipleship. One becomes a disciple when called by Jesus himself (e.g., Mark 1:17; 2:14). The initiative lay with Jesus alone; apart from his call, there is no recognizable motive for one to become a disciple and follow Jesus. The synoptic tradition contains instances when the would-be disciple takes the initiative, but all of these attempts fail, and there is no evidence that discipleship would have resulted. In Mark 10:17–27 the rich young ruler turns to Jesus, but when the call to discipleship confronts him, he goes away sadly. According to Luke 9:57–60 Q, several came to Jesus with the intention to be his disciples, yet failed to become disciples because they remained bound to their past. We should take note that the stories for every one of the disciples have not come down to us. The self-understanding of Jesus, who saw the embodiment of the breaking in of the entirely new (the Kingdom of God) in his own person (cf. Luke 11:20 Q; 17:21), was reflected in the call which created the discipleship existence. This call is the indication of the nearness of God, who anticipates the human search for him and unexpectedly and uninvited enters the human life.

The exclusivity of Jesus' initiative in the call to discipleship accords with the great variety of people among the disciples. Because this circle was founded exclusively through Jesus' call, no other social factors needed to surface: Indeed, antisocial factors in this circle could be overcome. At least one Zealot (Simon the Canaanite, Mark 3:18, cf. the historically accurate rendering of "zealot" in Luke 6:15) belonged to the Twelve, as did a tax collector (Levi, cf. Mark 2:14)—representatives of 2 groups that fought bitterly. Much is to be said for counting women, for whom it was otherwise unthinkable to enter into discipleship. (Luke 1:1–3 speaks of several women who followed Jesus; Mark 15:40f also names women who followed Jesus to the cross). It is evident that Jesus called people into fellowship regardless of social, religious, and ethnic background or gender.

The call of Jesus demanded a total break with the past. The disciples immediately left their families and their vocations (e.g., Mark 1:16–20; 2:14), and followed Jesus. So it could become a direct condition of discipleship that only one who hated his or her own family was eligible to be a disciple of Jesus (Luke 14:26 Q). The same break with the past expressed itself further in self-denial (saying no to oneself) and in the distancing from independent income (cf. Mark 8:34f). In view of the call of Jesus, the holiest duties of the past became objectless (Luke 9:57–60 Q). Finally, it also belonged to discipleship that customary values be radically broken (cf. Mark 10:41–45). Conditional relations are to be carefully considered in light of the break with the past: It is discipleship which demands and makes possible this break, but the break itself is not to be equated with discipleship. The call of Jesus demands and makes possible the break with the past in as much as it gives the disciple a new future.

Discipleship means entering into a lifelong relationship with Jesus (cf. Mark 3:14, where the meaning of discipleship is given: "That they be with him"). This includes the participation in the uncertain life of a traveling preacher and then also in the suffering and death of the teacher (cf. Mark 10:39; 8:34). The disciple is not there merely to learn from the teacher but to share his whole life with him without reservation.

Discipleship is characterized by establishing a fundamental life relationship to the person of Jesus (and not merely to his teaching). Jesus newly qualifies the life of his disciples: They are now "wedding guests"

whose time is entirely determined by the presence of the "bridegroom"; this makes it impossible for them to fast (Mark 2:18–22). Jesus gives them the freedom to let the law be for humanity (instead of humanity for the law, cf. Mark 2:23–28). The qualitative difference between master and disciple always remains preserved. It can therefore never be the goal of a disciple to become like the master. Discipleship means to live from what Jesus distributes, to realize that to which he calls. The disciple is as recipient dependent upon what Jesus embodied in his person, not merely upon what he taught.

There is of course no reason to doubt that the sending out, too, goes back to Jesus himself. It is characteristic of Jesus that he approaches people. This movement perpetuates itself in the sending forth of the disciples. According to Mark 1:17, the call to discipleship is simultaneously a sending to the assembly of people (in Israel). Also, Mark 3:14f shows that discipleship is connected with the mission of proclamation (of the approaching Kingdom of God, cf. Matt 10:7 Q) and with the power to exorcise (and to heal human infirmities, cf. Matt 10:8). Here, too, the reference to Jesus is preserved: the disciples do not replace Jesus but receive from him the power to cast out demons (cf. Mark 6:7). The disciples, equipped only with bare essentials, are to remain dependent on the goodwill of people (Mark 6:8f; Matt 10:9f). Their equipment should be a reflection of the gospel itself, which appeals to people to permit themselves to be gifted with grace. It would therefore be contradictory if the disciples were to demonstrate material independence. According to Matt 10:6, the sending was restricted to the "lost sheep of Israel," namely to those who belonged to the people of Israel who through their impure way of life or their ignorance of the law were fallen out of the religious fellowship of the nation. In that, Jesus' sympathy to the sinners and outcasts repeats itself.

The word "disciple," even when thoroughly restricted to disciples of Jesus, names a series of groups who must be distinguished from each other. First, it refers to the rather large number of Jesus-followers who are best referred to as his adherents (cf. Luke 6:13–17; Mark 2:15). In all probability, women, too, belonged to these "disciples" (see above). The word "disciples" refers particularly to the Twelve. It has long been debated whether this was an institution of Jesus. The fact that the description "one of the Twelve" was applied particularly to Judas, the traitor, speaks strongly against post-Easter origins for the establishment of the Twelve (cf. e.g., Mark 14:10). Also, even the later meaning of the Twelve can be better explained if they form an entity instituted by Jesus. The Twelve symbolize the claim of Jesus on all of Israel, his non-exclusive movement towards the whole nation. The creation of the Twelve can be understood as a symbolic act that suits the appearance and the proclamation of Jesus well. The Twelve were chosen by Jesus from out of the crowd. These Twelve are then also the "sent ones" (*apostoloi*). It can be said that although every one of the Twelve was a disciple, not every disciple belonged to the Twelve and was an apostle. The concept "apostle" in earliest time was also used of some who had no recognizable connection with the earthly Jesus (for example, Paul), who neither were disciples nor belonged to the circle of Twelve (see APOSTLE).

Recent scholarship has been moving again toward understanding the disciple relationship more in terms of the teacher-student model. The development of the tradition which led to the Gospels is being understood as analogous to the rabbinical tradition. Thus Jesus is often addressed as "teacher" or "Rabbi" (e.g., Matt 25:25; 8:19). There are, however, two problems with this: first, it is not clear whether Jesus himself established the memorializing and traditionalizing of his own teaching. The growth of the tradition, on the other hand, permits us to recognize an astonishingly free use of the words of Jesus. Secondly, it is worth observing that Jesus placed not his teaching but his person in the center, so that the disciples had no student relationship but a life relationship to him.

It is characteristic of the Twelve for them to desert Jesus in the decisive hour. In contrast to the women (Mark 15:40f), who at least witnessed the crucifixion from afar, the Twelve fled to Galilee (Mark 14:50, a report that does not in the least attempt to justify their flight), and their discipleship dissolved itself into nothing. The frankness with which their failure—especially that of the prominent disciple Peter—is preserved in the memory of the Church is remarkable (cf. Mark 14:53–72). The disciples could probably only afford such a reminder because they were saturated with the experience that the Resurrected One

himself had overcome their failure. Seen historically, it was the appearances of the Resurrected Jesus in Galilee which led them to move to Jerusalem and to risk their lives for the Christ.

2. Comparable Phenomena. As analogue to discipleship, the teacher-student relationship, as practiced by the scribes and by later rabbinic schools, first comes to mind. At first glance, there are apparently great similarities: Jesus is addressed as Rabbi, *mathētēs* being the Gk translation of the Heb *talmîd,* and the rabbinic scholars live with the master in order to follow him in his ways. Of course, there are also considerable differences, which all are related to the distinction between teaching and person. While the rabbinic scholar is bound beyond the teachings of his teacher to the Law, discipleship means an unmediated connection to the person of Jesus (that is, with that which is embodied by this person). While the student is concerned with becoming a teacher himself, discipleship is characterized by an insuperable qualitative difference from Jesus. While the Rabbi is petitioned by his students, discipleship always comes into being as the result of the call of Jesus. While the relationship of rabbinic apprenticeship is limited to an agreed-upon period of time, there is no sign of temporal limitation to the term of discipleship to Jesus.

In a few places, the NT reveals tht John the Baptist, too, had gathered a group of disciples (cf. e.g., Mark 2:18; John 1:35ff; 4:1; Matt 11:2ff). Of their calling, however, we hear nothing. It is also not known in what relationship these disciples stood with John. A few of Jesus' disciples probably came from John's group of disciples (John 1:35ff). The group of disciples was preserved after John's death and extended itself as far as Asia Minor, perhaps in heretical groups of Judaism. Its existence was contemporary with the early Church (cf. Acts 18:24; 19:7). John's disciples were difficult to distinguish from Christians on the basis of external characteristics (baptism regarded as sign of membership; local groups separated from the synagogue).

In Greek culture, the phenomenon of discipleship appears in a number of forms (philosophy students, religious scholarship, and mystery cults). The teacher-student relationship is predominantly characterized by the concept of *mimēsis.* Teachers and students are bound together by a certain teaching and practice of life, and the student is recognizable in his imitation of the teachings and life of the teacher. Teachers like Pythagoras or Apollonius of Tyana enjoy expressly religious veneration. The principle of tradition is a further indicator; each student generation cares for and further develops it.

The closest analogy to the discipleship which Jesus created is to be seen in the prophet's vocation. Here, God himself was the one who calls, which reflects the theological quality of discipleship. Jesus stood in the place of God; his call was the call of God. This is responsible for both the unquestioning and the unconditional nature of discipleship.

3. Sociohistorical Aspects. The phenomenon of discipleship has been examined sociohistorically in recent scholarship. Sociologically describable aspects are: renunciation of possessions, abandonment of all social ties (residence and socially accepted patterns of behavior), and existence as a wandering charismatic. The sociological description of discipleship is a partial perception, which in accord with its own claims does not desire to compete with religious description. Therefore it is rigorously guarded against, that discipleship is not unintentionally derived from its social conditions (a crisis situation in ancient society). Seen sociologically, the movement to discipleship is categorized as "social uprootedness" (comparable to emigrants, Qumran people, robbers, zealots, vagabonds, prophetic movements). In spite of this categorization, attention to the individual pecularity of the disciples of Jesus must hold good. Having renounced all possessions, they lived a life of wandering and homelessness, even after the death of Jesus, and carried the message and power of Jesus to the people. Among these wandering charismatics, the carriers of the *Logienquelle,* the Stephan-circle, and Barnabas and Paul are to be counted. It is debatable whether they came from the proletariat or from the artisan and farmer class. In the latter case their renunciation of possessions would not have been a condition but a voluntary act. Even when seen from a sociological point of view, it remains certain that Jesus himself and his message is the only factor which can explain the origins of the Twelve.

C. Understanding of Discipleship in the Gospels

A pervading motif in the narrations of the Gospels is the misunderstanding of the disciples. Particularly these, who know Jesus best, are confounded again and again by the newness of that which he brings. The expectation of the Messiah, too, is prematurely applied to him by the disciples (cf. Mark 8:27–33). The misunderstanding disciples, who receive special instruction through Jesus, give way to those who can enter into the later churches with their own difficulties in understanding. A further continuous motif is the persecution which the disciples must take upon themselves as a consequence of their following of the cross. The churches are strengthened by their social resistance.

Matthew especially emphasizes the demand for perfection of the disciples (Matt 5:48), whose righteousness had to far exceed that of the Pharisees (Matt 5:17). Discipleship is a radical way of life, radical also in obedience to the will of God, as it is interpreted through Jesus. Mark especially emphasizes the fact that failure and discipleship do not necessarily disqualify each other. The discipleship stories highlight the following motifs: Jesus approaches human beings in order to get them to approach others; Jesus "sees" human beings; one becomes a disciple not through certain conditions of life but because of the unexpected call of Jesus; the call itself creates what it demands, since discipleship is understood as creation of this call and not as decision of the called. Discipleship is entirely dependent on Christology; in being a disciple, the service of the Son of Man as humility, service, and peacemaking replicates itself (Mark 9:33–50; 10:42–45). Luke identifies the Twelve with the apostles and is especially interested in the continuity of the disciples with the period of Jesus' life. The gospel of John especially stresses the conversion of the disciple John to Jesus. Everything depends on remaining in the word of Jesus—on the living relationship to Jesus—whose service in love makes the disciples into friends (John 13; 15). The mark of discipleship is love, which is authoritative in the Church (John 13:34f). Analogous to the sending of the Son, the disciples are also sent into the world (John 17:18); in them God's gift to the world, which became an event in the incarnation of the Word, perpetuates itself.

D. Toward the Understanding of Discipleship in Acts

In Acts, the word "disciple" refers to the "Christians" (from 6:1) nearly without exception. Here the only example in the NT of "female disciple" is to be found (9:35; it is not entirely certain, however, whether Tabitha was a disciple of Christ). This occurrence appears to draw on a pre-Lukan linguistic use, which points to a self-description of the (Palatinian) tradition carriers. This usage plays no further role in the rest of the literature of the NT; it is to be assumed that it disappeared from the consciousness of the Christians. Possibly the word "disciple" as self-description of the Christians in the Hellenistic world led to occasion for confusion with the schools of philosophy.

DISCIPLINE, MANUAL OF. See COMMUNITY, RULE OF THE (1QS).

DISCOURSE ON THE EIGHTH AND NINTH (NHC VI,*6*). A previously unknown Hermetic tractate in the Coptic language, and one of three Hermetic texts preserved in the Nag Hammadi Library. As part of Codex VI, it is written in the Sahidic dialect but with traces of Subachmimic and Achmimic influence: Its official designation is NHC VI,*6*,52,1–63,32. The text is generally well preserved with the exception of damage at the top of each page; thus the original title is lost. The modern title, "The Discourse on the Eighth and Ninth," is derived from the text itself (53,24–26; cf. 61,21–22) and is descriptive of the contents. The Coptic text can be dated towards the middle of the 4th century C.E., or the approximate date of the copying of Codex VI. The Greek original probably dates from the 2d century C.E. as certain terms and concepts demonstrate an affinity with Middle Platonic speculation which was current at that time.

A. Contents

Disc. 8–9 can be described as a Hermetic revelatory dialogue in which a mystagogue and initiate undergo a process of spiritual ascent and illumination at the levels or stages of the "Eighth" and "Ninth," designations which refer to levels within the Divine realm beyond the 7 planetary spheres. The Eighth or Ogdoad is described as the place or sphere where souls and angels continuously praise the Ninth with hymns; the Ninth or Ennead is the dwelling place of Nous or Divine Mind. A tenth level is not mentioned but is perhaps assumed; this would be the dwelling place of the Highest God (cf. *Corp. Herm.* I; *Apoc. Paul*). The mystagogue is identified in the text as Hermes (58,29; 59,11; 63,24) and Trismegistus (59,15.24). The initiate is unnamed.

The spiritual ascent described in the text follows a prescribed order, the so-called "order of the tradition." The text begins with the recollection of a promise made by Hermes to bring the mind of the initiate into the Eighth and Ninth; Hermes acknowledges the promise and declares that he and the initiate are now ready to proceed. At an earlier point, both had advanced to the level of the Seventh (stages 1 to 7 are implied in the text but not described). The initiate had also undergone a period of intellectual preparation by reading certain books. As a result, he was now in a proper state of piety and living according to Divine law and was thus ready to advance to the levels of the Eighth and Ninth. This final ascent is described in terms of 2 stages of ecstatic illumination which are experienced mutually by Hermes and the initiate through the agency of spoken dialogue, prayer, hymns of praise, the chanting of magical vowel sounds (*voces mysticae*), and sacred silences. A further element is a fraternal "kiss" which specifically engenders the divine birth of Hermes as unified Mind (Nous). In this divinized state, Hermes as Nous first sees and describes the vision of the Eighth: he sees an indescribable Depth, then the Source or Fountain of life, and finally sees the souls and angels of the Eighth singing a silent hymn. A second illumination occurs when the initiate shares in this experience and both he and Hermes see the souls and angels silently praising the Ninth and its powers. This vision of the Ninth is followed by an act of grace and thanksgiving, further hymnic praises, and the calling out of the hidden name of God (a series of magical vowel sounds). Hermes then instructs the initiate to inscribe the discourse on turquoise steles and deposit them in the temple at Diospolis, Egypt. This must be done in conjunction with certain astrological signs. The tractate concludes with a sacred oath to keep the words of Hermes protected: those who do so will be blessed; those who do not will be cursed.

B. Importance

Disc. 8–9 is important for several reasons. First, as a Hermetic tractate, it shows special affinities with *Corp. Herm.* I, IV, VI, VIII, XIII, as all these texts demonstrate a common world-negating dualism of the body and the spirit. The closest parallels, however, are with *Corp. Herm.* XIII, as this text describes a similar path of ascent, accomplished via Nous, and resulting in an ecstatic experience of spiritual rebirth. In both texts, this spiritual ascent can be understood as a prefiguring of the soul's ascent through the

various celestial spheres after death (this postmortem ascent is described in *Corp. Herm.* I). A major difference, however, is that *Disc. 8–9* is far more coherent as a literary text, demonstrating a symmetry of structure and language that is not apparent in *Corp. Herm.* XIII. Further, *Disc. 8–9* represents a more-advanced stage of illumination than that of *Corp. Herm.* XIII and focuses in particular on a special aspect of the ascent (the word, Ennead [Ninth], for example, is found in no other Hermetic text). *Corp. Herm.* XIII, in contrast, is a more-loosely organized text which relates an entire anagogic path whereby the soul, before it enters the Ogdoad, is systematically cleansed of various vices by 10 purifying powers or virtues (in *Corp. Herm.* I, these vices and virtues are associated with the 7 planetary spheres in terms of the soul's postmortem ascent). Consequently, the rebirth experience of *Corp. Herm.* XIII can be understood as a form of metamorphosis achieved from without, in automatic or mechanistic fashion. In *Disc. 8–9,* rebirth is experienced dynamically from within as an awakening of a divine power or element that the initiate already possesses. Thus the relationship between the 2 texts is not one of literary dependence but of genre: both are revelatory discourses or dialogues, but represent different traditions of spiritual regeneration.

A second feature of importance in *Disc. 8–9* is its connection with an explicit Egyptian locus. The instructions at the end of the tractate—to inscribe the text in hieroglyphic characters (lit. "in letters of the scribe of the House of Life") on steles and deposit them in the temple at Diospolis—point to the existence of a Hermetic community in Upper Egypt during the Hellenistic period, either at Diospolis Parva (near Nag Hammadi) or Diospolis Magna (ancient Thebes). This community, under the protection of Hermes Trismegistus, would most likely have had links with the Egyptian priesthood, perhaps in connection with a temple of Thoth, the Egyptian scribal god who was said to live in the "House of Life" (the figure of Thoth appears in the guise of Tat in other Hermetic texts). A further reference in the text to 8 frog-faced and cat-faced guardians who protect the temple along with the sun are probable allusions to the primordial Ogdoad and Ennead honored, respectively, at Hermopolis and Heliopolis. Although these Egyptian allusions are not exact (e.g., the Ogdoad at Hermopolis consisted of frog-faced and serpent-headed deities), their inclusion in *Disc. 8–9* points to an authentic Egyptian inspiration for this text and perhaps for the *Corpus Hermeticum* as a whole. This is a significant suggestion as previous scholars had generally discounted any Egyptian influence on the Hermetica (with the notable exception of Reitzenstein), preferring to regard any Egyptian references in symbolic rather than literal terms. The evidence from *Disc. 8–9* would now seem to refute this consensus.

Of further significance is evidence in *Disc. 8–9* for a ritual/cultic context involving a "brotherhood" engaged in esoteric study, prayer, hymnic praises, ascetic disciplines, and a mystery initiation aided by the community leader or "Father" (identified with Hermes). In this context, the ritual "kiss" of Hermes and the initiate can be viewed as a sacramental act reminiscent of the "kiss" in the bridal chamber ritual associated with Valentinian circles. This evidence, then, would argue against those scholars who have viewed the *Corpus Hermeticum* solely in terms of "reading mysteries" with only symbolic but not actual ritual or cultic significance. The evidence from *Disc. 8–9* would now appear to disprove this theory as well.

Finally, the existence of Hermetic material in a gnostic library brings up the question of gnostic parallels. First, the names for God found in the text ("Father of the All," "Source," "Depth," "Fountain," "Ungenerated," "Self-Generated") can be paralleled in various gnostic texts. This is the case with other terms as well; e.g., "pleroma," "pronoia," "aeon," "Hebdomad," "Ogdoad." In addition, the use of *voces mysticae* in an ascent context in conjunction with prayers, hymns, and sacred silences, are also features of gnostic anagogic material. The ritual "kiss" and its Valentinian parallel has already been noted. However, much of the above can also be found in traditions not directly dependent either on Hermeticisim or gnosticism; e.g., the Chaldean Oracles and the magical papyri. Indeed, the repeated use of forms of noesis/noein ("perception," "understanding") in connection with salvation in this text, rather than forms of gnosis (found only once), suggests more direct links with Middle Platonic speculation than with strictly gnostic thought. It is prudent then not to identify *Disc. 8–9* as a form of Hermetic gnosticism, as certain scholars suggest, but to view it as a form of Hermeticism which, like forms of gnosticism, belonged to a

wider current of thought (dualistic in nature, astrologically based, and anagogic in orientation) which found expression in a variety of philosophical and religious traditions of the Hellenistic period.

DISCOURSE, DIRECT AND INDIRECT. The predisposition of the biblical writers to use direct discourse as a means of narration has often been noted, and the new wave of literary studies of the Bible since the 1970s has done much to illuminate the artful complexity in the deployment of direct discourse. Because biblical narrative is very sparing in description and circumstantial detail, its characteristic rhythm is rapid summary—often covering a period of years in a verse or two—suddenly slowing down to a significant scene represented chiefly through dialogue. Thus, in Genesis 25, the narration moves from Jacob's and Esau's birth to their young adulthood in 2 brief verses (Gen 25:27–28), and then the crucial scene of the selling of the birthright (Gen 25:29–34) is represented mainly by direct discourse that subtly characterizes each of the twins through the kind of speech he uses and also sets the terms for the whole ensuing story (Alter 1981: 42–46). The instance of Jacob and Esau equally illustrates the tendency of the biblical writers to exploit the first piece of dialogue assigned to a personage as an initial, revelatory exposition of character.

The biblical writers are so inclined to use direct discourse that they often do so where it would be avoided by other narrative traditions, or even where actual speech is not represented. Inquiry of an oracle, for example, was usually done through the manipulation of a cultic device such as the Urim and Thummim, but in biblical narrative the result of this inquiry is represented as a verbal response to a verbal query (e.g., 2 Sam 1:1). When, however, a full-scale dialogue or a sequence of dialogues is introduced into the narrative, the shift to direct discourse is generally an index of the importance of what is happening. David's adultery with Bathsheba in 2 Samuel 11 takes up just 5 verses with only two small bits of dialogue. His machinations that lead to the murder of Uriah are conveyed through an elaborate chain of dialogues and speeches reporting or responding to other speeches that unfolds over the remaining 22 verses of the chapter. On the plane of moral significance, one infers that the truly grave transgression is not the adultery but the killing with which David compounds his sexual crime (Perry and Sternberg 1968; Sternberg 1985: 190–229).

The intricacy of the biblical representation of characters' language is especially evident in the frequent tendency to embed direct discourse within direct discourse. Occasionally, one encounters Chinese-box constructions, as in Jer 36:27–31, where the Lord addresses Jeremiah, quoting the words the prophet is to say to King Jehoiakim, in which are embedded the king's angry words to Jeremiah, which in turn incorporate the words written by the prophet in the scroll he delivered to the king (Alter 1985: 138–39). More characteristic is the subtle interplay between embedding and embedded discourse, or, alternately, between direct discourse and the narratorial report that it seems to mirror more or less verbatim. The rule of thumb is that whenever a character repeats in dialogue what either the narrator or another character has said, small but significant changes are introduced—in the suppression or alteration of a detail, in a choice of terms, in the order of items—that tell us something about the position and attitude of the speaker or the audience he or she is addressing. In the Genesis 24 story of the proxy wooing of Rebekah by Abraham's

servant, the dialogue at the beginning, in which Abraham exacts an oath from the servant, is repeated by the servant in his speech to Rebekah's family; but many details are modified in order to play down Abraham's role as emigrant to a divinely promised foreign land while playing up family ties (Savran 1985; Sternberg 1985: 131–52). In Genesis 39, when the Egyptian lady denounces Joseph as a rapist, she uses virtually the same words the narrator has just used to report the action in which she in fact assaulted Joseph; but the order of the items is changed (in her version, first she cries out and then he flees, instead of the other way around), and the telltale garment is no longer "in her hand" but "by" her. When she accuses Joseph to the household staff, who are presumably slaves, he is a "Hebrew fellow"; when she repeats nearly the same words of accusation to her husband, Joseph becomes a "Hebrew slave" (Alter 1981: 109–10; Sternberg 1985: 423–27).

Direct discourse is also sometimes used to represent the thoughts of the characters in biblical narrative. The scale of such representation is highly restricted, but these nevertheless qualify formally as interior monologues. In some instances, interior monologue is explicitly introduced by the phrase "he said in [or to] his heart," as in 1 Sam 27:1: "And David said in his heart: Now one of these days I shall perish by the hand of Saul. The best thing for me is to flee to Philistine territory …" Often, the Hebrew verb "to say" has the force of "to think" even without the adverbial "in his heart," as when Saul schemes, clearly talking to himself, to have David killed: "And Saul said: Let me give her to him so that she can be a snare to him, and so that the hand of the Philistines will be against him" (1 Sam 18:21). The play of variations in the citation of direct discourse in dialogue can even occur when the direct discourse cited is interior monologue. A piquant example that illustrates how subtly this general technique can be employed occurs in the repetition of Sarah's unspoken speech of skepticism about the promise of a son (Gen 18:12–13). "And Sarah laughed inwardly, saying: After being shriveled, will I have pleasure, and my lord is old!" The angel of the Lord, with the advantage of the auditory equivalent of chairvoyance, hears these unvoiced words, but this is how he repeats them to Abraham: "Why is it that Sarah laughed, saying: Will I really give birth, I being old?" The angel, with divine tact, has clearly tempered the vehemence of Sarah's interior monologue. The most salient of the changes he makes in her speech was already noticed by the great medieval Hebrew exegete Rashi: No mention is made now of Abraham's age, only of hers. The angelic version also edits out Sarah's biological concreteness. There is no reference to being shriveled or worn (Heb root *blh*), or to pleasure (in all likelihood, the Hebrew root *ʿdn* indicates sexual pleasure, though it might merely allude to the "pleasure" of maternity). This purposeful transformation in repetition of direct discourse is characteristic of the procedure throughout the Bible: in this instance, nothing is left of Sarah's words that might offend her husband's sensibility.

The biblical writers are far more concerned with how the characters manifest themselves in their speech than in their chains of perception, musings, and preverbal sensation; but there are nevertheless many brief instances of what students of narrative call free indirect discourse or narrated monologue (Cohn 1978: 99–140)—that is, the representation of the unvoiced inner speech of the character not through direct quotation but through the 3d person grammatical perspective of the narrator. Biblical Hebrew has a convenient term, the so-called presentative, *hinnēh* (KJV "lo" or "behold"), that often serves as a shifter from the point of view of the narrator to that of the character. (In direct discourse, that term is a way of pointing to an object or person visible to the speaker, as when Isaac says to Abraham, "Behold [*hinnēh*] the fire and the wood, but where is the lamb for the offering?"; Gen 22:7). The shift itself is typically made to dramatize a moment of climactic discovery. Thus, when the Israelite general Barak is brought by Jael into her tent where she has just killed the Canaanite commander Sisera, all she says to Barak is that she will show him the man he seeks. Then the narrator reports what Barak sees in the following language: "And behold [*wĕhinnēh*] Sisera lying dead, the tent-peg through his temple" (Judg 4:22). The immediacy of perception intimated through indirect discourse is caught by the use of a participial form instead of a verb in the perfect tense, and even more by the syntax, which beautifully replicates the quick successive stages of Barak's discovery: first the identity of the figure before him; then the fact that he is not just sprawling but dead; then the precise instrument of death—the tent-peg through the temple.

At less dramatically defined moments, the shift into free indirect discourse is chiefly a way of bringing to the fore the subjective viewpoint of the character as he undergoes an experience. This is the case when Jacob, at the beginning of Genesis 29, arrives at the site of a country well in an unfamiliar Mesopotamian setting, after a journey by foot of hundreds of miles and just before the moment he will meet the woman he is to love (Fokkelman 1975: 50–51). "He saw, and behold [*wĕhinnēh*], a well in the field, and behold [*wĕhinnēh*] there, three flocks of sheep lying by it (for from that well they would water the flocks), and the stone was big on the mouth of the well" (Gen 29:2). The double use of the presentative punctuates two successive moments of perception—First, Jacob notices the well, then the sheep nearby; then, in the phrase placed here in parenthesis, the narrator appears to intervene momentarily from his perspective to explain the local practice of watering; and, finally, Jacob's eyes fix on the great stone over the mouth of the well, the stone against which he is about to pit his strength. Such use of indirect discourse is of course modest in comparison to the richly sustained elaboration of that technique in the 19th and 20th century novel, but it illustrates the finely adjusted mobility of biblical narrative in the means of presentation it adopts. The inner experience of the characters may be conveyed by quoted monologue, or as here, by narrated monologue by narratorial summary of attitudes and feelings, and by the way the characters respond to each other in speech and action. Similarly, the narration of events and relationships may be conveyed by dialogue, or dialogue embedding previous dialogue and narration, or by a variety of modes of narratorial report.

DISEASE. See SICKNESS AND DISEASE.

DISHAN (PERSON) [Heb *dîšān* (דִּישָׁן)]. A son of Seir, the Horite (Gen 36:21; 1 Chr 1:38), brother of Dishon (Gen 36:21; 1 Chr 1:38), uncle of Dishon (Gen 36:25, 26 [read, with 1 Chr 1:41, Dishon instead of Dishan]), and the father of Uz and Aran (Gen 36:28; 1 Chr 1:42 [read Dishan instead of Dishon, but see below]). See also SEIR; HORI; DISHON; UZ. According to Gen 36:30, both Dishan and Dishon were Horite/Seirite tribes, regardless of whether one translates Heb *ʾallûp* as "tribe" or "chief". Furthermore, the names Dishan and Dishon are identical, Dishon exhibiting the Canaanite (and ancient NW Arabian) shift *â* > *ô* whereas Dishan shows the Proto-Semitic, Aramaic, and Central Arabian form of the same name. The occurrence of the same name in 3 different positions of the genealogy (Gen 36:20–28; 1 Chr 38–42) makes it doubtful that this genealogy is an actual representation of the Horite/Seirite tribal system. The Masoretic tradition may have expressed similar doubts by misspelling the name of Dishon/Dishan twice (Gen 36:26; 1 Chr 1:42). Gen 36:20–28 forms one of the most ancient components of Genesis 36 (Weippert 1971: 443); it seems, however, to have been compiled from conflicting traditions well after the demise of the Seirite/Horite tribal system.

The name Dishan/Dishon signifies an unspecified piece of game (Nöldeke 1904: 84). For more animal names among the tribal/personal names recorded in Genesis 36, see also ACHBOR; AIAH; ARAN.

DISHON (PERSON) [Heb *dîšôn* (דִּישׁוֹן)]. The name of two men in the OT. It may mean "mountain goat" (*IDB* 1:854).

1. The 5th son of Seir, the Horite, who lived in the land of Edom (Gen 36:21; 1 Chr 1:38). He was the father of Hemdan, Eshban, Ithran, and Cheran (Gen 36:26; 1 Chr 1:41). Some scholars believe that Dishon is a variation of DISHAN, but in the genealogy of the Horite chiefs he is listed as the brother of Lothan, Shobal, Zibeon, Anah, Ezer, and Dishan (Gen 36:20–21). The form *dîšon* occurs only in Gen 36:26.

2. The son of Anah and grandson of Seir, the eponymous clan leader of the Horites who lived in Edom (Gen 36:25; 1 Chr 1:41).

DIVINE ASSEMBLY. Common to the mythopoeic world of the ANE was the idea of a council or assembly of the gods that met to determine the fates of the cosmos. Depictions of such divine gatherings are found in the religious and mythological literatures of Mesopotamia, Ugarit, Phoenicia, and Israel. Though the concept of a "synod" of the gods was present in Egyptian mythology, it seems to have played little active role in Egyptian religion. While there is much to suggest that in Mesopotamia and Canaan this heavenly assembly reflects a developed political reality within the human realm, in the literatures of these cultures the council of the gods is presented as a standard part of the organization of the divine realm which constituted the major decision-making body in the divine world to which all the members of the pantheon were subject.

Within the biblical materials, the concept of an assembly of divine beings is found throughout the OT as an expression of Yahweh's power and authority. Yahweh is frequently depicted as enthroned over an assembly of divine beings who serve to dispense his decrees and messages. It is this mythological setting that provides the background, in part, for the development of the angelic hierarchy that occurs during the intertestamental period. This concept of divine authority and power also supplies the conceptual background for understanding the idea of prophetic authority within the Hebrew texts.

A. Terminology

Despite the common mythological depictions of the assembly of the gods, the terminology used to describe this concept is rather diverse.

1. Extrabiblical. In the Mesopotamian materials, the standard term used for the assembly is *puḫru*—the assembly of the gods is most commonly designated as *puḫur ilāni.* Among the various terms used to designate the assembly in the Ugaritic materials is the analogous phrase *pḫr ʿilm.* While it remains disputed whether *ʿilm* in this and analogous phrases in Ugaritic is to be read as the plural, "gods," or as

the singular, "El" (+ enclitic *m*), it is apparent that it is one designation for the assembly of the gods in the Ugaritic texts (*UT* 17.7 [*KTU* 1.47.29]; *Ug* V.9.I.9 [RS 24.643; *KTU* 1.148]). In *UT* 51.III.14 (*KTU* 1.4) the phrase *pḫr bn ʾilm* designates the assembly of the gods while *mpḫrt bn ʾll* is frequent in the liturgical texts (*UT* 107.3 [*KTU* 1.65]; *UT* 2.17, 34 [*KTU* 1.40; see also lines 8, 25]). To this should be compared the 10th-century B.C.E. Phoenician reference to "the assembly of the holy gods of Byblos" (*mpḫrt ʾl gbl qdšm; KAI* 4.4–5). In the most detailed Ugaritic description of the assembly (*UT* 137.14, 15, 16–17, 20, 31 [*KTU* 1.2]), the compound expression "gathered assembly" (*pḫr mʿd*) is employed. Elsewhere in the Ugaritic texts the most common designation for the assembly is *dr ʾil/dr bn ʾil*, "the assembly of El/the assembly of the sons of El" (*UT* 107.2 [*KTU* 1.65]; *UT* 2.17, 25–26, 34 [*KTU* 1.40; see also line 8]; *UT* 1.7 [*KTU* 1.39]; *UT* 3.16 [*KTU* 1.41]; RS 18.56, 17–18 [*KTU* 1.87]; *UT* 128.III.19 [*KTU* 1.15]). In the Keret text the phrase *ʿdt ʾilm* is also used to connote the assembly of the gods (*UT* 128.II.7, 11 [*KTU* 1.15]).

2. Biblical. The terminology used in Hebrew to denote the assembly is also diverse. Biblical Hebrew, while not using the term *puḫru/pḫr* to designate the assembly, does employ the terms *ʿedâ,* "assemblage" (Ps 82:1) and *dôr,* lit. "generation" (Amos 8:14; see also Pss 14:5; 49:20; 73:15; 84:11; 95:10; 112:2; Isa 53:8; Jer 2:31, 7:29; Prov 30:11–14; compare *dr* in *KAI* 26.III.19;27.12), both of which are used of the council in Ugaritic materials. Additionally, Isa 14:13 employs the phrase *har môʿēd,* "mount of assembly" (cf. Ug *pḫr mʿd*), and *qĕhal qĕdōšîm,* "assembly of the holy ones" (Ps 89:6). The term *sôd* also occurs in the biblical materials as a designation for the council (Ps 89:8; Jer 23:18; 23:22; Job 15:8). Neither *qāhāl* nor *sôd* is attested in Ugaritic as a term designating the assembly of the gods.

B. Members of the Assembly

More significant for an understanding of the role and function of the divine assembly in the literature and religion of the ANE is the variety of terms used to designate the members of the assembly.

1. Mesopotamia. The membership of the heavenly council is most clearly discernible in the Mesopotamian literature. There the membership of the council is composed of all the major gods and goddesses of the land. Most important among these gods are two special groups, the fifty *ilū rabiūtu,* "the great/senior gods," and the seven gods called *ilū šīmāti,* "the gods of the fates," or the *mušimmū šīmāti,* "the determiners of the fates." The depictions of the council proceedings in Mesopotamian materials, most especially in the *Enūma Eliš,* reveal that the council met under the presidency of the high god Anu and that after a banquet and discussion of the issues, the fates were determined and pronounced. The executor of the will of the council was the storm god Enlil.

In the Canaanite and Hebrew literatures depicting the assembly of the gods, the individual natures of the constituent members of the assembly are not nearly so clear as they are in the Mesopotamian accounts. In both the Canaanite and Hebrew assemblies, the identities of the gods, apart from the high god, remain somewhat obscure.

2. Ugarit. In the assembly of the gods, as depicted in the Ugaritic materials, the members of the assembly are noted as *ʾilm,* "gods," a fact that is conveyed by the designation of the assembly as *pḫr (bn) ʾilm, mpḫrt bn ʾil,* and *dr bn ʾil.* There are, however, some more specific indications of the membership in the Canaanite assembly. In the Keret epic (*UT* 126.V.1–28 [*KTU* 1.16]), El sits at the head of the assembly and four times addresses the gods, called either *ʾilm,* "gods," or *bny,* "my sons," asking who will heal the ailing Keret. *UT* 128.II.2–7 (*KTU* 1.15) presents El, Baal, Yarih (Moon), Kothar-wa-Hasis, Raḥmayyu (ʾAṯirat[?]), Reshep, and the *ʿdt ʾilm,* "the assembly of the gods," as gathering to consider Keret's request for progeny. Though broken, the text seems to give the names of some of the major deities and the leading members of the assembly, and then lists the assembly itself, as though the latter had been hypostatized and could represent a grouping of minor deities. This hypostatization of the council is confirmed by the appearance of the council in the pantheon lists and sacrificial tariffs from Ugarit. The Ugaritic pantheon list (*UT* 17.7 [*KTU* 1.47.29]) includes the *pḫr ʾilm* among the deities of Ugarit; the corresponding Akkadian list (*Ug* V.18.28 [RS 20.24]) reads ^{d}*pu-ḫur ilāni*^{M}, "the council of the gods." In addition to this grouping of deities occurs the notice of *pḫr bʿl,* the "assembly of Baal," that might be equivalent to the "helper gods of Baal" (*ʾil tʿḏr bʿl/ilānu*^{M} *til-la-at* ^{d}*adad* [UT 17.4 (*KTU* 1.47.26)/*Ug* V.

18.25 (RS 20.24)]). The connection of the two assemblages in the texts (*dr ʾil wpḫr bʿl*; *UT* 1.7 [*KTU* 1.39]; *UT* 3.16 [*KTU* 1.41]; RS 18.56.17–18 [*KTU* 1.87]) suggests that these might be interpreted as collective "summary" statements for those deities not designated specifically in the lists. The dedication of sacrifices to this hypostatized council (*dr bn ʾil//mpḫrt bn ʾil,* UT 2.17, 33–34 [*KTU* 1.40 (see also lines 7–8, 42)] or *pḫr ʾilm,* Ug V.9.9 [RS 24.643; *KTU* 1.148]) indicates that it was regarded as an object of veneration, a view that is confirmed by the Phoenician references to the council that show that as late as the 6th century B.C.E., the divine assembly was still invoked as an active part of the Canaanite pantheon (*KAI* 4.3–5; 9.B.5–6; 26.III.18–19; 27:11–12). The Ugaritic materials reveal a concept of the council that may be summarized as follows: the major and minor deities of the pantheon met in assembly under the leadership of El to make those decisions concerning the cosmos that fell within the purview of the gods. Most specifically, the issues of kingship, temple, and progeny concern the council. Apart from the fact that the members of the assembly are noted as gods or sons of El and are often the recipients of sacrifices, there seems to be little or no development of the individual roles or functions as presented in the Ugaritic texts.

3. Israel. An analogous situation is encountered in the Hebrew materials. Though there are numerous references to the divine beings that constitute the members of the heavenly court, there is little or no development of individual figures or functions in the early Hebrew materials. In Pss 29:1, 89:7, the members of the Hebrew council are called *bĕnê ʾēlîm,* "sons of gods/gods" (or possibly "sons of El," reading *ʾēl-m;* cf. Ug *bn ʾilm*). Likewise, Deut 32:8 may contain the reading *bĕnê ʾĕlōhîm* (cf. LXX, 4QDt), a reference that would be analogous to the *bĕnê hāʾĕlōhîm,* "the sons of god," contained in Gen 6:2, 4; Job 1:6, 2:1. See also SONS OF GOD. In Ps 82:6, the deities of the assembly are called "sons of the Most High/Elyon" (*bĕnê ʿelyôn*), while the inclusive nature of the membership in the assembly is reflected by the reference to *kōl ʾĕlōhîm*, "all the gods," in Ps 97:7. A more general designation of the members of Yahweh's court is *qĕdōšîm*, "holy ones" (Deut 33:2–3; Job 5:1, 15:15[Q]; Pss 16:3; 89:6, 8; Zech 14:5; Prov 9:10; 30:3), or the collective meaning of *qōdeš* (Exod 15:11; Pss 77:14; 93:5; cf. Ug *bn qdš*). Despite the tendency of interpreters to view the Hebrew materials from a monotheistic viewpoint, it is apparent that the biblical materials themselves envisioned Yahweh surrounded by his heavenly court, the lesser deities who made up the divine entourage.

Given the warrior character of Yahweh presented in the early Hebrew materials, it is possible to ascertain one function of these divine beings who accompanied the high god. Though the precise meaning and etymology of the phrase remain debated, it is possible to interpret the *ṣĕbāʾôt,* "host, army," of the phrase *YHWH ṣĕbāʾôt* as a reference to the military retinue that fought alongside the high god. Whatever character is assigned to these divine beings, two matters are made clear from those texts that are concerned with the incomparability of Yahweh (cf. Deut 3:24; 10:17; 1 Kgs 8:23; Jer 10:6; Pss 86:8, 95:3; 96:4[=1 Chr 16:25]; 97:7; 135:5; 136:2; etc.): such comparisons presume the setting of the council (cf. Ps 89:6–9), and the members of that council are presumed to be clearly inferior to Yahweh. Despite this inferior status, these beings constituted the "host of heaven" (*ṣĕbāʾ haššāmayīm*, cf. Isa 40:26; Ps 148:3), the worship of whom was forbidden in Hebrew tradition (Deut 4:19; 17:3; cf Jer 8:2, etc.). As illustrated by the parallelism of the *kôkĕbê bōqer* and *kōl bĕnê ʾĕlōhîm* ("the morning stars"//"all the sons of god"; Job 38:7), the heavenly bodies could be envisioned as part of the divine entourage who participated in the wars of Yahweh (cf. Josh 5:13–15; 10:12b–13a; Judg 5:20; Ps 148:2–3). In addition to the function of serving as part of the divine retinue, the beings served to praise and adore Yahweh in his court (Pss 29:1; 148:2–3).

C. The Messenger of the Council

Since the major function of the council of the gods was to make and enforce decrees concerning the operation of the cosmos, an important role played by certain members of the assembly was that of messenger of the council. In the Canaanite materials from Ugarit, the major gods are depicted as dispatching messengers (called *mlʾk, tʿdt, ǵlm;* cf. Hebrew *malʾāk, tĕʿûdâ, ʿelem*) who deliver their addresses in a highly stylized, formulaic manner (*tḥm//hwt*). In the Hebrew Bible, the phrase *malʾak YHWH,* "the messenger of Yahweh" (Exod 3:2; Num 22:31; Judg 13:13, 15, 16, 2 Sam 24:16–17; Zech

3:1; etc.; see also the *mal*ʾ*ăkê* ʾ*ĕlōhîm* of Gen 32:2–3), is used to denote those divine beings who serve as envoys of Yahweh and who deliver his decrees. Often confirming their divine commission is the notice that they are "sent" (*šlḥ*) by Yahweh from his council (Gen 24:7, 40; Exod 23:20; Num 20:16; compare Judg 13:8).

This concept of messenger forms a major aspect of the conceptual background of Hebrew prophecy wherein the prophet is viewed as the messenger of Yahweh (cf. Hag 1:13; Mal 3:1). Such texts as Jer 23:18 (cf. v 22) and Amos 3:7 reveal the council background presumed by the concept of prophecy (see also Job 15:8). As the messengers of the Ugaritic council delivered their messages via set formulas, the pronouncements of the Hebrew prophets were also characterized by certain formulaic expressions, the most common of which was "thus says Yahweh" (*kōh* ʾ*āmar YHWH*), a phrase frequently paralleled by the formula "the word of Yahweh" (*dĕbar YHWH*). The prophetic reception of the divine message, i.e., the commissioning of the messenger, is conveyed at least in part via the common expression "the word of Yahweh was to PN" (*wayhî dĕbar YHWH* ʾ*el-PN*) and then delivered with the imperatives characteristic of prophetic addresses (cf. 1 Kgs 12:22–24; 13:20–22; 2 Sam 7:4–5; Jer 21:11–12; Ezek 28:1–2; etc.).

D. Hebrew Depictions of the Assembly

The role of the divine assembly as a conceptual part of the background of Hebrew prophecy is clearly displayed in two descriptions of prophetic involvement in the heavenly council. In 1 Kgs 22:19–23 (cf. 2 Chr 18:18–22), Micaiah ben Imiah oversees the heavenly decision regarding the fate of Ahab. Isaiah 6 depicts a situation in which the prophet himself takes on the role of the messenger of the assembly and the message of the prophet is thus commissioned by Yahweh. The mythological depiction here illustrates this important aspect of the conceptual background of prophetic authority.

Not all depictions of the assembly pertain to prophecy. Ps 82:1–8 presents a picture of judgment in the divine realm. Yahweh is presented as speaking in the ʿ*ădat* ʾ*ēl*, "the assembly of El … in the midst of the gods" (*bĕqereb* ʾ*ĕlōhîm*), called also "sons of the Most High/Elyôn" (*bĕnê* ʿ*elyôn*), and condemns them to death because of their failure to dispense justice properly.

A further association between the concepts of the assembly and the divine decree is found in the epic traditions concerning the "Tent of Meeting" (ʾ*ōhel mô*ʿ*ēd*—cf. Exod 33:7–11; Num 11:16–29; 12:4–10, etc.). In Hebrew traditions the ʾ*ōhel mô*ʿ*ēd*, an earthly representation of the heavenly abode of the deity, served as an oracle tent where Yahweh appeared directly to his people (Exod 25:22; 29:42–43; 30:36; 40:34–38; Num 9:15–23). These traditions are consistent with the ANE concept of the council meeting at the shrine of the high god. In mythological terms, this shrine was located on the mountain dwelling of the deity. In the Canaanite materials, this was the cosmic abode of El, *ġr ll*, "Mount L-1" (*UT* 137.14,20 [*KTU* 1.2]]), called also *ḫršn* (*UT* ʿnt pl. ix:III.22 [*KTU* 1.1]), located at the confluence of the rivers of the deep (*UT* 51.IV.20–24 [*KTU* 1.4]; *UT* 129.4–5 [*KTU* 1.2.III]; *UT* ʿnt.V.13–16 [*KTU* 1.3.V.5–7]; *UT* 49.4–6 [*KTU* 1.6.I.32–34]; etc.). In the biblical materials, the assembly is depicted as meeting on the "mount of assembly" (*har mô*ʿ*ēd,* Isa 14:13, cf. Ezek 28:14, 16). With the establishment of Jerusalem as the central cultic site, such traditions were applied to Mt. Zion, the dwelling place of Yahweh (Pss 48; 46; Isa 2:2–4; Mic 4:1–3), the place of the decree of Yahweh and the issuance of the Law (Isa 2:3; Mic 4:3), the site of life-giving waters (Isa 33:20–22; Ezek 47:1–12; Joel 4:18; Zech 14:8; *1 Enoch* 26:1–2).

The depictions of the council contained in Job 1:6–12 and 2:1–7 and Zech 3:1–7 reveal the beginnings of the development of a specialized figure, the *śāṭān*/Satan, "the adversary." In Job 1:6–12 and 2:1–7, the *śāṭān* is presented as one of the *bĕne hā*ʾ*ĕlōhîm* who assembled before Yahweh on the appointed day (*hayyôm*). In the story, he serves to test Job's faithfulness, but remains throughout under the direct control of Yahweh. In Zech 3:1–7, this figure stands to accuse the high priest Joshua but is rebuked by Yahweh; this figure, though developing a specialized function and role in the conceptions of the assembly, remained, at least until the time of Zechariah, a member of the assembly under the control of Yahweh.

E. Development of Specialized Functions

Despite the general tendency for the members of the council to remain in the background, the development of some specialized functions and figures, such as those of the Satan, are apparent, especially toward the intertestamental period. The collection of divine beings constituting the assembly

provided a basis for the development of an elaborate angelology wherein there were specific ranks and hierarchies of divine beings (Dan 8:16; 9:21; 10:13, 21; 12:1; Tob 12:15; *1 Enoch* 81:5; 87:2–3; 88:1; 90:21–22; 2 Esdr 5:20; etc.). The figure of the Satan begins to appear as a distinct figure (*Jub.* 49:2; CD 4:13; 5:18; 8:2; 1QS 1.18, 23–24; etc.), and the concept of "hostile" angels also becomes evident (*1 Enoch* 40:7; 53:3; 61:1; 69:4, 6, etc.). A partial background for this development may be found in those biblical texts that reflect stories regarding human and/or divine rebelliousness in varying forms (Gen 6:1–4; Isa 14:12–15; Ezek 28:1–19; Job 4:17–18).

At the same time, heavenly figures are seen as intercessors on behalf of humans (Dan 6:23; 10:13, 21; *1 Enoch* 15:2; Tob 12:15; etc.), a role that is assigned to a member of the heavenly court in Job (9:33–35; 16:19–21; 19:25; 33:23–24). In the Ugaritic epics, the role of intercessor is played by the god Baal, who intercedes before the high god El on behalf of the earthly king (*UT* 128.II.11–16 [*KTU* 1.15]; *UT* 2 Aqht I.16–27 [*KTU* 1.17]). Additionally, these figures serve as protectors of the righteous (Dan 10:13, 21; 12:1; 2 Macc 11:6; *1 Enoch* 20:5; *Jub.* 35:17; 1QH 5:21–22; etc.) and as the heavenly army of the end time (Zech 14:3–5; 1QH 3.35–36; 10.34–35; 1QM 15.14). The NT materials add nothing new to the picture already developed. Such passages as Luke 1:11–20 and 2:8–14 show that the messenger function remained a primary aspect of these divine beings, though throughout they remain subjugated to the power and will of God. DIVINE MAN. See ARETALOGY.

DIVINE NAMES (OT). See NAMES OF GOD.

DIVINE WARRIOR. See WARRIOR, DIVINE.

DIVINERS' OAK (PLACE) [Heb *ʾēlôn* (אֵלוֹן) *mĕʿônĕnîm* (מְעוֹנְנִים)]. A sacred tree (a terebinth or perhaps an oak) near Shechem, according to Judg 9:37. Since Gaal, looking out from the gate of Shechem, described the approach of the enemy as from the direction of the Diviners' Oak, the tree must have been outside Shechem.

Since several other biblical texts refer to a conspicuous tree in association with an altar or a sanctuary at Shechem (Gen 12:6–7, cf. Deut 11:30; Gen 35:4, cf. 33:19–20; Josh 24:25–26; and Judg 9:6), the question arises whether they all refer to the same tree and holy place at Shechem. Though this may indeed be the case, such a simple identification is hindered because the trees bear different names (*ʾēlôn, ʾēlâ, ʾallâ,* and *ʾēlôn,* respectively). It may be, however, that the names are used imprecisely or interchangeably (Gottwald 1979: 776, n. 500). Also, the texts offer scant information regarding the locations of these trees with reference to Shechem, and the trees are described differently.

The description given to the tree in Judg 9:37 connects it with divining or receiving oracles. A similar association may be sought in Judg 4:4–5, which states that the prophetess Deborah used to sit under "the palm tree of Deborah," and in 2 Sam 5:24–25, where David awaits a sign from the trees. Messages were also sought from trees at Ugarit (CTA 3.C.19–20). The tree in Gen 12:6 is qualified by the term *môreh* (*Hipʿil* masc. part. from *yrh*). Based on the evidence of Hab 2:18–19, which uses this same form and also a 3d masc. imperfect verb of the same stem to denote the giving of revelation, it is probable that the sacred tree of Moreh in Gen 12:6 is also one where revelation was received and that it should be identified with the Diviners' Oak. See also *YGC,* 165–66; Nielsen 1955: 216–22.

WESLEY I. TOEWS

DIVORCE. The biblical teaching on divorce is much debated for two reasons. First, while the relevant texts are not numerous, they provoke exegetical issues which are complex and difficult. Second, since the church and synagogue look to Scripture for moral guidance and since divorce continues to be a pressing moral problem, the pastoral issues these texts envisage are important and urgent.

A. In the OT

The great halakic debate over divorce among the rabbis of Second Temple Judaism focused on two OT texts: Gen 2:22–24 (with 1:27) and Deut. 24:1–4. According to rabbinic haggadoth, Gen 2:22–24 teaches that God created males and females (Gen 1:27) in order to re-create them into an inviolable union (*CD* 4:19–5:3). Marriage thereby establishes a new physical relationship ("one *flesh*") comparable to other familial relationships, held together by a natural (i.e., hereditary) and therefore indissoluble covenant. In fact, the deuteronomic text (cf. Jer 3:1–5) which forbids remarriage of a divorced wife to her first husband is but the logical extension of the levitical prohibition (Leviticus 18) against marrying close relatives; a divorce (or subsequent remarriage) cannot annul the kinship relation God established through marriage (Heth and Wenham 1985).

However, since the prohibition of remarriage (Deut 24:4a) is the apodosis of the deuteronomic *crux interpretum,* the assumption is that divorce was a known practice regulated by now unknown customs or rules. Indeed, the practical issue in the debate between rabbis was to explain the grounds for divorce, centering on the meaning of the vague phrase (Deut 24:1) *ʿerwat dābār,* "an indecent thing," which when found in a woman brought her into disfavor with her husband and gave him reason to issue her *sēper kerîtut,* "a bill of divorcement." While it is not possible to reconstruct the exact pre-deuteronomic or deuteronomic meaning of the phrase *ʿerwat dābār,* two schools of rabbinic interpretation establish the range of possible meanings (*Git.* 9:10; *b. Git.* 90a). The school of Shammai contended that the phrase referred to unlawful sexual behaviors, even though the Deuteronomist surely would have excluded adultery, a behavior punishable by death (Deut 22:22–24) rather than divorce. The school of Hillel contended for a much broader definition which included childlessness, cultic offenses, and even failure to complete household tasks.

B. In the NT

Jesus' teaching on divorce (Matt 5:31–32; 19:3–9; Mark 10:2–12; Luke 16:18) can be understood against the backdrop of this rabbinic discussion of the deuteronomic text as well as the "one flesh" ideal of the creation narrative. The Lukan version (Q; cf. Matt 5:32) is the most authentic. Cast from the male perspective of Palestinian Judaism (*contra* Mark 11:12), the logion of Luke's Jesus contends that the man who initiates a divorce, who marries a divorced woman, or who then remarries another woman commits adultery. Although his teaching was similar to that of the Qumran Essenes (Fitzmyer 1976), it was dissimilar to current, mainstream rabbinic halakoth in three ways: (1) it prohibited remarriage, even to the woman with a bill of divorcement; (2) it broadened adulterous behavior to include a man's infidelity (cf. Mark 10:11) and a woman's remarriage; and (3) it ruled out serial monogamy.

Although similar to Luke, the divorce logion of Mark's Jesus is found within a pericope less concerned with halakoth than with a haggadic commentary for disciples (Mark 10:10) on the biblical ideal of "one flesh" (Mark 10:2–9). Thus, if God made male and female into one flesh, then neither the male (Mark 10:11) nor the female (Mark 10:12) should divorce and remarry; to do so is adultery.

Matthew's Jesus, on the other hand, is a scribal Messiah very interested in the rabbinic debates. However, by adding the exception clause to the divorce logion found in 5:32 (*parektos loqou porneias*) and 19:9 (*mē epi porneia*), the first evangelist clearly moves Jesus' concern beyond those which typified the scribes and Pharisees. While everything about these exceptive clauses is contested (Witherington 1985), at the heart of the matter is the meaning of *porneia.* We would agree that *porneia* refers here to incestuous marriages; however, Matthew intends an *ironical* meaning for both outsider and insider.

According to Matt 19:3–9, the divorce logion, with its concession, makes the decisive point which ends his debate with the Pharisees (*contra* Mark). To this point, Jesus' appeal to the Genesis texts (19:4–6) could have been construed by his opponents as supporting their interpretation: to leave one's father is to forsake unnatural (i.e., incestuous) marriages with sister or mother (*b. Sanh.* 58a). The tendency among Pharisees was to define the "one flesh" principle negatively and narrowly in order to broaden their own grounds for divorce and polygamy. The effect of the climactic 19:9 is to challenge divorce as a practice approved by God and to reassert monogamy as God's ideal. In this reconstruction, then, the exception clause makes a rhetorical point against the outsider: while apparently acknowledging the typical rabbinic interpretation of the Genesis texts as prohibiting *porneia* (incestuous marriage), Matthew's Jesus subordinates this interpretation (i.e., the exception clause) to his own, thus using these same biblical texts to authorize monogamous relationships rather than polygamous ones as God's ideal.

For the disciple, who seeks to live a life "more righteous than the scribes and Pharisees" (5:20), neither the hardness of heart (cf. 5:28) which made the deuteronomic legislation necessary (19:8a) nor the *porneia* which makes divorce possible can be permitted. Thus, while Matthew apparently allows divorce if *porneia* is found, such a possibility is moot for the righteous disciple. For the insider, Matthew's exception clause becomes an ironical reminder that one's character is formed by a God whose will is for indissoluble monogamy (19:6). Clearly, the sum of the synoptic tradition argues that Jesus' teaching intended to create among his disciples an intolerance for divorce even though Jewish law tolerated it.

While Paul reformulated Jesus' prohibition of divorce and remarriage in 1 Cor 7:10–11, the particular contingencies of the Gentile mission forced him to adapt the dominical tradition in new ways. Some Corinthian believers understood Paul's ascetical preference (7:1, 6–9), rooted in his missiological values (7:32–35) and apocalyptical convictions (7:29–31) as absolutizing ascetical marriages even though not everyone had the gift of celibacy (7:7b, 17–24). Other believers desired (cf. 7:9b) their conjugal rights (7:2–5). The result was marital conflict between believers with divorce a real possibility.

The exegetical problem with Paul's response concerns the apparent contradiction between the dominical prohibition of divorce in 7:10–11 and the apostolic permission granted in 7:15. Murphy-O'Connor rightly observes that the parenthesis, *ouk egō alla ho kyrios* (7:10), qualifies Jesus' prohibition as an "afterthought because of its pastoral utility" (1981: 606) rather than as a normative principle. (This Paul gives in 7:17: believers should be content to remain in the marital state they had entered before being summoned into the church by the converting call of God.) Thus, Paul adapted the dominical to his own solution as a halakic commentary on a particular kind of marriage in the Corinthian church: that is, in the case of ascetical marriage, there was no grounds for divorce (and so for remarriage) when the people involved did not have the gift of celibacy.

His permission to divorce granted in 7:15 applied to a different kind of marriage (7:12, *tois de loitois legō egō, ouk ho kyrios*; *contra* Moiser 1983), when believers were abandoned by nonbelievers. In this case the grounds for divorce were more convincing: there was not a mutual commitment to the believer's divine calling (*keklēken;* cf. 7:17a), and the unbeliever divorces (*chorizō*; cf. 7:10) the believer. Evidently, Paul did not consider Jesus' prohibition of divorce binding in this case, and later even considered the possibility of remarriage under certain circumstances (7:27b–28).

C. Conclusion

Scriptural teaching on divorce underscores two convictions which form a pastoral dialectic. Following Jesus, there must be a readiness to resist divorce as an evil; divorce is opposed to God's reign, even though the believing community may tolerate it. However, following Paul, there must be a willingness to resist facile solutions which fail to accommodate concrete and difficult cases presented by our own situations. See also *ISBE* 1: 976–78.

DIZAHAB (PLACE) [Heb *dî zāhāb* (דִּי זָהָב)]. Referred to as the location of Moses' "repetition of the law" (Deut 1:1). The name is a mixture of official Aramaic (*dî* "the one of") and Hebrew (*zāhāb* "gold"); orthographically (*dy* instead of *zy*) the name cannot predate the 6th century B.C. The place remains unidentified, but three suggestions deserve mention.

1. According to the first half of Deut 1:1, Dizahab, Suph, Tophel, Laban, and Hazeroth may have been situated in Transjordan NE of the Dead Sea. A. Musil (1907: 196, 211–12) identified Dizahab with aḏ-Ḏuhaybah, 22 km E-NE of Mâdabâ. Musil's identifications of Dizahab, Laban, and Suph do not, however, lead to a geographically consistent reading of Deut 1:1 (Mittmann 1975: 9–11).

2. According to Deut 1:2, the four places could have been situated between Mount Sinai/Horeb and Kadesh–barnea. This view contradicts the plain meaning of Deut 1:1 but finds support in Pharan Deut 1:1 (Wâdî Fêrân on the Sinai peninsula; Knauf 1989: 23–24). Furthermore, both Laban and Hazeroth may occur under the names of Libnah and Hazeroth in the wilderness itinerary (Num 33:17; 20). Therefore, Burckhardt (1822: 523) suggested Mînâ᾽ eḏ-Ḏahab "Gold-Harbor" on the Sinaitic coast of the Gulf of Aqabah as a location for Dizahab.

3. Meyer (1906: 375) identified Dizahab with MEZAHAB, Gen 36:39; 1 Chr 1:50, which may have been a place in Edom.

ERNST AXEL KNAUF

DODANIM [Heb *dōdānîm* (דֹּדָנִים)]. Fourth "offspring" of Javan (Gen 10:4). The Sam. Pent. and the LXX, along with some Hebrew manuscripts, follow the parallel passage in 1 Chr 1:7 and read an initial *reš* in place of the MT 's *dalet.* This assumes scribal confusion which may reflect the similarity in the orthography of the two letters. On the basis of the plural suffix marker *-îm,* this figure seems to be the name of an ethnic group. Many commentators have followed the alternative reading and found in the Rodanim the inhabitants of Rhodes. If so, is this error repeated by the MT in the "people of Dedan" mentioned in Ezek 27: 15 (so LXX; cf. Simons, *GTTOT,* 80)?

An alternative explanation which preserves the MT 's vocalization identifies the Dodanim with the Danuna. The Danuna appear as a region in Syria, mentioned in a 14th century B.C. Amarna letter from Tyre (*da-nu-na*), in a Neo-Assyrian inscription of Ashurnasirpal I (*dan-nu-na*), and in the Egyptian inscriptions (*d-in-nw-n* et al.) (*RA* 2: 120). However, the dissimilarity in the consonants of Dodanim and the Danuna renders this interpretation unlikely (Wenham *Genesis 1–15* WBC, 219).

A more recent proposal has been set forth identifying the Dodanim with the inhabitants of Dodona, the site of an ancient Greek oracle in the region of Epirus (Neiman 1973: 121; Berger 1982: 60).

RICHARD S. HESS

DODAVAHU (PERSON) [Heb *dōdāwāhû* (דֹּדָוָהוּ)]. Father of Eliezer, a prophet from Mareshah, a town in the Shephelah district of Judah (2 Chr 20:37). The LXX's *ōd (e)ia* and *dōdia* probably reflect Heb* *dōdîyāh*. Dodavahu's son upbraided Jehosaphat, king of Judah, for aligning himself with Ahaziah, king of Israel, in order to build ships for the purpose of trade. The fleet was destroyed by Yahweh in an act of judgment against this alliance (2 Chr 20:35–37). Since the prophet is not mentioned in the parallel account (1 Kgs 22:49–50), scholars have argued that Eliezer, son of Dodavahu is a literary fiction created by the Chronicler to explain the failure of Jehosaphat's maritime venture. Ward (*IDB* 1: 861) suggests that the Chronicler based the name on the Davidic hero Eleazar, the son of Dodo (2 Sam 23:9). The evidence, however, for such theories remains inconclusive. Although a definite theological perspective governs the Chronicler's historical writing, he may have employed different sources here. He also may have had a different *Vorlage* than that reflected in the MT of Kings (see Williamson, *1–2 Chronicles* NCBC, 302–3). Since 4QSam[a] is closer to Chronicles than the MT of Samuel, the exact form of the *Vorlage* of Chronicles remains uncertain.

STEPHEN G. DEMPSTER

DODO (PERSON) [Heb *dôdô* (דּוֹדוֹ)*; dōdô* (דֹּדוֹ)]. Var. DODAI. The name of three men in the Hebrew Bible, two of whom were warriors associated with the royal court. Like the name "Dodavahu," this name is derived from the common Heb root *dwd,* which means "beloved," "favorite," or "friend." The term can also refer to one's uncle (cf. Lev 10:4; 20:20; etc.). This root forms the basis of the name David as well as Solomon's other name, Jedidiah ("beloved of Yahweh"). Isaiah 5:1, which begins with references to *yĕdîdî* and *dôdî,* is probably a play on the names of David and Solomon. Related forms (*dôdî, dôdek, dôdâ*) are especially prominent in the Song of Songs (1:13–14; 2:3, 8, 10, etc.). The names *Dodāhū* and *Dudū* are attested in cuneiform texts.

1. The grandfather of Tola, one of Israel's minor judges from the tribe of Issachar (Judg 10:1).

2. The father of Eleazar, the second of "the three" most renowned warriors of David (2 Sam 23:9 = 1 Chr 11:12). Dodo's own lineage is described as *ben-ʾăḥôhî,* "the son of Ahohi," or more likely, "the son of an Ahohite." Dodai the Ahohite is named as one of David's officers over the monthly levies (1 Chr 27:4), and he may be this same father of Eleazar (Heb *ʾel-āzār*). The related name *Dodavahu* (cf. Akk *dōdāhū*) is attributed to the father of Eliezer (Heb *ʾĕlîʿezer*), the prophet in 2 Chr 20:37.

3. The father of Elhanan of Bethlehem, who immediately follows Asahel, brother of Joab, in the list of David's warriors (2 Sam 23:24 = 1 Chr 11:26).

DOE. See ZOOLOGY.

DOEG (PERSON) [Heb *dōʾēg* (דֹּאֵג)*; dôʾeg* (דּוֹאֵג)]. An Edomite in the service of King Saul (1 Sam 21:8; 22:9, 18; Ps 52:2). The etymology of the name is unknown—perhaps it is a shortened form of a theophoric name with confessional and/or trusting character " (God NN) cares about/has cared about." Doeg accidently spied David when David fled to the sanctuary of Nob and received holy bread and Goliath's sword after consulting the oracle there. Doeg reported this to Saul after an assembly in Gibeah (1 Sam 22:9–10; Ps 52:2); thereupon Saul condemned to death Ahimelech son of Ahitub and the rest of the priests of Nob because they had assisted David (1 Sam 22:16–17). When Saul's Benjaminite "footmen" (*rāṣîm,* 1 Sam 22:17) refused to execute the sentence, Doeg himself killed all the priests of Nob (1 Sam 22:18) and then executed many of the people who lived in the city of Nob. One of Ahimelech's sons, Abiathar, was able to escape the massacre and fled to David, who took him in (1 Sam 22:20–23). David reacted to Abiathar's report with self-condemnation because he had foreseen Doeg's and Saul's action (1 Sam 22:22).

DOG. See ZOOLOGY.

DOK (PLACE) [Gk *Dōk* (Δωκ)]. A small fort near Jericho constructed by Ptolemy, the son-in-law of Simon Maccabeus. Following a banquet at this location, Simon, the last surviving son of Mattathias, and two of his sons were treacherously murdered by Ptolemy in 135 B.C. (1 Macc 16:11–15). Josephus in his account called the fort Dagon and located it N of Jericho (*Ant* 13.8.1 §230; *JW* 1.2.3 §56). The Copper Scroll (3Q15) of Qumran also makes reference to the site. The site of the fort is thought to have been located on Jebel Qarantal (M.R. 190142), two miles NW of Jericho. At the base of that hill is the spring "Ain Duq," which is thought to retain the ancient name of the fort.

ROBERT W. SMITH

DOLMEN. A megalithic structure, a stone chamber created by the erection of two or more massive vertical "wall" stones roofed by one or more equally massive "roof" stones. Similar structures in W Europe are known as *cromlechs.* The typical dolmen in biblical lands is rectangular, and the narrower chamber-closing wall stones are known as "end" slabs or stones. Dolmens are sometimes held to be intimately and culturally associated with other megalithic phenomena in Bible lands such as the twelve standing stones at Gilgal (Joshua 4) or Jacob's pillar (Gen 28:22), but the association is unproved. Consensus is that dolmens are tombs, but unassailable proof of this is yet to be produced.

A "classic" dolmen is a stone box: floor, four walls, and roof, each consisting of one or more great slabs. Modifications occur. Some structures have more than one roof slab. Some have more than one slab forming each wall. Some have more than one floor slab. Some have no floor slabs, their floors being earth or bedrock. Some dolmens were made not of slabs but of boulders forming walls and roofs or boulders for walls and slabs for roofs. In many instances "door" or "window" holes, simple or drafted, were carved into one of the end slabs. Two-decker dolmens exist, one chamber above another. There are dolmens with more than one chamber on the same level, each divided from the other by a vertical slab. Some of these slabs have carved holes. There are some dolmens with "trailers" attached to them, dolmens smaller than the main dolmens and in line with them.

Some researchers hold that stone cist graves such as those of Chalcolithic times found at ʿel-Adeimeh are degenerate forms of dolmens, examples of which are found nearby, but this theory is not universally accepted.

It is not known if the variations in design and construction indicate changing traditions within one population, or are evidence of movements of groups in and out of the territories in which the variations occur.

Despite the great size of many of the components of dolmens, there is no reason to doubt that application of human and animal muscle, levers, rollers, and perhaps ramps, combined with sliding, tumbling, rolling, and lifting sufficed to move dolmen components into position. No sophisticated methods were required.

Old World dolmens occur in a band stretching from the British Isles and the Scandinavian countries, Germany, France, Portugal, and Spain E across Italy and N Africa into the Near East and the Caucasus, India, and on to Korea and Japan. Since our interest is the core Biblical lands, it is to be noted they are found from the Jordanian and Syrian deserts W to the Mediterranean foothills of the central mountain ridge of Palestine, and from Syria and Lebanon S to about the latitude of Kerak. That dolmens practically disappear S of the region of Kerak is provocative, but no satisfactory explanation of the fact has been advanced.

There are dozens of dolmen sites in the core area, and they contain thousands of dolmens. Huge fields exist in Syria, smaller ones in Lebanon. At the Tawahin es-Sukkar site in the Jordan valley there are more than two hundred dolmens. Less than twenty miles to the SE, at Tell Umm el-Quttein there are only six. This variation in numbers is a common pattern: large groups occur at Meron, Khorazin, and especially Shamir in Israel and Irbid, Kefr Yuba, and El Maslubiyeh in Jordan; but dolmens appear singly at Abu Dis and Beit Jibrin. Perhaps these are but remnants of former more extensive fields, their original companions having been swept away by farming, road building, military construction, or other such

activities ancient and modern, but there is no reason to assume that single dolmens were not erected upon occasion.

We do not know when the dolmens were built, nor do we know who built them. Estimates of age range from 7000 to 3000 B.C. for the most part, although some dates more recent than 3000 B.C. have been suggested. While builders have been held to be people of Neolithic, Chalcolithic, or the Early Bronze Age, no artifacts have been discovered in acceptable associations with dolmens to permit assignment of the structures to a particular culture and thus a time. Until we have such datable artifact association with dolmens or have found some other method of equating dolmens with established time and culture niches, we simply do not know when they were built nor who built them.

The classic and exhaustive treatment of these phenomena to date in biblical lands is that of Paul Karge in his *Rephaim,* Paderborn (1925).

JAMES L. SWAUGER

DOMESTICATION OF ANIMALS. See ZOOLOGY.

DOMITIAN (EMPEROR). Titus Flavius Domitianus, second son of Vespasian and brother of Titus, was born in Rome on 24 Oct. A.D. 51 and became emperor on 14 Sept. 81. His early years coincided with a decline in the Flavians' relationship with the imperial family, which had been quite close under Claudius when Titus lived at court and was educated with the royal children. No such favor came to Domitian. Twelve years younger than Titus, he was still not of an age to acquire military experience when his father rebelled in 69 A.D. He was in Rome when Vitellius perished and found himself in charge until Vespasian reached Rome some ten months later (Oct. 70). However, his first taste of real power was brief and he was soon relegated to a position of comparative inferiority. Although granted substantial honors (he held all the priesthoods and seven consulships) during the reigns of his father (69–79) and brother (79–81), he received no military training and was appointed to no positions of authority; and as Titus was only forty when Vespasian died, there was no prospect of and little apparent reason for a change in this policy.

On Titus' sudden death Domitian became emperor. Unlike his father and brother, he was either unable or unwilling to disguise his autocracy: in particular, he could not maintain a good relationship with the senate, and as most historians were senators, this has done little to enhance his reputation. For a time, though, he made the effort and even awarded consulships to potential opponents—Helvidius Priscus (whose father was executed by Vespasian), Arulenus Rusticus (long recognized as a member of the "philosophic opposition"), and Salvidienus Orfitus (whose father was executed by Nero). Possibly he hoped to compromise them in the eyes of their senatorial supporters, but whatever his motives, the attempt was a failure and all three were executed (Dio Cass. 67.13.3; Suet *Dom.* 10.2–4). Other senators shared their fate, including two imperial cousins, T. Flavius Sabinus and T. Flavius Clemens. But the ancient evidence does not fully support modern claims that he instituted a reign of terror. Fewer than twenty victims are named in our sources, and the timing of the beginning of the "terror" varies—for Suetonius (*Dom.* 10.5), Domitian became more cruel after Saturninus' revolt (89), but for Tacitus (*Ag.* 44) the worst came four years later, after the death of Agricola. On the other hand, his was an overt autocracy: he styled himself "perpetual censor" and even "Lord and God," though the latter title has not been found on any coin, inscription, or manuscript. Far more significant in the long term was the increased role in government assigned to the equestrian order at the expense, inevitably, of the senate: this did violence to tradition and harm to his reputation. In 87/88, for instance, he executed the (senatorial) proconsul of Asia and replaced him with the equestrian C. Minicius Italus, an event particularly offensive to senators since the Asian post was the most highly regarded external appointment open to them. Equally unprecedented was the appointment of the equestrian Cornelius Fuscus to the command of the Dacian war, a traditional senatorial post. It is not surprising that Domitian's relationship with the senate deteriorated.

To describe Domitian simply as an autocrat would be to ignore his achievements as an administrator. Like all the Flavians, he kept close control of the finances of state. Despite considerable expenses at home and abroad, he at the very least managed to balance his budget, for his successor Nerva could afford

immediately to pay a generous donative and *congiarium* (distribution of money to the people), as did Trajan two years later, while his predecessor Titus had had enormous expenses. His building program was extensive and included the completion of the Flavian Amphitheatre (the Colosseum) and the erection of his fine palace on the Palatine. He was also concerned with the administration of justice. Suetonius refers to his scrupulous and conscientious nature and stresses the integrity of his city officials and provincial governors—"at no other period were they more honest or just" (*Dom.* 8.2). Famine was a severe problem during the reign, especially in Asia Minor (possibly reflected in 6:5–6), where one of his provincial governors issued an edict (*Année Epigraphique* 1925: 126) forbidding hoarding and setting a maximum price on the grain to be released by his orders, apparently the earliest example of imperial regulation of prices in the provinces. But his concern was more positive: to promote grain production he allowed no more vines to be planted in Italy and ordered half the acreage assigned in the provinces to vineyards to be turned over to grain production (Suet. *Dom.* 7.2; 14.2).

Domitian was a successful commander and almost always popular with his troops, no doubt because he increased their salary by twenty-five percent, the first rise of any kind in a hundred years. His military activities were considerable: he favored consolidation in the west together with expansion in the east. In 82 or 83 he moved against the Chatti (a German tribe living near the upper Weser), thereby strengthening the Middle Rhine; the result was peace in Germany for over a century. In Britain, Tacitus' father-in-law Agricola advanced far into Scotland but the conquest of the north was not completed. The abandonment of the legionary fortress at Inchtuthil near Perth (about a million Roman nails were found in one pit alone) provides dramatic evidence of the new direction in imperial policy, for in 85, Domitian turned to the Danube, where the Dacian leader Decebalus had invaded Moesia and killed the imperial legate Oppius Sabinus. Cornelius Fuscus' subsequent expedition also met with disaster: he himself was killed, and it was not until 88 that the Romans were successful. Then, in 92, the Marcomanni and Quadi invaded Pannomia and destroyed an entire legion; before long they were subdued and peace was finally established. Thus by 96 the best legions in the empire were stationed not on the Rhine but on the Danube.

Domitian resorted to legislation in an effort to improve public and private morality. Again the hand of the autocrat was obvious. He forbade castration and checked theatrical license; at the same time, three Vestal Virgins were executed for immorality; one, the chief Vestal Cornelia, was buried alive. Consistent with this was his determination to restore the official religion of Rome to its former purity. Again, transgressors were severely punished, even if they were imperial relatives: Flavius Clemens and his wife Flavia Domitilla were executed in 95 for atheism, "a charge on which many others who drifted into Jewish ways were condemned" (Dio Cass. 67.14.2). Similar charges were laid against Christians, still regarded by some as members of a Jewish sect. Perhaps Suetonius had Christians in mind when he said that Domitian exacted the special Jewish tax on "those who lived as Jews without publicly acknowledging their faith" (*Dom.* 12.2). But both Pagan and Christian writers attest to Domitian's hostility to Christianity: Pliny (*Ep.* 10.96.1) knew of the "examination" of Christians at this time, as did the Christian writer Eusebius (*Hist. Eccl.* 3.18.4), whose sources referred to the banishment of Flavia Domitilla (niece rather than wife of Flavius Clemens) because of her "testimony to Christ," and some support is provided by the fact that a woman of that name gave a cemetery to the Christians. The persecution, limited though it probably was, reached its height in the latter part of the reign and is reflected in the book of Revelation: for Pliny, worshipping the living emperor's image distinguished Christian and non-Christian, it was a useful administrative device. But for the author of Revelation it was a request to worship "the beast and his image" (Rev 6:9, 7:14, 12:11 and 20:4).

Domitian's unpopularity in various quarters led to conspiracies against him. On 22 Sept. 87, sacrifice was offered "on account of the detected crimes of wicked men" (*CIL* VI 2065), who presumably were guilty of plotting against the emperor; however, both their identity and their motivation are unknown. In Jan. 89 occurred the rebellion of L. Antonius Saturninus, governor of Upper Germany, which was quickly suppressed by his counterpart in Lower Germany, A. Bucius Lappius Maximus (*Année Epigraphique* 1961: 319): the consensus of opinion is that this was a military rather than a senatorial plot. But the execution of his cousin Flavius Clemens provoked a third and successful conspiracy involving his wife

Domitia Longina, one or both of the praetorian prefects, and a number of his personal staff of freedmen. They stabbed him to death on 18 Sept. 96, a few weeks before his forty-fifth birthday, an act greeted with delight by the senate, indifference by the people, and anger by the army (Suet. *Dom.* 23.1).

DOPHKAH (PLACE) [Heb *dopqâ* (דָּפְקָה)]. The first encampment site of the Israelites after leaving the wilderness of Sin, but before reaching Alush, as listed in Num 33:12–13. The meaning of the name is unknown, but many (Abel, *GP* 213; Aharoni, *LBHG*, map 48; Simons, *GTTOT*, 252; *WHAB*, pl. V) have associated it with *mfkt*, the Egyptian word for turquoise, and connected it with the Egyptian mining center at Serabit el-Khadim (M.R. 999829), though it is not universally accepted (Robinson 1856: 73). Though the Egyptians continued to mine there into the 20th Dyn., their expeditions were periodic, and Israelites moving through the area would have faced no opposition from them.

The discussion of the location of any of the places associated with the journey of the Israelites from Egypt through Sinai is problematic. Identifications depend on whether a northern or southern route for the Exodus is assumed, and are based on the similarity between the sound and/or meaning of the Hebrew name and Arabic names found in the area by explorers. Some authorities doubt if any confidence can be placed in the historicity of the list in Num 33:1–9, where most of these stations are mentioned. Also, no material culture that can be definitely associated with the Israelites has been found in the Sinai. Therefore all suggested locations must be treated as extremely tentative.

JEFFREY R. ZORN

DOR (PLACE) [Heb *dôr* (דּוֹר)]. A city that joined the coalition led by Jabin, king of Hazor, against Joshua and the Israelites (Josh 12:23; cf. also NAPHOTH-DOR). The Canaanite city of Dor, located in the territory of the tribe of Manasseh (Judg 1:27; 1 Chr 7:29), apparently was not conquered until the time of David.

A. History

Dor is first mentioned in an inscription of Rameses II (13th century B.C.). This inscription contains a list of the settlements along the *Via Maris*, including its W branch from the Sharon to the Acco Plain. It is likely that Dor (like other cities on the coast such as Tell Abu Hawam) was founded during the LB II period shortly before the reign of Rameses II, when commercial relations between the Mediterranean eastern coast and the Aegean islands were thriving.

The port of Dor and its ruler, Beder, king of the Tjeker (one of the groups of Sea Peoples who invaded the E Mediterranean area in the LB/early Iron transition), is mentioned in the account of Wen-Amon's journey to Byblos (ca. 1100 B.C.; *ANET*, 26). In the reign of Solomon, Dor became the center of his fourth administrative district and was governed by Abinadab, the king's son-in-law (1 Kgs 4:11). In 732 B.C. Tiglath-pileser III conquered the city along with that section of the Coastal Plain which belonged to the

kingdom of Israel. He made it the capital of the Assyrian province of Duru, extending from the Carmel to Jaffa.

The Eshmunezer inscription (*ANET*, 662) suggests that during the Persian period Dor was ruled by the Sidonians. This probably accounts for the error of the Greek writers who attributed the founding of the city to the Sidonians. There was apparently a Greek colony at Dor in Persian times, and it might even have been a member of the Attic Sea League (in its Carian division). During the Hellenistic period, the city became an important fortress. In 219 B.C. it withstood the attack of Antiochus III and the Seleucid army. Eighty years later the pretender Tryphon entrenched himself there during his war against Antiochus VII Sidetes (1 Macc 15:10–14). At the end of the 2d century B.C. the tyrant Zoilus ruled both Dor and Straton's Tower (later Caesarea) until Alexander Jannaeus took both cities from him. Pompey ended Hasmonean rule in Dor and awarded the city autonomy and the right to mint coins. Its coins indicate that Zeus, Dorus (a son of Hercules, Dor's mythical founder), and Astarte-Aphrodite were worshipped at Dor.

A Jewish community and synagogue are known to have existed in Dor at the time of Agrippa I (A.D. 41–44). Hieronymus relates that the city was entirely in ruins in his time (end of the 4th century A.D.), but it is known that bishops resided there until the 7th century. Afterward the site was abandoned until the construction of the Crusader fortress of Merle (Dahl 1915; Albright 1925; Luciana 1964).

B. Identification and Exploration

According to Greek and Latin sources, Dor was located between the Carmel Range and Straton's Tower. The *Tabula Pentingeriana* map places Dor 8 mi. N of Caesarea; Eusebius states that the distance is 9 mi. (*Onomast.* 78:9; 136:16). On the basis of these sources it is possible to locate Dor at Khirbet el-Burj (M.R. 142224) on the coast S of Kibbutz Nahsholim and N of Tantura. NW of the mound are the remains of the port, and to the S are the ruins of the Crusader fortress.

In 1923 and 1924 two seasons of excavations were carried out at Dor under the sponsorship of the British School of Archaeology in Jerusalem. The excavations were begun under J. Garstang and were expanded a year later (Fitzgerald 1925; Garstang 1924). In 1950 and 1952 J. Leibowitz conducted excavations N of the mound (Leibowitz 1951; 1957). From 1980 to 1983, the Byzantine Church located E of the mound was excavated (Dauphin 1984). The most recent excavations on the tel have extended over six seasons (1980–1985). Three areas (A–C) were opened in 1980 on the E edge of the mound, a fourth (area D) above the S bay in 1984, and a fifth (area E) on the W side in 1985 (Stern 1985a). At the same time an underwater survey was carried out (Raban 1983; Raban and Galili 1985; Wachsmann and Raveh 1980).

C. Area C—The Residential Quarter

Area C has yielded almost nothing of the Byzantine period and very little from the Roman. Enough, however, is preserved from the Roman period to infer two phases of development in what appear to be elaborate houses with fine masonry walls and cement and mosaic floors.

The Hellenistic strata had several phases and included a residential quarter erected in strict compliance with the Hippodamic system. From the beginning of the 3d to the 1st centuries B.C., a long row of stores and workshops (one room having a thick layer of crushed murex shells on the floor) stood along the entire inner face of the city wall. At least two streets have been found which parallel the N-S city wall. These in turn are flanked by blocks (insulae) of subdivided buildings (ca. 20 m wide) with doors opening onto their respective streets. These may have been multiple-storied and traces of what appear to be basements have been found. See Fig. DOR.01.

This quarter of the city seems to have survived with occasional rebuilding at least until the days of Alexander Jannaeus. With each reconstruction the floor was raised, resulting in as many as three Hellenistic floor levels, some made of crushed chalk, others of pressed clay. The outer walls of the buildings were constructed mostly of well-hewn sandstone ashlars laid in "headers"—a sort of small-scale version of the city wall. The inner walls and divisions, however, were built in the typical Phoenician style of ashlar piers with a fill of rubble. It appears that the general plan of this building was Greek while the structural details were Phoenician.

On the W side of area C the Hellenistic levels were penetrated to the Persian levels. During 1983 and 1984 excavations were conducted below the street separating the two insulae and below the western insula. These excavations demonstrated that the plan of the residential quarter, including the division into adjacent insulae, had started early in the Persian period, perhaps as early as the 6th century B.C., and continued to the early Roman period. During this long occupation the plan of the quarter remained essentially the same.

D. Area A—The Trial Trench

Area A, located at the center of the E slope of the tel, presents a picture of the site very similar to that revealed in area C. The upper stratum, dating from the late Roman period, has two sections of plastered stone aqueducts. The first crosses the center of the E slope of the mound; the second appears to branch off from the first and carried water inward to the city.

Beneath this stratum stood a magnificent wall of the Hellenistic period which continued into the early Roman period. It is perhaps the most impressive fortification of this period discovered in Israel. The wall is of local sandstone ashlar blocks and is preserved to a height of more than 2 m. A square tower extends 15 m from the wall and is also constructed of large *kurkar* ashlars laid in "header" fashion. Inside the tower is a central square pier made of large stones, which apparently served as a foundation for a wooden staircase giving access to the roof. This feature is quite common in the later Roman and Byzantine architecture of Palestine.

The discovery of a coin of Ptolemy II Philadelphus (285–246 B.C.) in the stratum below the fortifications implies that the complex was built in the latter part of his reign or shortly afterward. However, it was apparently built before 219 B.C. because Antiochus III (223–187 B.C.) beseiged the fortified city (Polyb. 5.66).

E. Area B—The Gate Area

The Gate Area is S of areas A and C and yielded many remains of the late Roman period (stratum I), mainly stone-slab–covered water channels. Additional late Roman structures include a system of plastered cisterns built one above the other. The remains of some poorly preserved buildings were found, but they were badly eroded and would not permit a coherent plan for reconstruction. One of the buildings, however, had some especially fine masonry.

Stratum II (the Roman period) had several phases. The main road which led into town from the E city gate consisted of a monumental causeway and a wide court. The pavement stones had been embedded in a thick layer of hard lime cement. A system of small drainage channels led from the S into the main drainage channel built of ashlar stones, which in turn led W through the city gate. Sections of black granite pillars were found in the court which evidently stood along both its sides. Almost nothing remains of the Roman city gate, and the area had actually been razed to the level of the road pavement. At the site of the gate itself, the structures were found destroyed to below the surface of that period.

Elsewhere in area B parts of large buildings from the Roman period have been uncovered, all similarly constructed from a mix of cement and stones. One room had parts of limestone tables of the type now familiar from the excavations in the Jewish Quarter of Jerusalem, as well as a complete bronze bowl standing on three decorated feet, along with many vessels and sherds of both local and imported wares from the Roman period. One of the rooms near the city wall and gate apparently served as an arsenal, as inferred from a large accumulation of well-worked ballista stones. These were of different sizes and two were inscribed with Greek letters apparently denoting their weight.

Strata III and IV are of the Hellenistic period and consist of a number of phases. The dominant structures from stratum III are the city wall and the poorly preserved remains of a defensive tower projecting eastward from the wall. A street parallels the inside of the city wall and apparently is a continuation of the one found in area C. Here, too, sections of buildings probably continue those observed from area C. A relatively narrow street leading from the gate into the town transects the N-S street and then continues further W, toward the probable locations of the Agora, the temple, and the harbor.

In the final phase of the Persian period only a narrow postern gate existed from which a narrow street led into the city. However, below this were two superimposed city gates. The uppermost was a two-

chambered gate from the Persian period to which a stone-paved square led from the E. One smooth basalt socket of the outer door was found *in situ* as well as a socket in the center of the entrance where a vertical bolt would have been placed to lock the door. Only Persian period material was found in this gate, and it appears that it was already in use at the beginning of that period. It is, however, logical to assume that it was actually constructed earlier in the Assyrian period, and that only material of its last (Persian) phase is represented, hence its construction would have been in Iron Age IIC.

Remains of a four-chambered gate with a tower flanking each side of its facade stood below the two-chambered gate. The gate was only partially excavated, but its plan closely resembles that of the four-chambered gate of Megiddo. The gate at Dor, however, is much more massive. The width of one of the inner piers was 2.5 m and was built of two huge limestone boulders brought probably from the Carmel range. The W side of the pier, which faced the city, was covered with well-dressed orthostats. Since a 10th century B.C. layer was uncovered beneath part of this gate complex, we may assume that the four-chambered gate was in use during the 9th and 8th centuries B.C. and was destroyed by the Assyrians at the end of the 8th century. One of the more unique finds in this area was an oval stamp seal made of an animal's horn, depicting two stags standing on mountaintops. Only some pits and installations of the 7th–6th centuries B.C. phases were preserved.

The 11th–10th century town of Dor was uncovered in the 1984 excavations. It seems that the general layout in this phase was similar to the one of the 9th–8th centuries. The houses of both strata were generally built with stone foundations and mud brick superstructures.

EPHRAIM STERN

DORCAS (PERSON) [Gk *Dorkas* (Δορκας)]. A female disciple who was raised from the dead by Peter in Joppa (Acts 9:36–43). She is the only woman called a *mathetria*, a Greek word meaning "female disciple." Possibly Luke thought she best exemplified what a female disciple of Jesus should be like, for we are told that she was literally "full of good works" (v 36). Dorcas was noted for her aid to the poor, in particular poor widows for whom she sowed garments and did other good deeds (Witherington 1988: 149–51).

That Dorcas' ministry was specifically to widows has fueled the conjectures that (1) there was an order of widows in the Christian Church from a very early date, and (2) that Dorcas may have been in charge of such an order (Viteau 1926: 513–27). Against this view is the fact that both here and in the Pastoral Epistles widows are mentioned as those who receive, not perform, ministry (1 Tim 5:3–16). It may be implied that Dorcas is a single person who ministered to widows on an ongoing basis, but we are not told that she is a widow. In fact, the description of her activities is reminiscent of Luke 8:3, which may suggest she had a function similar to the Seven mentioned in Acts 6:1–7. In the text the word "deaconness" is

never mentioned, though Luke may be depicting Dorcas as one who functions as a prototype of a deaconness. Regardless, she is presented as a model disciple, for she is one who builds up the community of faith by various sorts of practical service. That an urgent plea was sent to Peter for help, even after Dorcas had died and was laid out for public mourning, shows how indispensable she was to the Christian community in Joppa (Witherington 1988: 149–51).

Dorcas was not originally a proper Greek name, but rather a nickname which means "gazelle," as does the Aramaic name Tabitha. This may suggest that Dorcas was or had been a slave, since slaves bear nicknames of this sort in the extant literature of the period much more often than is true of the general population. Alternatively, the name could be a reference to some personal characteristic the woman had (Foakes Jackson and Lake 1933: 110). It may be that Dorcas had become a proper name by NT times, and thus one should perhaps not read too much into the name itself. It is notable that she is given more attention than Aeneas, and that Luke pairs a story about how the Gospel helps a man with one about a woman.

BEN WITHERINGTON, III

DORYMENES (PERSON) [Gk *Dorymenēs* (Δορυμενης)]. Father of Ptolemy, who was the governor of Coele-Syria (1 Macc 3:38; 2 Macc 4:45; cf. 2 Macc 8:8). He might have been the Aetolian commander under Ptolemy IV, the king of Egypt, as mentioned by Polybius (5. 61. 9).

URIEL RAPPAPORT

DOSITHEUS (PERSON) [Gk *Dositheos* (Δοσιθεος)]. Greek theophoric name that became popular among Jews in the Hellenistic period. It replaced the Hebrew parallel name Mattathiah (="present/gift of God"), or similar names (Mattaniah, Nethaniahu). It is recognizable in Hebrew/Aramaic form as *Dosthai.*

1. Commander under Judas Maccabeus in the war waged against Thimotheus in Transjordan. Sosipatros served with him as a commander. These two took Thimotheus prisoner, but he convinced them to release him (2 Macc 12:19–25).

2. Cavalryman in Judas Maccabeus' forces, fighting against Gorgias, in the border region of Judea and Idumea (2 Macc 12:35). He almost captured Gorgias, but a cavalryman of Gorgias troop wounded him in his arm and enabled Gorgias to escape. He was one of the soldiers of the Tobiad garrison in Transjordan, according to an improved reading of the text of 2 Macc 12:35 (Abel 1949; Goldstein *1 Maccabees* AB).

Some argue that 1 and 2 are the same person, who took part in Judas Maccabeus' campaigns against the neighbors of Judea and showed prominence in battle (note that the first Dositheus took Timotheus prisoner, the second almost took Gorgias prisoner). Yet it should be noticed that the second Dositheus is introduced in the discourse as "… one of …" (*dositheos de tis*), which shows him to be a person not mentioned earlier in the story. Also, the first Dositheus, though fighting in the Tobianic territory, is not described as belonging in any way to this region.

3. Egyptian Jew, who served as general under Ptolemy VI Philometor (180–145 B.C.E.). He is mentioned in Josephus' *Contra Apionem* 2.49 with Onias, who may be identified with Onias IV.

4. Dositheus, son of Drimylos, a renegade Jew who served under Ptolemy IV Philopator (222–205 B.C.E.). He saved the king's life (*3 Macc.* 1:3) and is known also from papyrological evidence (*CPJ* I, Nos 127a, 127e, pp. 230–236, Fuks 1953–54; Mørkholm 1961).

5. Man who brought to Egypt the Greek translation of the book of Esther (Add Esth 9:1). He was a priest (Kohen) and Levite, and it happened in 114 B.C.E., or 77 B.C.E. or, more doubtfully, 48 B.C.E.

URIEL RAPPAPORT

DOTHAN (PLACE) [Heb *dōtān* (דֹּתָן)]. A town in Ephraimite territory mentioned in the story of Joseph's seizure by his brothers (Gen 37:15–36), in the Elisha story (2 Kgs 6:13), and in Judith (3:9; 4:6; 7:3–18), but not in any other extant written sources.

Dothan has been identified since the mid-19th century with Tell Dotha (M.R. 173202), an imposing mound of some 25 acres 14 miles N of Shechem. The mound presents a classic *tell*-formation, rising steeply nearly 200 feet above the surrounding terrain. It is situated along the E reaches of the broad fertile Dothan Valley, on the main route N from Samaria to En-gannim (modern Jenin) and the pass leading into the Jezreel Valley.

Excavations were carried out from 1953 through 1960 by Joseph Free of Wheaton College, who purchased the entire mound. Brief and somewhat preliminary reports of seven seasons have appeared, but Free is deceased and has left such inadequate records that the site's stratigraphy is confused and may never be satisfactorily published. Therefore the following outline is very tentative (based partly on the few published reports, as well as personal examination of the material; there are few stratum numbers published, and none can be supplied).

Excavation was carried out in areas P and K, deep soundings on the W and S slopes, and in areas A, T, L on the summit. Dothan seems to have been first settled in the Late Chalcolithic period (ca. 3800–3200 B.C.), to judge from basal sherds. During the EB I–III periods (ca. 3200–2400 B.C.) the site developed into a major city-state, with at least seven levels of occupation distinguished. A stone-built defense wall some 11 feet wide and preserved at least 16 feet high was found, with a flight of steps leading up the slope to a presumed city gate. An auxiliary city wall and another gate are reported from area K, but this cannot be checked. The site appears to have been abandoned thereafter, like many others, throughout EB IV–MB I (ca. 2400–1800 B.C.).

The MB II–III period (ca. 1800–1500 B.C.) is poorly known, but in area K there are massive city walls that belong to this period, and the steep slopes of the mound give the appearance of having been created by a typical MB Age *glacis.* In area D, two levels of domestic occupation were partially cleared, with house remains and some burials. Sporadic occupation seems to have continued into the LB Age (ca 1500–1200 B.C.), but it is not known whether the site suffered the usual Egyptian destruction between the two periods. A large rock-cut tomb (Tomb 1) on the W slopes, with faint traces of a corbel-like construction, produced some 100 burials and one thousand whole vessels. The range of the pottery appears to extend from the 13th century into the 12th or early 11th century B.C. (i.e., LB IIB–early Iron I). Many vessels (unpublished) suggest cultic functions, and several are unique. Particularly striking are a number of chalices, stands, and multi-handled kraters.

The Iron I period is poorly known (or at least poorly represented in the excavated material). A number of ashy layers on the W end of the mound may, however, be dated to Iron I (12th–11th centuries) on the basis of parallels at Gezer, Aphek, Tell esh-Sharia, and elsewhere; these may be threshing floors or industrial deposits of some sort, rather than "destruction layers."

Iron II is a major period, with material reported from nearly all areas. Area A produced several complete private dwellings along a street. A destruction may be dated to the 9th century B.C., on the basis of a carbon-14 determination of 804 B.C. (± 80 yrs). Area L reveals in levels 4–1 a series of Iron II occupations. A level 4 building (ca. 10th–9th centuries), with thick walls, many rooms, and dozens of storage bins and vessels, may have been an administrative building, finally destroyed in the Aramaean invasions of ca. 810 B.C. Level 1 is post-Assyrian, with Assyrian Palace Ware.

Dothan was then deserted until the Hellenistic period, when a small settlement, with well-preserved houses, was constructed on the summit on the E end of the mound. Roman and Mameluke remains complete the picture, the latter with a multiroomed building and several courtyards in area T.

WILLIAM G. DEVER

DOUAY VERSION. The Rheims New Testament, translated from the Vulgate by Gregory Martin and supervised by both William Allen and Richard Bristow beginning in October 1478, was finished in March 1582. The translators were Roman Catholic refugees from the persecutions of Elizabethan England whose Catholic College had been temporarily (1578–93) moved from Douay to Rheims in Flanders. Martin, formerly a scholar at St. John's College, Oxford, and at the time Lecturer in Hebrew and Holy Scripture at the Catholic College, is described by biographers as an excellent linguist. Martin died of consumption only about seven months after his translation work. The controversial matter which accompanied the translation is attributed to Bristow.

The translation (Herbert 1968: No. 177), made from Latin, shows a dependence on existing English translations, particularly Coverdale's. There are correspondences with Taverner which passed on into the KJV. The Rheims translation also shows a careful comparison with the Greek. Published by John Fogney, it employs a style disfigured by Latinisms. Martin expresses agreement with Jerome that in translating Scripture one must keep the very words lest one miss the sense. The preface gives an apology for translating from the Vulgate and criticizes certain renderings of the English Bible, giving their dates. The text is in paragraphs with verse numbers on the inner side of the page. Discussions of contents precede each chapter, and summaries of contents called "Arguments" precede most books. A glossary at the end of the volume explains fifty-eight words.

Though not authorized by English church authorities, the translation circulated in England without legal hindrance. The notes, as might be expected from the English atmosphere at the time, were quite polemical. Its producers represented a persecuted English minority, and its critics also could not be expected to be objective. Thomas Fuller called it "a translation which needs translating," and another Britisher, on reading the title, "Translated out of Latin into English," said, "It is a lie! It is not English."

Sir Francis Walsingham requested Thomas Cartwright to write a refutation of the Rheims notes, but later Archbishop Whitgift opposed Cartwright's work and turned the task to William Fulke. Fulke in his *a Defence of the sincere and true Translations of the holie Scriptures into the English tong* issued a refutation. He then also issued a second work, *The Text of the New Testament,* in 1589, with the Bishops' NT and the Rheims printed in parallel columns. Fulke's work was reprinted in 1601, 1616, and 1633 and was the means by which the Rheims version became widely known. In 1618 Thomas Cartwright's *A Confutation of the Rhemists Translation, Glosses and Annotations on the New Testament* was issued posthumously. The full text of the Rheims is given only to the end of Matthew, and after that only the verses to which the controversial notes refer.

The Rheims version did not experience the circulation of its rivals—the Bishops', the Geneva, and the King James. It went through only four editions (1582, 1600, 1621, and 1633) from its origin until 1700. It was then printed again in its original form in 1738, 1788, 1789, and 1834. It was included in the *English Hexapla* (1841) and *The New Testament Octapla* (1962).

Some of the Latinisms of the Rheims (acquisition, advent, caluminate, character, evangelize, resuscitate, victims, and neophyte) later became accepted English words, but "Pasche" and "azymes" remain strange. Carleton in 1902 showed the indebtedness of the KJV to the Rheims, a debt which Butterworth (1941:231) estimated to be five percent of the language of the King James.

The English Catholics found themselves unable for financial reasons to publish the OT until twenty-seven years later, in 1609–10 (Herbert 1968: No. 300). Published at Douay by Laurence Kellam, the text, though earlier done by Martin, had been further compared with the Latin text of Clement VIII published in 1592. The annotations, which are less copious than those of the NT (as well as less polemic) are

attributed to Thomas Worthington. The preface criticizes the previous English Bibles of 1552, 1577, 1579, and 1603.

The apocryphal books follow the order of the Vulgate rather than forming a collection between the OT and NT as in Protestant Bibles of the period. Third and Fourth Ezra, however, are printed at the end of the Prayer of Manasseh. The Douay OT appeared too late to be influential on the King James.

A second edition (Herbert 1968: No. 499) in two volumes was published by John Cousturier of Rouen in 1635, after which there were no further editions for 115 years until Dr. Challoner issued a revision in 1749–50. Challoner is the first to issue the Douay-Rheims NT and OT together. The printing of 1635 carries an extract from a royal license, dated 3 August 1634, granted Cousturier to print these Bibles in English. The Douay text of Genesis was included in L. A. Weigle's *The Genesis Octapla,* 1965.

DRACHMA [Gk *Drachmē* (Δραχμη)]. See COINAGE.

DRAGON AND SEA, GOD'S CONFLICT WITH. In the OT there are a number of references to Yahweh's conflict with the dragon and the sea, the dragon sometimes being named as Leviathan or Rahab. The theme is also seen in the NT in the book of Revelation. The imagery is sometimes associated with the creation of the world. Sometimes it is historicized, so that the dragon symbolizes a foreign nation such as Egypt, and sometimes the divine conflict is projected into the future as the final, eschatological battle. It is also sometimes claimed that Leviathan and Behemoth may denote existing, natural creatures, but this is probably incorrect. The background of this mythological imagery was previously believed to be Babylonian, but since the discovery of the Ugaritic texts it has become apparent that the more immediate source of the biblical allusions is Canaanite mythology.

A. Creation

A number of poetic OT passages describe a conflict at the creation of the world which pit Yahweh against the dragon and the sea. The clearest instances are in Ps 65:7–8 (—Eng 6–7); 74:12–17; 89:10–15 (—Eng 9–14); 104:1–9; Job 9:5–14; 26:5–14; and 38:8–11. This conflict also seems to form the background of Ps 93:3–4; Job 7:12; 40:15–41:26 (—Eng 34), while Job 3:8 seems to allude to the reversal of the process of creation.

At the end of the 19th century, H. Gunkel (1895) argued that these OT allusions constituted an Israelite appropriation of the Babylonian myth of Marduk's defeat of the sea monster Tiamat recounted in Enuma Elish, the so-called Babylonian creation epic. This view has continued to find support in the 20th century, but the discovery of the Ugaritic mythological texts has shed new light on the question. In addition to a detailed account of Baal's defeat of the sea-god Yam (*KTU* 1.2 = *CTA* 2), there are allusions to another conflict between Baal or Anat and the sea monster Leviathan (also known as the twisting serpent, the crooked serpent, and the dragon, in addition to other monsters; *KTU* 1.3.III.39.IV.3, 1.5.I.1–3, 1.82.1–3, 1.83.3–10 = *CTA* 3.IIID.36.IV.47, 5.I.1–3, *UT* 1101.1–3, 1003.3–10). These indicate a Canaanite background for the allusions to Leviathan (Ps 74:14; Job 3:8; 40:25–41:26 —Eng 41:1–34; Isa 27:1) and the twisting or crooked serpent (Isa 27:1; cf. Job 26:13). Since Rahab seems to be another name for Leviathan, this too was presumably a Canaanite dragon name, though it has not yet appeared in any extra-biblical text. The form of the word *tĕhôm* (cf. Ugaritic *thm*) suggests that it is not simply a borrowing from Akkadian Tiamat, though the word is philologically cognate with it.

If one grants a Canaanite background, the question is raised whether the underlying myth is a creation myth. The Baal-Yam myth certainly makes no reference to creation, and although certain parts are missing, it seems unlikely that sufficient is missing at the end for a creation account comparable to Enuma Elish. However, the Canaanites may have envisaged a primeval creation context for the conflict with Leviathan. This cannot be proved, but it would explain why the dragon conflict is associated with creation in the OT and why the defeat of the dragon is anticipated at the very end of the Baal epic (*KTU* 1.6.IV.51–53 = *CTA* 6.VA.50–52), which probably corresponds to the time just before the New Year.

It seems likely that the theme of Yahweh's conflict with the dragon and the sea was a motif in the celebration of Yahweh's kingship at the autumn festival (feast of Tabernacles) in the Jerusalem cult. Just as the kingship of Marduk was associated with his defeat of the sea monster Tiamat in Babylon, and Baal's kingship was connected with his defeat of the sea-god Yam at Ugarit, so perhaps Yahweh's kingship was associated with his victory over the sea. This is explicitly the case in Ps 29 and 93, as well as the exilic Ps 74. In Babylon the imagery was associated with the Akitu festival, the Babylonian spring New Year festival, and it appears that in Israel this imagery had its setting at the turn of the year—at the feast of Tabernacles (presumably also among the Canaanites). Such a setting is in keeping with the creation context of the theme—the obvious connection between creation and the New Year. Moreover, Ps 65, which has the chaos conflict theme, not only has the creation context (vv 7–8—Eng 6–7), but is also a harvest hymn (vv 10–14—Eng 9–13), and the feast of Tabernacles was a harvest festival. There is strong evidence that Yahweh's kingship, which was associated with the conflict with the chaos waters, was an important theme at the feast of Tabernacles (cf., Zech 14:16–17; later Jewish tradition associating Yahweh's kingship and the New Year; the LXX heading associating Ps 29 with Tabernacles; etc.).

There are several allusions to Yahweh's conflict with the dragon and the sea in the book of Job (3:8; 7:12; 9:8, 13; 26:12–13; 38:8–11; and 40:15–41:26—Eng 34). There are also references to Rahab (including the helpers of Rahab), Leviathan, Behemoth, the twisting serpent, the dragon, and the sea. In some of the passages the creation context is clear (cf., Job 9:8, 13; 26:12–13; 38:8–11) and, in the absence of more plausible settings, the creation context is reasonably assumed in the others. In Job 3:8, when Job laments the day of his birth, he cries, "Let those curse it who curse the day, who are skilled in rousing up Leviathan." This appears to involve the reversal of the process of creation. Two reasons may be suggested to explain why this imagery is so frequent in Job. First, Wisdom theology is preeminently creation theology, and the dragon/sea conflict passages in Job have a creation context. Secondly, the conflict between the dragon and God provides an appropriate parallel to the theme of Job's conflict with God (Job 7:12; 9:13–14; 40:15–41:26—Eng 34; see below for more on the second divine speech in Job).

A number of passages in the OT speak of Yahweh controlling the waters at the creation of the world rather than in conflict with them (most importantly Gen 1:2, 6–10; but also Ps 33:7–8; Prov 8:24, 27–29; Jer 5:22 and 31:35). Perhaps these are a demythologization of the conflict myth. It has often been thought that Genesis 1 depends on, or polemicizes against, the so-called Babylonian creation epic Enuma Elish. The Hebrew word translated "deep" (*tĕhôm*) in Gen 1:2 is a cognate with Akkadian Tiamat, the name of the chaos monster overcome by Marduk in connection with the creation in Enuma Elish. However, though cognate, there is no reason to believe that the word *tĕhôm* is actually derived from Akkadian Tiamat. Also, although there are some points in common in the order of creation in Genesis 1 and Enuma Elish, these are not compelling enough to demand the dependence of one upon the other. Instead, it appears that the same chaos conflict myth ultimately lies behind the account in Genesis 1 as well as the poetic passages elsewhere in the OT discussed in this article—i.e., that the myth is ultimately Canaanite, not Babylonian. More immediately, it seems likely that Ps 104 is one of the sources behind Genesis 1. The order of creation in Genesis 1 corresponds very closely with the order cited in Ps 104; the psalm even has the word *tĕhôm* in the context of Yahweh's battle with the sea (v 6), as well as other parallels.

Finally, it should be noted that Ps 29:3, 10 and Nah 1:4 seem to speak of Yahweh's victory over the sea as part of his present lordship over the world of nature.

B. Alleged Naturalization

In the second divine speech in the book of Job (Job 40–41) Yahweh asks Job if he is able to capture the beasts Behemoth and Leviathan. The most common view, going back to S. Bochart's *Hierozoicon* in 1663, is that Behemoth and Leviathan denote respectively the hippopotamus and the crocodile. However, they are probably instead chaos monsters. The description of neither Behemoth nor Leviathan corresponds to any known creature, and certainly not the hippopotamus and crocodile. It seems fundamental to the argument in Job 40–41 that the beasts in question can be captured by God alone, otherwise Job might have replied that he could have captured them, and then God would lose the argument! The hippopotamus and crocodile were, however, captured in the ancient Near East. Leviathan, moreover, is said to breathe out fire and smoke (Job 40:10–13—Eng 18–21), strongly suggesting a mythological creature, and Leviathan is elsewhere a mythological sea serpent or dragon in both the Ugaritic texts and the OT, including the book of Job (3:8). Apparently Yahweh's subduing of Leviathan and Behemoth at creation forms the presupposition of the second divine speech. Job is, in effect, asked if he can play the role of God. Thus God asks Job (40:29—Eng 41:5), "Will you play with him as with a bird …?", which must reflect Ps 104:26, which may be read, "There go the ships, and Leviathan whom you (i.e., Yahweh) formed to play with," or alternatively, "There go the ships, and Leviathan whom you formed to play in it (i.e., the sea)." Leviathan in Ps 104:26 has often been thought to be some creature such as the whale, but it may be a mythical monster.

Similarly, Behemoth is no hippopotamus, for its tail is high and lifted up (Job 40:17), not short and curly, and Behemoth clearly cannot be captured by man (Job 40:24). It is most likely another chaos monster, oxlike in view of its name (lit. "great ox"), and also capable of living in the water (Job 40:23). Twice in the Ugaritic Baal myth (*KTU* 1.3.III.43–44, 1.6.VI.51 = *CTA* 3.IIId.40–41, 6.VI.50) there is a mythological beast *Arš* or *ʿgl ʾil ʿtk,* "El's calf *ʿtk*," answering to this description, and on both occasions it is mentioned alongside Leviathan (dragon). This is likely to be the prototype of Behemoth.

The point of the second divine speech about Behemoth and Leviathan seems to be that since Job cannot overcome the chaos monsters whom Yahweh has overcome, how much less can he hope to overcome Yahweh in argument. It is therefore appropriate that following this speech Job humbles himself before God.

C. Historicization

The dragon imagery in the OT is also used metaphorically to denote earthly powers hostile to Yahweh. In particular, it is applied to Egypt (so Rahab, Isa 30:7; and quite possibly 51:9, cf. v 10; Ps 87:4) or Pharaoh (Ezek 29:3–5; 32:2–8; reading *tannîn* "dragon" for MT *tannîm* "jackals"). Isa 30:7 should probably read *rahab hammošbāt* "the silenced Rahab" for the meaningless MT *rahab hēm šābet.* Since Egypt oppressed the Hebrews prior to the Exodus, and the heart of the Exodus was the deliverance at the Reed Sea, it is understandable how Egypt would be singled out for special designation as this mythical sea monster. The imagery seems to apply to Egypt in connection with the Exodus deliverance in Isa 51:9 (cf. v 10), and Ps 77:17–21 (—Eng 16–20) likewise uses *Chaoskampf* imagery with respect to the Exodus, but with no reference to the dragon. The *Chaoskampf* imagery is also employed in the so-called Song of Moses in Exod 15:1–18 in a transformed sense, namely that the battle is no longer *with* the sea but *at* the sea, as F. M. Cross has emphasized. Although some scholars have argued that this passage is extremely early, it is more likely that its *terminus a quo* is the 10th century B.C., since Exod 15:17 appears to presuppose Solomon's temple (cf 1 Kgs 8:13), which is here spoken of as deriving from Baal's dwelling on Mt. Zaphon.

The imagery of the chaos waters is also applied to the Assyrians (Isa 17:12–14; cf. 8:5–8), and the waters and the dragon are both used to denote the oppressive Babylonians (Hab 3; Jer 51:34, 44). The supposition that the swallowing of Jonah by the great fish is an allegory of the Babylonian exile, dependent on Jer 51:34, 44, is certainly to be rejected. Perhaps the mythology of the chaos monster ultimately lies behind Jonah 2: the association of mythological monster imagery with Joppa, where Jonah set out before being swallowed up, is illustrated by the strong tradition which locates Perseus' deliverance of Andromeda from the sea monster at Joppa, a tradition already attested in Pseudo-Skylax in the 4th century B.C., the probable date of the book of Jonah.

In Ps 44:20 (—Eng 19) the MT *tannîm* "jackals" should probably be emended to *tannîn* "dragon," though it is unclear which political entity is meant. Some suggest that in Ps 68:23 (—Eng 22) an allusion to the dragon should be found in the reference to Bashan (Heb *bāšān,* cf. Ugaritic *bṯn* "serpent"). However, Bashan is clearly a geographical name only a few verses earlier (Ps 68:16—Eng 15), and this is likely to be the meaning of the reference here too.

It is also unlikely that Ps 68:30 (—Eng 29) refers to a chaos monster in its allusion to "the beast of the reeds, the herd of bulls with the calves of the peoples." It more probably uses animal names to denote leaders and warriors (e.g. 1 Sam 21:8; Job 24:22; 34:20; Lam 1:15).

Sometimes the chaos waters denote the hostile nations as a whole (e.g., Ps 46). It seems probable that the motif of nations coming to attack Zion who are then miraculously defeated by Yahweh constitutes a development of the divine conflict with the dragon and the sea (cf. Ps 46; 48; and 76; Isaiah; and eschatologized in later proto-apocalyptic passages: Joel 4—Eng 3; Zechariah 12 and 14). It has widely been held that this motif in Psalms 46, 48, and 76 was simply an allusion to Sennacherib's abortive attempt to capture Jerusalem in 701 B.C. (cf. 2 Kgs 18–19). However, it is now generally accepted that the description does not adequately fit this or any other known event. G. Wanke (see 1966) claims that the belief in Zion's inviolability is postexilic, but various indications argue against this, especially the fact that this belief would be more natural before Jerusalem's destruction in 586 B.C. than afterward. Nor convincing are R. E. Clements' and J. J. M. Roberts' (see 1976) attempts to see these psalms as warnings to the vassal kingdoms of the Davidic empire not to revolt.

Reference to the waters in Ps 46:4 (—Eng 3) suggests that the divine conflict with the chaos waters may underlie the *Völkerkampf* motif. In support of this, Ps 48:3 (—Eng 2) refers to Zion under the name of *ṣāpôn,* which seems to reflect the name of Baal's dwelling place. Mythological traditions have clearly been adopted, and they were possibly mediated to the Israelites through the Jebusites, the pre-Israelite, Canaanite inhabitants of Jerusalem (cf. Ps 110:4, where the Jebusite priest-king Melchizedek is mentioned in the context of the *Völkerkampf*).

D. Eschatologization

In accordance with the principle *Urzeit wird Endzeit* (the Primeval time becomes the End time), the conflict with chaos is associated not only with the creation of the world but also with the *eschaton.* The so-called Isaiah apocalypse reads: "In that day the Lord with his hard and great and strong sword will punish Leviathan the twisting serpent, Leviathan the crooked serpent, and he will slay the dragon that is in the sea" (Isa 27:1). This passage depicts Leviathan in terms similar to the Ugaritic Baal myth almost a thousand years earlier (cf. *KTU* 1.5.I.1–2, = *CTA* 5.I.1–2: "Because you smote Leviathan the twisting serpent [and] made an end of the crooked serpent …"). The Ugaritic passage makes it clear that Isa 27:1 is speaking only of one dragon, something which had previously been questioned. There is no consensus with regard to the political identification of Leviathan in Isa 27:1. Part of the problem is the scholarly disagreement about the date of the "Isaiah apocalypse," but even if this could be ascertained, the problem persists whether Leviathan actually denotes the major world power of the time; if it does not, Egypt may be intended.

One of the most interesting instances of the influence of the myth of the divine conflict with the dragon and the sea appears in Daniel 7, the chapter about the "one like a son of man." Not everything in this chapter can be explained from the Canaanite myth, but as was first pointed out by J. A. Emerton (see 1958), only the Canaanite myth can adequately explain the combination of the following three factors: (1) in Dan 7:9, God is called "the Ancient of Days" and he has white hair, which is reminiscent of the Canaanite supreme god El, whose stock epithet was "Father of Years" (*ʾab šnm*) and whose position as an aged deity is also indicated by his gray beard; (2) the "one like the son of man," who comes with the clouds of heaven and is exalted to kingship by the Ancient of Days (Dan 7:13–14), may be compared with the Canaanite god Baal, who is often called "Rider of the clouds" (*rkb ʾrpt*),and whose rule ultimately depended on El's authority; and (3) the "one like the son of man's" rule follows that of the beasts of the sea, which may be compared with Baal, whose kingship resulted from his victory over Yam, the god of the sea.

The chaos monster imagery is unique in Daniel 7 in that it reflects the underlying Canaanite myth, in which a distinction is still made between the supreme God and the one who is exalted over the sea. The question naturally arises how this ancient Canaanite imagery came to influence the late, apocalyptic book of Daniel. It seems likely, as Emerton conjectures, that the imagery was passed down in syncretistic circles in the preexilic Jerusalem cult at the autumn festival, in which Yahweh-Baal was subordinate to El. The author of the book of Daniel probably had access to earlier Israelite written sources.

In the present form of the text the "one like a son of man" may denote the angel Michael (cf. Dan 12:1). One may compare Revelation 12, where Michael defeats the seven-headed dragon (= Satan). It is striking that Michael, not Christ, defeats the dragon; this may reflect an underlying Jewish tradition equating the "one like a son of man" with Michael. Interestingly, the next chapter of Revelation (i.e., chap. 13; cf. 17:3) presents another creature derived from Leviathan, the seven-headed beast, symbolizing Rome (Rev 13:1–10) as well as another beast, symbolizing the false prophet, who appears to derive from Behemoth (Rev 13:11–18).

JOHN DAY

DREAMS IN THE NT AND GRECO-ROMAN LITERATURE. Belief in the reality and significance of dreams and visions was widespread in ancient times. The people of the Greco-Roman world believed that dreams and visions were ways of receiving divine messages, prophecy, and healing. Dreams and visions in which a message was delivered in a direct and imperative fashion were valued more than symbolic dreams and visions, which required interpretation. But there was also great interest in the interpretation of dreams. Handbooks on dream symbolism were popular and part of the almost universally accepted belief that all dreams were significant in some way.

This belief in the revelatory significance of dreams and visions is also found in the OT; significant dreams and visions come from Yahweh who uses them as one means of communicating with human beings. The prophets are also called "seers," perhaps because the word of God so often comes through dreams and visions. But the emphasis in the OT is always on the revealed word of God, not the mode of that revelation. For this reason God also gives the interpretation of dreams and this interpretation is as important as the dream itself. The OT is also concerned with distinguishing true dreams and visions, which are genuine revelations of God, from those which are false. Only those dreams and visions which lead the people into a more faithful relationship with God are regarded as genuine revelations.

The NT, in common with both the OT and the Greco-Roman world, regards dreams and visions as one of the significant ways in which God chooses to reveal himself. But the NT understanding of dreams and visions is also unique in several ways. In the NT the meaning of a dream is always stated directly; interpretation of symbolic content is not required. Even when the symbolic content of a vision is given, the emphasis falls on the revelatory meaning of the vision. In keeping with this confidence that God's revelation is meant to be understood, the NT expresses little concern with the problem of false dreams and visions. Only once, in Jude 8, are dreams spoken of in a disparaging manner; even here, the real problem is the character of those who have the dreams, not the dreams themselves. The central message of the NT is that God has uniquely revealed himself in Christ. In the NT, dreams and visions are always seen as secondary to this central revelation and are significant only in relationship to God's revelation in Christ.

In the NT, dreams and visions are not always clearly distinguished from one another or from other more ordinary ways of seeing. The common word for dream (Gk *onar*) is found only in Matthew. The words used for vision (Gk *horama, optasia, horasis*) are found mainly in Luke-Acts. It is not always clear from the contexts in which these words are used whether they refer to dreams, visionary experiences, or some

other form of revelation. Visionary experiences are not always referred to as visions either. Even the great vision written down in the book of Revelation is only referred to as a vision once, in Rev 9:17. The NT always emphasizes the revelatory nature of dreams and visions, not the dreams and visions themselves.

The gospel of Matthew sees dreams as one of the ways that God communicates with humans and reveals his will to them. The fact that the message is delivered in a dream is stated, but the meaning of the dream is what is highlighted. In the infancy narrative, God uses dreams to direct and warn both Joseph and the wisemen. Matthew is also the only gospel to refer to a dream or vision during the public ministry of Jesus. In Matt 17:9, Jesus refers to the transfiguration as a vision. Here the word vision is probably best understood as referring to what was seen; this is the way Mark 9:9 (= Luke 9:36) understands it. In Matt 27:19, Pilate's wife has a dream which warns Pilate that he ought not to crucify a righteous man. This dream, like those of the infancy narratives, reveals God's continuing intervention on Jesus' behalf.

Luke's gospel opens with Zechariah's vision of an angel who prophesies concerning the birth of John. Luke 24:23 mentions a vision of angels who tell the women who come to Jesus' tomb that he is alive. In both cases the vision is used to announce an unexpected action of God. No dreams or visions are mentioned during Jesus' lifetime in Luke, Mark, or John. All four gospels see Jesus as a unique and full revelation of God. The revelation of God in Jesus is a complete revelation. Dreams and visions are not necessary when God chooses to reveal himself in such a direct and unequivocal way.

In Acts the preaching of the gospel and the fellowship of the early Christians both point to this revelation of God in Christ. Dreams and visions are a sign of God's continuing presence in the church through the Holy Spirit. Acts 2:17 declares that the coming of the Holy Spirit is marked by dreams, visions, and prophecy. God reveals his will to the church through the Spirit; and one of the means the Spirit uses is visionary experience. Visions mark the advance of the gospel into the gentile world. Paul's vision on the road to Damascus (Acts 9:1–9 = Acts 26:9–20) and his vision of the man of Macedonia (Acts 16:9–10) both initiate crucial events in the missionary activity of the church. Peter's vision in Acts 10 is especially important in this regard. This is the only vision in Acts in which the symbolic elements of the vision are mentioned in detail and the only one for which the interpretation is not immediately given. It is only when Peter sees the Holy Spirit fall upon Cornelius that he understands the meaning of the vision. As he reports in Acts 11:1–18, he then interprets the vision as an indication that the gentiles are to be included in the church as gentiles. God's revelation through visions directs the decisions of the early church, especially the crucial decision to accept gentiles as members of the community of Christ.

In 2 Cor 12:1–10 Paul writes about an ecstatic visionary experience. As is typical of the NT accounts of visions, almost no details about the vision itself are given. In fact, Paul declares that he does not know enough about the mode of the vision to give details and cannot speak about the content of the vision. The point of his story about the vision is not the vision itself but the revelation he received as a result of the vision. This revelation leads him to a greater understanding of what it means to suffer as an apostle of Christ.

In the NT, dreams and visions are understood as one of the ways that God communicates his will to human beings. When a dream or vision is mentioned, the emphasis is always on the message which is revealed and the revelatory character of the experience. The revelations received in dreams and visions are understood in relationship to the unique revelation of God in Jesus Christ. All true revelations of God are part of this great revelation in Christ.

JANET MEYER EVERTS

DRESS AND ORNAMENTATION. Dress provides important social and cultural information concerning status, power, group identity, manufacture, and trade. The significant role played by clothing in ancient society is apparent in the biblical writers who use dress metaphorically to make ethical exhortations or take theological positions, and to show the status and character of significant figures.

Any description of dress and its importance in the biblical tradition is complicated by the long period involved (ca. 2000 B.C.E.–125 C.E.), the diversity of peoples and nations depicted, the distinctive dress

worn by various classes and groups, the extensive geographic area with which the texts deal, the paucity of sculptural or physical evidence in Palestine, and the fluid meaning of terms used for dress in literary texts. Nevertheless, significant evidence for clothing and ornamentation worn by biblical people comes from physical remains, artistic renderings, and textual evidence.

Archaeological excavations in and around Palestine have periodically uncovered remains of clothing and textiles and of ornamentation such as rings, buttons, toggle pins, and earrings for most relevant periods. Sculpture, ivory carvings, and paintings provide rare though often stylized glimpses of clothing of persons from the kingdoms of Judea and Israel. In addition, some groups or individuals during the preexilic and postexilic periods no doubt wore the garb of the dominant political and cultural power of the time. For these reasons sculpture, pictorial panels, and steles in Egypt, Mesopotamia, and Anatolia provide important though not unambiguous clues to ancient dress.

Likewise, Greek and Roman society and culture influenced what persons wore in Palestine during the Greco-Roman period. Further, the NT depicts people and events throughout the Roman empire. Description of dress and ornamentation in the NT period, therefore, must consider material evidence obtained from sculpture, numismatics, funerary dedications, mosaics, and paintings both in and outside of Palestine proper. In addition, textual sources give important evidence for the role of dress in ancient societies as well as its symbolic importance. When combined, archaeology, artistic representation, and literary evidence elucidate what people wore, how people wanted to look, and the symbolic power of dress and ornamentation (Bonfante and Jaunzems 1988: 1385–86).

———

A. Hebrew Scriptures

The frequent reference to dress or ornamentation indicates the social and symbolic importance of clothing for ancient Israelite society. The most common Hebrew term for clothing, *beged,* occurs over 200 times and is used indiscriminately for men's (Gen 39:12) and women's (Gen 38:14) clothing, the torn garments of a leper (Lev 13:45), the robes of the high priest (Lev 8:30), the covering of the poor and the garb of the wealthy (Ezek 26:16; 27:20). Less frequent general terms for dress include *śalmâ* (Josh 9:5; 1 Kgs 10:25; Mic 2:8); *mad* (Lev 6:3; 1 Sam 18:4); *kĕsût* (Job 31:19; Isa 50:3); *malbuš* (1 Kgs 10:5; 2 Chr 9:4); *śimlâ* (Gen 9:23; Deut 22:5; Isa 9:5); *ʾadderet* (Gen 25:25; Josh 7:21); *tilbošet* (Isa 59:17); and *lĕbûš* (Gen 49:11; Job 30:18; Mal 2:16). Even fabric, generally wool or linen (Lev 14:47), could have symbolic importance; only priests, for example, were to mix the two (Lev 19:19; Deut 22:11).

1. Men. a. Outer garments. The outer garment in the Hebrew scriptures is given a number of names which makes clear distinctions difficult. Outer wear in antiquity was generally draped around the body and pinned, belted, buttoned, or fastened (Bonfante and Jaunzems, 1988: 1386). The outer garment primarily served a functional role. Men or women could carry kneading bowls on the shoulders wrapped in a *śimlâ,* a large mantle (Exod 12:34). Mantles, *madweh,* down to the ankles are implied (2 Sam 10:4 = 1 Chr 19:4) which provided protection from the elements. The outer garment, *kĕsût,* covered one while sleeping and was the final most essential part of one's wardrobe (Exod 22:27; Job 24:7; 31:19). A portion of the outer garment, *ʾadderet,* could be pulled up to cover one's head (1 Kgs 19:13).

Rare visual evidence for a male's outerwear in Syro-Palestine comes from the "Black Obelisk" of Shalmaneser III (858–824 B.C.E.), which shows Jehu, the Israelite king, wearing a fringed outer garment with tassels on a section thrown over the shoulder; a girdle with tassels on the end is tied around his middle (*ANEP*, 120–22, 290–91; Mazar et al. 1959, 3: 212–13; cf. 2 Sam 20:8). Each of his attendants has a fringed mantle or *śimlâ* draped over the left shoulder (Matthews 1988: 119). Tassels, *gĕdilîm,* or fringes which could be placed on the four corners of one's cloak, *kĕsût* (Deut 22:12) served as extensions of the hem and were to contain a blue thread as a reminder of the covenant between God and the Israelites (Num 15:37–41). The tassels, according to ancient Near East parallels, were threads of the embroidery and could be decorated with a flower head or bell. The more ornate the hem, the greater the social status and wealth of a person (Milgrom 1983: 61–65).

Some traditions portray the outer garment of special persons as conveying power (or its loss). Saul, for example, grabs and rips the hem of Samuel's cloak, symbolizing the loss of Saul's kingdom to David (1 Sam 15:27; cf. 1 Sam 24:4–20; cf. Stephens 1931: 68–69). Elijah, on the other hand, throws his mantle (*ʾadderet*) over Elisha to indicate his successor (1 Kgs 19:19); Elisha uses the same mantle to part the waters of the Jordan (2 Kgs 2:8, 14). Garments also served as an expensive prize of war (Josh 7:21; cf. Gen 25:25; Judg 14:12; 1 Sam 27:9, *ANET*, 175, 177, 311), gifts (1 Kgs 10:25), payment (2 Kgs 5:23; Prov 20:16), or disguise (1 Sam 28:8). Some prophets wore a hairy mantle (Zech 13:4), perhaps of camel hair (Mark 1:6). Prisoners in certain periods had to wear special clothing (2 Kgs 25:29; Jer 52:33) as did widows and those in mourning (Gen 38:14). A red garment symbolized the destruction by God of his enemies (Isa 63:1–4).

In general, the tearing or removal of one's garments publicly displayed despair (Gen 37:29), mourning (2 Sam 1:11–12), or loss of status (Num 20:26). A type of cloak, *meʿîl,* which was wrapped around the body and the undergarments (1 Sam 15:27; Ps 109:29) was commonly torn when one was in grief (Job 2:12; Ezra 9:3). The prophet Ahijah tore his new *śimla* to symbolize the division of Solomon's nation into the northern and southern kingdoms (1 Kgs 11:30). Shame, humiliation, powerlessness, or outrage result when one is stripped of one's dress (cf. Bonfante 1989:546). The king of the Ammonites exerts his power, displays his contempt, and shames David's emissaries when he cuts their clothing, *madwêhem* (lit. "their garments") in half to the hips and shaves off half their beards (2 Sam 10:4–5; cf. Isa 7:20). The stele of Sennacherib (705–681 B.C.E.) depicts naked male prisoners from Lachish impaled on stakes as the battle rages; after the fall of the city, naked prisoners are staked out on the ground. The pictures graphically portray for the Assyrian audience and their client states (including Judah) the impotence of those who challenge Assyrian rule (Mazar et al. 1959, 2: 286–87; cf. Mic 2:8). Prohibitions against taking a poor

man's coat existed (Exod 22:25–26); a 7th century B.C.E. ostracon records a peasant's plea to the governor to return a coat that had been confiscated (*WHJP* 4: 249).

In the priestly tradition, special outerwear depicted power, prestige, and identity. The apparel of the high priest expressed the priest's intercessory role for Israel (Exod 28:29, 38). Three outer garments apparently distinguished his garb. The ephod cloth was composed of a mixture of fine linen and gold leaf, blue, purple, and scarlet threads (probably woolen); the garment itself had shoulder straps. Each strap had an onyx stone engraved with six names of the tribes of Israel (Exod 28:6–12; 39:2–7). The same materials were used to fashion the breastplate, which was worn over the ephod and had twelve precious stones, each inscribed with the name of a tribe, in four rows. The Urim and Thummim were also attached to the ephod (Exod 28:15–30; 39:8–21). Under the ephod was worn a blue robe made of wool with pomegranates of linen, and blue, purple, and scarlet wool threads alternating with golden bells on the fringe (Exod 28:31–35); Josephus attaches cosmic implications to the colors (*Ant* 3.184–87). The Levites wore outerwear of fine linen; the Chronicler depicts the priestly character of David by describing him as one who wears a robe, *me‹il,* of fine linen (1 Chr 15:27).

Special clothing must be worn by the priests entering the holy place (tent of meeting and altar) or they may die (Exod 28:42). Apparently priests wore other garb when not performing temple duties (Ezek 42:14; 44:19) further emphasizing the sacred and special character of the priestly garb (Bergemeier 1963: 268–71). The clothing served as a protective cover for them while they were in the presence of God.

b. Undergarments. Most males wore the *›ezor,* probably the type of kilt represented by the soldiers of Lachish in the stele of Sennacherib, that wrapped around the waist. Generally made of flax, the *›ezor* often had a leather or cloth belt from which a knife, seal, stone weight, or other valuables could be hung. Excavators have found leather and bronze belts in Iron Age tombs at Tel 'Aitan (*WHJP* 4: 247–48). The *kĕtonet* was probably the forerunner of the Greek *chitōn* and Roman tunic, and was worn next to the skin (Brown, 1980: 8–11) or over the *›ezor;* it often had sleeves (Gen 37:3; Lev 16:4; Cant 5:3). The "Black Obelisk" of Shalmaneser mentions the *kĕtonet,* a garment generally made of wool (Matthews 1988: 117–19). Antecedents reach back at least to the 19th century B.C.E. as the Egyptian tomb at Beni-Hasan that depicts Semites contemporary with the patriarchs indicates. The men have pointed beards and no mustaches and wear decorated one-shoulder tunics that reach to just below the knees. Some men are bare from the waist up; from the waist down they wear a skirtlike garment with fringe at the bottom (Davies and Gardiner 1936, pl. 10–11; *ANEP,* 3).

Jehu, who prostrates before Shalmaneser III, appears to wear a short-sleeved tunic extending to the ankles that is belted around the middle and has fringes or a large border along the bottom (*ANEP*, 120, panel II; cf. Isa 22:21). Jehu's attendants also wear tunics that extend to the ankles under their cloaks (Mazar et al. 1959, 3: 212–18.) In like fashion, the stele of Sennacherib shows several Judaean leaders or defenders of Lachish wearing an unbelted tunic with sleeves as they plead for their lives before the king (*ANEP*, 129, 293–94). Styles of undergarments apparently varied according to one's wealth or allegiance. Excavations at Ramat-Rahel and En-Gedi, for example, have found 7th century B.C.E. sherds with figures of men whose dress imitates the style of Assyrian wall paintings (*WHJP* 4: 248).

Priests had special undergarments. The high priest's tunic was a "checkerwork of fine linen" (Exod 28:39); according to Josephus, this tunic extended to the ankles and had long sleeves (*Ant* 3.153). Around the tunic was a finely spun linen girdle that contained blue, purple, and scarlet wool and elaborate embroidery (Exod 28:30; 39:29). Under their tunics priests wore linen breeches, *mikněsê,* that covered their loins (Exod 28:42; 39:28; Ezek 44:18). In addition, a type of girdle, *‹abnĕt,* was worn as a belt around the waist (Exod 29:9; Lev 8:7).

c. Headgear and hair. A turban or cloth miter could cover the head (Exod 29:6; Zech 3:5). Some (*hăbālîm*) were wound around the head (1 Kgs 20:31; cf. the term *sānîp* [Job 29:14; Isa 3:23]). Helmets in war are depicted on the Sennacherib stele (cf. 1 Sam 17:5; 2 Chr 26:14). The soldiers on the walls have two types of headgear. Most of the archers have conical helmets with earflaps; other defenders' headgear, rounded on top, may be a length of cloth wrapped around the head (Mazar et al. 1959, 4:283; *WHJP* 4:

248). In contrast, on the Shalmaneser stele Jehu's ambassadors have socklike headcoverings similar to Syrian headdress of the day (Mazar et al. 1959, 3:212–13; *ANEP*, 120–22, 290–91).

Priests wore a turban of fine linen (Exod 28:39). In addition, the high priest wore a crown or miter, *nēzer.* A gold plate hung by a blue thread in front of the miter or headdress that had the world "Holy to the Lord" engraved on it (Exod 28:36–38; 39:30–31; cf. however, Jos. *Ant* 3.178; *JW*, 5.235, who states that it had only the tetragrammaton; Feldman 1971: vii–clxix).

The obelisk of Shalmaneser shows the Israelite king, Jehu, and his attendants with pointed beards (Mazar et al. 1959, 3: 212–13; *ANEP*, 120–22, 290–91) similar to the Semites in the Beni-Hasan painting (*ANEP*, 3). In contrast, the Sennacherib stele has some defenders of Lachish wearing hair and beards that are tightly curled (*ANEP*, 129, 293–94), reflecting a change in hairstyle because of either a different time period or region.

Hairstyle had important symbolic implications and often depicted one's relation to the rest of the community. According to priestly tradition, the tattered clothing and long, unkempt hair of the leper signified his uncleanness with respect to the community (Lev 13:45–46). Carefully defined procedures in the priestly tradition determined whether a person with yellowed or thinning hair in the beard or on the head, perhaps a type of ringworm, was viewed as unclean (Lev 13:29–37). A male healed of leprosy, however, displayed his new status in the community by washing his clothes and shaving his hair, including his beard and eyebrows (Lev 14:8–9). Mold or mildew on garments was also viewed as a form of leprosy; such unclean garments were destroyed (Lev 13:47–59).

Hair carried symbolic as well as religious social or political overtones. Kings and priests were anointed with oil poured over their head. Spit running down one's beard could depict insanity (1 Sam 21:13). Joab took Amasa by his beard, perhaps as an outward sign of greeting, while he killed him with a hidden weapon (2 Sam 20:9). As a sign of his total allegiance to God the Nazirite did not cut his hair (Num 6:5) until his time of separation with God was completed; then he shaved his head and burned the hair (Num 6:18; cf. Judg 16:22). Levitical priests were to trim their hair and not let their locks grown long nor shave their heads (Ezek 44:20). Some traditions, however, discouraged persons from rounding the hair, *śē‘ăr,* near the temples; nor were persons to cut or tear the edges of their beard when mourning (Lev 19:27; 21:5; Deut 14:1), a custom in the ancient Near East (Isa 15:2; Jer 48:37). Other traditions, however, especially in the prophetic tradition suggest that shaving heads or beards as a sign of mourning or judgment was practiced (Amos 8:10; Isa 22:12; Jer 41:5; Mic 1:16; Ezek 5:1; cf. Job 1:20). Indeed, tearing out one's hair or beard could indicate shame and anger (Ezra 9:3).

d. Footwear. A sandal, *na‘al,* was generally made of leather and fastened with a strap or laces, *śĕrôk* (Gen 14:23; Isa 5:27). The male Semites in the Beni-Hasan tomb painting wear sandals with straps (*ANEP*, 2–3). The attendants of the Israelite king Jehu, however, wear shoes with upturned toes that cover the entire foot (Mazar et al. 1959, 3:212–13; *ANEP*, 120–22, 190–291).

To go barefoot indicated poverty (Deut 25:19), mourning (2 Sam 15:30; Ezek 24:17, 23), or contact with holy ground (Exod 3:5; Josh 5:15). Isaiah's symbolic act of taking off his sandals portrays the eventual destruction of Egypt and Ethiopia by the Assyrians who lead the captives away naked and barefoot (Isa 20;2–5; cf. the barefoot petitioners from Lachish who appear before Sennacherib; *ANEP*, 129, 293–94).

The sandal could symbolize breakdown in the fabpic of society or the family. The prophet Amos depicts social disparity and societal disintegration in the northern kingdom by condemning the wealthy who sell the poor for a pair of shoes (Amos 2:6; 8:6). Another tradition states that when a man does not marry his brother's widow, even on the advice of the elders, the widow may pull off one of his sandals and spit in his face (Exod 25:9–10). In still a different tradition the removal of one's sandal verifies a business transaction, which could include marriage (Ruth 4:7–10). The Deuteronomist symbolized God's presence and guidance of Israel by the lack of wear on the sandals of those who wandered 40 years in the wilderness (Deut 29:5). In contrast, in the same tradition the Gibeonites used worn-out, patched sandals and clothing to trick the Israelites (Josh 9:5, 13).

e. Ornamentation. Typically, the greater the ornamentation on outer garments, especially the hem, the greater the importance of the individual in society (Milgrom 1983:61). Thus the high priest wore elaborately decorated outerwear. The king wore purple robes and garments of fine linen. A man could wear a signet, or an arm band, or a cylinder that had his name or some identifying mark on it around his neck, or on his hand or arm (Gen 38:18, 25; Jer 22:24; 2 Sam 1:10). Finger rings indicated rank (Gen 41:42; Esth 3:10; Hestrin and Dayagi-Mendels 1979; *IDB* 1: 871). Molds for casting bronze ornaments have been found at several sites in Israel (*WHJP* 4: 253).

2. Women. Specific information on the dress of women is sparse, especially since general terms for dress are similar to those mentioned for men's clothing (*lĕbûš, malbuš,* beged). Some characteristics distinguished the two, however, as indicated by the warning that men were not to wear women's garments, *śimlâ* (Deut 22:5). 8th century B.C.E. attire of wealthy women in Judah could include ankle jewelry, headbands, pendants, bracelets, scarves, headdresses, jewelry for the arms, sashes, signet rings, nose rings, festival robes, mantles, garments of gauze, linen garments, turbans, and veils. In addition they used perfume, had belts around their clothing, and maintained well-groomed hair (Isa 3:18–24; cf. Ezek 16:10–13).

a. Outer garments. Women who lived at the time of Abraham may have worn brightly colored garments with designs as indicated in the Beni-Hasan tomb. There, each of three women appears to wear a square piece of colored material wrapped around her with the end tossed over her left shoulder, leaving her right shoulder bare; a fourth wears a garment rounded at the neck (Horn 1968: 2). The Sennacherib stele depicts women and girls dressed in a cloaklike garb that extends to just above the ankles and could be pulled over the head like a hood (Mazar et al. 1959, 2: 283). Women wore special outerwear when they were widowed (Gen 38:14). Some wealthy women perfumed their clothing with myrrh, aloes, and cassia (Ps 45:8; cf. Cant 4:11) and had garments with ornaments of gold (2 Sam 1:24). From the 10th century B.C.E. on, bronze toggle pins (safety pins) and buttons found in many excavations may have been used to pin or button the garment (*WHJP* 4: 249).

b. Undergarments. The *kĕtonet* was a long undergarment, similar to the males; according to tradition, virgin daughters of kings such as Tamar wore a long robe with sleeves (2 Sam 13:18; Cant 5:3). The same term describes Joseph's garment (Gen 39:) incorrectly translated by the LXX as the *chitōn* of many colors (Brown 1980: 8). In addition, women probably wore some sort of girdle or belt (Isa 3:24).

c. Headgear and hair. The veil appears to be used on special occasions to identify the status or character of women. Women used veils, *ṣā‹îp,* or part of their outer garment to cover their faces on wedding days (Gen 24:65) or if they were prostitutes (Gen 38:14, 15,19); cf. *rĕ‹ālôt* (Isa 3:19). Certain veils allowed the face to be seen (Cant 4:1, 3). In Sennacherib's stele, the women leaving the city of Lachish are wearing a type of mantle that is pulled over the head, probably signifying their act of mourning (Mazar et al. 1959, 2: 283).

In the priestly tradition, when a woman was accused of adultery by her husband, the priest unbound or uncovered her hair as part of a lengthy ritual proving her guilt or innocence (Num 5:11–28; cf. Susanna 32). If an Israelite wished to marry a beautiful woman who is captured in war, her head must be shaved, her nails cut, and her captive's garb removed (Deut 21:12–13).

d. Footwear. Footwear for women seems little different than men's. The women and children in the Beni-Hasan tomb painting wear shoes that cover the entire foot (*ANEP,* 2–3). Women's footwear is rarely mentioned in the biblical accounts, but the Song of Songs 7:1 depicts women's feet as graceful in sandals. The women and girls on the Sennacherib stele are barefoot (Mazar et al. 1959, 2: 283).

e. Ornamentation. Women wore pierced rings in their ears and nose (Gen 24:47; Ezek 16:12). Other JEWELRY included bracelets, arm and leg bands, nose rings, earrings, and beads (probably for necklaces) made of gold and silver (Exod 32:2; Prov 25:12). Some women wore rings and jewelry associated with worship of foreign cults (Hos 2:13).

3. Manufacture and Trade. Except for luxury goods, most clothing and ornaments were made and circulated locally. Bracelets, earrings, rings, and beads made of iron, bronze, copper, silver, and gold have been found in excavations throughout Israel (*WHJP* 4: 253). Perfumes, widely used in Israel, had great

popularity as indicated by numerous stone bands, juglets, and bottles that probably held cosmetics (1 Sam 8:13). Indeed, perfumery as a craft was practiced in large measure by women (*WHJP* 4: 262). Local farmers and herdsmen provided the raw flax for linen and wool for woolen goods. Women probably cleaned the wool and spun it into thread (Prov 31:13, 19); garments were probably made on horizontal looms (*ANEP*, 142–43; Horn 1968: 24–28). Evidence exists for silk, cotton, hemp, and jute as well (Horn 1968: 5–14). Local guilds or particular cities or villages may have manufactured some clothing (Mendelsohn 1940: 17–18; cf. Prov 21:10–29; 31:24). Numerous loom weights found throughout Palestine and weavers' workshops at Lachish and Tel Amal substantiate this (*WHJP* 4: 244–45).

Color was often a sign of status, as was the quality of the garment; thus dyeing was an important industry, as evidenced by the large numbers of dyeing establishments found throughout ancient Israel (Horn 1968: 18–21; Albright 1943: 55–62; *WHJP* 4: 245–47). Especially significant was the purple dye industry, as indicated by the large quantity of purple dye producing murex shells that have been found along the coast of present-day Israel and Lebanon (see PURPLE: Milgrom 1983: 61–65; Spanier 1987; Reinhold 1970; Ziderman 1987: 25–33). The weaving industry was probably associated with this industry (Horn 1968: 23–24).

In summary, archaeological and ancient Near Eastern iconography provide important clues as to the garb of men and women in Palestine in the pre- and postexilic periods. Dress and ornamentation tell much about ancient Israelites' social status, trade and commerce, and interaction with surrounding cultures, information not readily available in written records. In turn, the biblical tradition illustrates the symbolic power that dress played in social, political, and religious arenas of the day.

B. Intertestamental and New Testament Period

Like the Hebrew scriptures, Greek terms used to describe dress are often general in character. The garb of Jews both in and outside Palestine reflected the regional and international dress worn from the Persian through the Roman periods. Roman citizens were especially status conscious, and this was reflected in the quality, color, and design of their clothing. In certain cases, color and designs in the Near East identified male from female, rich from poor. Special occasions often necessitated special dress as, for example, at weddings (although the exact nature is not clear [Matt 22:11]). White garments could signify purity (Rev 3:4–5).

1. Men. a. Outer garments. Roman citizens in Palestine were allowed to wear the toga, a large, semicircular garment draped around the body; often, however, only the wealthy could afford the expensive fabric (Wilson 1938). Acts, for example, portrays Paul, who as a Roman citizen does not wear the toga (Acts 16:35–39). The Gk *himation*, on the other hand, served as the most common outer garment for men and women including Roman citizens (Bonfante 1973: 586). Rectangular and of various sizes, it was draped around the body. The crowds that meet Jesus in Jerusalem throw their *himatia* on the ground (Mark 11:7–8); Bartimaeus, the blind beggar, takes off his *himation* and comes to Jesus (Mark 10:50); workers in the field generally took off their *himatia* to work (Mark 13:16 = Matt 24:18). As in the Hebrew Scriptures, power can be associated with the mantle, as the healing of the woman who touches Jesus' *himation* indicates (Mark 5:28–30). The Gk *stole*, a general term for the outer garment or long robe in the NT, is associated with wealth (Luke 15:22; 20:46) or salvation (Rev 6:11; 7:9).

In Palestine, color and designs in the fabric distinguished male and female outer garments. Male *himatia* found at the Cave of Letters near the Dead Sea (*ca.* 90–135 C.E.) were made of white or yellow wool with reddish-brown or blackish-blue notched bands woven into the fabric (Yadin 1963: 169–203). Similar *himatia* with notched bands have been found at Dura Europas, Egypt, Palmyra, and in the At-Tar Caves west of ancient Babylon (Yadin 1963: 227–32; Fujii 1987: 225–26). Some male *himatia* in the Cave of Letters had stripes the same color as the notched bands. The stripes, of different widths, ran around the portion of the *himation* draped around the neck (Yadin 1963: 223). Yadin argues that the stripe framed the face when the *himation* was pulled over the head for prayer or sacrifice. The stripe may be the *kraspedon* (RSV "edge") of Jesus' *himation*, which the woman with the flow of blood touched (Matt 9:20 = Luke 8:44). This may explain, as well, the passage that states the Pharisees made their *phylactēria* broad and their *kraspeda* long (stripes rather than fringes) (Matt 23:5). Similar designs have been found on clothing

discovered at En-Gedi and on some of the clothing piled and burned by the last defenders of Masada (Yadin 1965: 81; Yadin 1966: 154).

An outer cloak, Gk *chlamys,* was fastened at the neck and worn like a cape. A sign of authority, a purple *chlamys* was part of the Roman officer's garb. Only the Gospel of Matthew has taunting soldiers place a purple *chlamys* on Jesus (27:28). Some Judea Capta coins show a Jewish soldier with a *chlamys* around his neck, suggesting that the cloak was not limited to Roman soldiers and officers (Madden 1903: 208–14; 219–25; cf. Jos. *JW* 7§29).

b. Undergarments. The principal garb for men and women was the Gk *chitōn* or Lat *tunica.* It came in a variety of shapes, sizes, and colors, and one could wear more than one tunic (Matt 10:9–10; cf. Mark 6:9; Luke 9:3). Tunics have been found by Yadin at the Cave of Letters, one of them almost completely intact. The intact tunic consists of two equal sized pieces of cloth sewn at the top and sides, leaving openings for the head and the arms (Yadin 1963: pl. 66; cf. Jos. *Ant* 3§161). The seamless tunic in John 19:23 was distinctive. Josephus mentions that such a seamless garb was worn by the high priest (*Ant* 3§161–62); however, the actual technique for making such a tunic remains problematic (Horn 1968: 30–32).

Like the *himation,* the quality of the fabric of a *chitōn* could signify social status or wealth; in addition, Roman citizens and often those of some means had narrow bands running from the top to bottom of the tunic. Initially, wide purple *clavi* were reserved for Roman senators, smaller purple bands for equestrians. By the time of the empire, however, the wearing of tunics with purple bands was widespread (Bonfante and Jaunzens 1988: 1402–1403). Tunics found in the Cave of Letters have purple bands although not of true purple (Yadin 1963: 207–209; pl. 66). Frescoes at Pompeii show children with thin purple bands on their *tunica* (Mazar et al. 1959, 5:120).

A child's tunic found in the Cave of Letters had the four corners tied into bundles that held various items (Yadin 1963: pls. 65, 89), perhaps to ward off evil. NT tradition suggests that some tunics were long, belted, and made with gold (presumably gold thread; Rev 1:13). In the Johannine tradition Peter wears a tunic (*ependytēs*) common to the peasants of the day (John 21:7). For possible parallels see the depiction of a 1st century B.C.E. peasant (Hadas 1965: 148) who wears the tunic over one shoulder with the other bare, the garb of a swineherd as depicted in a 1st-century funeral stele from Italy, and a Hellenistic portrayal of a fisherman from Alexandria (Mazar et al. 1959, 5:37, 155; cf. Laubscher 1982).

At Masada hundreds of silver-plated scales of armor have been found near the remains of one of the defenders; the scales were probably laced onto a leather undergarment (Yadin 1966: 54–55) such as Roman soldiers, especially the legionaries and centurions, wore (Sander 1963: 144–66; Mazar et al. 1959, 5:154, 191, 241). Another undergarment was a type of linen cloth, Gk *sindōn,* wrapped around the loins (Mark 14:51–52). The same term can refer to a linen shroud (Matt 27:59). Imprints of woven material on bones and a skull found in a tomb indicate that wrapping the deceased in a shroud was probably common (Hachlili 1988: 95).

c. Headgear and hair. During the reign of Antiochus IV, the high priest Jason forced the nobles in Jerusalem to wear the broad-brimmed hat of the Greeks (2 Macc 3:12). The hat may have had its origin in Persia and was imported to Greece by Alexander the Great (Bonfante and Jaunzems 1988: 1398–99). In addition, the high priest and other priests wore special headgear (Jos. *Ant* 3 §172). The head itself plays an important symbolic role in the NT tradition. A woman anoints Jesus' head with expensive oil, probably perfumed (see esp. John 12:3; cf. Matt 26:7–8 = Mark 14:3 = Luke 7:38) an allusion to burial and kingship. Perfumed ointment was used across the Roman empire at this time (cf. picture of woman pouring ointment in picture from Pompeii [*Views,* 5:99]).

On the Judea Capta coins, some Jewish soldiers wear beards and longish hair. No doubt, other 1st-century Jews shaved their faces and had short hair in the Roman style (cf. 1 Cor 11:14; Ps-Phoc 212). The Acts tradition has Paul cut his hair to fulfill a vow he had made, perhaps an allusion to the Nazirite tradition (18:18; cf. 21:24; Num 6:1–21). Paul states in his correspondence to the Corinthians that the head of a man is to remain uncovered (1 Cor 11:3) probably to discourage any connection with the Roman practice of pulling the toga over one's head while offering sacrifices to the gods (Thompson 1988: 104).

Paul also admonishes the Corinthian men to wear their hair short, perhaps in accordance with Roman custom or simply to highlight the differences men and women should maintain in the community (Thompson 1988: 104). As in the Hebrew scriptures, dust could be thrown on the head and hair as a sign of mourning (Rev 18:19).

d. Footwear. Roman society developed varied footwear for different occasions. Outdoor shoes (Lat *calceii; hypodēma*) were strapped or laced, like the sandal (*hypodēma*) that John the Baptist did not feel worthy to untie (Mark 1:7). For Romans, *sandalia* were generally an indoor shoe, in function the ancient equivalent of slippers (Bonfante 1973: 593–94). Sandals and sandal fragments have been found at Masada (Yadin 1966: 54, 57). Some tombs in Palestine contained leather sandals that were placed in a coffin near the dead person's head (Hachlili 1988: 95).

e. Ornamentation. Signet rings found at Masada indicate that the defenders had a degree of wealth; some rings functioned to make an imprint on wax that sealed legal documents or letters (Yadin 1966: 150). Such signet rings may be the same type as the *sphragis* mentioned in the NT (Rom 4:11; 1 Cor 9:2; 2 Tim 2:19; Rev 5:1; 6:1; 7:2; 8:1; 9:4). They served as a sign of identity and authority. In addition, men wore phylacteries (Matt 23:5; Matthews 1988: 234), examples of which have been found at Qumran (*WHJP* 8: figs. 12–15).

2. Women. a. Outer garments. Women's outerwear, though similar in style to men's, often had darker and more varied colors, greater length, and unique ornamentation. In particular, a gamma-shaped design on the mantle appears to distinguish a woman's garb from a man's. At Masada and the Cave of Letters, Yadin found fragments of mantles with a gamma-like shape sewn into the fabric which identifies them as women's garb (1965: 81; 1966: 223–29). As with men, outer garments of wealthy women could be made of linen with gold woven into the fabric (*T. Job* 25:7; *Jos. Asen.* 5:5). The outer garment and tunics could be girded with a cord or sash; one text gives the cord cosmic significance (*Test. Job* 48:1; 50:3). In certain periods and regions virgins could have two girdles or sashes that indicated virginity, one around the waist, the other probably just under the breast (*Jos. Asen.* 15:15–17).

b. Undergarments. As a sign of mourning a woman might wear a black tunic and a sackcloth, the latter presumably of burlap (*Jos. Asen.* 15:16). Torn clothing could symbolize the loss of status (*T. Job* 39:1–5; Judith 10:3–4). The NT does not specifically mention or discuss the undergarments of women during this period; no doubt women, like men, wore a type of tunic or *chitōn.*

c. Headgear and hair. The Judea Capta corpus (which includes coins, sculpture, and a breastplate) generally depict a despondent and veiled woman. The woman's veil is part of the *himation,* which was pulled over her head especially during periods of worship. This is standard practice for both men and women elsewhere in the Roman empire (cf. 1 Cor 11:2–16). No clear evidence, however, exists for 1st century Jewish or Christian women wearing a separate veil. It was acceptable for women to go unveiled in public (Thompson 1988: 112; MacMullen 1980: 208–18). Evidence does exist for women in Palmyra, Tarsus, and Syria wearing veils that covered at least part of the face (Thompson 1988: 133; de Vaux 1935: 397–412). The head could be covered by a hairnet such as those found at Masada and the Cave of Letters which were similar to those in Roman society, as indicated by the famous portrait from Pompeii of a woman wearing a golden hairnet.

Hair found at Masada confirms that some 1st-century women in Palestine wore their hair long. In this case, the hair was in a single braid down the back (Yadin 1966: 54, 56; cf. 1 Tim 2:9). The popular fashions of aristocratic Roman society likely influenced certain Jewish fashions. Cutting a woman's hair, especially in public was a sign of disgrace (*T. Job* 23:6–25; cf. 1 Cor 11:6; Thompson 1988: 133).

d. Footwear. As yet no clear distinctions between the footwear of men and women are apparent. Sandals found at Masada are much like those of the present day.

e. Ornamentation. Cosmetic equipment found in the casement walls of dwellings at Masada included palettes for mixing eyeshadow, bronze eyeshadow sticks, clay perfume vials, a bronze mirror case, and a wooden comb, fibula, and ring keys (Yadin 1966: 146, 148, 150; cf. *1 En.* 8:1–2; Jdt 10:2–4). Ring keys such as those found at Masada were often worn by women on their fingers or around their necks; one was

found still attached to its chain (Yadin 1965: 81). The rings locked chests that held important items (*Jos. Asen.* 2:3–4).

Wealthy women who could afford gold, pearls, and the latest hair and clothing fashions were among the early Christians (1 Tim 2:9; 1 Pet 3:30; cf. Jdt 10:4). Some women wore phylacteries, which in certain cases were believed to have a therapeutic role or the capacity to ward off evil (*T. Job* 47:11).

3. Manufacture and Trade. In the 1st century, the Roman empire traded extensively with the east (China, India, Parthia); indeed, Jewish traders settled in the Indus River as early as the 1st century (Warmington 1928: 131–32). An important trade item was cloth and clothing (including fine linen, silk, and various qualities of wool; (see Casson 1989: 39–40; Sidebotham 1986: 196; cf. Rev. 18:11–12). 2d- and 3d-century evidence suggests that Galilee was noted for its linen and Judea for its wool industries (Jones 1974: 350–64; Horn 1968: 5; Paus. 5.5.2) and thus may have participated in this trade.

Clothing was part of local and regional economies. Wool and clothing markets existed in Jerusalem prior to its destruction (Jos. *War* 5§331). Fullers cleaned dirty clothing acting as the ancient equivalent of dry cleaners. The type of fullers, *gnapheus,* depicted in Mark who could never bleach clothes as intensely white as those Jesus wore (Mark 9:3; cf. Matt 17:2, Luke 9:29) may have dressed in the same type of simple tunics as the fullers depicted in a mural found at Pompeii (Tanzer 1939: 10, 12).

Clothing was a significant industry in the Greco-Roman world. According to Acts, certain members of the early Christian communities were involved in some manner with the clothing industry (Jones 1974: 350–64). Simon, who lived at Joppa, (Acts 10:32) was involved in the tanning industry, which was unpopular because of the smell. Lydia dealt in the lucrative purple dye industry (Acts 16:14). Dyes such as indigo were imported from as far away as India (Casson 1989: 16, 43, 194). Representative samples of most colors in antiquity have been found in the Cave of Letters and at Masada (Yadin 1966; Horn 1968: 18–20).

Clothing and ornamentation played a significant role in the economic, social, political, and religious fabric of ancient society. It depicted one's social standing, ethnic origin, sex, and political position. Clothing functioned as more than covering against the elements. What you wore conveyed who you were and the nature of your relationship to those around you. The biblical writers adeptly tapped the symbolic power of ancient dress to convey social, theological, or political messages.

DRUSILLA (PERSON) [Gk *Drousillē* (Δρουσιλλη)]. The Jewish wife of Felix, the Roman procurator who heard Paul's defense in Caesarea (Acts 24:24). Most of what we know about Drusilla comes from the Jewish historian Josephus, who reports that she was born in A.D. 37/8, the youngest daughter of Agrippa I and Cypros (*Ant* 18.132; *War* 2.220; cf. *Ant* 19.354: she was six at the time of her father's death in A.D. 44). She had inherited Roman citizenship and her full name, Julia Drusilla, indicated as much. The name Drusilla was itself a Roman name and probably was bestowed by Agrippa in honor of another Drusilla, the sister of his friend Emperor Gaius (alias Caligula); she had died in A.D. 38 (Braund 1984: 111). Drusilla's father betrothed her to Epiphanes, son of Antiochus IV, the king of wealthy Commagene, which lay to the north on the Euphrates around Samosata (*Ant* 19.355). Epiphanes had initially agreed to convert to Judaism, but subsequently, after Agrippa's death, he demurred and thus declined the marriage. Instead, Drusilla married Azizus, king of Syrian Emesa, in A.D. 53, after he had been circumcised (*Ant* 20.139).

Drusilla is said to have been very beautiful. For that reason she was the victim of the jealous behavior of her equally beautiful sister, BERNICE. Her beauty also brought her to the attention of Antonius FELIX, Roman procurator of Judea. Josephus reports how Felix sent her one of his associates, a Cyprian Jew named Atomus, who claimed magic powers in order to persuade her to leave Azizus and marry Felix instead. Felix's promises of future happiness and her weariness given the mistreatment at her sister's hands persuaded her to violate Jewish law and do as he asked. She and Felix had a son, Agrippa, who later died in the volcanic eruption of Mt. Vesuvius in A.D. 79, and it is possible that she died with him (*Ant* 20.141–44). To this extent the biography of Drusilla is clear enough, however some confusion exists elsewhere in sources where another Drusilla is mentioned. This individual was also a royal personage who married Felix (Tac. *Hist.*5.9; Braund 1984: 179).

DUMAH (PERSON) [Heb *dûmâ* (דּוּמָה)]. A son of Ishmael (Gen 25:14; 1 Chr 1:30). In all probability, this "Dumah" refers to the district and oasis town in N central Saudi Arabia near the S end of the Wadi Sirhan. An oracle against this town and its relation to the Kedarite tribal confederacy is perhaps contained in Isa 21:11; but the reference in Joshua 15:52 apparently belongs to another location; see

DUMAH (PLACE). The modern name, al-Jauf, has been in use since at least the 19th century A.D. and means "depression, basin, or hollow." The ancient name of the site, Dumah, is perhaps derived from the Aramaic and may mean Edom or, according to the Bible and various Arab scholars, may have been one of the sons of Ishmael (Gen 25:14; Musil 1927: 531–32; Mandaville 1965: 492; Vaglieri 1965: 624). The earliest reference to the town occurs in the inscriptions of Sennacherib (691–689 B.C.; *LAR* 2.358). The town was first identified as the locale mentioned in the Neo-Assyrian documents by Glaser in 1890. Most modern scholars accept this identification (Eph'al 1982: 121, n. 414).

Dumah (29°48.5′ N, 39°52.1′ E) is the largest oasis in the long, extremely arid, Wadi Sirhan and often has been referred to as "the gateway to Arabia." The springs of the area allow very productive agriculture. Because it lies astride the major trade routes leading from central and S Arabia to Amman and Damascus, it has enjoyed commercial prosperity, which has made it the object of political struggles by both sedentary states and nomadic tribal groups.

There has been continuous historical documentation of Dumah since the Neo-Assyrian inscriptions. Niebuhr was the first Westerner to describe the town in 1772 (Musil 1927: 553), but actual archaeological reconnaissance did not begin until the 1960's (Winnett and Reed 1970). The first comprehensive survey of the area and town was conducted in 1976 (Adams et al. 1977) and a second campaign in 1977 clarified the archaeological-historical record for the S Wadi Sirhan basin, including Dumah (Parr et al. 1978). More recently, ongoing excavation and survey in the town environs promises to shed new light on Dumah in its historical context.

The S Wadi Sirhan basin has seen human occupation as early as the Paleolithic period, but large-scale pastoral nomadic groups did not occupy the region until the Chalcolithic/EB Age. Our knowledge of the 2d millennium B.C. both archaeologically and historically remains elusive, but a period of renewed growth and vitality characterized the 1st millennium B.C. By the time of the Neo-Assyrian inscriptions, Dumah had become well established both as an agricultural town and trade entrepot. Sennacherib and Esarhaddon both waged campaigns against Kedarite Arab leaders at Dumah and Esarhaddon describes Dumah as a fortified town (Eph'al 1982: 5, n. 7). Sennacherib removed the principal deities from the town and sent Te'elhunu and Hazael, the Arab leaders, into exile. The tribute levied against the town included objects obtained from long-distance trade such as spices and precious stones (cf. Musil 1927: 480–85). No corroborating archaeological evidence has been found to support the Assyrian inscriptional evidence that Dumah was located in the Wadi Sirhan. Iron Age II sites, however, have been located in the N end of the Wadi Sirhan at Kaf and Ithra (Adams et al. 1977: 36).

From the Classical period, both Pliny (*HN* 6.157) and Ptolemy (*Geog.* 5.19.7) mention Dumatha/Domatha (cf. Musil 1927: 531–32), and considerable Nabatean remains have been found which include painted wares, coins, and inscriptions (Winnett and Reed 1970: 7, 15, 144; Bowersock 1983: 57–58, nn. 48–49). From the 2d century A.D. is a memorial stone of a centurion of the III Cyrenaican Legion (Bowersock 1983: 98–99, n. 26). A brief sounding at the base of the massive fort, Qasr Marid, which turned up Nabatean and Roman wares, confirms that the lower courses belong to this period. In addition to the principal site there was a large-scale gardening system (Adams et al. 1977: 36).

The satellite site of al-Tuwayr just S of Jauf with extensive Hellenistic remains has been recently examined and may be identified with Ptolemy's Obraka or Pharatha (Parr et al. 1978; Gilmore, Ibrahim, and Mursi 1984). Byzantine references to Dumah and the involvement of the Beni Kalb continue into the early Islamic period (see Musil 1927: 532; Vaglieri 1965: 625). Islamic tradition essentially confirms the earlier role that Dumah played as an agricultural center for tribal confederations and a key locale in the Arabian spice trade. When the shift of political capitals from Damascus to Baghdad occurred in the 8th century A.D. Dumah declined in importance and today is of little consequence.

DUMAH (PLACE) [Heb *dûmâ* (דּוּמָה)]. The Hebrew word appears twice in Psalms (94:17; 115:17) as a designation for the netherworld. Some infer that the word in this context means the "silence of the grave"—a metaphor for Sheol. Dahood (*Psalms II* AB, 349–50), however, prefers to identify Dumah with the Akk-Ug *dmt* meaning "fortress," which suggests a different metaphor of the netherworld.

1. One of the nine towns assigned to the Hebron administrative district of the hill country of Judah (Josh 15:52). Most scholars agree that these districts were established during the Judean Monarchy. In the Ginsburgh Hebrew manuscript, the name appears as "Rumah." It also appears as "Rumah" in the LXX and Vg. Since it is easy to mistake a Heb *dalet* for a *reš* and vice versa, it is possible that "Rumah" in 2 Kgs 23:36 should read "Dumah," particularly since a Rumah is mentioned nowhere else in the Bible. Eusebius identified a village of Dumah in his *Onomasticon,* and Robinson noted a village of ed-Daumeh. Modern cartography lists this village as Duma (M.R. 148093; Ar Khirbet Doma ed-Deir), which lies just W of the main road from Hebron to Beer-sheba, about 15 km SW of Hebron.

2. A place mentioned in connection with the region of Seir (Isa 21:11), a mountainous country inhabited chiefly by Edom. It is possible that the text originally read Edom instead of Dumah, and that the *ʾalep* at the beginning of the word was dropped by scribal error. But the scribe would then also have had to add a *he* to fully transform Edom into Dumah. LXX renders the word as "Edom" or "Idumea." Others suggest that the Hebrew word means "silence" and refers to the enigmatic nature of the question which follows: "Watchman, what of the night?" (This location may be the same as #3 below.)

3. An oasis in N central Saudia Arabia, located midway along an ancient desert route from Babylon to Tema, which is mentioned in various Neo-Assyrian documents. See DUMAH (PERSON).
HAROLD BRODSKY

DUNG GATE (PLACE) [Heb *šaʿar* (שַׁעַר) *hāʾašpōt* (הָאַשְׁפֹּת)]. This gate of Jerusalem is referred to four times in Nehemiah (2:13; 3:13, 14; and 12:31). The Heb word *ʾašpōt* used here can mean "ash-heap (Lam 4:5, NIV), refuse-heap, dung hill," referring to human and animal excrement and other refuse connected with the sacrificial system; the gate to it would be in an area of any access and would be expected to be on the side of the city less offensive, where the wind would blow the odors away. The most likely location for the Dung Gate is at the Hinnom Valley toward the S, and this would fit Nehemiah's description of going (counterclockwise) from the Valley Gate (Neh 3:13) on the west side of David's City, south to the Dung Gate (Neh 3:13, 14) at the Hinnom Valley, and back northward to the Fountain Gate and the wall of the Pool of Siloam (Neh 3: 15). Some have identified the Potsherd Gate at "the valley of Ben Hinnom" (Jer 19: 2) with the Dung Gate. In another view (Mazar 1975: 194–95) holds that the Ashpot Gate is to be taken as the Gate of Tophet (based on a root *špt* meaning "hearth," from an archaic *tpt*) in the Hinnom Valley where in the reign of Manasseh infant sacrifice was performed (2 Kgs 21: 6; 2 Chr 33: 6).

W. HAROLD MARE

DUR-KURIGALZU (PLACE). The ancient city which occupied the site of the present city of Aqar Quf, near Baghdad. Although not mentioned in the Bible, the site is famous because of its impressive ziggurat. From the Middle Ages to the present times, certain travelers have even believed this monument to be the Tower of Babel referred to in the book of Genesis. Nevertheless, it was not until 1942 that any archaeological interest was shown in the site. The General Department of Antiquities of Iraq undertook an

expedition under the direction of Taha Baqir and assisted by Seton Lloyd which worked there from 1942 to 1945. They focused on the ziggurat and the temples associated with it, as well as the large palace which occupied the neighboring tell of El-Abyad. Since that time important restoration work has been carried out by the Department of Antiquities: the temples have been restored and the entire foundation of the ziggurat has been reconstructed to its original likeness with baked bricks.

The ancient name of the city, Dur Kurigalzu, known from the epigraphic findings, shows that it dated to the Kassite era and undoubtedly was founded by one of the two kings named Kurigalzu, either the first one at the end of the 15th century B.C. or the second one (1332–1308 B.C.). Our knowledge of the history of the site stops at that point.

In terms of archaeology, the whole of the Enlil quarter formed by the ziggurat and the temples is only partially known. The ziggurat itself, one of the largest in Mesopotamia and in any case the best preserved, is supported on a foundation that measures 67.6 meters by 69 meters. The core which still exists shows that clamping was done every eight or nine rows of baked bricks by a layer of reeds which are still in a good state of preservation. It is probably their presence which retarded the destruction of the heart of the ziggurat. At its base, the solid mass was surrounded by a wall of baked bricks and three stairways which were located on the southeast side. The stairways were constructed by using the same materials and led to the top of the first story located about 33 meters above the ground. The total height of the ziggurat remains unknown.

Opposite the perpendicular stairway of the ziggurat was a construction considered to be the sanctuary of Enlil. It is composed of at least six courtyards surrounded by rows of nondescript rooms. The courtyard opposite the stairway of the ziggurat differs from the others due to a large terrace which allows only a small passageway between it and the walls. Most probably the temple itself or the altar stood there. This layout seems to have been unique in Mesopotamia.

The palace of Dur-Kurigalzu is also of prime interest since certain of its characteristics differentiate it from other palaces at other sites. The presently known part extends more than 300 meters in all directions, and although it is not absolutely certain, it seems to be one and the same building. But of this building, only one large complex is known, referred to as "complex A." It is 100 meters by 140 meters, centered around a courtyard of 64 meters on the side against which the units "C," "D," "F," "G," and "H" are laid side by side, all of which are only partially excavated. More or less detached from this group are other parts of buildings ("E," "AA," "C") which have been recognized only by the markings of the walls above the ground. Even if the whole complex was not built at the same time, as is probably the case, the strength of the construction is even more impressive if one adds another floor to it, as the different architectural characteristics tempt one to do. Elsewhere, the use of the archway for a series of alveoles form the base of an architectural unit which has no known parallel. This unit seems to show the utility of techniques which were still little known in the Near East in the middle of the 2d millennium B.C. No other palace in Mesopotamia, even among those constructed during the great splendor of the Assyrian and Babylonian Empires of the first millennium B.C. resemble the one of Dur Kurigalzu. One can almost speak of it as an architectural enigma, for it is not fixed in any known tradition, it has no successors, and it stands as a unique case in a period which was not the most brilliant in Mesopotamia.

DURA (PLACE) [Aram *dûrā*ʾ (דּוּרָא)]. A Mesopotamian site mentioned in Daniel. Dan 3:1 says that King Nebuchadnezzar made a golden image and "set it up on the plain of Dura, in the province of

Babylon." Because of their refusal to bow down to this image, Daniel and his friends Shadrach, Meshach, and Abednego were thrown into the fiery furnace. The location of Dura is uncertain. The name probably derives from Akk *dūru,* which means "city wall, fortification, fortress." Thus the LXX translation *peribolos* "walled area," is technically correct (Theodotian gives *Deira*).

The name "Dura" could signify the outer fortifications of Babylon. Pinches (*ISBE* [1939] 2: 883) proposed a general interpretation of "the plain of the Wall," a part of the outer defenses as "the rampart designated *dur Suanna,* "the rampart [of the city] Lofty-defense," a name of Babylon. The "plain" or "valley" of Dura could simply be a section of the city. However, Jeffery (*IB* 6: 395) translates Aram *biq·â* (Dan 3:1) as "a low plain between two ranges of mountains" rather than an open space in the city. And one might expect the text to refer to the "city" rather than the "province" of Babylon if the setting was within the walls of the city.

"Dura" is a common name in the area and forms an element in a number of names, such as the famous Dura-Europos, 270 miles NW of Babylon, on the upper Euphrates in what is now Syria. Within the province or administrative district of Babylon, Oppert (1862: 238–40) and others noted the River Dura is a tributary which flows into the Euphrates about 5 or 6 miles below Hilla, the site of ancient Babylon. Nearby is a series of mounds or low hills called Tulul Dura (pl.) or (sing.) Tell Dēr, 27 km (or 16 miles) SW of Baghdad, in the neighborhood of ancient Erech. At the end of the row are two larger mounds, the smaller of which is called el Mokattat. There Oppert noted a massive brick structure 14 m square and 6 m high. He thought this was the platform for Nebuchadnezzar's gold image, and that this was the Dura of Dan 3:1. Whether this is correct or not the context of the story in Daniel does suggest proximity to city of Babylon. This precludes not only Dura-Europos, but other earlier identifications such as the sites north of Babylon and east of the Tigris.

Polybius (5.48) and Ammianus Marcellinus (23.5.8; 24.1.5) mention a Dura at the mouth of the river Chaboras where it enters the Euphrates near Carchemish (see PW 5: 1847). Another Dura is beyond the Tigris near Apollonia (Polyb. 5.52 and Amm. Marc. 25.6, 9). The former was certainly outside the province of Babylon. The second was in the district of Sittakene, which in Parthian times was included in the province of Babylon (according to Strabo). But it is still far from the capital.

Montgomery (*Daniel* ICC, 199) cites Ptolemy's *Geography* (6.3) for the Susian *Deera.* Pinches says it was also called *Dūr-ili,* "god's rampart." Duru is listed with Tutul and Gudua (Cutha) in an intervention between Deru or Dur-ili and Tindir (Babylon). A Talmudic tradition (*b. Sanh.* 92b) makes the plain or valley of Dura the scene of Ezekiel's vision in 37:1–14 of a valley full of dry bones which are brought back to life. It has also been identified with the valley or plain of the vision in Ezekiel 3:23. Rabbi Johanan said "The plain of Dura extends from the river Eshel to Rabbah." The dead were young Israelite men who attracted the attention of Chaldean women. Jealous husbands had the men killed. When Hananiah, Mishael and Azariah were thrown into the fiery furnace, God told Ezekiel to "Go and resurrect the dead in the plain of Dura." The Dura-Europos synagogue (3d century C.E.) frescoes included a painting of this event in Ezekiel 37. The painting would thus be a picture of Dura and may represent an early identification with the site and the story in Dan 3:1.

HENRY O. THOMPSON

DURA-EUROPOS (PLACE). An ancient city, marked by the village of Slihiyeh in Syria, on the right (W) bank of the Euphrates River about halfway between Aleppo and Baghdad, 60 miles S of Deir ez-Zor, where the Ḫabūr River enters the Euphrates. This was the old Roman frontier post of Circesium. The place is referred to by the Greek geographer Isidore of Charax writing in the 1st century C.E. (Hopkins 1979: 4). Dura is E of Palmyra, NE of Damascus. Its antiquity was accidentally discovered by a British officer, M. C. Murphy, in the course of digging trenches in 1921 during operations against the Arabs (Rostovtzeff 1938: 1). The trenches revealed wall paintings in what was later found to be the temple of the Palmyrene gods. In a scene dating to about 239 C.E., the Roman commander Julius Terentius is shown sacrificing to the gods. Another tradition ascribes the discovery to French soldiers doing amateur

archeology around their campsite (Gates 1984: 168). A survey was conducted by James H. Breasted (1924: 52–61) with the help of British East Indian troops who uncovered part of the temple. A painting brought to light included a Greek inscription, "The Good Fortune (Gk *tychē*) of Dura," giving Breasted the name of the site.

Systematic excavation was begun by the Belgian scholar Franz Cumont in 1922–23, and continued from 1928 until 1937 by a Yale University expedition, both in conjunction with the French Académie des Inscriptions et Belles-Lettres. Cumont continued with the expedition as the Académie's representative. About a third of the area was uncovered by the excavators. It was determined that the site was a Roman military outpost destroyed in 256 C.E. Among the finds were pagan temples, a Jewish synagogue, and a Christian church. A parchment sheet from Tatian's *Diatessaron* in Greek offered evidence of Greek-speaking Christians there in the first half of the 3d century. The *Diatessaron* fragment went far to demolish arguments favoring a late date for John's gospel. (The history of excavations of the site has been compiled by Hopkins [1979] and more recently reviewed by Velud [1988].)

After a long hiatus, excavation of Dura-Europos resumed in 1986 under the auspices of the Mission Franco-Syrienne d'Étude Archéologique et de Rehabilitation du Site de Doura-Europos. Results of the 1986 and 1987 campaigns are presented in preliminary reports (Leriche 1986, 1988).

The compound name "Dura-Europos" is a modern construction (Matheson 1982: 3). The name "Europos" was attached to the new foundation in commemoration of the birthplace of its Seleucid patron, and was the name used locally until at least 180 C.E. After 200 the city was more often called in Greek *Doura,* preserving a Semitic name meaning "fortress." The city was Greek in character although influenced by oriental traditions.

Dura-Europos was founded (apparently *ex nihilo;* see Will 1988: 316) during the reign of Seleucus I (311–281 B.C.E.) by his relative Nicanor, probably one of the Seleucid governors' generals (Rostovtzeff 1938: 10). For the brief period 280–268 B.C.E., Europos minted its own coins (Bellinger 1949). In 113 B.C.E. the city was occupied by the PARTHIANS. They made Europos into a caravan city and it prospered for nearly a century. Conflict with Rome ensued, but in 20 B.C.E. Augustus concluded a peace with the Parthian king Phraates IV, ensuring peaceful trade. During the Partho-Roman peace, agriculture expanded up and down the Euphrates, yielding economic growth (Rostovtzeff 1938: 20–22, 139). But war with Rome returned when the Emperor Trajan (98–117 C.E.) reversed the peaceful policies of his predecessors and conquered Europos. He built a triumphal arch on the desert road W of the city. Later the city was evacuated by Hadrian (117–38), who restored peace and gave the city another 40 years of prosperity (Rostovtzeff 1938: 23). But with its reconquest by Lucius Verus in 165 C.E., the city became a military garrison in the *limes* of Rome. Septimus Severus (193–211) and Caracalla (211–17) stationed new detachments and built the monumental praetorium. Under Caracalla the city became a Roman colony. The archives—some 200 documents—of the XXth Palmyrene cohort have been excavated. Monumental baths and a new amphitheater were built in 216.

Despite efforts by Alexander Severus (222–35) to reinforce the city, it nearly fell to the Sassanids in 238. Rome retained possession of Dura for another 18 years, until its destruction in 256 under the Sassanid ruler Shapur I (241–72 C.E.). Dura-Europos was never rebuilt.

Dura-Europos is perhaps most renowned for the artwork preserved there. The most striking are paintings, especially frescoes, of religious themes. The Temple of the Palmyrene Gods, the Mithra temple in the Roman camp, the Jewish synagogue (dating from 246 C.E.), and the Christian church are all decorated with paintings.

The synagogue (discovered in 1932–33) originated as a private house that was remodeled as a public building at the end of the 1st century C.E. From dated inscriptions it is known that in 244/5 the synagogue was refurbished and expanded by the synagogue leader Samuel, and that the paintings were added in 249/50 (Gates 1984: 172). These paintings have been called "the most exciting and revolutionary discovery of early Jewish art" (*IDBSup,* 68). The religious diversity implicit in their motifs has called into question the widely held notion of a "normative" rabbinic Judaism in this early period.

All four walls of the synagogue were covered with paintings in 5 horizontal bands. The top and bottom bands are decorative; the 3 middle bands consist of at least 28 panels portraying 58 biblical scenes. The bands converge on the Torah shrine in the W wall. Bilingual inscriptions indicate that the Jews at Dura spoke Greek; the style of representation is likewise a result of a confluence of ANE and Hellenistic elements. The clothing of figures in the biblical scenes, for example, ranges from Syrian workers' attire to formal Greek wear, all anachronistic in a biblical context. Among the biblical figures portrayed are Abraham, Isaac, Jacob, Moses, Aaron, Samuel, Elijah, Ezekiel, David, and Solomon. The art of the Dura synagogue seems to be closer in spirit to later cabbalistic conceptions than to Talmudic (Gates 1984: 174; Matheson 1982: 116; Goodenough 1988: 259–60).

The Christian church was created in 232/3 C.E. by remodeling a private home built earlier in the 3d century (Kraeling [1967: 37–39] argued that the house was not converted into a church until later, about 240). Two rooms combined to form the worship area. A platform is at one end. Another room may have been a school. A small room in the NW corner was made into a baptistery. This is the only decorated room in the church. Over the vaulted baptismal font was a painting of Jesus as the Good Shepherd. A scene incorporating Adam and Eve was added later in the lower left corner. Other pictures show Jesus healing a paralytic, walking on water, and helping Peter. These and other paintings in the baptistery are less influenced by Mesopotamian artistic canons and more strongly Greco-Roman in style (Matheson 1982: 130–33). The paintings are the work of at least two artists whose techniques contrast visibly. There are several inscriptions, among which are the phrases "Christ Jesus is yours: remember Proclus" and "Christ Jesus remember the humble Siseos" (Hopkins 1979: 115).

The Mithraum was built new in 168 C.E. specifically as a temple by two commanders of the Palmyrene mounted police stationed in Dura. It is unusual in that it was built above ground (the typical temple of Mithra is subterranean, in keeping with the divinity's birth in a cave; Matheson 1982: 19); in 211 it was rebuilt by the *vexillationes* of two Roman legions (Matheson 1982: 24–25). In the center of the shrine were two bas-reliefs, one above the other, of Mithras slaying a bull. Two magnificent wall paintings flanking the bas-reliefs date from a third rebuilding about 240; they are more than five feet in height (Gates 1984: 166–67; 176–77). Each shows Mithras mounted on horseback with a bow and arrow in a hunting scene. Two seated figures, each with an ebony staff, are also portrayed (Hopkins 1979: 202). They may be the Mithraic prophets Zoroaster and Osthanes (Matheson 1982: 202). It is interesting to find a Mithraum in a city with a church; Mithraism was a chief rival of Christianity for several centuries.

A. Earth in the OT

1. Terminology. "Earth" is generally (approximately 660x in RSV) a translation of Heb *ʾereṣ,* a word that derives from a base common to the Semitic languages (Akk *erṣ-;* Ar *ʾarḍ-*). Hebrew *ʾereṣ* has a broad range of meaning, and is most frequently (about 1620x in RSV) rendered "country" or "land" (see further *TDOT* 1: 388–405). Less often, "earth" translated Heb *ʾădāmâ* (also translated "country," "ground," "land," and "soil" in RSV; see *TDOT* 1: 88–98). Once in Genesis (26:15) and six times in Job (7:21; 8:19; 19:25; 28:2; 30:6; 41:33) the English word "earth" represents Heb *ʿāpār,* elsewhere translated "ash," "dust," "ground," "rubbish," and "soil" in RSV.

In the Aramaic portions of the OT, "earth" renders Aram *ʾăraʿ* (Jer 10:11 and seventeen times in Daniel), and, uniquely, *ʾăraq* (Jer 10:11a). The sole occurrence of Aram *yabešet* (Dan 2:10) is also translated "earth."

The extremely wide range of meaning embraced by Heb *ʾereṣ* has been explained in two ways. Possibly the word originally designated the Semitic speaker's home region or country, from which it was extended to the territories of neighboring peoples, eventually including the whole expanse of human habitation, i.e., the "earth" below, as contrasted to heaven above (Rost 1965: 85; *IDB* 4: 874). However, the early and firm association of "earth" with "heaven" in the formula "heaven and earth" in several Semitic languages from earliest times on may suggest that its primary meaning embraced the inhabited surface of the cosmos, each subsection of it, or "country," constituting a microcosm (Stadelmann 1970: 127). While neither option can be advanced with full confidence, the vast predominance of the singular in Hebrew as compared to a few late instances of the plural (e.g., Ezra 9:1; 2 Chr 32:13) makes it abundantly clear that the OT perceives as continuous what English distinguishes with the words "earth" and "land, country." In a number of passages the choice between the translation "earth" or "land" is a difficult one.

2. Cosmology. On the whole, Israel shared the world view of the ancient Near East. The earth was perceived as a flat expanse, seen either in the image of a disk or circle upon the primeval waters (Isa 40:22; Job 26:10; Prov 8:27; cf. "circle of the heavens," Job 22:14) or of an outstreched garment spanning the void (Job 26:7; 38:13). According to H. H. Schmidt (*THAT* 1: 230–31), these two images, present also in Mesopotamia, derive from different but compatible conceptions of the cosmos which are intertwined without tension in the OT. References to the earth's (four) corners/rims/hems ([*ʾarbaʿ kanĕpôt hāʾāreṣ;*

Isa 11:12; Job 37:3; 38:13; cf. Isa 24:16), its end(s), border(s), edge(s) (*qĕṣê/qĕṣôt;* Job 28:24; Ps 135:7; Isa 5:26; 40:28; 41:5, 9; Jer 10:13; 51:16), combinations of these images (Jer 49:36; also Ps 48:11—Eng 48:10; 65:6—Eng 65:5), its ends (where it ceases: *ʾapsê [hā] ʾāreṣ;* Deut 33:17; 1 Sam 2:10, etc.) its boundaries (Ps 74:17), or its remotest parts (Jer 6:22; 25:32; 31:8; 50:41) depict the vast expanse of the earth and its outer limits, rather than a firm conception of its shape. T. Boman (1960: 157–59) has pointed out that naming the outer limits of any area includes the whole area, so that the above terms function almost as synonyms for "earth," "world." The modern concept of an infinite or open-ended universe was not known in the OT; on the contrary, heaven and earth were thought to be sealed together at the rim of the horizon to prevent the influx of the cosmic waters (Stadelmann 1970: 43).

In contrast to this preoccupation with the earth's outer limits, a center or navel of the earth (Heb *ṭabbûr*) is mentioned only once (Ezek 38:12; cf. Judg 9:37; *Jub.* 8:19). L. Stadelmann (1970: 147–54) suggests that Jerusalem (cf. Ezek 5:5), and possibly Bethel at an earlier time (cf. Gen 28: 10–12, 17–18), were considered in this light, in keeping with the views of many ANE and other peoples that their central sanctuary or capital city represented such a center. However this theme is not prominent in the Old Testament; that Jerusalem, as the center of worship of the universal God, held a position of central prominence (Isa 2:2–3 = Mic 4:1–2) is a theological rather than a cosmological observation.

Over the earth and its surrounding sea(s) arches the firm vault (or firmament, Heb *raqîaʿ* [Gen 1:6]) of (the) heaven(s). Together, heaven and earth make up what we would call world, universe, cosmos (Gen 1:1; 2:1, 4; Exod 31:17; Ps 102:26—Eng 102:25; Isa 48:13; 51:13, 16 and often). Occasionally, earth alone seems to enhance the whole cosmos (e.g., Isa 6:3; 54:5; Zeph 1:2–3, 18[?]). The vault of heaven rests on the earth (Amos 9:6; cf. 2 Sam 22:8: "the foundations of the heavens" = the earth) which in turn is firmly set on pillars (1 Sam 2:8) or foundations (Isa 24:18; 40:21; Jer 31:37; Mic 6:2, etc.). The foundations are associated with the "heavens" (2 Sam 22:8) or the "world" (Heb *tēbēl;* 2 Sam 22:16 = Ps 18:16—Eng18:15), and with "mountains" (Deut 32:22; Ps 18:8—Eng18:7). The verb *yāsad* "to found" is used with reference to God's founding of the earth (Job 38:4; Ps 24:2; 102:26—Eng 102:25, etc.).

Somewhat ambivalent in this structure is the place of the sea(s) or water(s), the deep, and the underworld. The seas can be spoken of as familiar reality, in which the fish and other water creatures swarm (Gen 1:20, 22, 26, etc.) and on which humans move in ships (Ps 104:25–26; 107:23; Prov 30:19; Ezek 27:9). As such, the sea forms part of the earth, i.e., the flat surface below juxtaposed to the heavens above. A transitional position between earth and the surrounding sea is occupied by the islands or coastlands (Heb *ʾiyyîm;* Isa 24:14–16; 41:5; 42:4, 10). Elsewhere in the OT the sea(s) or water(s) take on the character of a third cosmic realm in addition to heaven and earth, the extension of the cosmic chaos waters surrounding everything (see EASTERN SEA; SEA; WESTERN SEA).

The underworld is often spoken of as part of the earth, a lower cavern, grave, pit, (called in Heb Sheol) where the dead lead a shadowy existence; it can even be referred to simply as "earth" (1 Sam 28:13; Ps 71:20; 106:17; Isa 29:4). In other texts, Sheol is treated as a separate cosmic realm besides heaven and earth (Job 26:5; Ps 139:8; Amos 9:2). The OT conception of the world, then, is basically bipartite (heaven and earth), variously extended to a tripartite cosmos (heaven-earth-sea, or heaven-earth-underworld). Although certain later books and sections (Job, Proverbs 8, several postexilic Psalms, Isaiah 24–27; 40–55) are more explicit in their cosmological descriptions than the earlier documents, the general view of the cosmos does not show any significant change or development throughout the OT period.

3. Theology. Even though *ʾereṣ* is generally a feminine noun, the writings of the OT nowhere acknowledge a divine "Mother Earth" or earth goddess related as female consort to a sky god or other male deity, a widespread Near Eastern conception (*RGG*^{3} 2: 548–50), though not universal. (Egyptian mythology had a female sky goddess and a male earth god [*TDOT* 1: 390].) Where heaven and earth conjoin to produce fertility, they are never more than mere created instruments of God (Hos 2:23–24—Eng2:21–22). At the same time, Israel was well aware of the fertility practices of its neighbors and their divinizing of the earth and its features. Literary remnants of that divinizing are employed occasionally as metaphors. For example, heaven and earth are called as witnesses in God's lawsuit (Deut 4:26; 30:19; 31:28; Ps 50:4, etc.) and exhorted to "shout for joy" (Isa 44:23; Jer 51:48). Actual divinizing of the

earthly realm, however, was firmly rejected (implicitly in Exod 20:4–5 = Deut 5:8–9). Schmidt (*THAT* 1: 233) considers possible allusions to the Mother Earth motif in Job 1:21; Eccl 5:14—Eng5:14; Ps 139:15 (cf. also Gen 3:19; Sir 40:1), while Eliade (*RGG*^{3} 2: 550) allows only Job 1:21; Ps 139:15.

Israel also knew of the localization of deities in certain parts of the earth/land by its neighbors (e.g., 2 Kgs 17:24–41), but the God of Israel is rarely so localized (1 Sam 26:19 may be such a case). He is the *ʾādōn kol-hāʾāreṣ* "Lord/Master of the whole earth," a firmly coined epithet (Josh 3:11, 13; Ps 97:5; Mic 4:13; Zech 4:14). That his rule proceeds from Zion (Pss 48, 76, 84, 87, 122; Isa 2:2–4), a foundational assumption of the royalist Jerusalem theology, constitutes no limiting localization; it belongs to the theme of election of instruments (including places) towards the accomplishment of his universal ends (cf. Deut 10:14–15; 1 Kgs 8:27–30).

God is the creator, owner, ruler, and sustainer of "heaven and earth, the sea and all that is in it" (Ps 146:6). He created them a cosmos in contrast to chaos (Gen 1:1–2:4a; Job 38:4–6; Ps 121:2; 124:8; 134:3; 146:6; Prov 8:24–29; Isa 45:18–19; 48:13), keeping chaos at bay (Job 38:8–13; Ps 33:7, etc.) yet not in a struggle or contest among near-equals (as in ANE mythology) but by his wisdom (Prov 3:19–20; 8:30–31) and his sovereign, commanding word (Gen 1:1–2:4a; Job 26:12–13; Ps 33:6, 9; 104:7; Isa 51:9–10; Jer 32:17 [? power, outstretched arm]). This is true even though the language of combat has been preserved now and then (Job 38:8; Ps 74:12–17; Isa 27:1; Heb 3:8–11). In his sovereignty he may, however, employ the chaos powers as instruments of judgment, as is evidenced particularly, but not only, in the great Flood and as it is threatened for the eschaton (Gen 6:5–8:22; Isa 24:17–23; Jer 4:23–28; Ezek 26:19–20; Amos 9:13).

In the present eon, however, God willed the earth's stability and permanence as a sign of his grace towards his creatures (Gen 8:22; Ps 74:12–17; 104:5–6). That the earth is "founded" on "pillars" or "foundations" gains theological relevance here. He set the earth's bounds against chaos and sea (Ps 33:6–7; 104:7–9; Isa 40:12), making "earth" synonymous with the realm of the living; note the phrase *ʾereṣ ḥayyîm* "land of the living" (Job 28:13; Ps 27:14—Eng 27:13, etc.). God the Creator is therefore not to be contrasted with God the Savior, for his work of creation in itself constitutes salvation from the rule of the chaos powers (Ps 74:12–17; 89:9–15—Eng 89:8–14; 104:5–9; Isa 40:28–31; 51:9–11). The frequent expression "the ends of the earth" marks the all-inclusiveness of his rule, both for judgment and salvation, a rule that is not limited, however, to the earth, but includes the heavens and the netherworld (1 Sam 2:10; 2 Chr 16:9; Job 28:24; Ps 46:10—Eng 46:9; 98:3; 139:7–12; Isa 41:5, 9; 45:22; 49:6; 52:10; Amos 9:2–3; Mic 5:3—Eng5:4; Zech 9:10).

God himself is consistently associated with the heavens, his dwelling place, which are "above," juxtaposed to the earth "beneath," a characterization expressive not only of ancient perceptions of world structure, but also of rank. In remarkable contrast to Mesopotamian beliefs, however, as well as to the NT (see B.3 below), heaven in the OT does not become a prototype for life on earth. In Mesopotamia, life on earth was seen as a participation in, and reflection of, a model in heaven (Jacobsen 1946: 185–201). In the OT, the notion of heaven is devoid of such content, and life on earth, supremely under God's lordship, is called to imitate God only in his works on the earthly plane (as in his care for oppressed Israel in Egypt), and never in his heavenly existence (Harrelson 1970: 237–52). Nor is the petition "Thy kingdom come, Thy will be done, on earth as it is in heaven" (Matt 6:10) imaginable in the OT context. Even when God is presented in the metaphorical setting of the Heavenly Council (e.g., 1 Kgs 22:19–22; Job 1:6–12; 2:1–6; Isaiah 6; 40:1–11), we hear only of deliberations concerning events on earth; we learn nothing about a heavenly world. And further, even the heavens, as God's creation, are subject to his verdict of destruction (Ps 102:26–27—Eng 102:25–26; Isa 13:5; 14:26; 24:18; 51:6; Jer 4:23–28; Zeph 1:2–3, 18), so that God transcends both heaven and earth (Isa 65:17; 66:22).

B. Earth in the NT

1. Terminology. In the NT "earth" renders Greek *gē.* In the LXX *gē* translates both Heb *ʾereṣ* and *ʾădāmâ.* The Greek word can also mean "land, country, region" and "soil, ground." As *ʾereṣ* in the OT, *gē* can mean both a particular country or region and the whole inhabited earth.

2. Cosmology. In most respects the NT shares the cosmology of the OT without devoting extensive discussion to it. While certain passages allude to a tripartite universe (heaven, earth, "under the earth," Rev 5:3, 13 [cf. Phil 2:10]), the bipartite designation (heaven, earth) is dominant throughout. Hades, the LXX's name for Sheol, was undoubtedly conceived of as a subterranean abode of the dead, but its place as a tier in the tripartite universe (heaven, earth, Hades) can be discerned only in Matt 16:18–19, and there uncertainly. Matt 1:23 (= Luke 10:15) uses heaven and Hades as the extremes of exaltation and humiliation, possibly implying that earth is the middle tier (cf. also Rev 5:3).

As in the OT, the earth itself can be regarded as the realm of the dead; thus the Son of man will spend three days and nights "in the heart of the earth" (*en tę̂ kardia tês gês*; Matt 12:40) or descend "into the lower parts of the earth" (*eis ta katōtera merē tês gês*; Eph 4:9). On the other hand, hell or Gehenna (*geenna*; Matt 5:22, etc.), though the destiny of the condemned dead and therefore a third state of human beings (as contrasted with life on earth, and redeemed existence in heaven), is apparently not visualized very concretely as a tier in the cosmic structure, though it is certainly associated with neither regions rather than higher realms.

We conclude, then, that the NT generally understands the universe as comprehended in the duality of (the) heaven(s) and (the) earth, an expression that is often coextensive with "world" (Gk *kosmos*), although the latter can also be used for the arena of human life, and thus as a synonym for "earth" alone, as well as for "world" (Gk *oikoumenē;* see *TDNT* 3:884, 888).

Only occasionally do we find reminiscences of the OT's vivid structural details of the cosmos, such as the earth's "four corners" (Rev 7:1; 20:8), its "end" or "uttermost parts" (Acts 1:8; 13:47, cf. Isa 49:6), its " (four) ends" (Matt 12:42 = Luke 11:31) or its "face" (Acts 17:26). Mark 13:27 and Rev 7:1 mention the "four winds."

3. Theology. Presupposing the OT throughout, the NT views earth as the creation and possession of God, ultimately subject to his sovereign rule (Matt 5:35; 11:25 = Luke 10:21; Acts 2:19; 4:24; 7:49; 14:15; 17:24; Rom 9:17; 1 Cor 8:5–6; 10:26; Eph 3:15; Rev 11:4; 14:7), yet a rule challenged by the power of Satan. Due to this challenge, the earth, as to its theological status, "lags behind" heaven, where God reigns unimpeded.

As the battlefield between God and Satan, the earth becomes the arena of human probation, the scene of either obedience or disobedience. The pervasiveness of the latter, in turn makes the earth the target of God's judgment and salvation, especially through the agency of Jesus, the Christ/Messiah. The adjective "earthly" (Gk *epigeios*), often designating anything located on the earthly plane of the universe (Phil 2:10), can consequently also refer to that which is the opposite of what is heavenly (1 Cor 15:40; 2 Cor 5:1; Phil 3:19; *TDNT* 1:680–81).

Christ's mission originates in heaven and is marked by his bringing what is qualitatively of heaven (in harmony with the rule of God) onto the earthly scene (Mark 2:10–11 = Luke 5:24; Luke 12:49; 18:8[?]; John 3:31–36; 17:4; Rom 10:18 [Ps 19:4]; 1 Cor 15:47; Eph 4:9–13, 24). Here he establishes signs of the incipient rule of God, destined to become visible to the ends of the earth. Ultimately, however, it is not the complete transformation of earth that constitutes the end *(telos)* of Christ's mission, but a redeemed state that transcends heaven and earth, both of which are divinely ordained to pass away (Matt 5:18; 24:35 = Mark 13:31 = Luke 21:33; Luke 16:17[?]; Heb 12:26 [will be shaken]; 2 Pet 3:7, 10), or to be transformed into a new heaven and earth (2 Pet 3:13; Rev 21:1). In the book of Revelation more than elsewhere the earth moves increasingly toward becoming the realm of the evil posers, and thereby the target of God's judging wrath (Rev 3:10; 6:10; 7:2; 11:6; 14:15–20; 16:1; 19:2). The faithful are preserved through God's grace (Rev 7:3; 9:4) and ultimately saved from the earth (Rev 14:3; cf. Heb 11:13).

Short of this apocalyptic drama, however, the realms of heaven and earth are frequently characterized as standing in sort of cosmic correspondence, heaven constituting divine perfection to be emulated on earth (Matt 6:10; 23:9; Luke 2:14; 11:2; 18:8[?]; John 3:31; 1 Cor 15:47; Col 3:2, 5; Heb 12:25). Yet at times the initiative can be taken on earth, evoking its validation by the heavenly world (Matt 16:19; 18:18, 19; Mark 2:10 = Luke 5:24). Clearly, heaven and earth do not function only as cosmological realms here, but as theological horizons. Jesus Christ is the prime agent to effect the permeation of earth by heaven, and

his church takes up this task. Christ's mission can be described, from one perspective, as removing the discrepancy and uniting (theologically speaking) the realms of heaven and earth (Matt 28:18; 1 Cor 8:5–6; Eph 1:9–10; Col 1:16, 20).

EARTHWORM. See ZOOLOGY.

EAST. The primary direction for orientation for most of the ANE world. East was the direction of the rising sun, which served as one of the ways of describing the direction in biblical Hebrew. Likewise in Akkadian, the same phrase was often used to indicate east.

In biblical Hebrew the word root *qdm* is the most common word-group meaning east. Literally, *qdm* referred to what was before or in front of one. Thus east was the direction a person faced in order to get his/her orientation. Ugaritic used the same root *qdm* to indicate east or the east wind. The Hebrew words *qedem, qēdmâ, qidmat, qadmōni* and *qādîm* can have the meaning "east, eastward, eastern." The other common word for east is *mizrāḥ* or *mizrāḥ (haš)šemeš,* the rising of the sun. A third word group *ʿal pĕnê,* at times translated as east by RSV and other versions, probably should be understood not as a specific direction, but more as a general location, "in the vicinity of."

East in biblical texts was the location of Eden; and when Cain was banished, it was to an area east of Eden. It was from the east that men migrated to the plain of Shinar to build Babel. The Hebrews designated many peoples who lived east of them as "people of the east". When Jacob fled to Paddan-Aram, the people there are called "people of the east." Similarly, the people living across the Jordan river from Israel could be called "people of the east." People of the east were often respected for their wisdom. In the NT, men from the east came following the star and seeking the messiah-king, and in the vision of Revelation, the Euphrates River is dried up so that kings from the east might destroy Babylon. In a few passages, the Dead Sea, usually called the Salt Sea, is referred to as the Eastern Sea paralleling the similar common terminology for the Mediterranean Sea as the Western Sea.

The east wind was the wind coming from the desert regions of Syria and Arabia. This east wind is today called a *khamsin* (literally, "fifty," for it often lasts about fifty days) or sirocco. It comes in a season marked by low humidity, high winds, and extremely hot weather. Because the winds come from the desert regions and are strong, they often carry a great deal of dust and sand. Such winds were extremely sultry, causing plants to wither, even stripping fruit from plants and scattering everything in its path. This east wind can be called "the wind of Yahweh," for he controls it. He uses the east wind as an instrument of his judgment. It was a strong east wind that drove back the waters of the Red Sea and permitted the Hebrews to cross on dry ground.

JOEL F. DRINKARD, JR.

EAST COUNTRY (PLACE) [Heb *ʾereṣ qedem* (אֶרֶץ קֶדֶם)]. Area to which Abraham sent the sons of his concubines (Gen 25:6). The phrase *ʾereṣ qedem* may be translated as either "the land of the east" or "the land of Kedem." Elsewhere in the Bible *qedem* is used to refer to various regions within a wide expanse of territory from the Middle Euphrates to N Arabia (see Gen 29:1; Num 23:7; Judg 6:3, 33; 7:15). Most scholars feel, therefore, that *ʿereṣ qedem* represents a broad, nonspecific region to the E, or SE, of Palestine. Sarna (1989: 173), however, suggests that *ʾereṣ qedem* implies a specific territorial entity: "the

land of Kedem." He cites as support the Egyptian Story of Sinuhe (20th century B.C.E.) in which a traveler visits Kedem, near Byblos in ancient Phoenicia (see *ANET,* 19).

EAST GATE (PLACE) [Heb *ša῾ar hammizrāḥ* (שַׁעַר הַמִּזְרָח)]. The name East Gate has been variously applied in biblical literature to the eastern gate (*ša῾ar hammizrāḥ;* Neh 3:29) of the inner court of the Temple in Jerusalem and to the eastern gates (*ša῾ar haqqadmônî;* Ezek 10:19; 11:1; 40:6–11; 43:1–5; 44:1–3; 46:1) of the inner and outer courts of Ezekiel's visionary temple. In the KJV it is erroneously used to translate "Potsherd Gate" in Jer 19:2.

The East Gate of which Shemaiah was the keeper (Neh 3:29) was a gate in the enclosure of the sacred Temple precincts. Surrounding the sacred Temple enclosure and the royal compounds was yet another enclosure that apparently had two gates (the Water Gate, Neh 3:26; and the Mifqad or Muster Gate, Neh 3:31) on the east facing the outer defensive wall of the city. The street(s) and/or open place where Hezekiah gathered the priests and Levites (2 Chr 29:4–5) and where Ezra assembled the men of Benjamin and Judah (Ezra 10:9) is most likely located between this East Gate of the sacred Temple enclosure and the Muster Gate of the royal enclosure. The eastern gate of the outer defensive perimeter was the Horse Gate.

In extrabiblical literature, the name has alluded to the Gate of Nicanor of the Temple court (*JW* 5.5.3 §201, *m. Middot* 1:4; 2:3) and to the Shushan Gate of the Temple Mount (*m. Middot* 1:3; see also *m. Para* 3:6 and *m. Šeqalim* 4:2). The uniqueness of the Herodian Gate of Nicanor distinguishes it from all the other gates of that period. It was the only gate not made of gold (*m. Middot* 2:3), and Josephus refers to this gate as the gate of Corinthian bronze. It was here that priests came to trumpet (*m. Sukka* 5:4) and where adulterous women were brought for judgment (*m. Soṭa* 1:5; 2:1). The doors of this gate were nearly lost at sea but were miraculously recovered (*m. Yoma* 3:10). Any association of the Nicanor Gate with the Beautiful Gate (Acts 3:2, 10) is unfortunate and the distinction between the two should be kept in mind with the Gate of Nicanor on the east side of the Court of Israel and the Beautiful Gate on the east side of the Court of Women.

Biblical references to an East Gate should not be confused with the east gates of the Temple Mount of later periods (e.g., the Shushan Gate [*m. Middot* 1:3; *m. Para* 3:6 and *m. Šeqalim* 4:2], the Gate of the Temple Treasury [Gk *gazophylakion*] of John 8:20).

The Shushan Gate ("the Eastern Gate whereon the Castle of Shushan was sculptured" [*m. Middot* 1:3]) exited from the Temple Mount (Court of Gentiles) to the Kidron Valley. It was not a public entrance or exit but was for the ceremonial leading away of the scapegoat to the wilderness and the red heifer to the Mount of Olives via one or possibly two causeways built for that purpose (*m. Para* 3:6; *m. Šeqalim* 4:2).

After the destruction of the Temple in 70 C.E., the esplanade was desolate and an eastern gate (Shushan Gate) that may figure in the Medaba Map (Avi-Yonah 1954: 53, 59) may already have been closed. It was this east gate that later became the Golden Gate (a name that resulted from Latin speaking pilgrims misinterpreting the Beautiful Gate [Gk *hōraia*] and the Golden Gate [Lat *aurea*] [Mackowski 1980: 134–35]).

EAST, PEOPLE OF THE [Heb *bĕnê qedem* (בְּנֵי קֶדֶם)]. "People of the East" is a literal and succinct translation of Heb *bĕnê qedem.* The expression occurs ten times in the OT. According to the

place and time of the speaker, "people of the east" comprises various tribes and people. The geographical derivation of a generic ethnonym is not peculiar to Hebrew. In the story of Sinuhe (20th century B.C.), *qdm* is the region E of the Phoenician coastal cities. In the late 19th century A.D., the peasants of central Transjordan referred to the bedouin as *ahâlî aš-šarq* "people of the east" or *šarqîyah* "easterners" (Musil 1908: 22). The latter expression still provides the most probable etymology for the Gk/Lat term *sarakênoi/saraceni* (cf. O'Connor 1986 for a different view).

The most generic use of "people of the east" is found in 1 Kgs 5:10. According to this verse, Solomon's wisdom surpassed that of both Egypt and "the people of the east." If this verse was written in the Persian period, "people of the east" refers to the Asian part of the Persian empire, including Syria, Arabia, and Mesopotamia. They and the Egyptians constituted what was understood as, more or less, the world. If one prefers a more restricted circumference of the expression, the eastern wisdom may allude to Arabian adages (cf. Prov 30:1; 31:1, and see MASSA), and to the Edomites metallurgical skill (Jer 49:7; Obad 8; cf. Knauf and Lenzen 1987: 87).

The "land of the people of the east," where Jacob seeks refuge from his brother's wrath (Gen 29:1), was originally the area E of the mountains of Gilead, populated by Aramean shepherds in the Late Bronze and Early Iron Age (Otto 1984: 76–78). Within the context of Genesis' final redaction, it refers to N Syria, the vicinity of Harran.

In Judg 6:3, 33; 7:12; 8:10; Isa 11:14; Jer 49:28; Ezek 25:4, 10, *bĕnê qedem* signifies the predatory bedouin as experienced by Israel and her neighbors from the 6th century B.C. onward (cf. Knauf 1988: 31–38; 160–61 for the perception of the "Midianites" in the book of Judges). Given the locale of the book of Job (see UZ), Job 1:3 also refers to Arabia.

EASTER. See PASSION NARRATIVES.

EASTERN SEA (PLACE) [Heb *hayyām haqqadmônî* (הַיָּם הַקַּדְמוֹנִי)]. A body of water or a sea to the E of the land of Israel. The term is employed three times in the Prophets: Joel 2:20; Zech 14:8; Ezek 47:18, the former two as part of an idiomatic expression designating one of two opposite points of the compass and the latter as part of the future border of Israel envisioned by the prophet.

The Hebrew expression is composed of the word *hayyām* "the sea" and the term *haqqadmônî,* a denominative noun derived from *qdm* and suffixed with termation *ôn (ōn* in Joel 2:20) and the adjectival ending *î.* Akkadian *qudmu (qadmu)* connotes "early time," "olden days" and (in prepositional use) "front" (CAD 13: 295–96), while in Ugaritic texts *qdm* is in the sense of "east wind" and "in front of" (*UT* 19.2208). Biblical Hebrew employs the aforementioned meanings and extends it to a variety of expressions mostly designating a period of time or a location eastward (KB, 823–24).

Hayyām haqqadomônî, perceived as connoting an eastern orientation, is therefore a designated location, a body of water in "the front" (of a person facing eastward). Geographically, scholars favor its identification with the Dead Sea because of the latter's place to the E of Israel, thus formulating the equation *hayyām haqqadmônî* = Dead Sea, translated into English as the Eastern Sea (GesB 302; see also Mitchell ICC, *Haggai, Zechariah* 347; Joel 112; Eichrodt *Ezekiel* OTL, 589–90). It should not go unnoticed, however, that Eusebius (Onomasticon #503) does not record *hayyām haqqadmônî* as cognate to the Dead Sea. Neither the LXX, nor the Aramaic translations are familiar with the equation. To Rabbinic literature it is unknown, and the Vulgate translates it verbatim, *mare oriental.*

Remarkable, however, is Rashi's explanation. In Ezek 47:18 he considers the sea as a geographical place on the future E border of the land of Israel, which he identifies as the Sea of Salt, mentioned elsewhere as located in the east. Nevertheless, in the other places where *hayyām haqqadmônî* is in apposition to another body of water, Rashi does not consider it cognate to the Sea of Salt. In the prophecy of Zechariah it meant for him a cosmic sea located "eastward to the world." Kimḥi (Ezek 47:18) contends that if the sea is an actual body of water, then the possibility of identifying it with seas to the east of Israel is either with the Sea of Salt or with the Sea of Chinnereth.

Ancient commentaries provide an additional dimension of the term *qdm*. Commenting on *miqqedem* (Gen 2:8), Jerome advances that it be understood as *ab exordio,* and indicates that Symmachus and Theodotion are of the opinion that the word there is *non orientem sed principium* ("not 'eastern' but 'first' ") (Origen *Hexapla* Gen 2:8 [Field 1875]). Further, the Sages support the understanding that the term *qdm* (*b. Pesaḥ.* 54a) has the specific meaning of a beginning related to the creation epoch, an assumption manifested also by Targum Onkelos, which renders it in Aram *mlqdmyn* "before the beginning." It is echoed by Albright (1968: 97) who remarks that *(miq)qedem* connotes primordial time and not "from the east."

Unique to *qdm* is the Akkadian *Qu-du-mu* a name for a god, which appears in a Northwest Semitic tongue in the denominative form of *qdmn.* For the Ugaritians it is a personal name (UT 68:40; 328:3) and for the Sages (*Midr.* Gen. Rab. 38:7) it is also a name, but only as an epithet for God, the one who antedated creation. Rabbinic literature employed the term *qdmny* in order to qualify the condition of creatures existing immediately after the Creation. *Nḥš hqdmny* and *ʾdm hqdmny* were placed among those existing during the period of creation but, after being punished by God, vanished and went into oblivion.

The biblical expression *hayyām haqqadmônî* undoubtedly predates the Rabbinic expressions and serves as a model for them. Jerome discerned the antiquity of the sea while explaining it as *mare primum* "primal sea" (*PL* 1527), thus permitting the understanding of the phrase in mythical context. The term is incorporated only in prophecies envisioning enormous cosmic changes (*b. Menaḥ.* 54a; Cook *Ezekiel* ICC, 425; also Kaufmann 1955–56: 524–25; 563–66) and in metaphors which intermingle the historical and the legendary; hence it makes a geographical identification less attractive and contributes to the proto-historical nature of *hayyām haqqadmônî.*

The merger of two senses of the term "belonging to the creation epoch" and the "eastern direction" form a new dimension for the Eastern Sea as the "legendary orient." This sea is complemented by *hayyam hāʾăhărn,* the "legendary occident" (see WESTERN SEA). The expression constitutes a word pair of two opposite points of the world, the uttermost east and the extreme west. The use of legendary entities as designations of the ultimate points is not alien to East Mediterranean people. It is anticipated by the couplet *šḥr* and *šlm* "Dawn and Sunset" (UT text 52:52–53), the mythological Gk Cadmus (from *qdm* "east") and Gk Erebus (from *ʿrb* "west") all of which are metaphorical expressions of the same idea, the furthest limits in the legendary cosmos. Neither is it uncommon for the poet to mix and match separate units to forge the antithesis (Ps 139:9; Job 18:20), nor is it unconventional to form word pairs (Isa 43:18, Qoh 1:11) which describe both antiquity and extremity (Ben Yehuda Vol 12:5766). Hence, *hayyām haqqadmônî* and *hayyam hāʾăhărôn* symbolize the extreme frontiers of east and west in the unique phraseology of the biblical heritage.

EATING AND DRINKING IN THE OLD TESTAMENT. In the Old Testament, "eating" and "drinking" denote the ingesting of food and liquid for two primary purposes: (a) the preservation and strengthening of the life force; and (b) the establishment and strengthening of communal bonds between

persons who eat and drink together. There are, in addition, a number of passages in which "eat" or "drink" are metaphors for other kinds of consumption or relationship.

———

A. The Hebrew Terms for "Eat" and "Drink"
B. Primary Functions of Eating and Drinking
1. Relation to the Life Force
2. Relation to Communal Bonding

———

A. The Hebrew Terms for "Eat" and "Drink"

The Hebrew *ʾkl,* "to eat," a root common to several Semitic languages, occurs 910 times in MT. Most of these occurrences represent the verb itself, though there are a few related words such as *ʾōkel,* "food," and *maʾăkelet,* "knife." The cognate verb *akālu* occurs frequently in Akkadian; the main derivative in that language is *akalu,* "bread" or "food," while Hebrew employs *leḥem* for "bread." Ugaritic uses as verbs both *ʾakl* and *lḥm* for the meaning "eat," though *lḥm* appears more frequently.

The root *šth,* "to drink," appears 216 times in the Hebrew Bible, again primarily as the verb itself, though there are derivatives such as *mišteh,* which means either a "feast" or a "drink." The verb *šātâ* does not occur in the *Hipʿil* or causative form; its causative is supplied by the *Hipʿil* of *šqh,* "to give drink," appearing 64 times. Again, the cognate words are used in much the same way in Akkadian: *šatû,* "to drink" and *šaqû,* "to give drink." Ugaritic uses both *šty* and *šqy* to mean "drink," and also employs the causative š-form with *šqy* to produce the meaning, "to give drink."

In 35 OT texts the two words are used together in a fixed expression, "he/they ate and drank." This same fixed expression occurs in Ugaritic and Akkadian texts as well. The effect of the two verbs together is intensification of whatever connotations are supplied by the context. Thus if the plain fact of consumption is the point, the phrase "ate and drank" implies a full meal, satiation (e.g., Gen 25:34). If the hospitality owed to visiting strangers is involved, "they ate and drank" emphasizes that full-services were extended to the visitors (e.g., Judg 19:4, 6, 21).

B. Primary Functions of Eating and Drinking

One very important range of meanings stems from the fact that eating and drinking sustain the human life force. This fact leads, in turn, to the celebration of Israel's God as the one who provides food and drink through his work in creation and history. It leads at the same time in another direction—toward the use of eating and drinking as metaphors for any kind of activity where elemental human needs are met.

1. Relation to the Life Force. a. Sustenance. A human both "has" a *nepeš* ("soul," "life," "life force") and "is" a *nepeš* ("person," "appetite," even "throat"; Wolff 1974: 10). Food sustains this hungry being in life—so much so that "to eat" can mean "to live" (Gen 47:22).

If eating and living can be identified, it stands to reason that the strength or quality of the life force is directly dependent on the intake of food (1 Sam 28:20; Judg 15:18–19). A strong life force is shown by the brightness of the eyes, while sickness, depression, or anxiety cause the eyes to dim (Ps 6:8; 38:11; 2 Sam 14:29; Deut 28:65; Lam 4:16). Eating and drinking strengthen or "improve" the heart (Ruth 3:7); wine makes the heart "glad" (Ps 104:15). Stress and illness make a sufferer forget to eat bread, so that the heart is "smitten like grass" and "withered" (Ps 102:4).

The need for food is so intense and so endlessly a part of experience that it can even spill over into dreams, "as when a hungry man dreams that he is eating and awakes with his hunger not satisfied" (Isa 29:8). Akkadian texts, too, show dream interpreters dealing with the meaning of food in dreams (*CAD* 1/1: 249).

Such intense need leaves society at the mercy of those who would exploit its limitations, because the person who controls the food supply has great power. This fact lies behind Jacob's purchase of Esau's birthright in exchange for food (Gen 25:29–34). Later, Jacob exploits his father's hunger and obtains Isaac's blessing after serving him a savory stew (Genesis 27). It is ironic that the blessing itself concerns food and power (Gen 28:28–29).

The power to control food lies in the hands of the wealthy, who flaunt this power in ostentatious banqueting (Amos 6:4–6; Isa 6:22; 22:13). Meanwhile, the poor are chronically hungry. "All my life I have never had enough to eat," says an Old Akkadian text from Mesopotamia (*CAD* 1/1: 241, 9′); many poor people in Israel must have known the same endless hunger. Only Israel, however, had a body of sacred legal or *torâ* traditions which were designed to ensure food for the poor.

Prominent among Israelite laws designed to provide food for the poor are: permission to pick and eat handfuls of grain and grapes from a neighbor's field (Deut 23:24–25); the command to leave some grain and fruit unpicked at harvest time so that the poor may glean a little food (Deut 24:19–22; Ruth 2); the prohibition against taking a grinding stone as collateral on a loan (Deut 24:6); and the command to pay day laborers at the close of each working day, out of consideration for the hand-to-mouth existence of poor folk (Deut 24:14–15).

Even worse than the chronic hunger of the poor, however, was the frequently mentioned experience of starvation, whether as a recorded fact or as a recurrent symbol for God's punishment of people. Perhaps the most graphic description of starvation is found in Deut 28:47–57, where the famished survivors within a besieged city resort to cannibalism, even eating their own children's bodies. That such things happened in wartime throughout the ancient Near East is confirmed by the occurrence of very similar passages in the "curse" or threat sections of Assyrian treaties—treaties imposed by the very nation whose tactics starved opponents into cannibalism (*CAD* 1/1: 250b; *ANET,* 533). The threat to inflict such starvation is probably the ultimate use of "food power" as a weapon of control. Such brutal manipulation of human hunger stands in sharp contrast to God's kindly provision of food to all living beings.

b. Symbolic Aspects. Where does food come from? The Old Testament unequivocally ascribes the provision of food to God, the very God who "breathed into the man and he became a *nepeš*" (Gen 2:7). From the beginning, humans are given the vegetation of the earth to eat (Gen 1:29, P; 2:16, J). Later, after the Flood, the Noahites are permitted to eat animal flesh, but not the blood (Gen 9:3). Still later, detailed and extensive sets of regulations are given concerning the foods that may or may not be eaten (e.g., Leviticus 11; Deuteronomy 14). Whether these well-known food laws are motivated by a desire to avoid Canaanite cult practices (*IDB* 1: 641) or by a kind of logic about "natural" and "unnatural" animals (Douglas 1966; Soler 1979), the theological implications are clear: God is the Power who provides food for human life.

Certain foods are not intended for use. Traces of food taboos are found elsewhere in the ancient Near East, especially in Egypt. For example, a text which first appears on coffins in the Middle Kingdom tells "how the pig became an abomination to the Gods, as well as their followers, for Horus' sake" (*ANET,* 10).

God's beneficence in providing food is not limited to humans alone. Psalm 104, for example, powerfully celebrates God's gift of food and drink to all living creatures, whether herbivores such as cattle (v 14), or carnivorous predators such as lions (vv 20–23). As in Egyptian and other literatures, this divine provision of food is made through the regular orders of nature (see the famous Egyptian "Hymn to the Aton," *ANET,* 369–71). Only Israel, however, celebrates God's supply of food through history as well as through the operations of nature. Indeed, Yahweh's provision of food to Israel appears as a major theme in two segments of the basic sacred-historical recital, namely the Wilderness Wandering and the Conquest.

Far from romanticizing the wilderness of the Sinai peninsula and the south and east borders of Canaan, the ancient Hebrew hated and feared this barren, empty land (Jer 2:6; Davies 1974: 75–90; *IDBSup,* 946–49). This only serves to underscore the fact that Yahweh, through pure miracle, sustained Israel's life in a place bereft of any normal supplies of food and water. Yahweh effected this miraculous sustenance of his people in the face of their frequent rebellion and grumbling, through the provision of manna and quails from the sky and water from the rock (Exodus 16; Ps 105:40–41; Neh 9:15). Deuteronomy finds in the mysterious manna a lesson on divine sovereignty and mankind's humble dependence: "man does not live on bread alone, … man lives on everything that proceeds out of the mouth of the Lord" (Deut 8:3).

The Conquest traditions shift to a sterner depiction of Yahweh as a warrior for his people, but with the same goal—the provision of food. The Promised Land into which Joshua leads the tribes of Israel is

described again and again in terms of its fertile potential for food production (e.g., Deut 8:7–10). Other texts develop the theme of food supply in different directions. "I destroyed his fruit above and his roots beneath" (Amos 2:9, referring to the Amorites). Psalm 80 speaks of Israel as a "vine out of Egypt," planted by God after he "cleared the ground for it." Isaiah develops this vineyard metaphor even further (chap. 5), while Jeremiah represents Yahweh himself as the people's inexhaustible source of water—a source rejected by the people, who hew out broken cisterns "that can hold no water" (Jer 2:13).

The result of apostasy, Deuteronomy and the prophets threaten, will be the loss of land and food alike, so that Israel itself will be "consumed off the land" (Deut 28:21). Nature will turn against an erring people: "the heavens over your head be brass, and the earth under you shall be iron" (Deut 28:23). Finally, starvation will set in and Israel will be deprived of its beautiful land by enemy conquest (Jer 28:53–57).

With the hold on food and on life itself so dependent on a relationship to God, it is understandable that the rabbis of later Judaism prescribed a blessing thanking God for every kind of food. "A person should not taste anything," they taught, "until he says a blessing. For it is said, 'The earth is the Lord's and all that it holds.' One who benefits from this world without a blessing performs a sacrilege" (*t. Ber.* 4:1; Bokser 1981).

c. Metaphorical Eating and Drinking. Humans share the earth with a multitude of other creatures and forces which unremittingly pursue their own appetites, often at human expense (*TDOT* 1:236–46). Fire eats houses, cities, and fortresses (Num 21:28; Amos 1:4, 7, 10, 12). Cold and heat eat people (Gen 21:40). Invading armies eat up territory (Isa 1:7). In war, the sword eats first one soldier and then another (2 Sam 11:25). Death is hungry too, and its hunger is never satisfied, nor is the hunger of the barren womb, earth, and fire (Prov 21:15–16). Even famine is said to "eat," as if it were a force that gets to the food before people do (Ezek 7:15).

No Bible translation can succeed in conveying the prevalence of "eating" and "drinking" in the Hebrew. After all, the semantic range of the words is much broader in Hebrew than in English. As a result, translators must constantly employ milder or more oblique words such as "use," "burn," "consume," and "devour." The same happens in translations of Akkadian texts, which use the Akkadian cognate *akālu* to describe all kinds of destructive and consumptive activities, especially those of fire and warfare. Here as in the biblical translations, however, some of the nuance of the original text is lost.

With *šth* and *šqh,* "drink" and "give drink," we find much the same range of metaphorical meanings in the Bible and much the same problem for translators. Just as the sword eats, it also drinks blood until it is sated (Jer 46:10). The thirsty earth drinks water provided by God (Deut 11:11; Gen 2:6). Trees drink water from the earth (Ezek 31:14). A person not only drinks wine and water, but also "drinks" iniquity, derision, and violence (Job 15:16; 34:7; Prov 4:17).

In all these various metaphorical usages there are certain threads of continuity. In addition to their literal meanings of ingesting solids and liquids, "eat" and "drink" mean "to assimilate," "to internalize," "to make a part of oneself." This is what is meant when Jeremiah says he "ate" the word of Yahweh when it came to him (Jer 15:16; cf. Ezek 31:1–3). Similarly, a wicked person can internalize evil, making it habitual (Job 15:16; Prov 4:17), while a psalmist can express people's daily diet of pain and grief as being given "tears to drink" and "the bread of tears" to eat (Ps 80:5).

Secondly, "eat" can mean "use," "enjoy the use of," and even "enjoy" (Gen 3:17; Eccl 5:10). Thirdly, since "use" can imply "use up," *ʾkl* can also mean "to destroy," "lay waste," as by fire, pestilence, famine, and especially warfare. All of these meanings are paralleled in Akkadian and Ugaritic.

What still strikes the modern reader as odd is that no distinction is made between animate and inanimate forces. Not only do people and animals eat and drink, but so do things and abstractions. This suggests that there may be some truth to Johannes Pedersen's observation that the Hebrews did not firmly distinguish between living creatures and "lifeless" nature. Everything which has its own special peculiarities and faculties is thought of as "living," whether a stone or the earth itself (*PI* 1: 155). And all of these other creatures compete with humans in consuming.

2. Relation to Communal Bonding. The act of eating together implies a relationship of closeness and trust (Ps 41:9). Conversely, people who do not wish to be intimately related do not eat together (Gen 43:32). The social bonding function of eating together, which is widespread if not universal in human cultures, probably originates in the shared meals of families, or even more elementally in the experience of being suckled by one's mother. After infancy, the image of the father as food provider complements the mother-child imagery (cf. Ps 128:2–3).

a. Establishment of Human Community. The Bible depicts families and extended kin groups eating and drinking together on both humble and festive occasions (Ps 128:2–3; Job 1:4–5, 13, 18). Other groups also eat together, thus binding themselves into a quasi-family. This is the practice of the prophets encountered by Elisha (2 Kings 4) and, for that matter, it is also the practice of the despised "prophets of Baal," who "eat at Jezebel's table" (1 Kgs 18:19). To absent oneself from a family meal is to communicate feelings of alienation and anger (1 Sam 20:34).

The strong image of trust and solidarity which is projected by the family meal is subject, like hunger itself, to exploitation. This warping of family unity is part of the irony of Jacob's provision of food to his famished brother and his aged father. Even more strongly do Joseph's brothers make a mockery of family solidarity by callously eating together after throwing Joseph into a nearby pit (Gen 38:23–25). The re-created unity of the family is symbolized by the brothers' eating and drinking with Joseph in Egypt (Gen 43:32–34).

The festal eating and drinking at the banquet that accompanied a wedding was a major extension of the family meal. The bride and her attendants went in a procession to meet a similar procession of the groom and his friends, both accompanied by music (1 Macc 9:39; Jer 7:34). From there the joint procession moved to a house, usually the groom's, where a banquet was held with much merriment, to the accompaniment of more music. One marriage feast is described as lasting for seven days (Judg 14:12), but Tobias's feast lasted for fourteen (Tob 8:20; *IDB* 3: 278–87).

At the other end of the emotional spectrum, normal eating patterns were disrupted by a death in the family. Family members often fasted for a day or more after a death (2 Sam 1:12; 12:20–21; 1 Sam 1:13). Food was not prepared in the deceased person's house for about a week, during which time friends and neighbors brought "the bread of mourning" and "the cup of consolation" (Jer 16:7; Ezek 24:17, 22; *AncIsr,* 59–60). It was no small part of Jeremiah's lonely suffering as a prophet that he was allowed to share neither in the joys of marriage and family life, nor even in the meals prepared for mourners (Jer 16:1, 5).

Even after death and burial, the provision and sharing of food with family members was continued by means of funerary offerings. Archaeological excavations show that the Israelites for a time continued the Canaanite custom of placing food in the tomb at burial, and even as late a writing as Tobit includes the counsel to lavish bread and wine on the tomb of the righteous (Tob 4:17; *AncIsr,* 60).

In Akkadian, the expression for "host" is "one who gives salt and bread" (*CAD* 1/1: 245). Biblical texts place a similar emphasis on eating together as basic to the guest-host relationship; righteous Israelites even extend the solidarity of family meal to outsiders. The inclusion of strangers in a family meal is idyllically depicted in the narrative of Genesis 18, where Abraham and Sarah entertain the angels of Yahweh, and in Genesis 24, where Isaac's servant is treated with utmost kindness by Rebekah's family. Even the unfortunate Lot extends the prescribed hospitality to his visitors (Gen 19:1–2; Alexander 1985). The brutal assaults on travelers in the parallel narratives of Genesis 18–19 and Judges 19 show that such provision of hospitality was badly needed by people who traveled outside the territory of their clans or tribes; the sharing of food embraced these strangers in the solidarity and mutual protectiveness of the family circle.

Eating could also be used deliberately and ritualistically to seal a treaty or COVENANT. Some scholars even propose that the Hebrew *bĕrît*, "covenant," derives from the rare verb *bārâ,* "to eat" (*TDOT* 2: 253–54). The Hebrew Bible uses the word *bĕrît* to describe solemn mutual oaths or contracts between human individuals or groups, and also in reference to the covenants between God and his people. Four major texts describe covenants between people in which meals are eaten together as part of the ritual which

sealed their relationship: Gen 26:28–31 (Isaac and Abimelech); 31:51–54 (Jacob and Laban); Exod 18:12 (Moses and Jethro); and Josh 9:3–27 (Israel and the men of Gibeon). The implication seems to be that the covenant partners will now regard each other as "family" (McCarthy 1972: 30). At the same time a sacred dimension is added by the swearing of solemn oaths (Gen 26:31; 31:53; Josh 9:20), and even by the offering of sacrifice (Exod 18:12; Gen 31:54). Exodus 24:9–11 describes a similar series of events in the ceremony which ratifies the Sinai covenant between God and Israel. Here the solemn, awe-filled joy of a meal shared in the very presence of God seems to open up a new avenue of communion between God and man (Childs *Exodus* OTL, 507).

b. Celebration and Renewal of Communion with God. Closely related to the family and covenant meals were the meals which were eaten in connection with fixed religious observances. Major examples of such cultic meals are the yearly Passover supper and the meals associated with sacrifices, especially the *šĕlāmîm* or "communion sacrifices." Only a narrow line divides these cultic meals from the festal family meals, for Israel is, after all, Yahweh's *mišpāḥâ,* his "family" (Amos 3:1).

As with other ancient peoples, practically all ritual offerings and sacrifices of ancient Israel were foodstuffs (the only exception was the incense offering, Exod 31:1–10). Did these offerings of food and drink represent meals given for Yahweh's sustenance? Here Israel decisively parted company with the neighboring cultures of Canaan and Mesopotamia, where the mythological texts are full of descriptions of gods banqueting on priestly offerings (*ANET,* 69; Pope 1972). In Israel's scriptures Yahweh himself is never depicted as eating or drinking (*AncIsr,* 449–50); he is not fed from the sacrificial offerings (Ps 50:12–13; Schmidt 1983: 127–32). On the contrary, it is Yahweh who feeds his family at his table in the wilderness (Ps 78:19) and in the Temple (Ps 23:5).

The joyful banqueting of ordinary Israelites on occasions of sacrifice is depicted in 1 Samuel 2, where Elkanah distributes portions of meat to his family at Shiloh. On such occasions, families drank enough wine that it seemed reasonable for Eli to suspect that Hannah was drunk (1 Sam 2:14–15). In a narrative from the stories of Saul and Samuel, the prophet Samuel presides over a festal meal following a sacrifice (1 Sam 9:12–13). Saul is welcomed by Samuel and, in accordance with the rules of hospitality, is offered an especially fine piece of meat and later given lodging for the night (1 Sam 9:22–26).

One type of sacrifice, the *šelem,* was a "peace offering" (RSV) or a "communion sacrifice" (JB). Although scholars are no longer inclined to emphasize the etymological association of *šelem* with words implying "covenant," "peace," or "communion," there is little doubt that the *šelem,* even more than other sacrifices, emphasized feelings of brotherhood through commensality as the participants solemnly ate and drank "before Yahweh" (Deut 27:7; *IDB* 4:147–59). The *šĕlāmîm* are prescribed on occasions of thanksgiving and fulfillment of a vow, and as freewill offerings (Lev 8:11–16). The thematic link between all of these occasions for offering sacrifice is rejoicing (Deut 27:7; *IDBSup,* 763–71; see SACRIFICE AND SACRIFICIAL OFFERINGS).

Most deeply and permanently ingrained in Hebrew and Jewish custom throughout the ages, though, has been the annual *sēder* or Passover meal. In this meal many of the meanings of eating and drinking in ancient Israel come together in one complex experience. The Passover meal is at the same time an offering or sacrifice of food to God (Exod 12:2–7); a celebration of God's deliverance of his people from Egyptian bondage (Exod 12:27, 40–42); a harvest festival celebrating the first fruits of the grain harvest (Lev 23:1–4), and indeed a celebration of the whole gift of the land of Canaan to Israel (Deut 16:9–10; Exod 13:3–10); the meal also served to confirm familial and community solidarity not only with contemporaries, but with every future generation (Exod 12:43–49; 13:8–10). Participation in the meal was tantamount to participation in the great Exodus event of redemption, for the Passover supper takes on a nearly sacramental significance (in addition to the Old Testament texts, see *m. Pesaḥ* 10:5; *IDB* 3: 663–68).

c. Symbolic of End-time Redemption. The joy of the redeemed in the end-time experience of redemption is often symbolized, especially in intertestamental and New Testament literature, as a great banquet (Jeremias 1958: 59–65; Smith 1987). Even in the earlier biblical literature, however, the end time is presented as an era of miraculously high agricultural production (Amos 9:11; Hos 2:21–23; Ezek 47:12;

Joel 4:18—Eng 3:18). All of these passages build on the general importance of food as a symbol of security and health, and specifically on the important role of food in Israel's Wilderness and Conquest traditions.

These same motifs undergo baroque elaborations in postexilic depictions of the eschatological feasting of the redeemed at Yahweh's banquet table. The only canonical text describing this banquet is found in the Isaianic Apocalypse, Isaiah 24–27 (Isa 25:6–8). A number of pseudepigraphic texts elaborate upon this description (e.g. *1 En.* 62:14; *4 Ezra* 6:49–52). The Syriac Apocalypse of Baruch pictures the redeemed community feasting on the bodies of Behemoth and Leviathan and on the fruit of vines and trees which "shall yield ten thousandfold." This same apocalyptic tradition provides three different diets for the members of the Messianic kingdom: flesh, fruit, and manna. The flesh suggests the food of Israel's settled life after the conquest; the manna comes from the wilderness traditions; and the fruit is the diet of Adam and Eve in paradise. Thus the major epochs in the sacred history are made present, each through its characteristic food.

When the eschatological banquet takes the shape of the Messianic banquet in these late traditions, the emphasis shifts away from the prodigious quantities and qualities of the food. In place of the food, the texts mention either the protocol of the banquet, as in the Qumran scrolls (1 QS 6:4–6; 1 QSa 2:11–22; Cross 1961: 61–67) the simple fact of fellowship with the Messiah, or the honor and status accorded those who share in the consumption.

These scenes of eschatological dining complete the symbolic journeys whose trajectories began in Israel's most ancient scriptures. In the end time, in a perfect way never quite experienced in this world, food and drink represent fellowship with other men and women, communion with God through covenant and cult, and the gifts of God to Israel and to all mankind through history and through nature. In the time of God's final victory, the texts affirm, the life force itself will be eternally nourished as the plenty and joy of Eden are restored. The way to the Tree of Life, lost through a primal meal in the Garden, will no longer be barred to a hungering human race.

ALAN W. JENKS

EBAL (PERSON) [Heb *ʿêbāl* (עֵיבָל)]. A clan name which appears in the genealogical clan list of Seir the Horite in Gen 36:23 and in the matching genealogy in 1 Chr 1:40. This person is described as the third of five sons of the clan chief SHOBAL, and is thus a grandson of Seir. These elaborate genealogical lists may simply reflect the tribal alliances or territories in the region of Edom rather than actual blood kinship.

VICTOR H. MATTHEWS

EBAL, MOUNT (PLACE) [Heb *har ʿêbāl* (הַר עֵיבָל)]. A large mountain located just N of Shechem in the central Samaria mountains, often paired in the Bible with Mt. Gerizim immediately S of Shechem. One of the highest peaks in the area, Mt. Ebal descends to the E in four large steps, which continue to be cultivated today. In the days of Joshua, Mt. Ebal was the location of a major Israelite ceremony associated with the stone inscription of the Mosaic law, the building of an altar of unhewn stones, sacrifices, and a special liturgy of blessing and cursing (Josh 8:30–35; cf. Deut 11:26–32; 27:1–26).

Although the biblical passages attesting to the Mt. Ebal ceremony are clearly Deuteronomistic (and therefore late), their reference to an important ceremony outside Jerusalem and in the heart of N territory is in sharp contrast with the so-called "main theme" of the Deuteronomistic historian: namely, the centralization of the cult in Jerusalem. Thus, many scholars assume that the historical witness of these texts is generally authentic (see Soggin *Joshua* OTL, 241). This assumption has been reinforced by the April 1980 discovery of an early Iron Age site, apparently cultic, on the S part of one of the steps of the mountain.

This previously unknown site, known as el-Burnat, was discovered during a survey of the hill country of Manasseh begun in 1978. Actual excavations began in 1982, and six seasons of excavations were conducted.

A. Stratigraphy and Chronology

The two strata recognized at Mt. Ebal (2 and 1, with subdivision for 1A and 1B) belong to the earliest part of Iron Age I in the central hill country of Canaan (B. Mazar 1981; A. Mazar 1981: 31–36; Finkelstein 1986; Stager 1981; 1985; Zertal 1986; and contra Ahlstrom 1984: 171–73).

Both strata were short-lived, with no discernible evidence of destruction or violent action. Based upon two Egyptianized scarabs, a seal, and the pottery that had been discovered, stratum 2 apparently was founded in the middle of the 13th century B.C.E. It is suggested that stratum 2 can be dated ca. 1240–1200 B.C.E., while stratum 1 can be dated ca. 1200–1130 B.C.E.

B. Excavation Results

1. The Enclosures. The site consists of a large, double enclosure, defined by a stone wall. See Fig. EBA.01. The outer enclosure (ca. 250 m × 52 m), which is devoid of any architectural remains, constitutes an elongated kite with its tip to the S, where the entrance probably was located. The surrounding temenos wall was built in a single phase (str. 1B) and is of an unequal thickness, probably due to subsequent stone piling when nearby fields were cleared.

The inner enclosure (ca. 110 m × 35 m) is located at the higher, N part of the outer one. It consists of two parts—the N part (area C) and the S part (areas A and B). The S part contains the only architectural feature at the site. The W and S borders of the inner enclosure are founded upon a low rocky ledge, in the middle of which is an entrance which connects the two enclosures.

The enclosure wall was investigated in area C and was found to be approx. 0.9 m high. It was perhaps built as a barrier to prevent unauthorized passage while still allowing observation of the activities inside.

2. Area A: The Architectural Complex. This complex belongs to stratum 1B and consists of five elements.

The main building is a large, rectangular structure (ca. 9 m × 7 m) built of unhewn stones standing 3.27 m above bedrock. See Fig. EBA.02. Its corners are oriented toward the four cardinal points within an accuracy of 1 degree. The structure's walls are 1.4 m thick. The inner space is subdivided by two inner walls: a straight wall and an L-shaped wall, with an opening between them. The inner walls rest upon the earlier remains of stratum 2.

The remaining space was deliberately filled with four distinct layers of fill (layers A–D), consisting of earth, stones, ashes, animal bones, potsherds, or combinations of each. Layers A and C were pure ash with 962 animal bones which were burned and scorched. Layers B and D were of stones and earth, while the upper one (D) was probably meant to seal the fill and provide an upper floor for the structure. The fill seems to be the result of a single activity, as inferred from the well-stratified layers and the homogeneity of the pottery. The fact that the pottery collected from the fill was unrestorable implies that the fill was collected elsewhere and brought to the structure, rather than resulting from a second-floor collapse into a hypothetical cellar.

The main structure contains neither a floor nor an entrance, but was built as a high platform containing a special fill. Its construction was part of the new architectural scheme of the site in stratum 1B. It seems that it was filled with the remains of the cult of the preceding stage (str. 2).

The "surround" is a low stone wall abutting the outside of the main building. See Fig. EBA.03. Its stratigraphic position proves that it was built in stratum 1B as a single unit. The NW and the SE surrounds are 2 m wide, while the SW surround measures 0.6 m. A surround does not appear on the NE side.

The "ramps" (a main ramp and a secondary ramp) slope upwards from the SW to the main structure and bisect the courtyard. The main ramp leads to the center of the main structure and is 1.2 m wide, with an ascent slope of 22 degrees. The secondary ramp is 0.6 wide and parallels the main ramp abutting it on its N side, but ascends only to the level of the NW surround.

The courtyards are open, square, stone-paved architectural units attached to the main structure. They differ slightly from each other in their plan and inside them were found eleven stone-built installations containing either ash and animal bones, or clay vessels *in situ.*

A total of 70–80 installations of various shapes and dimensions were discovered around the main building. Roughly half of them contained either whole or partial ceramic vessels; some were votive vessels, two forms of which are unique to Mt. Ebal (a sharp-based juglet and a tiny carinated bowl). The installations were arranged in two layers, probably corresponding to the strata of the site. These installations also yielded an Egyptian scarab and a golden earring.

The custom of bringing pottery vessels and placing them as offerings around a ritual structure has deep roots in Near Eastern traditions. Collections of such vessels have been found at the MB-LB cult-place at Nahariya (Dothan 1956: 19), at the "long temple" of Hazor (Ottoson 1980: 60), at the "Obelisk temple" and the "champ des offrandes" at Byblos (Dunand 1950: pl. XCI:2; XCII:14122–23), at Athienou in Cyprus (Dothan 1984: 91–92), and at other sites.

Beneath the main complex of stratum 1B, were the remains of stratum 2: mainly a hard-packed dirt surface with a round, 2m-in-diameter, stone-built structure (L94). This structure was filled with black ash and animal bones. The floor and structure were presumably part of an earlier complex which undoubtedly bore a cultic character. The builders of the later large structure apparently considered the earlier round structure important, since they made it the exact geometrical center of the new building.

A stratigraphic section in the S courtyard unearthed a wide layer of ash and animal bones under the stone paving of the later courtyard. It seems that before the erection of the stratum 1B structure, cultic activities were conducted during stratum 2, and remains of these were likely used to fill the new structure.

The final phase, stratum 1A, appears to have been a deliberate burial of the site with stones. Evidence of this activity was found all over the site. The protection of sacred places by burying them is a well-known phenomenon in the Near East, including Israel (Ussishkin 1970).

3. Area B: The Domestic Building and Courtyard. NW of the main building the slope consists of wide rocky steps. A wall of big boulders was erected along the edge of the upper step when the site was founded in the second half of the 13th century B.C.E. (str. 2). This wall became a retaining wall for several elongated rooms where perhaps the custodians of the site lived.

In the transition into stratum 1, this building was filled to the top of the rockstep, creating a wide, paved courtyard. On the new courtyard were some installations, together with bones and pottery. Otherwise no other architecture existed apart from the main structure in area A.

A wide entrance gave access from the outer to the inner enclosure. It was located at the only natural opening in the rocky ledge W of the inner enclosure. Because of its width (7.5 m), the stone-paved three-stepped entrance may be inferred to have been a ceremonial, processional entrance. This contrasts with the gates at other Iron Age sites, which always had restricted access to help in defending the site.

4. Analysis of the Finds. The pottery represents a well-dated inventory of the early Israelite settlement. Three percent of the pottery in stratum 2 was of the LB tradition, containing carinated bowls, decorated juglets, etc. This stage apparently represents the interrelationship between Israelites and Canaanites during the 13th century B.C.E. The rest of the pottery was typical "Israelite," resembling the inventory of Giloh, ʿIzbet Ṣarṭah, Raddanah, Shiloh, Israelite ʿAi, Taʿanach, etc. It differs only slightly from these by the appearance of some special types, typifying the N hill country. These are a thick-rimmed bowl ("Manassite" bowl), trihandled jugs and jars, etc. To this must be added the two forms of votive vessels, unique to Ebal. The collared-rim jar represents nearly one third of the finds, while cooking-pots are less than the average from other sites (15–20 percent in domestic sites like Giloh and ʿIzbet Ṣarṭah as opposed to 5 percent at Mt. Ebal).

A special phenomenon is the decoration of the handles with designs of small indentations and incisions (Zertal 1986–87). It is the only kind of decoration known for the period, and it appears in many of the earlier sites of Iron Age I in Manasseh. This decoration appears to be geographically typical of Manasseh and limited to the early part of the settlement (13–12th centuries B.C.E.), and perhaps can be used to indicate the movement of the Israelites into Manasseh.

The nearly 3,000 bones analyzed thus far provide one of the largest samples ever studied in Israel. Apart from some small animals (hedgehogs, rats, wild rabbit, porcupine, etc.), which presumably died on the spot after the abandonment of the site, the remains of four species of large mammals were unearthed: sheep, goats, domesticated cattle, and fallow deer *(Dama dama mesopotamica).* Most of the bones were concentrated in the main building. Some were scorched and burned, probably indicating sacrifice (see analysis in Horowitz 1986–87).

The faunal data differ in many points from the typical finds at other Iron Age sites. The range of animals represented at Mt. Ebal is very narrow, while at other sites one usually finds the donkey and the dog, which were necessary animals for the Iron Age economy. The pig, which shares the same surroundings as the fallow deer and which is found at some of the other sites, is lacking here. The Mt. Ebal inventory represents only edible animals. The percentage of scorched and burned material is higher than is normally found, and this was concentrated in and around the main building. These points indicate that Ebal was a cultic site where animals were sacrificed and eaten.

Two Egyptian (or Egyptianized) scarabs were found in the site; both are rare and well dated (Brandl 1986–87) and belong to stratum 2. They have been dated by parallels from Egypt, Cyprus, and Israel to the second half of the 13th century B.C.E. or the last part of the reign of Rameses II. Since they show the same date, it is suggested that they can be used as dating material, rather than as a *terminus post quem* only. If so, we can fix for the first time an objective chronology for the Israelite settlement.

The stone seal found in the fill has a geometrical design and yields the same date of the second half of the 13th century B.C.E.

C. Interpretation of the Site

1. Archaeological Features. A comparison of Mt. Ebal with other contemporary sites indicates that it was a cultic site. Domestic and food-producing sites are often defined by four characteristics: a wide range of domesticated animals, the presence of sickle blades for harvest, the existence of bins to store

grains, and the presence of food-processing installations. Apart from the food-producing installations, none of the above have been found at Mt. Ebal. However, the combined presence of the bone finds, the fill, the general absence of domestic architecture, the special location, the installations, the entrance, and the temenos walls indicate a site for ritual ceremonies. Nevertheless, some have still compared the main building to storehouses, towers, or dwelling-houses (cf. Kempenski 1986; Coogan 1987; Shanks 1988).

Our only parallels are from literary sources. Special attention must be paid to the nonfunctional architectural features—the surround and the double ramp—to explain the site's special character.

Four Jewish sources from the Second Temple period (early Roman period) provide descriptions of a large burnt-offerings altar. This structure stood in the courtyard of the Temple at Jerusalem. Its description is given in the Mishnah (*Mid.* 3:1), twice by Josephus (*JW* 5.222; *AgAp* 198.1), and in the *Temple Scroll,* recently published by Yadin (1983: 239–41). These sources describe a large, square building, reached by a ramp. The altar is surrounded by a surround on three sides, with access via a secondary ramp joined to the main one. A striking similarity exists between these descriptions and the find at Mt. Ebal; the nonfunctional parts at the Mt. Ebal site are well explained by those sources. Albright (1920), analyzing the descriptions of the future altar in Ezekiel 43, suggested that it was built according to a Mesopotamian model—the ziggurat, which consists of a stepped building with a ramp, resembling the Mt. Ebal remains.

It is suggested, therefore, that the structure on Mt. Ebal is a large burnt-offerings altar, built in the beginning of stratum 1B, ca. 1200 B.C.E. This model, probably taken from Mesopotamian origin, was brought by the Israelites to Canaan. No other such structures have been found in the Canaanite religious world.

2. Historical and Sociological Issues. The discovery at Mt. Ebal represents one of the earliest stages of the Israelite settlement in the hill country. The existence of a cultic center implies social organization. The size of the enclosure and the main building, together with the quantity of the pottery and bones, may indicate a tribal or multitribal society. Since the site was where food and water were consumed and not produced, these were probably brought there, gathered, and distributed. Such organization requires some leadership—probably a priesthood.

The transition from stratum 2 to stratum 1 is a turning point from a modest cultic site (A. Mazar 1982) to a large central one, probably serving a large population. This transition could have been the result of some kind of social reorganization and centralized leadership.

Mt. Ebal appears to represent a different social element than the autochthonic one, bearing a basically imported culture. The architecture, the location of the site vis à vis Shechem, and to an extent the pottery are all foreign to the existing Canaanite civilization.

3. The Biblical Tradition. The presence of a ritual place on Mt. Ebal is mentioned in two biblical sources (Deut 27; Josh 8:30–35). These describe a ceremony requiring the presence of all the people of Israel. The ceremony includes inscribing the Mosaic law on stones, erecting an altar of unhewn stones, sacrifices, and special pronouncements of blessing and cursing.

In spite of the Deuteronomistic nature of the texts many scholars accept the basic authenticity of the event, especially such a significant event which is described outside Jerusalem and in the heart of the House of Joseph. On this basis, the tradition of Mt. Ebal is considered ancient and historical by Steuernagel (1900: 96), Alt (1966: 125–26), Noth (1966: 141–42), Mazar (B. Mazar 1974: 149), etc.

If there is a historical basis for the biblical tradition, an ensuing question is if there is a connection between the biblical tradition and the site at Ebal. The site is the only one from the Early Iron I period on the mountain; it agrees with the biblical traditions by its date, its location, and the general character of the remains. Furthermore, it appears to connect with a new social identity—the settling Israelites. It therefore appears that the site on Mt. Ebal is connected to the biblical tradition and that a central ceremony was performed on Mt. Ebal. It is also suggested that the site was the first multitribal cultic center, preceding Shiloh. The possible correlation between the abandonment of Ebal and the foundation of Shiloh (mid-12th century B.C.E.) may be interpreted as the movement of the national and religious focus of the Israelites from the north to the south, or from Manasseh to Ephraim.

ADAM ZERTAL

EBED (PERSON) [Heb *ʿebed* (עֶבֶד)]. The name of two individuals in the Hebrew Bible.

1. The ancestor of GAAL (Judg 9:26, 28, 30, 31, 35). Gaal led the men of Shechem in an unsuccessful revolt against Abimelech. The MT renders the name Gaal ben-Ebed, although some Hebrew mss contain the variant spelling Eber. It has been suggested that "ben-Ebed" (lit. "son of a slave") is a perversion of ben-Obed on the supposition that Ebed is not a usual proper name (Boling *Judges* AB, 176; Burney 1970: 278); but at least one other OT character was named Ebed (see no. 2 below). The LXX calls him *Abed* (var. *Abel, Sabet, Iobel*). The latter variant, found in Codex Vaticanus, has prompted discussion over whether Ebed was Canaanite or Israelite. If it is assumed that Vaticanus preserves the original reading, then Gaal's ancestor seems to have had the old Canaanite name Jobel or, less likely, an Israelite name which means "Yahweh is Baal (lord)." Gaal's nationality must be born out by the context of Judges 9, as demonstrated by Moore (*Judges* ICC, 254–56). Another possibility is that Ebed and Jobel are two names from the genealogy of Gaal ben Ebed ben Jobel (Boling *Judges* AB, 176).

2. A descendant of Adin and son of Jonathan (LXX *Obeth,* var. *Obe, Oben*) who was the family head of some returnees from exile under Ezra (Ezra 8:6; 1 Esdr 8:32 AV, NEB Obeth). Codex Vaticanus (1 Esdr 8:32) reads simply Ben-Jonathan. Fifty men accompanied Ebed, although according to 1 Esdr 8:32 the number was 250. Other descendants of Adin had returned earlier from exile under Zerubbabel (Ezra 2:15).

GARY S. SHOGREN

EBED-MELECH (PERSON) [Heb *ʿebed melek* (עֶבֶד מֶלֶךְ)]. An Ethiopian eunuch prominent in the service of the palace of Zedekiah and who provided timely aid to the prophet Jeremiah during his incarceration (Jer 38:7–13; 39:15–18).

Four components inhere with the personal life of this remarkable individual. First, he was an Ethiopian (Heb *kûšî*). Whether he was purchased as a slave or born in a Judean servile family or naturalized as a resident alien in Judah is not provided. It was not an uncommon practice to engage foreigners for royal service, particularly for the domestic chores. Secondly, the name Ebed-melech was clearly not his original name since it is Hebrew. It appears likely that it was bestowed upon him when he entered or rose to royal recognition in the kingly service. The name is neutral: "servant of [the] king"; the personal name is missing. Thirdly, he is described as a eunuch (Heb *sārîs*), a term which may be taken literally—antiquity did not attach so much stigmatization to such individuals as is common in modern parlance—or, it may mean a "court official." The usage of the term provides some foundation for either interpretation. And, finally, his responsibility that he exercised at court was extremely important. He was well informed of the inner workings of the palace, the political status of the foreign policy, the intrigues of the powerful nobles, and the injustices perpetrated against Jeremiah and minor groups by a regnant aristocracy. Amid the confusion of the bewildering times that tormented Zedekiah, he found in this loyal servant a refreshing confidence.

Some relationship to Jeremiah is presupposed by the text. When Ebed-melech discovered that Jeremiah had been consigned to the dungeon or cistern of Malchiah by the order of Zedekiah, who reluctantly acceded to the four powerful warlords of his court, he braved personal danger and appealed to the king as he sat in the Gate of Benjamin, no doubt administering the high court (Jer 38:1–6). Pleading the fatal consequences of such imprisonment to Jeremiah, he secured from the king a rescission of his former order and a new decree to transfer Jeremiah to confinement in the more livable court of the guard. One can only imagine the wrath he aroused from the prosecutors of Jeremiah, but one must applaud his selfless dedication to effect that amelioratory deed: to raise the prophet from the muddy cistern of Malchiah and to transport him to his new quarters.

This glaring invasion of a servant in the highest politics of the day and the glaring loss of face by the supreme war counselors earned for him the fear of stern reprisals. He seems to have become a marked man whose liquidation the anti-Babylonian aristocrats at court hotly pursued. Yet in all his fears there came to Jeremiah a divine oracle assuring Ebed-melech that he would never fall prey to his enemies, but would survive the coming disaster. Such was the kind gift of Yahweh in whom he had placed his trust. The didactic affirmation of the oracle indicates that faith in Yahweh is salvific though it involves a fight for the right, a concern for the oppressed, and a courage to dare (Jer 39:15–18).

EDWARD R. DALGLISH

EBENEZER (PLACE) [Heb *ʾeben hāʿēzer* (אֶבֶן הָעֵזֶר)]. The site of a battle with the Philistines in which the Ark was captured (1 Sam 4:1; 5:1). Ebenezer also figures in the story of a battle in which Israel defeated the Philistines under the leadership of Samuel. After this victory, Samuel erected a monument which he named "Ebenezer" (meaning literally "stone of help") commemorating the help which YHWH provided (1 Sam 7:12).

Many scholars feel that there are two Ebenezers, corresponding to the two battle narratives. Since Samuel erects the monument stone in 1 Sam 7:12 and names it Ebenezer after the battle of Ebenezer (1 Samuel 4) has already taken place, they reason that these must be two distinct places (see Cohen *IDB* 2: 5). In addition, the two battles are given different geographical locations: the battle in 1 Samuel 4 is near Aphek on the road leading from the coast towards Shiloh, and the one in 1 Samuel 7 is near Mizpah in the hill country N of Jerusalem (Driver *Samuel* ICC, 45).

Recently, however, excavations directed by M. Kochavi and supervised by I. Finkelstein were carried out at ʿIzbet Ṣarṭah (M.R. 146167) after its discovery in 1973 during survey work associated with excavations at Aphek (M.R. 143168; later called Antipatris, modern Ras el-Ein). Kochavi (1977) identifies this small settlement, 3 km E of Aphek, as the possible site of Ebenezer. Kochavi and Demsky (1978: 21) note, "As the nearest Israelite settlement on the fringe of the hill country facing Philistine Aphek in the Sharon plain, it is the best candidate for the Israelite staging area for the decisive battle with the Philistines." (For further discussion of this site see ʿIZBET ṢARṬA.)

Others who are less confident that the location of Ebenezer can be found point to the narrative and theological symmetry between the two battles (Garsiel 1985: 41–44) as evidence that these two scenes are meant to mirror each other as examples of Israel's fate being tied to its fidelity with YHWH. The repetition of the name Ebenezer, in this view, is part of this symmetrical arrangement. The use of Ebenezer in 1 Samuel 4 and 5 before the erection of the monument stone is an anachronism with many parallels in the OT; for instance, the mention of Bethel in Gen 12:8 before it is named by Jacob in Gen 28:19 (McCarter *1 Samuel* AB, 146). Hertzberg (*1 and 2 Samuel* OTL, 68–69) underlines this point with respect to the geography of Ebenezer when he observes that the problems posed in locating an "Ebenezer" based on these conflicting references were of little moment to the narrator, whose concerns were theological rather than historical.

JEFFRIES M. HAMILTON
JOHN F. KUTSKO

EBER (PERSON) [Heb *ʿēber* (עֵבֶר)]. **1.** A son of Shelah (Gen 11:14), and the father of Peleg (Gen 11:16), and Joktan (Gen 10:24–25). Eber lived a total of 464 years. Gen 10:21 designates Shem as the father (i.e., ancestor) of all the sons of Eber. The association of the name Eber with the name of Ebrium (*eb-rî-um*), a king of the 3d millennium B.C. Syrian city of Ebla (Matthiae 1976: 109; Pettinato 1976: 47), remains an unproven possibility (Archi 1979: 565; Loretz 1984: 190–92). The root of Eber, *ʿbr,* may appear as a verb in West Semitic ("to cross over") and Akkadian ("to cross over water"). The intention of the note in Gen 10:21 seems to be to relate Eber to the Hebrews, with which it shares the same root (Wenham *Genesis* WBC, 228). It is disputed whether this implies that the author of Genesis 10 considered both Eber's sons as well as all their descendants to be "sons of Eber" (Haran *WHJP* 2: 288 n. 35). The use of "Hebrew" in Genesis and throughout the rest of the Bible is a separate matter for consideration. Its relationship to Eber depends on how the name is intended in the context of Gen 10:21–29; as referring to a geographic region (cf. the Akkadian *eber nāri,* "beyond the river"; Gunkel *Genesis* HKAT 3/1, 80; Cazelles *POTT*: 22; Thompson 1974: 305–6, although he recognizes a possible exception for Eber), as referring to an ethnic group (Skinner *Genesis* ICC, 218–20; Malamat 1968: 166–67; Koch 1969: 39–40, 71–78; Loretz 1984: 183–90; on the *ʿapîru* and their relationship to Eber, cf. also Bottéro 1954 and Greenberg 1955), as referring only to a personal name in a genealogical list (Westermann *Genesis* BKAT, 700–1), or as referring to a sociopolitical group (Oded 1986: 19–22).

2. The seventh of seven kinsmen (or clans) dwelling in the territory of Gad in the area of Bashan and Gilead (1 Chr 5:13). Some Hebrew manuscripts read *ʿbd,* "servant," followed by LXX A, and other LXX manuscripts read *ōbēd,* LXX B, which reads *iōbēd.*

3. The first of three sons of Elpaal, a Benjaminite (1 Chr 8:12). Some Hebrew manuscripts and the LXX read *ʿbd,* "servant."

4. The second of eleven sons of Shashak, a Benjaminite (1 Chr 8:22). The LXX reads *ōbēd.*

5. At the time of Joiakim, the head of the priestly clan of Amok, who returned to Jerusalem from exile in Babylonia (Neh 12:20). A few Hebrew manuscripts and the LXX (*ōbēd*) read *ʿbd.*

RICHARD S. HESS

EBER (PLACE) [Heb *ʿēber* (עֵבֶר)]. Mentioned along with Asshur in the final prophecy of Balaam as a place afflicted by ships from Kittim (Num 24:24). The LXX, Syr, and Vg see here a reference to the "Hebrews," rather than to a specific place. Targum Onkelos reads *lʿbr prt* , "to Eber Perat," the area of N Mesopotamia. The oracle seems to refer to the Sea Peoples' invasion of the Levantine coast, ca. 1200 B.C. (Albright 1944: 226–31), although later sources find applications of the oracle in the invasions of Alexander the Great (1 Macc 1:1), of the Seleucids (*Ant* 13.6.7; Noth 1968: 194), and of the Romans (Dan 11:30 LXX). Eber in Num 24:24 may therefore be understood either as a general reference to the Israelites (through their eponymous ancestor mentioned in Gen 10:21–24; 11:14–17; Koch 1969: 75–78; de Vaulx, *Numbers* SoBi, 296–97; Wenham, *Numbers* TOTC, 182; Budd, *Numbers* WBC, 271) or, less likely, as a reference to N Syria as the region "beyond (*ʿbr*) the river (Euphrates)" (Gray, *Numbers* ICC, 379).

RICHARD S. HESS

EBEZ (PLACE) [Heb *ʾebeṣ* (אֶבֶץ)]. A town listed in the tribal territory of Issachar (Josh 19:20). The RSV and AV render the name Abez, transliterating the pausal form of the name. The name seems to be a cognate of the PN Ibzan (Heb *ʾibṣān;* Judg 12:8–10), and Boling (*Judges* AB, 215) associates the Heb root with the meaning "swift." The LXX^B reads *rebes* here, suggesting a Heb vorläge *rēbeṣ*, "resting place." The location of Ebez is unknown, although it has been suggested that it be identified with ʿAin el-Ḥbuṣ (or el-ʿAbuṣ), between Aulam and Sirin (*WDB*, 145).

EBIONITES. An early Christian sect known for its observance of some form of the Jewish law. Its members were regarded as heretical by the Church Fathers. The earliest undisputed use of the term Ebionites (usually *Ebiōnaioi* in Gk, *Ebionaei* or *Ebionitae* in Lat) appeared in the 2d century in the *Contra Haereses* of Irenaeus of Lyon, who recorded it as the name of a Christian group he considered heretical because they lived according to Jewish law. However, the term has an earlier history, having evolved into a sectarian name from the generic biblical Hebrew word *ʾebyônîm*, meaning "the poor." The significance of this earlier evolution has long been a subject of dispute.

The beginning of publication of the Qumran scrolls renewed an old debate on the question whether various NT references to "the poor" (*ptōchoi*) could help in retracing the history of the Ebionite heresy. The Qumran manuscripts include references to "the poor" which can be seen as semitechnical terms, midway between the generic biblical Hebrew use (e.g., in Psalms) and the use by Irenaeus. For example, in a commentary on Psalm 37, the Qumran writer describes his group as *ʿădat hā-ʾebyônîm*, "the congregation of the poor" (4QpPs37 III.10). Such references were noted by Teicher (1951), who proposed that the Qumran texts were written by Christian Ebionites; his proposal is emphatically rejected by most scholars, who find no evidence at all of Christianity at Qumran. At the other end of the spectrum, Keck (1965, 1966) essentially denies that Qumran, NT, and patristic references to "the poor" can help illuminate one another. The question as to whether the data from Qumran and the NT are useful for understanding Ebionite origins and history depends on what varieties of Jewish sectarianism and of early Christianity influenced the group.

Paul referred to certain early Christians in Jerusalem as "the poor" (Rom 15:26; Gal 2:10; Fitzmyer 1955). There is insufficient evidence to determine whether some of the Jewish law-observant Christians around James in Jerusalem designated themselves "the poor," though Jas 2:1–7, referring to the poor man

in the synagogue, suggests such a term would not have been offensive. What can be asserted on the basis of patristic literature is that the Ebionites associated themselves with early Christians who observed Jewish law. They rejected Paul's view of Jewish law (Irenaeus, *Haer.* I 26.2) and possibly encouraged the view that they were represented among the Jerusalem Christians who supposedly fled Jerusalem before 70 C.E. for Pella (as suggested by Epiphanius' account in *Haer.* 30.2).

All patristic accounts agree that Ebionites observed some version of Jewish law (including, e.g., circumcision). In addition, according to Irenaeus, Ebionites used only the Gospel of Matthew, venerated Jerusalem, and regarded Jesus' birth as natural (the patristic references are conveniently gathered in Kiljn and Reinink 1973). Tertullian repeats the complaints that Ebionites observed Jewish law and denied the Virgin Birth, regarding Jesus as merely a prophet, but adds that their founder was a person named Ebion *(Hebion),* presumably on the false assumption that all heresies can be traced to an eponymous founder. According to Hippolytus, Ebionites claimed that Jesus became Christ as a result of observing the law. Origen dismisses Ebionites as "poor in understanding" for insisting that Jesus was sent only to the Jews. By the 4th century, Eusebius, Epiphanius, and Jerome repeated familiar criticisms, but added some uncertainty as to which apocryphal gospels were used by Ebionites and other Jewish-Christian groups (see EBIONITES, GOSPEL OF THE); also, they allowed that some Ebionites may have accepted the Virgin Birth.

Epiphanius' long account of Ebionites (*Haer.* 30; see Koch 1976) assigns some portions of the pseudo-Clementine literature to them; this literature, which has a complex composition history (see CLEMENTINES, PSEUDO-), includes strongly dualistic theology, speaks of a reincarnated true prophet, and has Peter speak against Paul's view of law. Other innovations include vegetarianism and the rejection of portions of Hebrew scripture. Additionally, Epiphanius asserts that Ebionites had come under the influence of the revelation of Elchasai. See ELCHASAITES.

The Bible translator SYMMACHUS is occasionally mentioned as an Ebionite. His translation of Zech 9:9, for example, renders the characterization of the humble (Heb *ʿonî*) donkey-riding Messiah as *ptōchos,* poor. However, little is known of Symmachus, so this possible identification adds little to our knowledge of Ebionites.

Among possible allusions to Ebionites in Rabbinic literature, one of the more likely appears in *b. Šabb.* 116a, wherein rabbis debate whether to save books of the *minim* (heretics) in the case of fire. If one allows for a slight self-censoring spelling of the names, the rabbis consider books found in the house of Ebionites (*byʿbydn*) relatively more worth saving than books in the house of Nazarenes (see NAZARENES). In favor of this reading, it may be noted that the rabbis were more inclined to condemn Nazarenes, whereas Church writers were more inclined to condemn Ebionites.

Many questions remain concerning the evolution of the Ebionites and their relation to other Jewish-Christian groups. After the accounts in Epiphanius and Jerome, Ebionites fade from history.

STEPHEN GORANSON

EBIONITES, GOSPEL OF THE. The name given by scholars to a presumed Judaic-Christian gospel, now lost. The matter of these Judaic-Christian gospels, namely, the *Gospel of the Ebionites,* the *Gospel of the Hebrews,* and the *Gospel of the Nazoraeans* has been called the most irritating problem in the NT Apocrypha.

Confusion stems from the fact that the title "Gospel of the Ebionites" is never used by the Fathers. Rather, it is the creation of modern scholarship to reference a specific source cited by Epiphanius. He quotes from "The gospel which is called with them (viz. the Ebionites) according to Matthew which is not complete but falsified and distorted, they call it the Hebrew Gospel …" (*Haer.* 30.13.1). He further states that the Ebionites "also accept the gospel according to Matthew. For they too use only this like the followers of Cerinthus and Merinthus. They call it 'according to the Hebrews' which name is correct since Matthew is the only one in the NT who issued the gospel and the proclamation in Hebrew and with Hebrew letters" (30.3.7). Yet elsewhere, in the *Anacephalaiosis* (t. 2.30.2), a précis of the *Haer.* which may or may not be Epiphanian, it is said that the Ebionites "use the gospels (*euaggeliois*)."

We have other early reports concerning the Ebionites' choice of texts; these only further confuse the picture. Irenaeus (*Haer.* 1.26.2; cf. 3.11.7) states that "they use the Gospel according to Matthew only." Eusebius (*Hist. Eccl.* 3.27.4) says that they used "only the so-called Gospel according to the Hebrews and made small account of the rest." How these contradictory statements are to be resolved is unclear.

The Ebionites are described by the Fathers as law-abiding Jews, who rejected Paul. They apparently rejected the Virgin Birth, arguing that Jesus was the natural son of Mary and Joseph, and was adopted by God. Even after Christ descended on Jesus in the form of a dove at his baptism, Jesus remained simply a man. The Ebionites appear to have had an abhorrence of sacrifice; they may have used water in the Eucharist (on Ebionite beliefs, see Epiphanius, *Haer.* 30.2; Eusebius, *Hist. Eccl.* 3.27.1–6; Schoeps 1953; Klijn and Reinink 1973; EBIONITES).

The name Ebionite is correctly derived from the Hebrew *ʾbywnym*, which means "poor men" (Or. *princ.* 4.3.80). Tertullian is the first to derive it (incorrectly) from the purported founder of the sect, a certain man named "Ebion." The Fathers make word plays on the name "Ebionite," saying that it is an appropriate name, reflecting the "poverty" of the Ebionites' understanding of the "true" (from the Fathers' point of view) meaning of the Scriptures.

Epiphanius quotes the gospel used by the Ebionites a total of seven times. Most of his citations are of reasonable length, permitting us some insight into the nature of the document. It appears to have been harmonized, woven from traditions found in the Synoptic Gospels (Matthew, Mark, and Luke). Johannine parallels are not found. Because of these characteristics, which distinguish it from the other Judaic-Christian gospels quoted by the Fathers, scholarship appears justified in positing a distinct document and designating it the "Gospel of the Ebionites."

In connection with his remarks about the Ebionites' rejection of the Virgin Birth, Epiphanius quotes what he says is the beginning of their gospel; and indeed, it appears to omit the genealogies and Virgin Birth account, commencing, rather, with John the Baptist's mission. The opening story is similar to that in Mark, although harmonized from all three Synoptic Gospels.

It is difficult to determine which if any of the canonical gospels provides the framework for the *Gospel of the Ebionites.* Similarly, one is hard pressed to state the original language. Despite the statements of Epiphanius (*Haer.* 30.3.7), scholars have usually argued for Greek. This is because of a substitution in Frag. 2 (Vielhauer's numbering in *NTApocr* 1: 117–39, 153–58), which seems to have been elicited by the similarity of the words in Greek (so Dibelius): *egkris* (oil-baked cake) is substituted for the canonical *akris* (locust). A dissenting position, however, is that of Boismard, who detects two traditions in Epiphanius' quotations from the gospel used by the Ebionites. One is a later, more developed tradition, which is probably a Greek language original; the second is a much more primitive tradition and has a strong imprint of a Semitic language. It is this latter tradition which Boismard equates with the Hebrew (i.e., pre-Greek) recension of Matthew—the document described by Epiphanius.

The harmonized form of the *Gospel of the Ebionites* is noteworthy. Jerome reports that Theophilus of Antioch created a harmony of the Gospels (*Ep. ad Algasiam* [121] 6), and Eusebius *(Ep. Carp.)* tells of a synopsis of the gospels, created by Ammonius of Alexandria. Investigations into the gospel text of Justin show that he used a harmony which incorporated the Synoptics, but not John (Bellinzoni 1967: 140). The date of Justin's gospel text, its harmonized form, and its failure to incorporate John are all reminiscent of the Ebionite gospel. The relationship between Justin's gospel and the Ebionite gospel, if any, is unclear at

present. It is plain, however, that the genre was known, and Bertrand has argued that the harmonized *Gospel of the Ebionites* antedates the DIATESSARON of Tatian, which was composed about 170 C.E.

Frag. 1 (Vielhauer's numbering), which speaks of "Jesus … who invited *us*," led Lagrange (1922) and Waitz (1937) to equate the *Gospel of the Ebionites* with the *Gospel of the Twelve*, mentioned by Origen and Jerome. This seems both unnecessary and unlikely, as Klijn and Reinink (1973) have pointed out, for the same Fragment also speaks of "you, Matthew," which would infer that Matthew is the putative author.

WILLIAM L. PETERSEN

EBLA TEXTS. The texts discovered at Ebla (Tell Mardikh in NW Syria), which constitute the largest single find of 3d millennium B.C. cuneiform texts so far recovered anywhere in the Near East. Estimates of the number of texts have varied widely and have not always taken into account the distinctions made by the excavators in describing the tablets. Alfonso Archi, epigrapher of the Missione Archeologica Italiana in Syria, has counted 1,757 tablets (defined as complete or nearly complete texts), 4,875 fragments (that is, incomplete pieces which may have up to ten columns of writing), and many thousands of chips (that is, small pieces having only a few lines or parts of lines) (Archi 1986c: 78). A single room in the palace, L. 2769, yielded more than 14,000 inventory numbers (Matthiae 1986: 56).

A. Introduction

Although not mentioned in the Bible, Ebla has long been known from Mesopotamian cuneiform texts, especially those of the Dynasty of Akkad (*RG* 1: 37–38) and the Ur III period (Owen and Veenker 1987: 263–91) as a major Syrian city of the 3d millennium B.C. Since many important cities of that time in both Syria and Mesopotamia continued to be occupied for many centuries, Tell Mardikh presents a rare instance where substantial 3d millennium remains lie near the present surface of the mound (Biggs 1981: 132). This fact combines with the special circumstance of the destruction of the Ebla palace by a violent fire that may have helped to preserve some of the tablets by baking them. While accidental baking of the tablets is certainly possible, it is also likely that the large summary account tablets, the tablets of a distinctly diplomatic archival nature, and the large lexical tablets were baked intentionally and that the small daily account tablets—that would normally have been destroyed or recycled when their contents

had been entered in the summary tablets—were unbaked at the time of the fire. The tablets were originally arranged on shelves (Matthiae 1981 unnumbered figs. following p. 80, etc.), which collapsed presumably at the time of the fire. There have been differences of opinion on the physical arrangement of the tablets on the shelves (Pettinato 1981a: 50, challenged by Matthiae 1986: 64), but Matthiae's opinion is upheld by Archi (1988e: 67–69), who has provided detailed drawings of the reconstructed shelves.

The other principal finds of comparable 3d millennium cuneiform texts were likewise made at sites that were largely unoccupied beyond the end of the 3d millennium B.C. Previous major finds were in Iraq at Fara (ancient Šuruppak) in 1902–3 and at Abu Salabikh in 1963 and 1965. The Fara literary and lexical texts and the Abu Salabikh texts are described in detail by Biggs (1974: 35–42). A few additional tablets have been found in subsequent excavations at Abu Salabikh (Biggs and Postgate 1978: 101–17). Recently, administrative documents similar to some of those found at Ebla have been discovered at the Syrian site of Mari as long ago as the 1930s, but have only recently been published (Charpin 1987: 65–127).

A considerable amount has been written concerning the relations between Ebla and Mari. The most extensive survey is found in Gelb (fc.), where he discusses such questions as the writing system and the language of Mari and Ebla and its relation to certain features of the Akkadian used in texts found at Kish, use of the decimal system at Ebla, Mari, and Abu Salabikh, systems of measures, the month names, and year dates. (See also Archi 1985b: 47–51; 1985c: 53–58; 1985d: 63–83; 1985f: 25–34; 1988c: nos. 1–17; Pettinato 1977: 20–28; 1980b: 231–45; Edzard 1981b: 89–97; Kienast 1980: 247–61; Pomponio 1983a: 191–203; Pinnock 1985: 85–92).

In the early stages of the study of the Ebla tablets, it was believed that the geographical names found in them indicated that Ebla was the capital of a major Near Eastern empire in the 3d millennium B.C. which included Akkad, Assyria, Byblos, and parts of Anatolia (Pettinato 1976a: 45–46), a fact that is reflected in the titles of books about Ebla (Matthiae 1977, revised English translation 1981; Pettinato 1979b and English translation 1981a). The identification of the Mesopotamian city of "Agade" turned out to be a mistaken reading (Matthiae 1978: 540–43), and the reading of the signs A-BAR-SAL^4 as Assur (Pettinato 1976a: 48) is considered by many scholars to be dubious as well (Sollberger 1980: 130–55; Biggs 1982: 17; Lambert 1987: 353–64), although it is still maintained by Pettinato (1986: 286–87). Byblos (the Gk designation of the city whose name is normally written in cuneiform as *Gub-la*) was thought (Pettinato 1981a: 209; 1983a: 107–18) to be found in the writing DU-*lu* in the Ebla texts, but because *gub* has not yet been identified with certainty as a reading of the sign DU in Ebla texts (Krebernik 1982: 185), this identification is generally abandoned (Archi 1987e: 15–16; Fronzaroli 1984–86: 141; Michalowski 1988: 100–1). There were certainly diplomatic and cultural ties between Ebla and Kish in northern Mesopotamia (Gelb 1981: 9–73; Biggs 1981: 131–33; Archi 1987a: 125–40; 1987c: 37–52), but Nippur and the cities of central Sumer are not yet found in the Ebla tablets. This seems all the more reason to doubt that Dilmun (Pettinato 1983b: 75–82; Stieglitz 1987: 43–46) is correctly identified in the Ebla texts (Michalowski 1988: 100–1).

Much has been made of the supposed occurrences of Canaan in the Ebla texts (Pettinato 1981a: 341 index s.v.), but it is not certain that the writings *Ga-na-na* and *Ga-na*-NE can be interpreted that way (Edzard 1981b: 95).

Whatever may have been the extent of the commercial relations of Ebla, the idea of an empire in a political sense is explicitly denied by Archi (1985a: 145) who points out that there were local rulers even at Hama only 90 km to the S and that the Eblaite territory to the W stopped at the mountains which delimit the Syrian coastal region. He believes that the kingdom of Ebla included the plain of Antioch, but that its N border was probably the foothills which now define the border between Syria and Turkey.

There is no mention of Egypt in the Ebla texts, but inscribed vases of the Egyptian pharaohs Cephren and Pepi I were found in Royal Palace G (Scandone Matthiae 1979: 33–43) as well as uninscribed Egyptian vases (Scandone Matthiae 1981: 99–127).

B. Chronological Considerations

The date of the Ebla archives has been discussed at great length, but without dwelling on the particulars here, it can be said that the excavator, Paolo Matthiae, now dates the Royal Palace, Area A, to the early Proto-Syrian period, ca. 2400–2250 B.C. (Matthiae 1985: 134–37). Alfonso Archi, the epigrapher of the expedition, dates the archives to approximately the middle of the 24th century B.C. (Archi 1985a: 140); that is, in Mesopotamian terminology, late Pre-Sargonic and the early part of the reign of Sargon of Akkad.

Since there are so far no 3d millennium B.C. royal inscriptions from Ebla, all chronological and genealogical information comes from the administrative documents, where it is only incidental to the purpose of the particular documents. The section "relative chronology" in Archi (1988a: 205–21) should especially be consulted in this regard. The best current estimate is that the Ebla archives cover thirty to forty years (Archi 1985a: 140; 1988a: 218).

The kings of Ebla are designated by the Sumerian title EN, corresponding to *malikum* in Eblaite (Pettinato 1981a: 74; Archi 1987c: 17–43). Pettinato (1981a: 69) gives the following as kings of Ebla: Igriš-Halam, Irkab-Damu, Ar-Ennum, Ibrium, and Ibbi-Sipiš. Two of these names now require different readings: Ar-Ennum is to be read ARRULUM (Archi 1988a: 208), and Ibbi-Sipiš is to be read Ibbi-zikir, as many scholars recognized early (Gelb 1977: 21; see now Archi 1988a: 208). Archi has demonstrated that the evidence that suggested that Ibrium and Ibbi-zikir were kings was misinterpreted and that in fact they were only high officials in the kingdom (Archi 1988a: 209–12, 219). The texts concerning offerings to dead kings (Archi 1986a: 213–17; 1988a: 212) provide a list of previous kings of the dynasty (that is, excluding the king who was ruling when the document was drawn up), while the title "king of Ebla" in the Ebla archives is attested for only two individuals: Igriš-Halam and Irkab-Damu (Archi 1988a: 215).

C. Language of the Ebla Texts

Although written in the cuneiform writing system of Sumer, the ancient language of Ebla is beyond doubt Semitic, but its position within the Semitic family of languages remains in dispute. Pettinato (*RLA* 5: 12 and elsewhere) considers it Old Canaanite, but based partly on mistaken assumptions such as the supposed occurrences of *ik-túb*, "he wrote" (Pettinato 1981a: 56). The signs in question are now to be interpreted as GÁL-TAK$_x$, a Sumerogram for an accounting term (Alberti 1984: 65–74).

Gelb (1977: 28) concluded that Eblaite (or Eblaic or Eblaitic as others prefer to designate the language) is most closely related to Old Akkadian and Amorite. On the other hand, Sollberger (1986: 1) goes further than Gelb in insisting that it *is* Akkadian (his italics), while another scholar identifies it as a dialect of Akkadian (Dombrowski 1988: 211–35). It should be borne in mind that different scholars attribute differing importance to such matters as vocabulary, verbal system, pronominal system, phonology, and syntax. It should also be remembered that most of the analysis of the Eblaite language is not based on connected texts but rather on interpretation of the personal names (Krebernik 1988a; Archi 1988a: 205–306). The highly formalized administrative documents yield little information that would be of real significance in analyzing the language of the Ebla texts. On the other hand, most of the so-called historical texts with their syllabically written passages remain unpublished. A plausible reason for this is that texts written syllabically in the Eblaite language are extraordinarily difficult to interpret given the ambiguities of the script and the inadequate fashion in which the Sumerian writing system was adapted for writing a Semitic language (Krecher 1987: 177–97; Michalowski 1988: 100; for a nontechnical discussion, see Biggs 1982: 14–15, 22). Nevertheless, it is hoped that the "historical" texts will eventually provide the best examples of connected passages in the Eblaite language. The few literary texts found at Ebla are unlikely to be of much help.

D. Problem of "Reading" the Eblaite Language

It is now generally agreed that most of the Ebla texts were intended to be *read* in Eblaite. The fact that they are written with an overwhelming number of Sumerograms (including entire verbal forms in Sumerian, all surely to be pronounced using their Eblaite equivalents) has sometimes led to the mistaken opinion that the texts were largely in Sumerian. In many instances the only evidence for the underlying Eblaite language is an occasional preposition or conjunction.

The handwriting of the Ebla cuneiform texts demonstrates a distinctive regional style immediately recognizable as different from any cuneiform writing known from Mesopotamia (for the question of regional cuneiform handwriting styles in general, see Biggs 1973: 39–46). Yet most signs are sufficiently similar to their Mesopotamian equivalents that scholars who can read the 3d millennium B.C. Mesopotamian signs rarely misidentify Ebla signs. Nevertheless, there are some notable divergences (Krecher 1987: 177–97).

A more serious problem than the identification of signs has been establishing the correct syllabic readings of signs. It is well known that many Sumerian cuneiform signs have two or more possible readings. Normally one would, at least at a preliminary stage, assume a reading in an Ebla text corresponding to the most common Mesopotamian values. Yet, a number of common signs have readings that are not immediately obvious. A prime example is the sign EN. As a logogram, EN stands for the Eblaite word for "king." It has a syllabic value *en* (as in the personal name En-na-il), but it is used more commonly with the reading *ru*[12] (Krebernik 1982: 186; Civil 1984a: 78). An example is the reading of the "royal" name *Arennum, which has now been revised to *Ar-ru*[12]-LUM (where even the last syllable is of uncertain reading—*lum, núm, gúm,* and *hum* are theoretically possible) (Archi 1988a: 208).

The possible readings of the sign NI have been the subject of a great deal of controversy, principally because some scholars have believed in a reading *ya* and held open a possibility that the syllable was an abbreviation of Yahweh (with obvious religious-historical implications) in such names as En-na-NI, Iš-má-NI, and MI-kà-NI (Müller 1981: 70–92 and references cited there). A reading *ì* (standard in Mesopotamia) has never been in doubt, and a reading *bu*$_x$ is also certain (Krebernik 1982: 198; Civil 1984a: 77–78). A reading of NI as *ni* is apparently rare (Krebernik 1982: 198–99; Krecher 1988: 175) in the Ebla texts. In the case of the supposed Ya as a divine name, the solution seems now to come not from any syllabic reading of the sign NI, but from the Ebla treatment of consonants in a closed syllable, here specifically the consonant *l* (Archi 1986b: 246; 1988a: 263; Müller 1988: 72–73). The evidence is overwhelming that *l* is often not expressed in the writing at the beginning or end of a syllable. Thus *ì* can be simply a short writing for *il.* It seems likely that *ì* for *il* in personal names (where Il is a very common element) is especially frequent, because the sign NI (i.e., *ì*) is very simple (4 easy stylus strokes) whereas *il* is a complicated sign (usually made up of 15 or more wedges at various angles).

A number of further examples of syllabic values at Ebla that might be unexpected could be given, but only two additional examples will be provided to illustrate the extent of the ambiguities and the degree of caution that is needed. It appears that the common sign RI does not have a value *ri* in Ebla texts, but only *dal/tal/ṭal,* which is especially clear in words beginning with a *ta-* preformative (Krebernik 1982: 200) and in feminine personal names (Fronzaroli 1987b: 63–73). The sign BU represents not only the syllable *bu* (more often expressed by *bù*) but also *gi*$_x$ (based on Sum gíd).

While this is not a place for detailed discussion of the Eblaite writing system or of phonology, an additional feature should be mentioned: the problem of *l* and *r.* It has long been recognized that *l* can occur (at the beginning of a word, the beginning of a syllable, or the end of a syllable) where *r* would be expected (Archi 1980: 85, 87; Krecher 1984: 150; Müller 1988: 72). The contrary (use of a syllable with *r* where *l* is expected) is apparently not attested (Müller 1988: 72).

Some specific examples of potential ambiguities have been given here, but it should be stressed again that the Sumerian writing system was not well adapted to write a Semitic language with consonants that do not occur in Sumerian. It appears that the script, as adapted for use at Ebla, made no distinction, or at least no clear distinction, between different kinds of stops and the various sibilants (Krecher 1988: 175).

E. Ebla and the Bible

Soon after the discovery of the Ebla tablets, speculation arose concerning possible relationships to the OT (Pettinato 1976a: 48–50; 1980c: 49–72; Freedman 1978: 143–64; 1982: 309–35). The principal advocate of the theory that the Ebla tablets were of direct relevance for the study of the OT was the late Mitchell Dahood (1982: 1–24; 1984: 439–70; for additional references, see Baldacci and Pomponio 1987: 455 index ad Dahood). A famous example of Dahood's work is a text of which he confidently "translated" what he believed to be a proverb written in Canaanite but which turned out to be a text listing

Sumerian terms for cuts of meat. Most of his other attempts at elucidating texts from Ebla or texts in the Bible based on his interpretation of Ebla vocabulary cannot be as decisively rejected, but scholars who are knowledgeable about the cuneiform writing of the 3d millennium B.C. tend to be very dubious about his theories. The issue now seems to be principally one of historical interest when looking back upon the development of a new field of Near Eastern studies. Jonas Greenfield (1988: 94), referring to article of Dahood, neatly reflects the scholarly consensus when he writes, "Suffice it to say that Ebla has no bearing on the prophets, minor or major."

F. Administrative Texts

Approximately 80 percent of the 3d millennium B.C. tablets found at Ebla are administrative (Archi 1985a: 140). Many of these tablets may not be from archives in the technical sense of a collection or repository of records no longer in use, but rather are preserved for their historical value (Veenhof 1986: 7). However, it seems useful to follow the usual practice in Assyriology and to utilize the term "archive" to include texts stored or found together or which originated in the same administrative context (see detailed discussion in Veenhof 1986: 1–36). Although the term "library" has been used occasionally to refer to the tablets found at Ebla, the term "archives" has been used more generally.

The archives provide documentation for the activities of the various administrative sectors of the Ebla kingdom such as food supplies for the palace and its dependents (Archi 1982: 173–88; 1988b: 25–29; Milano 1987: 519–50), agricultural production and animal husbandry (Archi 1982: 175–76; 1984c: 45–81; Gelb 1986: 157–67; Milano 1984a; Renger 1987: 293–311), transactions in precious metals (Archi 1985f: 25–34; 1988c; Waetzoldt 1981: 363–78), and, with a vast documentation, the textile industry (Edzard 1981a; Biga and Milano 1984; Zaccagnini 1984: 189–204; Ribichini and Xella 1985; Sollberger 1986; Archi 1988c).

The tablets recording these administrative activities were stored in several different rooms of the palace (see Archi 1985a: 140–41 for a brief summary and 1986c: 72–86 for a detailed discussion of the particular archives).

Some of the tablets are dated, but the sequence within an archive can usually be determined best by internal evidence, principally by prosopography, since the order of the Ebla year names is not yet known (Archi 1986c: 72; see also Pomponio 1987a: 249–62 and Mander 1987: 395–407). Even prosopography is of limited use, however, because a number of persons bore similar names and patronymics are rarely given. No documents so far discovered bear seal impressimns, though seals were in use for other purposes (Mazzoni 1984: 18–45).

G. Lexical Texts

Word lists (or lexical texts as they are usually called by Assyriologists) form the backbone of the Mesopotamian scribal tradition from near the beginning of writing in the early 3d millennium B.C. through the 2d and 1st millennia B.C. with bilingual vocabularies (usually Sumerian and Akkadian but, depending on the area, including Hittite and other languages), ending with Greek transcriptions of the Sumerian entries. The texts of interest to us here are those of the 3d millennium B.C. (see especially Westenholz 1985: 294–98). Such lists of words are mostly thematic, and consist almost entirely of nouns. It is copies of such texts which make up the most important component of the lexical texts from Ebla (Pettinato 1981a: 46–47, 237–38; Biggs 1981: 129–32). Some of these texts are descended from the lexical traditions of early 3d millennium B.C. Uruk (Nissen 1981: 99–108). The best known of these is Early Dynastic (ED) Lu A (Civil 1969: 4–12; Arcari 1982), a list of occupations already ancient by the time of the Ebla tablets. Its archaic nature is indicated by the inclusion of cuneiform signs unknown except in copies of this list. Another list of occupations, ED Lu E, probably composed closer to the middle of the 3d millennium B.C., occurs at Abu Salabikh (Biggs 1974: nos. 54–60, edited in Civil 1969: 16–21, with corrections in Biggs 1974: 82), Kish, and Ebla (Pettinato 1976b: 169–78). An unrelated text of similar date, now known from Abu Salabikh and Ebla, was first published as a "Names and Professions List" (Biggs 1974 nos. 61–81 and edition pp. 62–71; Ebla version Archi 1981a: 177–204; 1984d: 171–74; cf. Biggs 1988: 91–96).

There is a list of geographical names first found at Abu Salabikh (Biggs 1974 nos. 91–111 and edition pp. 71–78), of which a version was also found at Ebla (Pettinato 1978a: 50–73; 1981b: 217–41; Pomponio 1983b: 285–88). A proposal to find Palestinian place names in this list (Shea 1983: 589–612) is generally rejected by scholars (Greenfield 1988: 94). See Steinkeller (1986: 31–40) for some specific identifications; he categorically rejects a proposal to see in the writing *U*^{9}*-ga-ra-ad* the name of the city of Ugarit, a conclusion also reached by Fronzaroli (1984–86: 145). The consensus now is that many of the place names are to be located generally in N Babylonia and the Trans-Tigris area and thus are not to be sought either in S Mesopotamia (not explicitly proposed by any scholar) or in the Syrian area (Pettinato 1976a: 52). Most scholars who have considered the question apparently agree with Biggs (1980: 84–85; 1981: 130–31) in rejecting a Syrian origin for the composition (Civil 1984c: 290; Steinkeller 1986: 31–32).

Other traditional Sumerian lexical texts found at Ebla include lists of birds (Pettinato 1978b: 165–78; 1981b: nos. 39–42 and pp. 105–23; Civil 1982: 17–22), fishes (Pettinato 1981b: 91–104), and practical repertories of words needed in writing everyday documents commonly known as "Practical Vocabularies" (Civil 1987a: 132–33).

Besides the numerous examples of Sumerian word lists directly related to those from Mesopotamia, Ebla has provided others so far unknown from elsewhere (Civil 1984a: 77). The most important of these texts is the Ebla Vocabulary published by Pettinato (1982: 115–343). It consists in most cases of a list of Sumerian words to which an Eblaite translation has been added. This list consists of nearly 1,500 lines and is known almost in its entirety from numerous exemplars (Archi 1980: 81–89); Fales 1984: 173–87). There is also the Ebla "Syllabary" (Pettinato 1981b: 51–52), which is more precisely a sign list with sign names (Civil 1984a: 77; Archi 1987d: 91–113).

There is another genre of lexical text that should be mentioned in this context, notable for its absence at Ebla: lists of deities (see also PANTHEONS, MESOPOTAMIAN). The lack of godlists among the lexical texts at Ebla may be accidental, of course. In the absence of such texts, however, the pantheon of Ebla has been reconstructed mainly on the basis of offering lists (Pettinato 1979d). The repertory of deities in the personal names is a somewhat less reliable criterion for establishing the Ebla pantheon since some of the divine names occur in the names of individuals from other areas (Archi 1984a: 225–56; 1985c: 53–58). Deities occurring in the literary texts, notably the incantations and Edzard (1984 no. 6), should be excluded from consideration in reconstructing the pantheon since the texts clearly did not originate at Ebla.

H. Literary Texts

Compared to Fara and Abu Salabikh, Ebla has yielded very few literary texts (Biggs 1981: 124–29), even fewer than initial descriptions indicated. The principal group of literary texts (in the widest sense) consists of incantations (Mander 1979: 335–39; Pettinato 1979a: 329–51; Krebernik 1984; Edzard 1984: 32). Of the other literary texts, a major example is Edzard's (1984 no. 6), which has been recognized as being a duplicate of a text from Abu Salabikh (Biggs 1974 no. 326, 342; Biga apud Edzard 1984: 30). The two versions studied together allow a better understanding of a number of passages than does either version alone. Both versions include a number of Sumerograms, but there are enough Semitic words (including pronominal suffixes) to indicate that the text is written in a Semitic language. Because the Abu Salabikh version is presumably earlier than that from Ebla, there is no reason to suggest that the language is the Semitic language of Ebla (Michalowski 1987: 171).

The supposed Creation of the World story found among the literary texts of Ebla (Pettinato 1979b: 278; 1980c: 59–67; 1980d: 46–47) has attracted a certain amount of interest. The composition, consisting of three exercise tablets, is also published by Edzard (1984 nos. 24–26 and pls. 40, 41, 53). The text is more convincingly intepreted by Civil (1984a: 80–81 and nos. 9–10) as a list of Sumerian personal names beginning with LUGAL, followed by two lines of literary quotations (Hruška 1985: 289–90).

One of the tablets originally identified as a proverb (Pettinato 1979c: 174 no. 1833; also published by Edzard 1984 no. 23) was "translated" by M. Dahood (1978: 93), who asserted that "The proverb appears to be pure Canaanite, containing not a word of Sumerian":

Donate without measure,
Donate without weighing;
Make presents without measure,
Make presents without weighing.

The text has subsequently been identified (Civil 1984b: 161–63) as an exercise tablet containing syllabic Sumerian words for cuts of meat, corresponding to the standard Sumerian of Ebla Word List D (Pettinato 1981b: 172, lines 50–53).

I. Letters and Diplomatic Texts

The letters and diplomatic records found among the Ebla archives are potentially among the most interesting and important, though formidable obstacles remain before they can be understood. These texts, with very few exceptions, are unpublished. To judge from the published examples, these texts are more likely to be written syllabically, that is, with few Sumerograms that would give modern scholars major clues to their contents. However, these published examples are fraught with difficulties which provide the basis for differing interpretations. One example is the so-called treaty tablet (Pettinato 1986: 389–95; Sollberger 1980: 130–55; Lambert 1987: 353–64 and references cited there). Doubts about reading "Assur" in this text have already been mentioned. A further example of disagreements concerning interpretation is Pettinato's belief that a certain sequence of signs is to be interpreted as Tudia, the first king in the Assyrian King List (Pettinato 1986: 287–88). The same signs have been interpreted as a form of the Sum verb È, "to go out, to send out" (Biggs 1980: 81–82; Sollberger 1980: 131). Nothing more can be said concerning those texts until they are published.

J. Colophons

The literary and lexical texts from the 3d millennium B.C. are often accompanied by a colophon (see in general Biggs 1974: 33–35). Such colophons usually include the name of the scribe who copied the tablet (most often indicated by *dub mu-sar,* "wrote the tablet"). Some of the names could also be those of other scribes or scholars who were involved in the production of earlier copies or who participated in some other way in the preparation of the tablet or its text (Mander 1984: 345–57). A surprising feature of the Abu Salabikh colophons was that approximately half the names in the colophons were Semitic rather than Sumerian (Biggs 1967: 55–66; 1974: 33–35; 1988: 89–98). Some of the Ebla literary and lexical texts bear colophons similar to those found at Abu Salabikh (Pettinato 1981a: 231–32; Mander 1984: 357–61). It is even possible that one of the best attested scribes (Lugal-kisal-si) from Abu Salabikh is also attested in a colophon on a text from Ebla (Pettinato 1981b: xxvii, no. 88). If this is correct, it may indicate a direct manuscript connection between the scholars at Abu Salabikh and at Ebla.

K. Second Millennium Texts

While the finds in the 3d millennium B.C. Palace G at Ebla have attracted the most attention, substantial finds of 2d millennium B.C. materials have been made, including part of an inscribed statue that first suggested that the site of Tell Mardikh was ancient Ebla (Pettinato 1970: 73–76; Lambert 1981: 95–96). A letter written in Babylonian, probably from a private archive but found out of context, was discovered some years ago (Kupper 1980: 49–51); publication of further OB documents by Kupper is expected. Among the finds from a grave was a silver vessel with a cuneiform inscription. Excavations of Mardikh IIIB (ca. 1800–1600 B.C.) are continuing (Matthiae 1985: 138; 1988: 34–43), so perhaps more 2d millennium textual material will eventually be found.

ROBERT D. BIGGS

EBRON (PLACE) [Heb ‹*ebrôn* (עֶבְרוֹן)]. A town in the territory of Asher (Josh 19:28). Assuming confusion between the Hebrew letters *bet* and *reš,* the MT form here is likely a misspelling of the place name ABDON.

ECBATANA (PLACE) [Aram ›*aḥmětā*‹ (אַחְמְתָא)]. Place located in the Zagros mountains of NW Iran between Tehran and Baghdad which was the capital of the Median Empire (Ezra 6:2). The name derives from an Old Persian expression (*hagmatāna*); Gk *ekbatana*) meaning "gathering place." At the foot of Mt. Orontes, this city provided a cool summer retreat for the later Persian kings, subsequent to its capture by Cyrus from Astyages in the 6th century. Herodotus (1.98)—although some would dispute the accuracy of his statement—attributes its foundation to Deioces (died ca. 656 B.C.) and provides a description of its seven concentric walls of fortification. Ecbatana may have been one of the "towns of the Medes" to which Israelites were exiled by the Assyrians (2 Kgs 17:6).

Ezra 6:2 contains the only mention of this city in the OT. When Darius was searching for a record which would confirm Cyrus' decree (de Vaux *BANE,* 63–96) about the restoration of Jerusalem and its

Temple, he could find nothing in the Babylonian archives. However, when the search was extended to the citadel of Ecbatana, a scroll was discovered and the claim of the Judeans substantiated (cf. 1 Esdr 6:23). This detail indicates the importance of Ecbatana as a government center, particularly for the Persian Empire.

Ecbatana figures in three apocryphal books—Tobit, Judith, and 2 Maccabees. In the book of Tobit (3:7; 6:5, 9; 7:1; 14:12, 14) Ecbatana is the home of Raguel, Tobit's brother. Tobias, the son of Tobit, stops at this city while on his way to collect money from Gabael, who lives in Rages, Media. During his stay in Ecbatana Tobias marries Sarah, the daughter of Raguel. Apart from indicating that Jews had dispersed as far as Ecbatana, little additional information about the city is provided.

Ecbatana is mentioned in Judith 1:1, 2, 14 as the headquarters of King Arphaxad, "who reigned over the Medes in Ecbatana." Nebuchadnezzar destroys Arphaxad's army in battle and spoils Ecbatana before turning his attention to the region of Judea, which had refused to assist him in his fight with Arphaxad. The major preoccupation of the author of Judith is with the awesome fortifications of Ecbatana, which rival those of Babylon.

According to 2 Macc 9:3, Antiochus IV died in the vicinity of Ecbatana. After his unsuccessful attempt to loot the treasures of Persepolis (9:1–2) and subsequent ignominious retreat, Antiochus received news of the defeat of Nicanor and Timotheus and their respective armies at the hands of the Judean rebels. This occurred "near Ecbatana." No other source links Ecbatana with Antiochus IV's death and this has caused some scholars, such as Goldstein (*1 Maccabees* AB) to question its accuracy.

The modern city of Hamadan occupies the site of Ecbatana. Tradition alleges that the tombs of Esther and Mordecai lie in the middle of the city. Major archaeological investigation remains to be done at Ecbatana.

A. The Meaning of the Name

The Hebrew title of the book is "Qoheleth." The word "Qoheleth," from which the name "Ecclesiastes" derives, has been variously explained as a personal name, a nom de plume, an acronym, and a function. The difficulty of comprehending the meaning of the word "Qoheleth" is compounded by the fact that it seems to be understood differently within the book itself, where "Qoheleth" has the article at least once (12:8, although the same verse occurs in 1:2 where Qoheleth lacks the article). In all likelihood, the article also appears in 7:27, where "Qoheleth" has a feminine verb form, although the word "Qoheleth" is otherwise always construed as a masculine. The LXX supports a redivision of the consonants in 7:27, yielding *ʾmr hqhlt* ("says the Qoheleth").

The name occurs seven times:

1. The words of Qoheleth son of David, King in Jerusalem (1:1).
2. The ultimate absurdity, says Qoheleth, the ultimate absurdity; everything is absurd (1:2).
3. I Qoheleth have been king over Israel in Jerusalem (1:12).

4. Look, I have discovered this—says Qoheleth—[adding] one to one in order to find the sum (7:27).
5. The ultimate absurdity, says the Qoheleth, everything is absurd (12:8).
6. In addition to the fact that Qoheleth was a sage, he also taught the people knowledge (12:9a–b).
7. Qoheleth sought to find pleasing words and accurately wrote down trustworthy sayings (12:10).

Although the word "Qoheleth" is understood as masculine, its form is *Qal,* feminine participle. Elsewhere the root *qhl* is always *Hipʿil* or *Nipʿal* (causative or reflexive/passive). It thus means "to convoke," "to assemble" (*Hipʿil*) or "to be gathered" (*Nipʿal*). Precedent exists for a masculine personal name with a feminine ending (Alameth, 1 Chr 7:8). This interpretation as a personal name clearly underlies the identification of Qoheleth as son of David, which occurs in the superscription to the book (1:2), but the idea of royal authorship ultimately derives from the book itself (1:12).

Three things weaken the argument for viewing "Qoheleth" as a personal name, a substitute for "Solomon": (1) the use of the article; (2) the identification of Qoheleth as a wise man *(ḥākām),* presumably a technical term in this instance (12:9); and (3) the point of view from which the book is written, except for the royal fiction in 1:12–2:26. Elsewhere the author writes from the perspective of a subject powerless to redress the injustices perpetrated by higher officials. Of course, an additional factor renders impossible the identification of Qoheleth with royalty: David did not have a son named Qoheleth who succeeded him, for Solomon occupied the throne after his father's health failed.

Then is "Qoheleth" a nickname for Solomon? The link between this unusual form and "Solomon" could easily have arisen from the language in 1 Kgs 8:1–12, which reports that the king assembled the representatives of the people to Jerusalem. But the initiative to look for such a suitable text must surely have sprung from the author's self-presentation in 1:12–2:26, for Solomon's vast wealth supplies the imagined context for the royal experiment described in these verses. As we shall see, the Egyptian royal testament offers a prototype for this section of the book, but Qoheleth was not content to restrict his sayings to this literary form. Conceivably, the allusion to one shepherd in 12:11 reverts to the royal fiction earlier abandoned by the author, inasmuch as the image of the pharaohs as shepherds circulated widely in Egypt. Nevertheless, Qoheleth usually speaks as a teacher, not a king; therefore, another explanation for the name must be sought.

Does the strange form conceal an otherwise unknown identity? Is "Qoheleth" an acronym? It has been argued (Skehan 1971: 42–43) that the name for Agur's father in Prov 30:1a, Jakeh, represents the first letters of a sentence *(Yqh = yahweh qādš hʾ).* Following this analogy, *qhlt* constitutes the abbreviation of a four-word sentence. But what would those words have been? So far, no satisfactory explanation along these lines has come to light. Some have even thought that Qoheleth stood for personified wisdom, a walking assembly of wise sayings, but elsewhere Dame Wisdom is always called *ḥôkmâ.* The most compelling answer to the enigma of the name points to two instances of a feminine participle functioning as an office (Ezra 2:55, 57; Neh 7:59). Two different occupations lie behind the personal names in these verses (a scribe and a binder of gazelles). Accordingly, Qoheleth refers to an office that was related in some way to assembling people. The LXX renders the word in this way, associating the noun for "assembly" with the word for a public gathering (*ekklēsia*). Jerome continued that line of reasoning in the Vulgate, but stressed the role of speaking in the presence of an assembly. Now if Qoheleth gathered people, did he summon them to a cultic assembly? This understanding led to the Reformers' use of *Prediger* ("Preacher") with reference to this book, but biblical evidence for such a meaning does not exist. Whatever else Qoheleth did, he did not preach, at least not in the modern sense of the word.

Did Qoheleth assemble people to a school? That kind of activity accords with the epilogist's description in 12:9. The difficulty remains that Qoheleth consistently opposes traditional wisdom. To be sure, school wisdom possibly possessed the capacity to criticize itself in the manner demonstrated by the book. One could even say that Qoheleth democratizes wisdom, turning away from professional students to ordinary citizens. The use of *hʿm,* "the people," in 12:9, where one would naturally expect a reference to students, favors this interpretation of the situation. Furthermore, if the form *qĕhillâ* in Neh 5:7 actually means "harangue," then the word "Qoheleth" might refer to an office of "arguer" or "haranguer." However,

Qoheleth does not present his observations in a manner that would justify this particular interpretation of the word under consideration.

The verb *qhl* always occurs with reference to an assembly of people. If the sense of the word could extend to the gathering of objects, then "Qoheleth" might refer to "collecting proverbs," the task for which the epilogist remembers the teacher (12:9–11). Qoheleth kept an ear in readiness to hear something worthwhile; he searched high and low for appropriate insights; and he grouped the resulting sayings in an understandable way. This instance would not be the only one in which Qoheleth departed from ordinary usage, for he forged a language and syntax peculiar to this book. Furthermore, he saw no fundamental distinction between humans and animals with respect to death; one could therefore argue that Qoheleth assembled sayings (1:1) and that 7:27 contains a veiled allusion to this understanding of the title ("One to one to discover the sum"). In short, Qoheleth collected sayings and in doing so arrived at the complete picture that life amounts to a huge zero.

B. Literary Integrity

We have already had occasion to mention an epilogist who commented on the achievement of the teacher. Naturally, the presence of an epilogue of this sort introduces the question of literary integrity. Did Qoheleth write the complete book, or have several authors contributed to its present form? Answers to these questions vary, but four different responses have commended themselves to interpreters: (1) the author wrote the bulk of the book, but editorial glosses entered at a later time; (2) the author cites traditional wisdom and refutes it; (3) the author enters into dialogue with an interlocutor, real or imagined; and (4) the book reflects a single author's changing viewpoints over the years, as well as life's ambiguities.

By analogy with superscriptions throughout the canon, it can be safely argued that 1:1 does not derive from Qoheleth's hand. This superscription identifies the author with David's son who held the office of king in Jerusalem. The expression "words of Qoheleth" echoes a similar superscription in Prov 30:1a, but the form also occurs in prophetic collections (e.g., Amos 1:1a; Jer 1:1a). The book of Qoheleth really begins at 1:12 ("I Qoheleth have been king over Israel in Jerusalem"). Furthermore, a thematic statement in 1:2 and 12:8 functions as an inclusio, setting off the beginning and the end of Qoheleth's teaching. Only in these verses does the superlative form *hăbel hăbālîm* occur. The additional verses in 12:9–14 derive from one epilogist, or more probably two. To this point in analysis a virtual consensus exists in scholarly discussion.

Within the body of Qoheleth's teachings as delineated above (1:3–12:7), one searches in vain for a consistent argument. It appears that later editors have toned down the extreme views of the teacher. Theories of multiple redactors (Qoheleth, a Sadducean, a sage, a pious one, and another editor) have lost their attraction in the latest analyses, although most interpreters still reckon with at least one glossator who corrected Qoheleth's views about reward and retribution (2:26a; 3:17a; 8:12–13; 11:9b; perhaps 5:18 and 7:26b). Whether or not these glosses derive from the second epilogist, also responsible for 12:12–14, remains uncertain, but the hypothesis has plausibility.

The effort to attribute the entire book to Qoheleth lacks persuasiveness for at least two reasons. First, it overlooks the probability that the same sort of editorial activity that took place during the preservation of the other books of the Hebrew Bible would also have occurred in this one. Indeed, the radical character of Qoheleth's views invited editorial comments. Second, the claim that Qoheleth could easily have referred to himself in the third person, as he apparently did in 7:27, obscures the appreciable differences in attitude between the rest of the book and the final epilogue (12:12–14). These differences go beyond use of language such as *bĕnî*, "my son," to religious views like the admonition to "fear God and keep the commandments" and the warning that the deity will bring every hidden thing into the light of day, presumably at a final judgment. One has the impression that Qoheleth's epitaph appears in 12:9–11, and that a less appreciative assessment of the teacher's unusual views about life follows.

Throughout the book one encounters teachings that stand in considerable tension with each other. A strong case has been made for understanding these contrasting opinions as instances in which Qoheleth cites traditional wisdom. An adversarial stance toward established dogma is beyond dispute, for Qoheleth

actually warns against an uncritical acceptance of claims about absolute truth (8:17). In one instance Qoheleth's language almost requires the addition of something like "he asks" ("There is an individual who has no heir, whether son or brother, but there is no end to all his work, and also his eyes are never content with his wealth—'for whom am I toiling and depriving myself of good things?' [he asks]; this also is absurd and grievous bother," 4:8).

Traditional sayings dot the observations of Qoheleth, as has been recognized for some time, for example, "the crooked cannot be straightened and what is missing cannot be counted" (1:15). One investigation (Whybray 1981b) has isolated eight quotations on the basis of affinities in form and content between the oldest collections in Proverbs and aphorisms in Qoheleth (2:14a; 4:5; 4:6; 7:5–6a; 9:17; 10:2; 10:12). Those scholars who believe they have found quotations in Qoheleth's observations emphasize the variety with which these traditional sayings are used. Some he quotes with full approval (7:5–6; 10:2, 12), but he gave them a radically new interpretation. Others serve to confirm the first stage in the characteristic two-part argument, the so-called broken sentence in which Qoheleth stated a truth only to qualify it by appealing to a fact of life that contradicted it. This phenomenon of quotations, widespread in the ANE, has four main categories: (1) the verbalization of a speaker's or writer's unexpressed ideas or sentiments; (2) the sentiment of a subject other than the writer or speaker; (3) use in argument and debate; and (4) indirect quotations without a *verbum dicendi* (Gordis 1976).

Early Christian theologians perceived the apparent contradictions within Qoheleth's thought and attributed the different views to two persons, a speaker and an interlocutor, real or imagined. The dialogical character of the book thus came to expression, despite the strong tendency to neutralize Qoheleth's unorthodox sentiments. Thesis stands over against antithesis in such a way that all teachings are relativized. J. G. Herder endorsed this view of the book, and contemporary interpreters have sought to bolster the argument by appealing to the juxtaposition of a *bonum* and a *malum* and by an intricate analysis of polar structures in the book. Although some of the proposed 38 chiastic structures and 60 polar structures result from much too general criteria, for instance, desirable and undesirable, one can scarcely deny the force of the hypothesis as such. After all, Qoheleth did arrange his argument in a group of 14 polarities in at least one literary unit (3:1–8).

Of course, the application of modern standards of logical consistency may bestow too much weight on the Greek heritage. Qoheleth may never actually have reconciled the disparities between faith and experience, but such a view elevates the religious dimension to a degree that Qoheleth probably never permitted. Perhaps two additional factors strengthen this particular approach to the contradictions in Qoheleth's thought. The teachings in the book may represent the fruit of a lifetime's research, having been given literary expression over a long period. Furthermore, life's ambiguities themselves may have struck Qoheleth as worthy of noting, particularly as historical situations changed from time to time. There may indeed be some truth in the claim that the confrontation between Hebraism and Hellenism produced a compromise position, best exemplified by Qoheleth. However, the Jewish tradition alone had its share of ambiguities, and these disparities between religious conviction and actual reality found expression in Qoheleth's realism.

Signs of thematic unity and a single tone largely offset these indications of tension within Qoheleth's thought, or between his views and those of later editors. Nevertheless, some segments of the book have not been successfully integrated into its logical scheme, above all the collection of sayings in 10:1–4, 8–20, which discourages the view that Qoheleth wrote a unified treatise. Although neither characterization of the book, treatise or collection of sentences, explains the situation adequately, it may be instructive to think of a kaleidoscopic image whereby apparently incongruent features of the text come together in many different meaningful configurations. Even if one accepts this reading of the disparate material, the difficult task of ascertaining the powerful force that brings a semblance of order out of apparent disarray remains. In a word, what shape does the book take; what identifies its internal structure?

C. The Structure of the Book

One can easily recognize the outer frame of the book. Leaving aside the superscription in 1:1, there remain a thematic refrain (1:2) and a poem (1:3–11) at the beginning, and a poem (11:7–12:7) plus a

thematic refrain (12:8) at the end. Together with the superscription, the two epilogues (12:9–11, 12–14) enclose the book in a kind of envelope. The first poem demonstrates the aptness of the thematic statement in the realm of nature, and the final poem shows the accuracy of the theme on the human scene. Nature's ceaseless repetition illustrates the utter futility of things, as does the eventual disintegration of the human body.

Within Qoheleth's teachings bracketed by a thematic statement and a poem, a few distinct units stand out, either because of content or because of introductory and concluding formulas. For example, a single thread holds together the royal experiment in 1:12–2:26, specifically the idea that a powerful monarch indulges himself in a vain search for something that will withstand time's ravages. A second example, this one smaller in scope, 4:9–12, discusses the advantages of teaming up with another person. So far, however, no satisfactory scheme has surfaced to explain all the units of Qoheleth's teachings. Often determining where one unit begins and another ends cannot be done. Therefore scholars vary widely in their calculations of the number of literary units within the book.

If the text lacks clear demarcations of the several units, how can one decide on the extent of each? Perhaps a clue exists in Egyptian Instructions, clearly divided into sections or chapters. Analogy with Papyrus Insinger, roughly contemporary with Qoheleth, may suggest that refrains mark off larger units in the Hebrew text. One refrain seems especially suggestive in this regard, the sevenfold exhortation to eat, drink, and enjoy one's portion of life's good things (2:24–26; 3:12–13; 3:22; 5:17–19; 8:15; 9:7–10; 11:7–10). But the first and last of these texts illustrate the difficulty of this approach, for the refrain in 2:24–26 certainly concludes a unit, and the formula in 11:7–10 just as certainly begins a new unit.

As a matter of fact, the book has a wealth of formulaic expressions, and these repeated phrases and sentences probably function to delineate units of thought. Wright has seized these data to arrive at an arrangement of the entire book. According to his view, a single refrain sets off the different units in the first half of the book, whereas two formulaic expressions indicate subsections in the second half. The first refrain, "All [this] is absurd and a chasing after wind" occurs six times in 1:12–6:9, yielding the following literary units (2:1–11; 2:12–17; 2:18–26; 3:1–4:6; 4:7–16; 4:17–6:9). In 6:10–11:6 the repeated phrases "not find out" and "who can find out?" indicate four subsections (7:1–14; 7:15–24; 7:25–29; 8:1–17) and "cannot know" also points to four sections (9:1–12; 9:13–10:15; 10:16–11:2; 11:3–6). This theory is then reinforced by an involved numerological analysis that takes its clue from the number of uses of the Heb word *hebel*, as well as the numerical value of its three consonants.

This elaborate hypothesis appears to press a valid intuition too far. In some instances, the formulaic expression occurs in the midst of a thought unit rather than at the end (for example, 11:2). Moreover, the repeated phrases sometimes do not enter into consideration (4:4, "striving after wind"), and other formulaic expressions are ignored altogether ("this is absurd," "under the sun," "I turned and considered"). In addition, the units perceived in the analysis under discussion vary in length, forcing one to wonder about the utility of such an approach. Despite the claims for objectivity, the decision to ignore some formulaic expressions and to concentrate on just these three ("This is absurd and a chasing after wind," "not find out"/"who can find out," and "cannot know") undercuts that claim, and the many assumptions necessitated by the numerological proof weaken the argument greatly.

Not all attempts to discover the book's structure have taken refrains as the starting point. Of course, many interpreters have searched for logically consistent units. Two recent theories illustrate this approach and demonstrate the sophisticated nature of such analyses of the book. Both interpretations apply the refined methods of literary criticism to the biblical text, although such literary analysis developed as a means of understanding quite different material. Loader's approach (1979) stresses the polar structures in the book and arrives at twelve fundamental units (1:2–11; 1:12–2:26; 3:1–4:16; 4:17–5:8; 6:10–8:1; 8:2–9; 8:10–9:10; 9:11–10:11; 10:12–20; 11:1–6; 11:7–12:8). Lohfink's approach emphasizes the Greek background of the book, which he understands as a philosophical treatise. In his view, Ecclesiastes has the form of a palindrome, a complete balancing of material so that the second half repeats the substance of the first half. Such a reading leads to the following structure:

1:2–3	Frame
1:4–11	Cosmology (poetic)
1:12–3:15	Anthropology
3:16–4:16	Social Criticism I
4:17–5:6	Criticism of Religion I (poetic)
5:7–6:10	Social Criticism II
6:11–9:6	Ideology Critique (Refutatio)
9:7–12:7	Ethics (poetic at the end)
12:8	Frame

Even if one conceded the far from obvious premise that the book uses Greek rhetoric, several questions remain. Why did the author allow the intruding critique of religion in 4:17–5:6 to mar the perfect palindrome? Has Lohfink chosen adequate rubrics? For example, is anthropology missing from the passage where Qoheleth offers a low opinion of men and an even lower estimate of women (7:25–29)? Can one rightly restrict ethics to 9:7–12:7 in light of persistent efforts to view the entire second half of the book as the practical, or ethical, implications of the worldview advanced in the first half of Ecclesiastes (1:2–6:9)?

Without committing oneself wholly to either clue, refrain or logical coherence, one can certainly discern a semblance of structure in the book. One of the most attractive interpretations (Schoors 1982b) divides the book as follows:

1:1	title
1:2	general theme of the book
1:3–2:26	Solomon's confession
3:1–22	human beings under the law of time
4:1–16	life in society
4:17–5:8	the advantage of silence over unreflected speech
5:9–6:9	on wealth
6:10–12	transitional unit
7:1–9:10	the experience of life and death
9:11–10:20	wisdom and folly
11:1–6	the necessity of taking risks
11:7–12:7	the necessity of enjoying life
12:8	inclusion: the general theme of the book
12:9–14	epilogue

Attractive as this analysis may be, it still does not answer all the questions that result from general rubrics such as "life in society" and "wisdom and folly." Because other sections also deal with social relations and knowledge or its opposite, it appears that every attempt to discover the book's structure serves as little more than a heuristic device.

So far this discussion has said nothing about another unifying principle, the tone of the book. The individual units combine to give a single impression. An honest and forthright teacher observes life's ambiguities and reflects on their meaning for human existence under the sun. Furthermore, a unity of themes and topoi reinforces this tonal unity, as a glance at the vocabulary of the book quickly confirms. Qoheleth uses certain words with such frequency that they almost induce a hypnotic state in the listener or reader. By their frequency of occurrence these words send a distant echo through the corridors of the mind

erected by this skillful teacher: do/work, good, wise, time, know, toil, see, under the sun, fool, profit, portion.

D. The Historical Setting

If all attempts to discern the book's structure remain inconclusive, the same verdict characterizes efforts to locate it in a particular place and time. For a brief period, scholars endeavored to demonstrate that the original language was Aramaic, but this trend has virtually disappeared. The discovery at Qumran of Hebrew fragments from the book to which a date in the mid–2d century B.C.E. seemed appropriate has hastened the demise of the theory of an Aramaic original. Such an early dating of a Hebrew version of Ecclesiastes left little time between its composition and the Qumran fragments. However, the decisive refutation of the Aramaic origin lay in the inability of its proponents to show how the present form of the book required a theory of translation to explain its peculiar style and syntax.

The fact remains that the book is writen in an Aramaizing Hebrew, a language with strong Mishnaic tendencies. The vocabulary contains a high percentage of Aramaisms, and in this regard it belongs alongside certain other late canonical books. Occasional Persian loan words also appear, for example *pardēs,* "park" and *mĕdînâ,* "province." Greek influence, once believed to lie behind the phrases "under the sun" and "to see the good," no longer seems likely; the ancient Semitic world attests to the former expression and the latter phrase is authentic Hebrew.

On the basis of certain commercial terms and usages, as well as orthography, a setting for the book in Phoenicia has been proposed (Dahood 1952). This theory of the book's origin has made little impact on the scholarly community. The suggestion of Egyptian provenance, based largely on the allusion to natural phenomena in 1:5–7, has been less convincing. The references to reservoirs (2:6), leaky roofs (10:18), wells (12:6), farmers' attention to the wind (11:4), and the Temple (4:17; 8:10) are perfectly appropriate for a literary composition in Palestine (Hertzberg *Prediger* KAT). Nevertheless, the evidence is inconclusive, for ancient authors openly received material from various sources. The so-called historical references in 4:13–16; 8:2–4; 9:13–15; and 10:16–17 function typically. Therefore, they offer no real assistance in dating the book or in locating its cultural setting.

Many factors point to a relatively late date for the composition of Ecclesiastes. The vocabulary itself shows signs of being very late, for example *sôp,* "end"; *pēšer,* "interpretation"; *māšāl,* "rule"; *šālat,* "rule"; *pitgām,* "decision"; *zĕmān,* "time"; *ʿinyān,* "worry"; the relative pronoun *šĕ,* "that, which," attached to another word; and the personal pronoun *ʾănî,* "I," used alongside *ʾanōkî,* "I," with almost equal frequency. Moreover, the *waw* consecutive occurs only twice, although the literary types in the book do not lend themselves to frequent use of this verbal form. A Hellenistic coloring may rest behind the vocabulary for rulers, perhaps also the observations about individuals whose responsibilities brought them in regular contact with the royal court. At least one of the rhetorical questions, a literary device that the author uses nearly 30 times, occurs only in arguably postexilic texts. This rhetorical question, *mî yôdēaʿ,* "who knows?", functions as a strong assertion equivalent to "no one knows." Another stylistic peculiarity of the book, the use of participles with personal pronouns, forms a late feature of the language.

The meager political data that scholars have detected in the book point to a period prior to the Maccabean revolt in 164 B.C.E., for the attitude toward foreign rulers fits best in the Ptolemaic period. The Zenon archives reflect a political situation of economic prosperity for the upper echelons of Jewish society about 250 B.C.E. It has been plausibly argued that Qoheleth belonged to the privileged class (Gordis 1968), although on the basis of highly inferential evidence. More probably his students came from privileged families, hence could act on their teacher's advice about wearing fine clothes and anointing themselves with expensive oils. The severe policies of Antiochus IV restricted such freedom to follow one's inclinations, whether personal or religious. Furthermore, Ben Sira probably knew and used the book about 190 B.C.E., although Whitley has attempted to show that Qoheleth actually used Ecclesiasticus. The bases for this late dating of Qoheleth lack cogency: that the language of Daniel is earlier, that the Mishnaic tongue was widely used, that Qoheleth wrote before 140 but after Jonathan's appointment in 152 B.C.E. and its accompanying political changes. A date for Qoheleth between 225 and 250 therefore still seems the most likely one.

E. The Literary Expression

What literary type best characterizes the book? Although several different types come to expression, the dominant one is reflection arising from personal observation. Qoheleth's language calls attention to both aspects, the observing and subsequent reflection ("I said in my heart" [1:16; 2:1, 15; 3:17]; "I gave my heart" [1:13, 17; 8:9, 16]; "I saw" [1:14; 2:24; 3:10, 16; 4:1, 4, 15; 5:17; 6:1; 7:15; 8:9, 10; 9:11, 13; 10:5, 7]; "I know" [1:17; 2:14; 3:12, 14; 8:12]; "there is" [2:21; 6:1, 12; 8:14; 10:5]). Naturally, the reflection varies from time to time, prompting some interpreters to distinguish between unified critical and broken critical reflections or meditative reflection and simple meditation. Not every critic thinks that such language adequately describes Qoheleth's dominant literary type; three alternatives have received some attention: *māšāl* (a similitude or comparison), diatribe, and royal testament. The latter of these, royal testament, occurs only in the "fiction" in 1:12–2:16 (perhaps also the conclusion resulting from the royal experiment, 2:17–26). From Qoheleth's language, "monologue" more accurately describes the material than "diatribe," for he emphasizes the debate within his own mind. The term *māšāl* has too broad, or too specific, a scope to be useful in describing the book's literary type.

Qoheleth also uses such literary types as autobiographical narrative, example story, anecdote, parable (often called an allegorical poem), antithesis, and proverb. The last of these occurs in many of its forms: truth statements (or sentences), "better" sayings, numerical sayings, instructions, traditional sayings, malediction and benediction. Qoheleth had particular fondness for "better" sayings, for they enabled him to pretend to endorse conventional wisdom but actually to challenge its veracity by introducing a wholly different consideration (4:3, 6, 9, 13; 5:4 [—Eng 5]; 6:3, 9; 7:1, 2, 3, 5, 8; 9:4, 16, 18). He also used the emphatic form, "nothing is better" (2:24; 3:12, 22; 8:15).

F. Qoheleth's Teachings

What did Qoheleth communicate by means of these diverse literary types? According to the thematic statement in 1:2 and 12:8, he sought to demonstrate the claim that life lacked profit and therefore was totally absurd. In support of this thesis, Qoheleth argued: (1) that wisdom could not achieve its goal; (2) that a remote God ruled over a crooked world; and (3) death did not take virtue or vice into consideration. Hence (4), he advocated enjoyment as the wisest course of action during youth before the cares of advancing years made that response impossible.

(1) *Wisdom could not achieve its goal.* The purpose of being wise, according to Qoheleth, was to discover the good for men and women. In other words, sages searched for ways to ensure success, specifically of living long, prosperous lives surrounded by children and admired by friends and neighbors. For many generations this quest for success had occupied the thoughts of Qoheleth's predecessors, whose conclusions the book of Proverbs preserves. In general, they considered it possible to achieve the goal of wisdom, although reckoning with incalculable divine actions now and again. Consequently, these early sages exuded optimism about the chances of living well. They based their hope on the conviction that a moral order existed, having been established by the creator who continued to guarantee it. These sages went about their work with confidence that the wise would prosper and fools would experience ruin.

But something happened that dashed such comforting thoughts, which had hardened into dogma. Mounting evidence that injustice often prevailed produced a religious and intellectual crisis. The books of Job and Ecclesiastes surfaced from this turmoil and offered a different perspective on the universe. The wisest man in the East underwent horrendous suffering that defied explanation, and wisdom possessed only limited value. It appeared that the moral order had collapsed, and this event had serious religious implications, making it no longer clear whether or not the deity turned toward humans benevolently.

Qoheleth recognized the futility of striving for success, because he saw such efforts being frustrated on every hand. The fastest runner did not always win the race, nor did the strong warrior necessarily achieve victory. The intelligent person did not always receive food, and the skillful were sometimes overlooked. Chance became the supreme factor in human experience, and none could exercise control over it. Qoheleth examined all those things thought to offer happiness—sensual pleasure, achievement, fame, fortune—but dismissed them as utterly absurd.

Whereas earlier sages had believed they could achieve wisdom, Qoheleth thought it impenetrable. Human resolve to possess her only enabled them to discover Wisdom's remoteness and profundity. Of course, limited bits of insight were accessible, enabling their possessors to waEc in light rather than darkness. Nevertheless, no one could really discover wisdom's hiding place, however much he or she claimed to have done so. Consequently, the future remained hidden and mysterious, even for the wise, who could not discern the right moment for any given action. Although Qoheleth characterized the natural universe and the human scene by monotonous repetition, he noted that none could profit from this element of predictability. In this respect, Qoheleth refused to yield a toehold to practitioners of the science of predicting the future, a technique of wisdom, popular in Mesopotamia, that used omens to discover what lay in the immediate future.

(2) *God was remote and the world crooked.* A devout Job directed his complaint to God in heated dialogue, but Qoheleth refused to address the deity at all. He warned those who approached the holy place that since God dwelt in heaven and they resided on earth, their words should be few. Qoheleth noticed that religious vows were a source of danger, inasmuch as some people forgot their promises once the occasion for the original vows had passed. He thus advised caution with respect to religious obligation. Qoheleth had the same attitude toward deeds of morality that he did toward acts of piety. He suggested that individuals adopt a moderate lifestyle, being neither excessively devout nor extremely virtuous. The suffering of Job indicated what could happen when a person became too good. Although Qoheleth did not refer to Job by name, he did counsel against striving with a stronger person, which some interpreters have plausibly taken as an allusion to Job's fruitless struggle with God.

Although Qoheleth freely referred to God's activity, he seemed unclear about the nature of the divine work. It appears that he thought the deity tested human beings in order to demonstrate their kinship with animals. Hence God showed individuals that they would die just like animals, with the implication that decomposition awaited as the final event for all creatures. Although Qoheleth mentioned a judgment, it seems nothing more than another way of talking about death. Some references to judgment must imply a forensic setting, presumably after death, but they probably constitute glosses in the spirit of the second epilogue.

In any event, oppression had gained the upper hand on earth, and the hierarchy of authority ultimately reached the sovereign of the universe, also implicated by such tyranny. Utter mystery characterized God's actions, both in the enlivening of a fetus and in the granting of power to enjoy the fruits of one's labor. Although Qoheleth freely talked about divine gifts, he did not know what disposition characterized the deity, whether love or hatred. To be sure, God bestowed generous gifts on human beings, but no apparent rationale for these acts of kindness existed. Instead, God dispensed these gifts with complete disregard for character. Consequently, nobody could ever ensure that the deity would grant only good things as reward for faithfulness.

Earlier sages had also believed that the High God transcended the universe, which owed its origin to the deity. But they proclaimed nearness as well, for they believed that God sustained a moral order. Qoheleth agreed that God created the universe; the language, however, differs sharply from the Priestly account of creation that seems to provide the source for Qoheleth's observations. God made everything appropriate for its time. This declaration substitutes a nontheological expression and an aesthetic category for the language in Genesis 1. Nevertheless, the created universe cannot be faulted, for human beings have perverted the beautiful and appropriate creation.

Qoheleth recognized an order inherent to things, but he denied that anyone could discover the right time for action. The creator placed some unknown gift in the human mind but made it impossible to use the divine mystery profitably. A time to laugh and a time to cry existed, but how did one know when those different moments presented themselves? What if a person looked for peace when the occasion called for war? Perhaps this anomaly prompted Qoheleth to spy out and explore all knowledge, for only by embracing the many polarities of existence could one ever hope to know the proper time for anything. Nevertheless, Qoheleth conceded that nobody really knows the meaning of a thing.

It made little difference that the universe had integrity, so long as human beings had an innate disposition to do evil. God's achievements could not be changed; the crooked could not be straightened and the straight could not be made crooked. This popular proverb, which Qoheleth quoted with approval (1:15; 7:13), hardly accords with Qoheleth's statement that men and women have used their ingenuity in the service of evil—unless, that is, God bears indirect responsibility for human contrivance.

In this oppressive world Qoheleth recognized a need for companionship, although he judged others on the basis of the contribution they could make to his comfort. A friend would rescue him from a pit, fight off robbers and brigands, and keep him warm on a cold night. Although Wisdom Literature usually moves within the general area of self-interest, that feature of Qoheleth's thought comes to prominence in the royal fiction, with indulgence the operative word. Only once did a pained conscience speak out in behalf of oppressed citizens, and the repetition of the cry "There was no comforter" reveals the impact of their suffering on Qoheleth.

(3) *Death did not take virtue or vice into consideration.* Qoheleth was not the first person to reflect on the finality of death, but he dwelt on it so much that it became central to his thought. Indeed, he once expressed hatred of life because he lacked the power to control his fate. Nevertheless, he stopped short of encouraging suicide, a natural consequence of his disdain for life. In this regard, Qoheleth differed from the unknown author of the *Dialogue between a Master and a Slave* (*ANET*, 437–38).

The thought that death cancels all human achievements prompted Qoheleth to consider life pointless. When one's accumulated wealth fell into the hands of a stranger or a fool, it seemed to mock personal ambition and frugality. Qoheleth imagined that memory of persons disappeared almost as quickly as their bodies decomposed. Furthermore, death's clutches caught some people even before they breathed that last breath, so that they could not gain any pleasure in life. Faced with such grim prospects, these unfortunate individuals would be better off dead, and better still if they had never been born. Qoheleth characterized the stillborn's condition as rest, whereas those who have entered this world undergo buffeting from all directions. Although he quoted a proverb that "a living dog is better than a dead lion," Qoheleth made it clear that the living have a dubious advantage. Knowing that one must die seems hardly worthwhile information; in this instance, as in most, knowledge brings suffering. Critics therefore generally assume that Qoheleth spoke ironically when citing the proverb.

Qoheleth's predecessors had also recognized death's inevitability, but they had assumed that a positive correlation existed between one's virtue and the manner and time of death. In addition, they had managed to deal with exceptions by appealing to the larger entity, the community. Neither source of solace remained for Qoheleth, who recognized death's arbitrary nature and who rarely transcended egocentrism. The same fate befell wise and fool, humankind and animals. Moreover, no one knew what happened after death, but the prospects did not look promising.

The concluding poem (11:7–12:7) depicts this common fate in unforgettable images. The decline of one's powers in old age resembles the collapse of a stately house, and the restrictions on activity contrast with nature's annual rejuvenation. The darkness of approaching death falls on humankind, but nature stands unmoved. Then comes the final silencing of men and women, depicted in two images. The first describes an expensive lamp that falls from the wall and experiences ruin; the second portrays a well at which the pulley breaks and the container for drawing water falls to the bottom and shatters. The language emphasizes the priceless commodities that come to ruin or cease to benefit anyone—silver, gold, light, water. The brief existence under the sun seems to constitute a single act of breathing on the part of the creator, who now takes back the vivifying breath. The death angel takes flight, bearing its reluctant burden into the realms of the night. Qoheleth may have despised life and envied the condition of the aborted birth, but he still did not welcome this destruction of personal identity.

(4) *The wisest course of action was to enjoy life during youth before the cares of advancing years made that response impossible.* Of course not everyone had the capacity to enjoy good food, women, expensive clothing, and perfumes. Qoheleth seems to have addressed young men who had adequate resources, enabling them to indulge in pleasure. Unless his advice was entirely divorced from reality, Qoheleth probably taught individuals from the privileged class. In any case, he implies that they had access to

persons in important positions of authority and that they possessed sufficient resources for living comfortably.

Qoheleth did not encourage total abandon to sensual desire, for such behavior carried too many risks. Instead, he advised young people to enjoy the simple pleasures available to them without resorting to extremes of austerity or debauchery. Although the language about enjoying "the woman you love" is unusual, Qoheleth may not have meant someone other than the young man's wife. However, Qoheleth warns of a future judgment, and a moment's reflection on this sober prospect may explain why he praised those who visited the house of mourning rather than the ones who chose to frequent places of levity.

Such somber warnings detract from Qoheleth's positive counsel, for he seemed unwilling to believe that anything really softened the impact of this conclusion about life's utter futility. Therefore he encouraged enjoyment and reminded those practitioners of pleasure about life's ephemerality and absurdity. Presumably, the little joys available to humans merely made an otherwise intolerable situation bearable. On the other hand, Qoheleth's view that God has already approved one's actions has a remarkably emancipating effect. Life introduces enough risks without the additional factor of a scrupulous conscience. Qoheleth thus left no room for anxiety about religious duty, for life was complex enough without complicating things by becoming a religious zealot. The truth of Qoheleth's observations about human existence speaks for itself. One can hardly escape the wisdom in his advice to enjoy the simple pleasures of daily existence while the strength and financial means to do so endure.

To sum up, Qoheleth taught by means of various literary types that earlier optimistic claims about wisdom's power to secure one's existence have no validity. No discernible principle of order governs the universe, rewarding virtue and punishing evil. The creator, distant and uninvolved, acts as judge only (if at all) in extreme cases of flagrant affront (for example, reneging on religious vows). Death cancels all imagined gains, rendering life under the sun absurd. Therefore the best policy is to enjoy one's wife, together with good food and drink, during youth, for old age and death will soon put an end to this "relative" good. In short, Qoheleth examined all of life and discovered no absolute good that would survive death's effect. He then proceeded to report this discovery and to counsel young people on the best option in the light of stark reality. It follows that Qoheleth bears witness to an intellectual crisis in ancient Israel, at least in the circles among whom he taught.

G. The Larger Environment

An intellectual crisis struck other cultures also, but not at the same time. One expects, therefore, to find some common themes throughout the ANE. This expectation has led to exaggerated claims of literary dependence on Qoheleth's part. Given the probable date of the book, Hellenistic influence has seemed most likely. Qoheleth's concept of chance (*miqrēh*) has been related to *tyche*; absurdity (*hebel*) to *typhos*; profit (*yitrôn*) to (*ophelos*); portion (*ḥēleq*) to *hyph*; "under the sun" (*taḥat haššemeš*) to *hypo ton helion*. One recent critic (Lohfink 1980) has postulated competing places of learning in Jerusalem, private schools in which the Greek language was spoken and Temple schools using Hebrew. This author argues that Qoheleth struck a compromise with Hebrew wisdom as the background and Greek—especially Homer, Sophocles, Plato, Aristotle, and contemporary philosophers—the inspiration. Other interpreters plausibly suggest that Qoheleth's knowledge of Greek thought amounts to no more than what any Jew would have absorbed simply by living in Jerusalem during the late 3d century.

What about literary relationships with ancient Egypt? To be sure, Qoheleth issues a *carpe diem* similar to the advice contained in the Harper's Songs, but this determination to enjoy sensual pleasure seems universal. The preoccupation with death in Qoheleth recalls a similar emphasis in the *Dialogue of a Man with His Soul*, (*ANET*, 405–7) and the royal testament must surely correspond to this literary type in such instructions as those for Merikare (*ANET*, 414–18). Nevertheless, Qoheleth does not offer a legacy for a successor, and the royal fiction disappears after chapter 2. Verbal similarities do occur with late Egyptian texts, particularly *Papyrus Insinger* (*AEL* 3: 184–217) and the *Instruction of 'Ankhsheshonq* (*AEL* 3: 159–84). For example, the hiddenness of God and divine determination of fate characterize both Insinger and Qoheleth, whereas Ankhsheshonq and Qoheleth advise casting bread (or a good deed) on the water and

promise a profitable return, and both use the phrase "house of eternity." However, the counsel about casting bread on water has a different sense, and the euphemism for the grave occurs widely.

Perhaps the most striking verbal similarity occurs in a Mesopotamian text, the Gilgamesh Epic (*ANET*, 72–99, 503–7). The alewife Siduri's advice to Gilgamesh that he enjoy his wife, fine clothes, and tasty food finds an echo in Qoheleth's positive advice. Qoheleth omits one significant thing, the allusion to the pleasure that Gilgamesh would receive from his child. The Gilgamesh Epic also deals with the themes of death, life's ephemerality, the importance of one's name, and memory of a person after death. According to *I Will Praise the Lord of Wisdom* (*ANET*, 596–600), divine decrees are hidden from humans, a view that Qoheleth advocates in 3:11, 8:12–14, and 8:17. The *Babylonian Theodicy* (*ANET*, 601–4) has a fundamentally pessimistic mood, whereas Qoheleth shrinks from blaming all evil on God (cf. 7:29). The *Dialogue between a Master and His Slave* recognizes the threat posed by women and sets up polarities in a way that commends neither alternative. Qoheleth also voices a low opinion of women (7:26) and juxtaposes positive and negative activities (3:1–8).

H. Canonization

Qoheleth's radical views have branded his teachings an alien body within the Hebrew Bible. How, then, did the book find acceptance in the canon? The usual answer, that the attribution to Solomon paved the way for its approval as Scripture, does not take sufficiently into account the fact that a similar device failed to gain acceptance in the canon for Wisdom of SolomonSolomon or for the Odes of Solomon. Their use of Greek may have canceled the effect of the claim to Solomonic authorship. A better answer to the question, that the book received two epilogues, the last of which removed the sting from Qoheleth's skepticism and advocated traditional views concerning observance of Torah, presents itself. Evidence from the 2d century C.E. indicates that the book of Ecclesiastes was mentioned, along with Song of Songs, Esther, Ezekiel, and Proverbs, in a discussion about books that "defile the hands" because of their sacred character, but the attitude of Hillel prevailed over the Shammaite contingency. On the Jewish side, Akiba recognized Qoheleth's canonical authority just before the middle of the 2d century. The book appears in the list drawn up by the Christian Melito of Sardis about 190 C.E., but in the 5th century Theodore of Mopsuestia first raised objection to its sacred character.

Precisely how early Qoheleth became canonical cannot be determined. A few verbal similarities between the book and Sirach exist (for example, "everything is beautiful in its time" [3:11; 39:16], "God seeks" [3:15; 5:3], "wise of heart" and "change of face" [8:1; 13:24], "either for good or for evil" [12:14; 13:24]). In addition, verbal echoes also occur in "one in a thousand," and "the end of the matter," but these comprise stock expressions in Wisdom Literature. Although Sirach was probably familiar with the book of Ecclesiastes, the evidence remains inconclusive. A similar situation exists with regard to Wisdom of Solomon, often thought to attack Qoheleth's views about enjoying life's sensual pleasures. If the author of chap. 2 has Qoheleth in mind, it clearly implies a misreading of his teachings, for Qoheleth did not advocate robbery.

I. The Text

The Hebrew text of Qoheleth is in good condition. Fragments dating from the middle of the 2d century B.C.E., discovered at Qumran, include part of 5:13–17, substantial portions of 6:3–8, and five words from 7:7–9. The Greek version may be the work of some disciples of Aquila, whereas the Syriac translation in the Peshitta may rest on a Hebrew text very similar to the Masoretic one. The Vulgate strove for faithfulness to the Hebrew, although Jerome hastily completed the translation of Proverbs, Ecclesiastes, and Song of Songs ("in three days").

JAMES L. CRENSHAW

ECCLESIASTICUS, BOOK OF. See WISDOM OF BEN-SIRA.

ECSTASY. Ecstasy may be defined as "an abnormal state of consciousness, in which the reaction of the mind to external stimuli is either inhibited or altered in character. In its more restricted sense, as used in mystical theology, it is almost equivalent to trance." The term has been used to explain certain phenomena in connection with biblical prophecy, but it seems that it is here rather a question of what has been recently termed "possessional trance," i.e., "a condition in which a person is believed to be inhabited by the spirit of another person or a supernatural being." During this possession, the person is in an altered state of consciousness and may speak and act like the inhabiting spirit, lapse into a coma-like state, and/or exhibit physical symptoms such as twisting, wild dancing, frothing at the mouth, and so on. This kind of trance may be an individual or group phenomenon. In many societies it is more or less institutionalized.

The biblical accounts of such phenomena are inadequate for a thorough psychological analysis, partly because they lack the necessary details, partly because they are not contemporary documents. Some examples, however, in the OT seem to fit into this pattern.

What the elders in the camp in the wilderness do when they "prophesy" (*hitnabbeʾ;* Num 11:16f., 24f.) is not described, but we learn that they receive something of the spirit that is upon Moses. Saul meets the "prophets" coming down from the high place at Gibeah, obviously in a state of ecstasy or trance induced by music (1 Sam 10:5f.), the spirit of Yahweh comes upon him, and he behaves like the prophets. He is also given "another heart." At another occasion (1 Sam 19:20–24) the men whom Saul had sent to kill David were confronted with a group of "prophets" in trance and began to *hitnabbeʾ* themselves: finally, Saul himself was seized by the spirit of God and behaved like the prophets: he stripped off his clothes and lay naked for a long time. In none of these cases is there any kind of prophetic proclamation.

The same expression is used of the prophets of Baal on Mt. Carmel (1 Kgs 18:26–29). They danced, cried aloud, and cut themselves with swords and lances, but no one answered. Here again, the word *hitnabbeʾ* is used, but no prophetic activity is involved; it should rather be translated "they raved." This kind of ecstatic behavior was obviously deemed typical of Canaanite religion.

Although the words *nabiʾ* "prophet" and *hitnabbeʾ* or *nibbaʾ* are used of the scriptural prophets, there is no obvious sign of such possessional trance in them. The vision Isaiah had at his call (Isaiah 6) seems to have been induced by what he really saw in the Temple; Amos' fruit basket (Amos 1–3) and Jeremiah's almond twig and boiling pot (Jer 1:11–19) seem to be real perceptions given a symbolical meaning. There may be some literary connection between Isaiah 6 and the story of Micah ben Imlah in 1 Kings 22, where, however, we learn that a lying spirit enters the prophets (v 22). The great vision of Ezekiel (chaps. 1–3) may be partly inspired by Isaiah 6, but here it is also told that the prophet was seized by the spirit (2:2) and carried away (3:14). Here we may be close to an ecstatic experience. On the other hand Ezekiel's lying paralyzed for 390 days (Ezek 4:4–8) is rather a symbolic action. Isaiah's description of his panic and deaf-mute state after receiving a terrifying revelation (Isa 21:31) describes his reaction to what he has seen, not the process of receiving his message. The same probably applies to Ezekiel's being mute and paralyzed after his vision (Ezek 3:22–27); it is the prophet's reaction, not the process of inspiration, that is described.

Another indication for ecstasy in Israelite prophecy has been found in the use of *měšuggāʿ,* "mad" or "crazy," with reference to prophets (2 Kgs 9:11; Jer 29:26; Hos 9:7). However, this is not an objective description of a prophet's behavior—no details are given—but rather a derogatory statement from the side of enemies. Furthermore, the word *hiṭṭip* is sometimes used to denote prophetic speech; it may be derived from a root meaning "to drip" and has been taken to refer to an ecstatic way of speaking (cf. frothing above). However, the actual use of the word in context does not allude to any such phenomenon.

Nevertheless, the fact that both possession trance and prophecy are expressed with the same term seems to imply that there were points of similarity between the two. One such point may be that the spirit of God was supposed to be at work in both cases, another that the visionary experience of the prophets sometimes was reminiscent of the state of trance or ecstasy. There is, however, one fundamental difference: the one believed to be possessed by a spirit usually forgets all about the spirit on awakening, while the OT prophets were fully conscious of the message they had received.

HELMER RINGGREN

ED-DALIYEH, WADI. See DALIYEH, WADI ED- (M.R. 189155).

EDDINUS (PERSON) [Gk *Eddinous* (Ἐδδινους)]. See JEDUTHUN (PERSON).

EDEN (PERSON) [Heb *ʿēden* (עֵדֶן)]. Son of Joah, and a Levite of the Gershonnite family, participated in the cleansing of the Temple during the first year of Hezekiah, king of Judah, taking about nine days (2 Chr 29:12). A person with the same name also assisted in the distribution of Temple funds in various Levitical towns, caring for families whose male head was serving in Jerusalem (2 Chr 31:15), obtaining the Chronicler's approval for being "faithful," that is, distributing without favoritism (2 Chr 31:18). The fact that other names besides Eden occur in both contexts (Shimei, Jehiel, Mahath, and Shemaiah) argues for their identity as persons, although this evidence is not conclusive. The name "Eden" is etymologically related either to the name given the birthplace of man, the Garden of Eden, meaning "delight" or "finery" (i.e., jewelry) or, less likely, to the Akk *edinu,* meaning "open field" (*HALAT* 748–49).

KIRK E. LOWERY

EDEN, GARDEN OF (PLACE) [Heb *gan-ʿēden* (גַּן־עֵדֶן)]. The place where the first humans are placed by Yahweh and from which they are later expelled. In Genesis 2–3 it is described as a place of beauty and abundance. Elsewhere it is designated as Yahweh's own garden (e.g. Isa 51:3; see GARDEN OF GOD) and even in Genesis 2–3 it is probably meant to be understood primarily as a dwelling place of Yahweh rather than simply a place of human habitation. Scholarly debate over Eden has concerned the

etymology of the name, the various biblical references, and the location of Eden. See also BETH-EDEN (PLACE).

A. Etymology

Two explanations have been proposed for the origin of the name *ʿēden,* "Eden": (a) that it derives from the Akkadian word *edinu,* "plain, steppe," which in turn is a loan word from Sumerian *eden;* (b) that it is connected with the West Semitic stem *ʿdn* occurring in several languages, having to do with "luxury, abundance, delight, or lushness."

Explanation (a) was first proposed after the discovery of parts of a cuneiform tablet from Nineveh containing a syllabary of Sumerian logograms and Akkadian equivalents. It has been adopted with varying degrees of caution by scholars such as H. Zimmern, H. Gunkel, J. Skinner, and S. R. Driver. The attractions of such a derivation are obvious. There is phonological similarity and the possible Eastern origins of the word coincide with the traditional placement of Eden "in the East." However, several objections have been raised. First, Genesis 2–3 refers to Eden in terms of a fertile garden or oasis. The transference to this meaning from a Sumerian word for "plain" or "steppe" is obscure. Secondly, while the word *eden* is common in Sumerian, the Akkadian equivalent *edinu* is attested only once on the syllabary referred to above. The usual Akkadian equivalent to Sumerian *eden* is *ṣĕru.* Several synonyms also exist for *ṣĕru.* From available evidence it seems that *edinu* was an extremely rare word in Akkadian and it is not a likely candidate for further borrowing into biblical Hebrew. The craft of a narrator or scribe in adopting such a word would be lost to nearly all hearers or readers. Thirdly, there is the problem that the Sumerian word begins with */e/,* while biblical Hebrew *ʿēden* begins with the guttural *ʿayin.* Some scholars would argue that the initial phoneme */e/* in Sumerian corresponds to Heb *ʾalep.* This is the basis for the proposed correspondence between Sum *íd,* Akk *id*, "river," and biblical Hebrew *ʾēd* (Gen 2:6). However this argument is not conclusive. One should compare also Sum *idiglat,* "Tigris," with the Heb *ḥiddeqel,* where the initial */i/* in Sumerian corresponds to another Hebrew guttural, *ḥet*.

Explanation (b) has been the traditional etymology. The LXX translates *gan-ʿēden* by *ho paradeisos tēs truphēs*, "the garden of luxuries," in Gen 3:23, 24 and elsewhere. This is clearly based on the connection of the name of the garden with the biblical Hebrew, *ʿēden* , "luxury, delight." This connection would have been missed neither by those who narrated the story nor by those who read or heard it. After all, the garden contained every tree which was "delightful to look at and good for food" (Gen 2:9). The question remains, however, whether or not the garden's name arose in this connection.

The stem *ʿdn* is known in Syriac and Talmudic Aramaic, and the cognate *ǵdn* occurs in Arabic. In languages contemporary with biblical Hebrew only two examples of possible cognates exist. The first is in Ugaritic. In the mythological text, *CTA* 12.2.53–54, the phrase *bʿdn ʿdnm* can be connected with a stem *ʿdn,* indicating "delight" or "abundance," although some scholars would disagree. In *CTA* 3.3.30; 4.2.17; 4.5.68–69 and elsewhere other meanings or explanations must be given to *ʿdn.*

The second example is in Old Aramaic, in an inscription on a statue of *Haddu-yisʿī,* King of Guzan. The statue is from Tell Fekheriyeh in N Syria. The bilingual inscription contains the Aramaic phrase *mʿdn mt kln,* which is parallel to the Assyrian expression *muṭaḫḫidu kibrāti*, "the provider of the regions," also inscribed on the statue. It would seem that the Aramaic expression is to be translated "one who provides for all the land," but whether the participle *mʿdn* is meant to carry the implication of "abundance" and "great delight" as the Hebrew *ʿēden* might suggest, or whether it is meant to indicate provision in general as the Assyrian parallel *muṭaḫḫidu* suggests, is a matter for debate. Since, however, both expressions occur in a list of epithets of the deity Hadad (Adad) who is described as the giver of plenty to both heaven and earth, including pasture and watering places, the use of *mʿdn* cannot be separated from the notion of earthly abundance and delight.

The etymology of *ʿēden* is therefore still a matter for debate. The derivation from Akk *edinu* remains problematic. The second derivation from West Semitic *ʿdn*, indicating "abundance" or "luxury," remains tenuous. Connection with this stem could just be secondary and late. The Ugaritic and especially the Old Aramaic evidence strengthens the case for this more traditional explanation.

B. Usage

The term *ʿēden* occurs thirteen times in the OT, although not always in the same context. Even within Genesis 2–3 it changes in meaning. In 2:8 and 10 (cf. also 4:16) *ʿēden* is used unqualified as a place name. In 2:15; 3:23 and 24 it occurs in the phrase *gan-ʿēden*, "Garden of Eden." Gen 3:23 and 24 seem to indicate that Eden refers just to the garden and not to some larger region in which the garden is located. Even the LXX reflects this change in sense. In 2:8, 10 and 4:16 it renders *Edem* for *ʿēden.* In 3:23 and 24 it translates *gan-ʿēden* as *ho paradeisos tēs truphēs*, while in 2:15 it renders it simply as *ho paradeisos.* The variation has been seen by some scholars as evidence for different sources within Gen 2:4b–3:24. Attempts to delineate these sources have not met with general acceptance and the unity of the present narrative is now widely stressed. Moreover, while inconsistencies or irregularities within the story can be attributed to a complicated history of tradition, they should not be seen solely as the result of development within the written form of the narrative. The story is an ancient one and the influence of oral narrative techniques (open to inconsistencies and parataxis) on its early written forms should not be ignored.

Outside the early chapters of Genesis, reference to *ʿēden* occurs most often in Ezekiel (28:13; 31:9, 16, 18; 36:35). Elsewhere it is mentioned in Isa 51:3 and Joel 2:3. In the case of Isa 51:3, Ezek 36:35, and Joel 2:3, *ʿēden* or the *gan-ʿēden* appears as a symbol of fertility. The first two references are set within oracles directed to Israelites in exile. In each, Yahweh's promise to restore his people involves the restoration of the land of Israel from a desolate waste to a fertile place. It will be like (the garden of) Eden. In Joel 2:3 the opposite is the case with the threat of judgment in which the land, now like the garden of Eden, will be stripped bare by locusts.

Isa 51:3 places *ʿēden* in parallelism with *gan-yhwh*. It would appear that at least by the time of the Exile Eden was associated wth the mythic concept of the garden of God (or Yahweh). This association possibly lies behind the reference to Eden in Ezekiel 36:35, although some scholars would regard vv 33–36 as a later addition. Direct equation of Eden with the garden of God (*gan-ʾĕlōhîm*)is found in Ezek 28:13. Here the king of Tyre is described residing in Eden, the garden of God, enjoying its privileges, and exhibiting a life commensurate with that until iniquity is found in him (v 15). He is then driven out to die without dignity on earth (vv 17–19). Equation of Eden with the garden of God is also found in Ezek 31:8–9 in an oracle describing the pharaoh of Egypt as a mighty and splendid tree with its top in the clouds and its roots watered by subterranean springs. It was luxuriant and provided shelter for animals and birds (vv 3–7). The trees of Eden which were "in the garden of God" were jealous of it (v 9). Further reference is made to the trees of Eden in the subsequent oracles speaking of the downfall of the pharaoh (vv 16–18).

The relation of the garden of Eden to the general theme of the garden of God must be seen in light of a full discussion of the latter. See GARDEN OF GOD. The issue has to do with the question of whether Eden was understood as a human paradise or a divine dwelling. It ultimately bears on the meaning of the narrative. The argument that the garden was created after the first human and therefore could not have been Yahweh's dwelling misses the subtlety of the situation. Many of the motifs of Eden are also those of the divine dwelling described in Mesopotamian and Canaanite myth. These include the unmediated presence of the deity, the council of the heavenly beings, the issuing of divine decrees, the source of subterranean life-giving waters which supply the whole earth, abundant fertility, and trees of supernatural qualities and great beauty.

The proliferation of such motifs in the ANE cannot be ignored. The description of Eden in Gen 2:46–3:24 draws heavily on the mythic garden-of-God theme but as is the case elsewhere in the Yahwistic narrative, there is a blend of mythic and historical elements. The mythic elements break through the narrative sufficiently to suggest that Eden was not simply a human paradise which had been lost through disobedience. Rather it portrays a divine dwelling within the human, historical context. It is certainly a place set apart from the world as humans have experienced it, but it nevertheless is meant to be understood as an historical entity. The garden of Eden serves as the setting for a drama which explores the relationship between the divine and human worlds, a relationship which in Israelite experience was played out in the context of history.

Some scholars have argued that the oracles of Ezekiel 28 and 31 show direct literary dependence on the Eden narrative of Genesis 2–3. Certainly some motifs are held in common (the magnificent trees, the

rebellion against God and subsequent expulsion, wisdom, precious stones, cherubim, and fire) and the oracles reveal some knowledge of the Eden tradition, but the stories also show marked differences. It is easier to assume that the Ezekiel passages come from a fluid oral tradition, and while they have drawn on the same theme and used some of the same motifs, they nevertheless have been composed independently of Genesis 2–3.

In pseudepigraphal literature the garden of Eden is frequently mentioned. In *4 Ezra* 3:6 and *Jub.* 3:9–35 there is direct reference to the Genesis 2–3 account and the garden. In this context Eden is an earthly concept (of *Jub.* 423–25; and 8:18–19 where Eden is one of the abodes of God on earth). However, we can detect a shift in meaning, for in *4 Ezra* 3:6 we have the first reference to Eden as a garden planted before the earth appeared. In *Jub.* 4:23–25, Enoch is taken in honor from among sinful humans in the garden of Eden where he writes condemnation and judgment on the world.

In other works Eden is clearly associated with Paradise, a heavenly dwelling set aside for the righteous and faithful (e.g., *T. Dan* 5:12). Elsewhere we see certain elements of the garden in Genesis 2 associated with Paradise, for example the trees of Life and Wisdom in *1 Enoch* 24–25; 28–32 and *4 Ezra* 8:52. In *T. Levi* 18:1–14 we have a description of a new anointed priest bringing redemption to God's saints. Verses 10–14 describe the opening of the gates of Paradise and the blessing of the saints as a reversal of the events of Eden in Genesis 3.

C. The Site of Eden

The location of the garden of Eden has intrigued biblical commentators from the time of Josephus (*Ant* 1.3.38–39). Interest has focused on the reference in Gen 2:10–14 where there is mention of the four headwaters which emerge from the river that flows out of Eden. Some commentators have questioned whether these verses are secondary. They interrupt the flow of the narrative and v 15 repeats the notice of v 8 that Yahweh put the human being he had created in the garden. This is not the only possible explanation. If the Eden story of Genesis 2–3 is a written version of a formerly oral traditional narrative and the description of Eden has been based on the theme of the garden of God, then it is possible that vv 10–14, with the description of the four rivers and reference to the jewels and produce of the lands through which they flow, could be the remnant of an embellishment of the theme at that point. The motifs of the rivers and precious jewels are elsewhere related to the garden of God (e.g., *Gilgamesh* [*ANET*, 89]; Ezek 28:12b–19). We should note that the description of the rivers decreases in length but the first three rivers show a part parallel structure. These features indicate the possibility of a longer, poetic basis for the verses.

The names of the rivers are important. The rivers *ḥiddeqel* and *pĕrat* are undoubtedly the Tigris and the Euphrates. The identities of the first two rivers, the *pîšôn* (usually taken to be formed from *pûš,* "to spring up") and the *gîḥôn* (from *ğaḥ* or *gîaḥ,* "to burst forth") are disputed. For the *pîšôn,* suggestions have included the Indus or the Ganges. The land of *ḥăwîlâ,* around which the *pîšôn* flows, is thus associated with India, although elsewhere it is connected with Arabia (cf. Gen 10:29; 25:18). The *gîḥôn* is frequently identified as the Nile through the connection with *kûš,* an ancient name for the south of Egypt. Others have connected the two rivers with canals in the Euphrates-Tigris plain or with the great oceans that encircled the known inhabited lands of Arabia and Africa. W. F. Albright argued in 1922 that Eden lay in the far west and that the *pîšôn* and *gîḥôn* were the Blue and White Niles.

Any firm identification of these rivers or the lands associated with them must remain tentative. There is probably little hope of moving beyond speculation. The possibility that *pîšôn* and *gîḥôn* were not river names in current use at the time of the composition of the Eden narrative ought not to be overlooked. They could even be a traditional rhyming pair of names without specific geographical reference.

The connection of *gîḥôn* with the name of the spring in Jerusalem cannot be neglected. The reference to the Tigris and Euphrates suggests a possible Mesopotamian origin for the Eden story. It therefore would seem unlikely that the Jerusalem spring is the origin for the *gîḥôn* of Gen 2:13, but the possibility of the identification of the two must be considered. The *gîḥôn* spring of Jerusalem is mentioned as the place of Solomon's anointing (1 Kgs 1:33, 38) and so was known at the time of the Yahwist. The name could even form a bridge between the motifs of the mountain dwelling and the life-giving springs associated with the

theme of the garden of God. See GARDEN OF GOD. This would be particularly important when Jerusalem-Zion was being promoted as the dwelling place of Yahweh in David's time and especially Solomon's reign.

The site of the garden is referred to in Gen 2:8 as *miqqedem*, usually translated "in the East." This has been used to support the idea of a Mesopotamian location for the story. The phrase could also be translated "from of old" (cf. Pss 77:6, 12; 78:12; 143:5; Prov 8:22–23, etc.) and possibly in earlier forms of the narrative it had a temporal rather than a geographic reference. If the Yahwist understood the phrase to indicate "in the East" then the precise location still remains uncertain. In Genesis 2–11 the Yahwist depicts the movement of primeval humanity in an easterly direction from the garden (Gen 3:24; 4:16; 11:2). This movement is reversed in Gen 12:4 when Abraham begins his journey westward from Haran to Canaan. It is possible that the Yahwist does not place Eden in Mesopotamia but somewhere W of that land, allowing for an easterly migration after the expulsion. In such a case the rivers of Gen 2:10–14 need not form an interconnected system but could be simply independent, traditional, or famous waterways which in the writer's cosmology are fed from the source that rises in the dwelling place of God. HOWARD N. WALLACE

EDER (PERSON) [Heb *ʿēder* (עֶדֶר)]. The name of two men in the OT.

1. Listed among the Levites of David's time, a descendant of Merari (1 Chr 23:23; 24:30). David is credited with the organization of the Levites into divisions with "charge of the work in the house of the LORD" (1 Chr 23:4). However, as Williamson notes (*Chronicles* NCBC, 160), in that these Levite genealogies do not extend to David's time, it is "probable that the expression *the sons of* is to be understood loosely."

2. A descendant of Benjamin, listed in the longer Benjaminite genealogy of the Chronicler (1 Chr 8:15). The Greek (LXX^B) reads *ōrēr* and *ōdēd* instead of (MT) *ʿarād* and *ʿāder,* a transposition of the consonants *r* and *d* which evidences the confusion between the Hebrew letters *reš* and *dalet*. The Chronicler attaches special significance to Eder as being among the "chief men" who "dwelt in Jerusalem." The Chronicler emphasizes this link of Benjamin with Jerusalem (1 Chr 8:28, 32), providing a clue as to why Benjamin is elaborated in 1 Chronicles 8. The Benjaminite line had been treated earlier in its proper place in the list of tribal genealogies (1 Chr 7:6–12). See also *Chronicles, Ezra, Nehemiah* TBC.

SIEGFRIED S. JOHNSON

EDER (PLACE) [Heb *ʿēder* (עֶדֶר)]. A settlement of the tribe of Judah. Eder is only mentioned once, in Josh 15:22, where it is listed among the settlements occupied by Judah in the aftermath of the Conquest. Though the present literary context of the Judean town list is set in the period of Joshua, its original setting was part of a post-Solomonic administrative division of the southern kingdom. The date for the establishment of this system is debated, with suggestions ranging from the early 9th to the late 7th centuries B.C.

A version of the LXX, however, takes this as Arad, which may well be correct (M.R. 162076). The beginning of the list states that these settlements were "toward Edom," i.e., the first sites listed are in the E part of the Negeb. In the early Hebrew orthography *reš* and *dalet* are very similar, and in copying could

easily be miswritten. The excavators of Arad have suggested that the earliest Iron Age citadel in Stratum XI is Solomonic (Aharoni *EAEHL*, 83). Joshua 12:14 also claims that the Israelites vanquished the king of Arad. It would be strange for Arad not to be listed among the southernmost settlements of Judah. Most commentators prefer the LXX reading (*GP* 2: 309; *GTTOT*, 142; *LBHG*, 105). In 1 Chr 8:15 Eder and Arad are listed as descendants of Judah. The Chronicler, having one source which listed Eder, but knowing full well of the existence of Arad, simply used both.

JEFFREY R. ZORN

EDER, TOWER OF (PLACE) [Heb *migdal-ʿēder* (מִגְדַּל־עֵדֶר)]. *Migdal-ʿēder* (M.R. 171123), meaning "tower of the flock," was a pastoral landmark in antiquity near Bethlehem (M.R. 169123) beyond which Jacob established a campsite after Rachel's death (Gen 35:19) and where Reuben violated Bilhah (Gen 35:21–22; *T. Reu.* 3:13). While the exact location is not known, it has been associated with Khirbet Siyar el-Ganam ca. 2.5 km (1.5 miles) E of Bethlehem on a ridge overlooking the modern village of Beit Sahur. Its name was most likely derived from the flocks that were kept in the area (1 Sam 16:4, 11; Luke 2:8). The suggestion that the tower received its name from the family of Ader (1 Chr 8:13–16) and is to be equated with the Migdal (city no. 58) of Shishak's cities list (Ahituv 1984: 141) is not probable since the clan of Beriah was from Aijalon near the coastal plains and Shishak's Migdal (no. 58) is to be found in the hill country of Ephraim between Tirzah and Adam, according to Aharoni and Mazar's reading of the list (*LBHG*, 324–25, 380 n. 9).

During the Second Temple period, it was prohibited to keep flocks in the land of Israel (*m. B. Qam.* 7:7; *b. B. Qam.* 79b) because of the negative effects on agriculture. The region around Jerusalem, as far out as Migdal-eder, was an exception in order to accommodate the need for sacrificial animals at the Temple. Sheep or goats within this area (of one year or more) were assumed to be for Temple service (*m. Šeqal.* 7:4). Possibly as early as the prophet Micah (4:8), Migdal-eder has been associated with messianic expectations; and the *Tg. Ps.-J.* on Gen 35:21 states that Migdal-eder is the place from where the Messiah will make himself manifest (Winter 1955: 230–42). Jerome (a 4th century C.E. resident of Bethlehem) affirms the traditional identification and function of Migdal-eder (Lat *turrim Ader* or *turris Gader*) and locates it by a road ca. 1.5 km (1 mile) from Bethlehem (*Quaestiones* 43; *de Situ et Nominibus* 215, 222 [*PL* 2: 898, 900]; *Quaestionum in Genesim* 361 [*PL* 2: 992]).

D. Syriac Language and Literature

———

A. Topography and Political History

Protected on three sides by a limestone massif, overlooking the plain of Harran to the SW, and located at the convergence of two ancient routes—from Armenia to Syria and from the Mediterranean to Iran, India and China—Orhay is a natural fortress and commercial center. Jewish and Christian traditions which state that Nimrod was the city's founder derive from competition with nearby Harran and lack historical basis (Duval 1891–92: 106, 256; Segal 1970: 1, 3, 188). Although the town probably dates to the 2d millennium B.C., it is not mentioned in surviving texts or inscriptions until its refoundation by

Seleucus Nicator ca. 303 B.C. (Appian *Syr.* 57). After this the city was known as Antioch by the Callirhoe as well as Edessa, both names alluding to the abundance of water provided by the *Skirtos* (Gk "leaping," = Syr *Dayṣan*) River as well as by the large spring-fed pools within the city (Pliny *HN* 5.21.1). Even in the Hellenistic period virtually nothing is known of the history of the city.

Syriac chronicles supplemented anecdotally by Greek and Roman historians and numismatic and inscriptional evidence provide a fuller view from ca. 132 B.C. to ca. A.D. 240. Then the city was ruled by a dynasty of Nabatean rulers, styled variously as toparchs, phylarchs, or kings, who carved a place for themselves at the eastern edge of the Roman domain. An 8th-century chronicler's list of the rulers, which begins with the eponymous *ʾUrhāy bar Ḥewyâ,* includes several who are known from other sources (Chabot 1953: 50.20–23). As the area was of strategic importance to Rome in the competition first against Parthia and then against Sassanid Persia, the Edessene policy of self-interested independence was sometimes perceived by the Roman historians as traitorous. So *ʾAbgar bar ʾAbgar* (68–53 B.C.) was wrongly accused of betraying Crassus (Plutarch *Crass.* 21–22; Cass. Dio 37.5, 40.20–23), but *ʾAbgar VII bar Izates,* grandson of the Jewish Helen of Adiabene, probably did betray Trajan in A.D. 116 (Cass. Dio 68.18, 21, 30). After a brief period of direct Roman rule (A.D. 116–18) relations between the Nabatean rulers and Rome were especially close under *Maʿnu VIII bar Maʿnu "Philorōmaios"* (A.D. 139–63) (Chabot 1953: 126.1). *ʾAbgar VIII bar Maʿnu* "the Great" (A.D. 177–212), once seen as especially friendly to Rome, may instead have been deemed traitorous due to his support for the wrong candidate in the struggle after the death of Commodus (Drijvers *ANRW* 2/8: 876–78). In any case, as a prelude to his Mesopotamian campaign, Caracalla summoned *ʾAbgar IX Severus* to Rome, arrested him, and in January 214 declared Edessa a Roman *colonia.* The surrounding area was designated the province of Osrhoene (originally Orrhoene, probably derived either from *ʾÛrhāy* or from the Persian name Khusro, Chosrhoes), and Edessa, now its capital, received a governor and a garrison. In A.D. 231 Alexander Severus elevated the city to the status of *metropolis,* but in 242 Gordian reduced it again to the status of *colonia.* The later 3d century brought Sassanian and Palmyrene domination, followed by renewed Roman control under Diocletian. When Diocletian's administrative reforms divided Osrhoene into two parts, Osrhoene and Mesopotamia, Edessa retained its status as capital of Osrhoene, though with a reduced jurisdiction. The city continued to be a commercial and administrative center throughout the Roman and Byzantine periods until it was captured by the Turks in the mid–12th century.

B. Pre-Christian Culture and Religion

Under the Nabatean kings, as under Roman rule, the city's population and consequently its culture and religion were a conglomerate of native Mesopotamian, Aramean, Greek, Jewish, and Roman elements. Although archaeological evidence is limited almost entirely to a few funerary monuments, several media are represented: sculpture, mosaics, and architectural remains. Semitic, Parthian, Palmyrene, and Greek influences are evident. Some inscriptions—most of them funerary—survive in Syriac, Greek, and Aramaic. Later Christian literary sources, principally the hymns of Ephrem Syrus (d. A.D. 373), the *Doctrine of Addai* (ca. A.D. 400), and the *Homily on the Fall of the Idols* by Jacob of Sarug (d. A.D. 521), attest several varieties of pagan worship. The ancient Mesopotamian deities, Bel (Marduk) and Nebo, are found in a Father-Son cult. The Aramaean *Taʿata* (Syr = Gk *Atargatis*) is worshiped, sometimes with her consort, *Baʿal Šamin.* At Edessa as at her principal cult center in neighboring *Hierapolis* (Syr *Mabbug*), she was associated with fertility rites and sacred fish ponds (cf. Lucian *Syr.D.* and *Itin. Eger.* 19.7 = CChr ser. latina 175, 1965, pp. 27–103). The Arabian river deities, Azizos and Monimos, are attested (Drijvers, *ANRW* 2/8: 892). Worship of sun, moon, planets, and stars is associated with astrological lore (Ephrem *HCH* 4, 5, 6 and Doc Add. = Howard 1981: 48). In addition, the city had a substantial and prosperous Jewish community associated with the siEc trade and with their coreligionists in nearby Nisibis. It is, however, to the legends associated with the arrival of Christianity in Edessa that the city owes its greatest fame.

C. Earliest Christianity in Edessa

According to traditions associated with King *ʾAbgar* V (d. A.D. 50) the evangelization of Edessa took place in the apostolic period. (See ABGAR, EPISTLE OF CHRIST TO. The earliest literary accounts of

the Abgar legend, in Eusebius' *Church History* (1.13; ca. A.D. 304) and in *The Doctrine of Addai,* claim that Addai, one of the seventy, was sent to the city by the apostle Thomas. Another tradition, which may have arisen independently, saw Thomas himself as the missionary to Edessa. Despite the fact that the *Acts of Thomas* recount the death of their protagonist in India (*Acts Thom.* 1–2, 159–70), both this work and the *Gospel of Thomas* (q.v.) may have originated in Edessa, and they may, therefore, attest an early association of the apostle with this city (Klijn 1965: 64–83, 106–38, but cf. Ehlers 1970). Ephrem Syrus alludes to a transferral of the bones of the apostle and to their veneration at Edessa (Ephrem *Car. Nis.* 27.62, 42.1.1–2.2, 49.9–40). Finally, Egeria came to the Syrian city (ca. A.D. 404–417) expressly to see the martyrium of Thomas, whom she believed to be the apostle sent to *ʾAbgar* by Jesus (*Itin. Eger.* 17.1).

Except for the fact that his rule coincided chronologically with Jesus' life (i.e., 4 B.C.–A.D. 7 and again A.D. 13–50), there is no evidence independent of Eusebius and the *Doctrine of Addai* to confirm any tie of *ʾAbgar* V to Christianity. Nevertheless, in an attempt to discern a kernel of historical truth in these legends, Gutschmidt (Burkitt 1904) argued that they actually referred obliquely to *ʾAbgar* the Great (ruled A.D. 179–214), since he is mentioned in the Bardaisanite *Book of the Laws of the Countries* (= *BLC,* cf. BARDAISAN OF EDESSA) as having forbidden emasculation in honor of Atargatis when he "came to the faith" (*BLC* 607). Burkitt (1904) accepted this view and argued further that the legends provided evidence for the Jewish-Christian character of early Syriac Christianity and for the evangelization of Edessa in the late 2d century. These proposals, once widely accepted, have been rejected or significantly modified (Bauer 1971; Drijvers 1970; Segal 1980; Murray 1975: 4–24).

Apart from the legends and the problematic *Chronicle of Arbel* (cf. Murray 1975: 9), the history of Christianity in Edessa begins with the *Chronicle of Edessa.* This 6th-century compilation records only a handful of events relevant to the history of Christianity prior to the time of Constantine: (1) the birth of Jesus, (2) Marcion's departure from the Catholic church, (3) the birth of Bardaisan, (4) the birth of Mani, and (5) a lengthy notice, prefatory to the other shorter notices, describing the destruction caused by a flood of the city in A.D. 201 (= *Sel.* 513/14), which mentions that the water "destroyed the nave of the Church of the Christians" or "destroyed the Church of the community of Christians" (Syr *wsrḥw hww twb bhaykl› d‹dt› dkrïstyn›*; Guidi 1955: 2.4). The chronicle does not mention a Christian bishop until 313, when Bishop *Qônâ* is said to have undertaken the construction of a new cathedral church, just coinciding with the new status of the Church under Constantine; the building was completed by his successor (Guidi 1955: 4.2–3). From this point forward a continuous succession of bishops and buildings is attested.

Dismissing the reference to the Christian church building as a later interpolation and rejecting any notion of a kernel of truth in the Abgar legend, Bauer argued in 1934 (= Bauer 1971) that the first Christians of Edessa were neither orthodox nor Jewish-Christian and that they had neither formal organization nor doctrinal norms. Various heretical groups—the followers of Marcion, Bardaisan, and Mani—were there by the late 3d century, but the orthodox Christians arrived only in the 4th century with a Bishop *Palûṭ* consecrated by the bishop of Antioch. Thus Ephrem Syrus' objection to designation of the orthodox Christians as "Palutians" (Eph. Syr. *HCH* 22, esp. 22.1–10) is to be explained by the fact that the Marcionites had been the first Christians in the city and thus were designated simply as "Christians." Against these views of Bauer, Vööbus (1958: 3–108; followed by Quispel 1968 and Murray 1975: 4–24) adduced parallels from the Qumran literature to fragments of early baptismal preaching preserved by Aphrahat (d. A.D. 337) and Ephrem to argue again a Jewish-Christian origin and theological orientation of the earliest Church at Edessa. Bauer's view has been forcefully reiterated by Drijvers (1970), and has been generally accepted for the city of Edessa itself although not necessarily for all of Syriac Christianity (cf. Murray 1975: 4–24).

D. Syriac Language and Literature

During the 2d–3d centuries A.D. the Aramaic dialect of Edessa became the literary language known as Syriac and it became the common language of the Christians of Syro-Mesopotamia. Edessa is thus the most probable place of composition of the earliest Syriac literature, such as the *Odes of Solomon* and the *Testament of Adam* as well as the putative Syriac originals of such works as the *Gospel of Thomas.* Some early Syriac versions of the Bible may have taken shape there as well. The first known Syriac author,

Bardaisan, (A.D. 154–222), certainly resided at Edessa, where he was associated with King ʾAbgar VIII. Three other early Syriac works may have originated here: an early 3d-century apology mistakenly attributed to Melito of Sardis was composed in Syriac by a writer well acquainted with the apologies of Justin and Aristides (Cureton 1855: Syr 22–35, 41–51; Ulbrich 1906). Also extant is an early Syriac version of a short 3d-century Greek apology wrongly attributed to Justin (Cureton 1855: Syr 38–42, 61–69). *The Letter of Mara bar Sarapion to His Son,* ostensibly an epistle of advice from a non-Christian Stoic to his son, is actually a Christian work, probably from the 4th century rather than the 3d as Schulthess thought (Cureton 1855: Syr 43–48, 70–76; McVey 1990). Accounts of the earliest Edessene martyrs, a former pagan priest, *Šarbîl,* and a bishop of Edessa, *Barsamyâ,* purporting to date from the reign of Trajan, are completely unreliable additions to the *Doctrine of Addai* (Cureton 1864: Syr 41–72, 41–72; Duval 1889; Burkitt 1904: 19–22). Although there is little of historical value in the surviving accounts of two early Diocletianic martyrs, poor village boys named *Šamônâ* and *Gûryâ,* or of the deacon *Ḥabîb,* executed under Licinius, the authenticity of their names is consistently attested in early liturgical materials (von Gebhardt 1911: xliv–lxiv).

KATHLEEN E. MCVEY

EDNA (PERSON) [Gk *Edna* (Ἐδνα)]. The wife of Raguel and mother of Sarah in the book of Tobit (Tob 7:7—Eng7:8). Edna is mentioned seven times (7:2, 7:7—Eng7:8, 7:14, 7:15—Eng7:16, 8:12, 10:13—Eng10:12, 11:1), each time as the object of address; she initiates no independent actions. The

name comes from the Hebrew root ʿ*dn*, the same root as the word for (the Garden of) Eden, and means "delight" or "daintiness." In view of the author's use of word plays in connection with other names in the book of Tobit (e.g., Azarias, "God helps"), one might suppose the author intended the reader to associate Edna with the delight of Eden.

PAUL L. REDDITT

EDOM (PLACE) [Heb ʾ*edôm* (אֱדוֹם)]. EDOMITE. A territory that in OT times was generally located S and E of the Dead Sea. The word "Edom" is derived from a Semitic root meaning "red," "ruddy." The name was thus probably given to the area because of the reddish color of the sandstone there. This entry consists of two articles, one focusing on historical and biblical references to Edom, and the other focusing upon the archaeology of the Edomite territory.

EDOM IN HISTORY

Less is known of the history of Edom than of most neighbors of ancient Israel, because there are no extant historical records from ancient Edom, and Edom has always been relatively isolated. Edom's natural contacts were with Midian and Hejaz to the S, with Egypt via the Gulf of Aqaba and the Sinai peninsula to the W, and with Syria and Damascus to the N via the difficult road that led across the Wadi Môjīb toward the territory of the Ammonites. The early Israelites knew very little about Edom, and since their knowledge was colored by their perpetually hostile experience of Edom, modern historians of Edom work under considerable disadvantages. Some historical evidence comes from Egypt, and a number of references occur in the Assyrian and Babylonian records, and recent findings of archaeological surveys and excavations have proved valuable (see below), but the OT records remain centrally important.

A. Early History of Edom

1. Egyptian References. The earliest reference to Edom comes from Egypt. Papyrus Anastasi (6.54–56; *ANET*, 259) preserves the report of a frontier official from the reign of Merneptah (ca. 1224–1214 B.C.), who noted:

> We have finished letting the Bedouin tribes of Edom pass the Fortress [of] Mer-ne-Ptah Hotep-hir-Maat—life, prosperity, health!—which is (in) Tjeku, to the pools of Per-Atum … to keep them alive and to keep their cattle alive.

"Edom" is presented as a foreign, non-Egyptian name. This Semitic place name (which means "the red (land)," and almost certainly refers to the mountains of Nubian sandstone which extend N-S between the Wâdī ʿArabah and the Syro-Arabian desert) was in use by the late 13th century B.C., and perhaps as early as the 15th century if Edom is indicated by ʾ*i-d-má* on a list of Thutmose III (1490–1436 B.C.; Helck 1971: 243–44). The name may be much older, but an earlier use cannot be traced.

The OT closely links Edom with the region called Seir (cf. Gen 36:8–9; Judg 5:4). This name first appears in a letter found in the Egyptian archives at Amarna from King Abdi-hiba of Jerusalem (first half of the 14th century B.C.), who wrote to Pharaoh Amenhotep III: "The land of the king is lost: there is war against us, as far as the lands of Seir ([*matat*] *Se-eri*^{ki}) (and) as far as Gath-Carmel!" (EA 288: 24–25; *ANET*, 488). Nearly a century later Rameses II (1290–1224 B.C.) claimed to have laid waste the land of the Shosu and plundered Mt. Seir (Montet 1933: 70–71; Albright 1944: 228; Giveon 1971: 100; for the

connection of Seir with the *šsw sʿrr* and *šsw yhw* on Rameses II's inscription at ʿAmārah West, see Fairman 1939: 141; Grdseloff 1947: 79; Giveon 1971: 27, 75; Weippert 1981: 292), but this must be reckoned dubious in the light of Astour's demonstration (1979: 17–33) that the place names on this list belong to Syrian and Lebanon. Rameses III (1193–1162 B.C.) makes a similar claim:

> I have destroyed the people of Seir among the *Shosu* tribes. I have laid waste their tents, with their people, their belongings, and likewise their cattle without number.

(Papyrus Harris I: 76: 9–11; see Giveon 1971: 134–37; Albright 1944: 229)

Thus 14th–12th-century-B.C. Egyptian sources mention both Edom and Seir, the latter more frequently (was it nearer and better known?); they do not identify the two places (Bartlett 1969: 1–2), but know their inhabitants as *shosu*.

Unfortunately the term *shosu* does not help to identify these early inhabitants of Edom with any precision. The word may derive from a NW Semitic root and mean "plunderers," or, perhaps more likely, from an Egyptian word meaning "wanderers" (Ward 1972: 56–59; cf. Gottwald 1979: 458–59). They appear in the regions of N Israel and Syria as well as in Seir and Edom (Giveon 1971: 22–261; Weippert 1974: 273), and possibly also in Nubia (Ward 1972: 37–40). But they are not presented as desert nomads; Ward sees them as a social class of freebooters and mercenaries, like the Habiru, not as an ethnic group (1972: 550–56; see further Weippert 1974: 265–80, 427–33; Görg 1979: 199–202; Giveon *LÄ* 5: cols 533–34).

The later OT tradition thought of the early occupants of Edom as "Horites" (Gen 14:6; 36:20–30; Deut 2:12, 22). De Vaux (1967: 481–85) suggested that "Horite" derived from "Huru," the Egyptian 18th Dynasty name for Canaan, and was reapplied by the OT writers to one particular group of the pre-Israelite inhabitants of Transjordan; if so, the Israelites' adoption of "Horite" may have been influenced by the similarity of the word to the Heb *hôr*, "cave," and by the known Edomite practice of cave dwelling (Obadiah 3). It is difficult, however, to extract hard evidence for the supposed pre-Edomite population from Genesis 36, because (1) the "Horite" clans of Gen 36:20–30 in many cases bear names found in 1 Chronicles 2 and 4 as names of Judahite clans (Meyer 1906: 328–54) and are linked with places W of the Wâdī ʿArabah, and (2) the phrase "the inhabitants of the land" (Gen 36:20) suggests that the Israelite historian has assumed from an analogy with the history of Israel that the Edomites entered from outside and took over an already inhabited land (a view explicitly stated in Deut 2:12). However, it is more likely that the Iron Age kingdom of Edom developed naturally from the LB Age population. Recent archaeology surveys in N Edom have found evidence of at least some occupation of the land in the LB Age, and also of continuity of occupation into Iron Age IA at most LB sites (MacDonald 1980: 169–83; 1982a; 1982b). Analysis of the archaeological evidence from the Transjordan as a whole has suggested that there was a strong LB Age presence, showing signs of Mycenaean and Cypriot influence from the Mediterranean, particularly in the more fertile N and central Transjordan and that this Mediterranean influence disappeared in the 12th century B.C. The LB tradition, however, lived on (for example, in several characteristic pottery shapes) into Iron Age IA. The decline of Mycenaean and Cypriot influence in Transjordan is not necessarily or simply to be explained by supposed new arrivals in Transjordan, and the other evidence may suggest the continuance, change, and development of the existing LB population under new economic circumstances. For Edom in particular, however, more evidence is needed.

2. Early OT References. The OT evidence for the early Edomite inhabitants of the land is limited and of uncertain value. Possibly some fragments of information can be gleaned from Genesis 36, but its current form derives from an Israelite editor of the 6th century B.C. who identified Edom with an ancestral figure, Esau of Seir, known in Israelite tradition as the brother of Israel's ancestor, Jacob. The process by which Jacob's brother Esau came to stand (in Israelite eyes) as the ancestor of Edom probably began when David conquered Edom in the early 10th century B.C., and the Edomites became better known in Israel and popularly linked with the uncouth Esau of the foEctale, the older brother whom Jacob worsted (Bartlett 1977). Analysis of the family ascribed to Esau in Gen 36:10–14 shows that Esau is associated with people and places ranging from the S borders of Judah to Midian in NW Arabia. Thus Esau's son Eliphaz is linked with Teman, perhaps the S region of Edom (de Vaux 1969; cf. Eliphaz the Temanite,

Job 2:11), but also with Kenaz, a tribe found in the Hebron region (Num 32:12; Josh 14:6, 14; 15:17; Judg 1:13; 3:9, 11). The name Reuel appears in Exod 2:18, Num 10:29 as that of a Midianite, but among his sons, Nahath appears as a Judahite (2 Chr 31:13), Zerah as a Judahite clan (Gen 38:30; cf. Num 26:13; 1 Chr 6:6, 26), and Shammah perhaps relates to the Jerahmeelite or Calebite clan Shammai (1 Chr 2:28,32, 44–45). Oholibamah (Gen 36:14) links Esau with the clans of the sons of Seir (Gen 36:20–30). Other links appear with Timna (a place on the W edge of the Wâdī ʿArabah) and Amalek, whose tribal home was in the Negeb. There is little in these names to suggest that the compiler is drawing on genuine early Edomite material, and much to suggest that he is doing his best to associate Esau with appropriate names. Most of the names link Esau with S Judah and the Negeb, and some with the S regions of Teman and Midian. This probably reflects the situation of the 7th–6th centuries B.C. when both literary and archaeological evidence suggests an increasing Edomite presence in the Negeb S of Hebron, and when Edom's associations with Midian to the S are well known (cf. Ezek 25:13). Of the tribes and clans of the Edomite heartland in the early period, Gen 36:10–14 tells us nothing. The Song of Moses (Exod 15:1–18) refers to the "chiefs" (*ʾallûpê*) of Edom in parallel with the "rams" (*ʾêlê*) of Moab, and the word has been taken up by the compiler of Genesis 36, who has formed his lists by conferring chiefdoms on the descendants of Esau and Seir (Gen 36:15–19, 29–30) and on various places and names already mentioned in the chapter (vv 40–43). The surprising story of the defeat of Cushan-rishathaim, king of Aram (-Naharaim), by Othniel the son of Kenaz from Debir (Judg 3:7–11) in the Negeb has sometimes been understood to refer to 12th- or 11th-century-B.C. Edom by emending *Aram* to *Edom* (Gray, *Joshua, Judges and Ruth* NCBC, 214; for a different solution see Malamat 1954). However, the emendation is doubtful, and the story may have been composed to give an example of God's saving activity to introduce the edited collection of stories of Israel's deliverance from its enemies (Mayes 1977: 291–92). It is thus of no value for the early history of Edom.

This presentation of the archaeological and literary evidence for early Edom forces us to reconsider the Israelite traditions of Israel's encounter with Edom after the Exodus. The oldest version of this story (Num 20:14–21) pictures Edom united under a king, its borders reaching to Kadesh (= Kadesh-barnea = Tell el-Qudeirat, some 100 km W of the Wâdī ʿArabah), with fields and vineyards, the King's Highway, and armed forces. Edom is introduced as Israel's brother. The Edom presented here depicts the later monarchic period, and this version of the story was perhaps formulated no earlier than the 8th or 7th century B.C. when the Edomites were beginning to settle in the land W of Wâdī ʿArabah, when Assyrian administration had led to the old N-S route being called "the King's Highway," when Edom's prowess with the sword had been experienced (cf. 2 Kgs 8:20–22; Amos 1:11), and when the idea of Israel's brotherhood with Edom had developed. The Israelite account gives no precise details of persons or places, except for Moses and Kadesh; the king of Edom is a shadowy figure, and there is nothing to imply the preservation of an ancient tradition of any value. It is a story of the confrontation of "all Israel" against "all Edom," revealing more of the monarchic period than of the Mosaic age (Bartlett 1977: 8–10). At the time of Moses, Edom was probably not a political unity or a nation; the evidence suggests that this did not occur for another three or four centuries.

The first hint of political development in Edom is given by the king list of Gen 36:31–39 (cf. 1 Chr 1:43–51). In its present form this list is an Israelite, not Edomite, document, looking back from a comparatively late period to "Kings who reigned in the land of Edom, before any king reigned over the Israelites," and presenting them as ruling in succession to one another. This, however, is an artificial construction put upon archival material which appears to derive from at least two different sources. One source simply listed the kings in the form "*X* from *Y*" (Jobab son of Zerah, Husham, Samlah, Shaul), while the second lists the kings with the added formula "and the name of his city was *Z*" (Bela the son of Beor, Hadad the son of Bedad, and Hadar); further information is supplied for Hadad and Hadar. One person, Baal-hanan the son of Achbor, is not connected with any particular place; possibly the name of his city was either then or subsequently lost. Apart from its incorporation in this list, the second group of names shows no connections with Edom, but instead with Moab (Bartlett 1965). Furthermore, a list of early kings, each with his city, fails to correspond with what we know of this early period of Edom's

history either from archaeological or literary sources; Edom was evidently not a land of city-states at this stage. The first group of names and places is much easier to relate to Edom. Jobab comes from Bozrah (modern Buseira), which is known from excavations (Bennett 1973; 1974; 1975; 1977) and from references in the OT prophets (Amos 1:12; Isa 34:6; 63:1; Jer 49:13, 22) to have flourished during the 8th–6th centuries B.C.; evidence for earlier centuries is less certain. Husham came from the land of the Temanites, a region (not a city) notable for its wisdom (Jer 49:7; Bar 3:22–23; cf. Job's comforter, Eliphaz the Temanite), and named in poetic parallelism with Edom itself (Jer 49:20), Mount Esau (Obadiah 9), and Mt. Paran (Hab 3:7). The name Husham may recall the Wâdī Ḥismeh, a broad plain between the S end of the central Edomite range and the peaks of Jebel Ram (Clermont-Ganneau 1906: 467). Samlah came from Masrekah, otherwise unknown; Simons (1959: 390–91) suggests a connection with Jebel Mushrāq between Ma῾ān and Aqaba. Shaul came from Rehoboth on the Euphrates (RSV), but the Hebrew *hannahar* might refer to the Wâdī el-Ḥasā. Eusebius (*Onomost.* 142.13) says that Rehoboth "is now a military post in Gebalene" (i.e., N Edom); this is probably the Roman Robatha near Zoara, which Simons identifies with Khirbet Riḥāb just S of the Wâdī el-Ḥesā (Simons 1959: 391).

The core of this king list thus names four apparently unrelated kings and their places of origin, or, more probably, their areas of rule. One, Bozrah, lay in N-central Edom and was regarded in monarchic times as the capital of Edom. The land of the Temanites was perhaps the region to the immediate S of the mountain range which was the focus of Edom. The other two places are uncertain. These four kings may have been local rulers, comparable with various rulers mentioned in Joshua and Judges. The age of this core material is uncertain, but the prominence of Bozrah and Teman suggests that it was the monarchic period, from which all the other references to these places come. The Israelite editor has combined this with other (not necessarily Edomite) material to produce a quite misleading picture of a pre-Davidic period when Edom was united under a succession of rulers. The editor, and even his sources, had at best only a fragmentary knowledge of Edom, which until the Davidic conquest was barely known to Israel.

3. Edom and the United Israelite Monarchy. How Edom was ruled before the Davidic conquest must therefore be a matter for conjecture, but it is clear that the growing power of the tribes of Israel as they united under a monarchy helped develop Edom's national consciousness. According to 1 Sam 14:47 Saul successfully fought against Edom; Doeg the Edomite's presence at Saul's court (1 Sam 22:9, 18), whether as an ex–prisoner of war or a fortune-seeking immigrant, reveals contact between Edom and Israel at the end of the 11th century B.C. (if the record is accurate and does not simply betray the Israelite writer's readiness to credit a vicious deed to an hereditary enemy). David's campaign against Edom (2 Sam 8:13–14; 1 Kgs 11:15–16; Psalm 60 (title); 1 Chr 18:12) may probably be dated ca. 990 B.C., after his wars with the Philistines, Moabites, Ammonites, Arameans, and Amalekites (Bartlett 1976: 218–20). David presumably wanted to secure the SE border of Judah and to control the trade possibilities of the Gulf of Aqaba. David's campaign was conducted by Joab, who ruthlessly exterminated the male population of Edom (thus ensuring Edom's future hatred for Judah; cf. Amos 1:11), and garrisoned Edom throughout. Joab's thoroughness is emphasized, and it was a century and a half before Edom gained independence from Judah.

Joab's massacre, however, was not quite total; 1 Kgs 11:14–22 tells how the Edomite Hadad, "of the seed of the king," escaped as a child with his father's servants to Egypt, where he married into the Egyptian royal house; after David's death he asked to return to Edom, but was refused by Pharaoh. Some may infer from this that in David's time Edom already had an hereditary monarchy, but though Hadad was a relative (not necessarily the son and heir; cf. 2 Kgs 25:25; Jer 41:1) of a king, we hear nothing of the king himself and nothing of his father, his father's position, or his place of rule. If Hadad fled ca. 990 B.C., his marriage in Egypt and the early youth of his son Genubath took place toward the end of David's reign, probably in the early years of Pharaoh Siamun (ca. 978–959 B.C.). Pharaoh might have seen this as a ripe moment for Egypt to regain, through Hadad, influence or even control in Edom, and hence the marriage. But with Solomon's accession Egyptian policy seems to have changed, perhaps recognizing that "the kingdom was established in the hand of Solomon" (1 Kgs 2:46), so Pharaoh soon gave Solomon his daughter in marriage, with the city of Gezer as her dowry (1 Kgs 3:1; 9:16). This change of policy may

explain why Pharaoh became unwilling to let Hadad return to Edom—it was the wrong moment to show Egyptian interest in Edom or make trouble there for Solomon. Some scholars believe that Hadad indeed returned to rule Edom, and made trouble for Solomon, following the LXX version which completes the Hadad story by borrowing material from the end of the following account of Rezon's hostility to Solomon (MT 1 Kgs 11:25), but this is unlikely. Edom was garrisoned, and lacking in population and manpower; in Jehoshaphat's reign there was still no king in Edom (1 Kgs 22:47), and it was not until the reign of Jehoram (ca. 847–845 B.C.) that Edom was strong enough to establish a monarchy. The activities described in 1 Kgs 11:25 are Rezon's, not Hadad's, especially if we follow the Syriac and LXX and read *wayyāṣoq* ("and he oppressed") for MT *wayyōqoṣ* ("and he loathed"). Hadad might have loathed, but he could not have oppressed Solomon (see Bartlett 1976).

We know virtually nothing of Edom under Solomon and his immediate successors. Glueck argued that the first period of Tell el-Kheleifeh, on the N shore of the Gulf of Aqaba, was destroyed ca. 925 B.C. by Sheshonq from Egypt (cf. 1 Kgs 14:25; Glueck 1967: 440), but Sheshonq's presence in this area is far from certain (Kitchen 1973: 296–300, 432–47), and recent analysis of the pottery from Tell el-Kheleifeh does not encourage belief in its existence before the 8th century B.C. (Pratico 1985). The relationship between Tell el-Kheleifeh and Ezion-geber "near Eloth on the shore of the Red Sea, in the land of Edom," where Solomon is said to have built a fleet of ships (1 Kgs 9:26), remains highly debatable. If Eloth is modern Eilat, Aqaba, or Tell el-Kheleifeh, Ezion-geber may be the island of Jezirat Fara῾un (Rothenberg 1965; Flinder 1977). Through the second half of the 10th century B.C. and the first half of the 9th, however, Edom continued to be garrisoned and governed by a "deputy" (*niṣṣab*, 1 Kgs 22:47). The Edomites were, like the Moabites and Syrians, the "servants" of David (2 Sam 8:14) and his successors, and probably like them paid tribute, though perhaps at a lower rate. Solomon is said to have included Edomite women among his wives (1 Kgs 11:1). Edom was too weak to take advantage of Judah's preoccupation with the revolt of Israel (1 Kgs 12), the attack by Sheshonq (1 Kgs 14:25–26), and subsequent wars with Israel. But its population must have been slowly recovering from Joab's massacre. From this situation Edom made a new start in the mid-9th century B.C.

B. The Edomite Kingdom

1. Edom and the Divided Israelite Monarchy. When Jehoshaphat reigned over Judah (869–847 B.C.), "there was no king in Edom; a deputy was king. Jehoshaphat made ships of Tarshish to go to Ophir for gold; but they did not go, for the ships were wrecked at Ezion-geber" (1 Kgs 22:47–48). The destruction of the ships was perhaps the result of storms, or of local hostility, to which Glueck (1965: 84) attributed the destruction of the second period of Tell el-Kheleifeh. The dating of this event may need revision in the light of recent research (Pratico 1985), but local unrest probably preceded the full revolt of Edom from Judah which took place in Joram's reign (ca. 847–845 B.C.), when Edom set up a monarchy (2 Kgs 8:20). The OT does not name this king, and offers a confusing account of Joram's response to the revolt (2 Kgs 8:21); by a slight correction, the MT may read, "Then Joram passed over to Zair with all his chariots, and the Edomites which surrounded him rose up by night and smote him and his chariot commanders, and his army fled home" (Stade 1901: 337; Zair, otherwise unknown, is perhaps Zoar at the S end of the Dead Sea). From this time, until its submission to Assyria a century later, Edom was an independent kingdom.

This account of the establishment of Edom's independence and monarchy in the reign of Joram of Judah is apparently contradicted by 2 Kings 3, which describes a campaign in which Jehoram of Israel leads Jehoshaphat of Judah (Joram's predecessor) and an unnamed king of Edom against Mesha of Moab. Some have solved this problem by dating the campaign to Jehoshaphat's later years when (it is argued) Joram was coregent with Jehoshaphat (Thiele 1965: 69–71, 205; Gray, *1 and 2 Kings* OTL, 66–67); others (following the Lucianic recension of the LXX) argue that the king of Judah in this campaign was originally Joram's successor Ahaziah (Miller 1967; Shenkel 1968: 93–108). However, closer analysis of the narrative reveals that it is composed from a brief account of Jehoram of Israel's campaign against Moab and a prophetic tale about Elisha; in this story and in the similar story in 1 Kings 22, the historian has attributed to Jehoshaphat's reign a campaign which really belonged later (cf. 2 Kgs 8:28–29); and the reference to the king of Edom (who is unidentified and pays no real part) is inspired by the reference to

the topography of the campaign, which itself owes much to the narrative of Numbers 20 (Bartlett 1983). In short, 2 Kings 3 provides no solid evidence for the existence of an Edomite king before the reign of Joram of Judah.

For the next half-century nothing is known of Edom. The new king and his successors were able to establish their kingdom while Mesha was establishing his in Moab to the N, while Israel was occupied by Syrian and Assyrian attacks, and while both Israel and Judah were suffering from internal upheaval. It was not until the reign of Amaziah (801–787 B.C.) that Judah attempted to reconquer Edom. According to 2 Kgs 14:7 Amaziah "killed ten thousand Edomites in the Valley of Salt and took Sela by storm, and called it Joktheel" (i.e., "El has put an end [to Edom]"; Starcky *DBSup* 7: cols 886–1017). Sela, usually identified with Umm el-Biyarah in Petra, has also been identified with Khirbet Silʿ a few km N of Buseira (see Bartlett 1973: 252 n. 55; Hart 1986). In either case, Amaziah's success was a raid rather than a conquest, for there is no evidence that Judah's rule over Edom was restored. Edom was certainly weakened by the raid, and its weakness is further revealed by its submission and payment of tribute to Adad-nirari III of Assyria (809–782 B.C.), along with Tyre, Sidon, Israel, and the Philistines. Edom may have offered tribute (when Judah, Moab, and Ammon did not) in hopes of being left unmolested, and, whether it continued to pay tribute or not, there are no further Assyrian references to Edom until the reign of Tiglath-pileser III (745–727 B.C.).

A further sign of Edom's weakness in this period is Judah's revived interest in the route through the Gulf of Aqaba. 2 Kgs 14:22 reveals that after Amaziah's death, Uzziah "built Elath and restored it to Judah," which Glueck connected with the rebuilding of Tell el-Kheleifeh after a period of dereliction (Glueck 1965: 85); to this period of the tell Glueck ascribed the seal inscribed "belonging to Jotham," who may or may not be identified with Uzziah's successor in Judah (Glueck 1940: 13–15; 1971: 225; Avigad 1961; Galling 1967).

Of the Edomites themselves in the first half of the 8th century B.C. we know virtually nothing. Amos 1:6 condemns Gaza for delivering "a whole people" to Edom, presumably selling them to slavery; Gaza and Edom may have been links on the slave-trading route between Arabia and the Mediterranean (though contra, Haran 1968). The oracle of Amos 1:11–12, if authentic (Bartlett 1977: 10–12), reveals Amos' knowledge of "the strongholds of Bozrah" and the region of Teman and of the fierce and warlike character of the Edomites as experienced by Judah when Edom seized its independence in the mid–9th century. Throughout Uzziah's reign, Edom was presumably recovering from the losses inflicted on it by Amaziah, and by time of Ahaz (736–729 B.C.) Edom was ready to take the offensive again. While Syria and Israel were attempting to depose Ahaz in favor of the son of Tabeel and coerce Judah into rebellion against Assyria, "the king of Edom recovered Elath for Edom and drove the men of Judah from Elath; and the Edomites came to Elath, where they dwell to this day" (2 Kgs 16:6; cf. the account in 2 Chr 28:16–18, where Edomite and Philistine attacks on Judah are made reasons for Ahaz' appeal to Assyria for help). Glueck ascribed the end of Tell el-Kheleifeh's Period III to this attack, and Period IV to the subsequent Edomite occupation (Glueck 1965: 86). The Edomite capture of Elath was an important development for Edom; Edom, not Judah, could derive the benefit of trade passing between Arabia and Syria via the Gulf of Aqaba, and could control the S Wâdī ʿArabah. This made it easier for Edomites to settle in the S regions of Judah, as they did over the next two centuries.

2. Edom and the Assyrians. The rebellion of Syria and its allies against Assyria ended with Tiglath-pileser III's capture of Damascus in 732 B.C. It was probably on this occasion that he,

> [received] the tribute of … Sanipu of Bit-Ammon, Salamanu of Moab, … Mitinti of Ashkelon, Jehoahaz of Judah, Kaushmalaku of Edom (U-du-mu-a-a), Muzr [i …], Hanno of Gaza, (consisting of) gold, silver, tin, iron, antimony, linen garments with multicolored trimmings, garments of their native (industries) (being made of) dark purple wool … all kinds of costly objects be they products of the sea or of the continent.

(*ANET*, 282)

Edom thus became Assyria's vassal, with the obligations of regular tribute and probably military assistance when required. Presumably some Assyrian officials were installed, and it was perhaps in this

period that the important N-S route from Damascus through Rabbath-Ammon, Heshbon, Dibon, Aroer, Kir-hareseth, and Bozrah became a vital link for imperial administration and first received its name, "the King's Highway" (Num 20:17; Oded 1970). Vassaldom to Assyria may not have been entirely to Edom's disadvantage; archaeological evidence suggests that it was in the Assyrian period that cities like Bozrah, and smaller places like Tawilan or the settlement on the top of Umm el-Biyarah, were at the height of their prosperity (Bartlett 1972: 31–35). Edom was therefore understandably hesitant to join rebellions against Assyria planned by Palestinian states, and when Ashdod solicited Edom's support in 713 B.C. (along with support from Philistia, Judah, Moab, Egypt, and elsewhere; *ANET*, 287), Edom probably avoided any serious commitment. A letter discovered at Nimrud in 1952 names the Edomites at the end of a list of those who paid tribute—Egypt, Gaza, Judah, Moab, and Ammon—after Sargon's retaliatory campaign against Ashdod in 712 B.C., but a lacuna in the text makes it uncertain what is said about Edom (Saggs 1955: 132–33, 151–52; Donner 1957: 159–61). In 701 B.C., when Sennacherib punished Hezekiah for rebellion, Aiarammu of Edom, together with the kings of Moab, Beth-Ammon, Ashdod, Byblos, Arvad, Sidon, and Samsimuruna, hastened to bring tribute (*ANET*, 287). An ostracon from Level VIII at Arad may be a fragment of diplomatic correspondence between Judah and Edom on the eve of Sennacherib's invasion, and it is not unlikely that Hezekiah invited Edom to join the rebellion, and that Edom (no friend to Judah) declined (Aharoni 1970: 28–32). A fragment of an Assyrian tribute list, from the reign of Sennacherib or his successor, notes "two minas of gold from the inhabitants of Bit-Ammon; one mina of gold from the inhabitants of Moab; ten minas of silver from the inhabitants of Judah; […mi]nas of silver from the inhabitants of [Edom] (mat[U-du-ma]-a-a) …" (Pfeiffer 1928; *ANET*, 301). Restoration of the name Edom here is strongly suggested by the context. The list seems to be ordered according to the amount of tribute paid, Edom as a poor country probably paying less than the others.

The importance of Edom to the Assyrians in the 7th century B.C. is revealed in the records of Esarhaddon (680–669 B.C.) and Assurbanipal (668–633 B.C.). Esarhaddon narrates that he called up

> Bal›u, king of Tyre, Manasseh, king of Judah, Qausgabri, king of Edom, Musuri, king of Moab, Silbel, king of Gaza, Metinti, king of Ashkelon, Ikausu, king of Ekron, MiEciashapa, king of Byblos, Matanba›al, king of Arvad, Abiba›al, king of Samsimuruna, Puduil, king of Beth-Ammon, AhimiEci, king of Ashdod

with others to transport "under terrible difficulties" Lebanese timber and quarried stone to Nineveh (*ANET*, 291). How this corvée affected Edom we do not know.

Assurbanipal later conscripted Edomite forces for his campaigns. According to the Rassam Cylinder, he took 22 kings from the seashore, the islands, and the mainland with him against Egypt, and if the list of 22 kings on Cylinder C belongs to this event, Qausgabri of Edom was involved with Manasseh of Judah, Musuri of Moab, Amminabdi of Beth-Ammon, and other contemporaries. In his ninth campaign, Assurbanipal marched against Uate›, king of Arabia:

> Upon the oracle-command of Ashur, and Ishtar [I called up] my army and defeated him in bloody battles, inflicted countless routs upon him (to wit) in the *girû* of the towns Azaril (and) Hirata (-)kasai, in Edom, in the pass of Iabrudu, in Beth-Ammon, in the district of Haurina, in Moab, in Sa›arri, in Harge, in the district of Zobah … Uate› had misgivings and he fled, alone, to the country Nabate. (*ANET*, 298)

Uate› was a member of the Qedarite tribe, which was in the Syrian desert E-SE of Damascus, traveling and raiding as far as the borders of Moab, Edom, and even into the Teima region (Bartlett 1979: 59–62). Edom could hardly escape involvement in this campaign, which seems to have occurred in part in its own territory. The advantage of Assyrian help against a local enemy may have been counterbalanced by the coercion to provide not only men but military bases, food, and other supplies.

These Assyrian references outline a period of Edom's history on which the OT is silent. Three Edomite kings are named: Qausmalaku in 732 B.C., Aiarammu in 701 B.C., and Qausgabri in the reigns of Esarhaddon and Assurbanipal, contemporary with Manasseh of Judah. Qausgabri's name is confirmed by a seal found at Umm el-Biyarah (Bennett 1966: 399–401). The lengths of their reigns are unknown, though Qausgabri's was perhaps fairly long. There is perhaps room for another king between Qausmalaku

and Aiarammu, and another between Aiarammu and Qausgabri, and certainly for several between Qausgabri and the end of the Edomite monarchy under the Babylonians in the 6th century. However, while we know that the capital was in Bozrah, the nature of royal succession is unknown.

A sign of Edom's self-confidence in the Assyrian period is that Edomites were beginning to settle in S Judah. Edom's seizure of Elath ca. 735 B.C. has been mentioned; and 2 Chr 28:16 notes a successful Edomite raid on Judah at the time. Particularly interesting are those OT passages which assume that the territory immediately S of Judah and W of the Wâdī ʿArabah was Edomite. Thus the account of Israel's request for a passage through Edom after the Exodus (Num 20:14–21) locates the Israelites in Kadesh (ʿAin Qudeirat, over 100 km W of Buseira and a similar distance S of Hebron) on the Edomite border. In its present form this account may be no earlier than the 7th or 6th century B.C. (Mittmann 1973). A similar assumption appears in Num 20:23; 21:4; 33:37, and in the boundary descriptions of Judah given in Num 34:3–5; Josh 15:1–4; and Ezek 47:19, and in the Judahite city list of Josh 15:21–32. These passages suggest a boundary extending from the S end of the Dead Sea SW toward Kadesh. However, the discovery of pottery similar to that from Buseira and elsewhere in Edom at Tel Malḥata and Tel Aroer (Kochavi 1967; *EAEHL* 3: 771–75; Biran and Cohen 1976; 1978), and of ostraca from Malḥata (Kochavi 1967; *EAEHL* 3: 774) and Arad (Lemaire 1977: 171–72) and a seal from Tel Aroer (Biran and Cohen 1976; 1977) bearing recognizably Edomite names, suggests the presence of an Edomite element in the population of the region between Beer-sheba and the S end of the Dead Sea in the 7th century B.C. Ostracon 24 from Arad contains an order that troops be sent from Arad and Qinah (Khirbet Ghazzeh or Khirbet eṭ-Ṭaiyib) to Ramath-negeb (Khirbet Ghazzeh or Khirbet el-Gharrah [Tel ʿIra]) "lest anything should happen to the city" and "lest Edom should come there" (Aharoni 1970: 16–27; Lemaire 1977: 188–95; the connection of this reference with 2 Kgs 24:2 [emended] and Jer 35:11 is highly speculative; see Bartlett 1982: 16–17). Edomite presence or influence in the Negeb is further indicated by recent identification of "Edomite" ware at Tell Meshash (Tel Masos; Fritz and Kempinski 1976), at Tel ʿIra (Beit Arieh 1981) and at Ḥorvat Qiṭmiṭ (Beit Arieh and Cresson 1985), and the identification of an ostracon written in Edomite at Ḥorvat ʿUza (Beit Arieh and Cresson 1985).

Later, Obadiah 19 and 1 Esdr 4:50 reveal the postexilic Jewish grievance that the "sons of Esau" and the "Idumaeans" continued to hold the Negeb; by the late 4th and 3d centuries B.C. the land S of Beth-zur is known by the Greek name *Idoumaia* (Diod. 19.95.2; 19.98.1; Zenon papyri PZC 59006, 59015 verso, 59084 [Edgar 1925: 10, 34]; see also 1 Macc 5:65; *Ant* 13.9.1 257; 13.15.4 395; *JW* 1.2.6 63). This Edomite settlement on the S border of Judah should probably be seen as a population drift extending over several centuries (Doeg the Edomite may be an early example) of people migrating W from Edom in search of a better life. They probably had enough in common with the tribes of S Judah—the Kenites, Jerahmeelites, Kenizzites—to facilitate intermarriage; certainly the editor of Genesis 36 could draw on names from this region when compiling lists of Edomites. The over-simple view that the Edomites migrated W under pressure from incoming Arabs from the E is based upon misconceptions of the origins of the Arab population of the desert, and of the relationships between the occupants of the desert and the sown, and needs careful restatement (Gottwald 1979: 426–28, 435–63; Bartlett 1979: 53–54).

3. Edom and the Babylonians. The decline and fall of the Assyrian Empire doubtless gave Edom a few years' relief from imperial administration and taxation. Probably it became a vassal of Babylon, together with Judah and other states, when Nebuchadnezzar took control of the W after 605 B.C. Though involved in discussions of revolt with Moab, Ammon, Tyre, Sidon, and Judah at Jerusalem in Zedekiah's fourth year (594 B.C.: Jer 27:1–7), when Judah openly rebelled in 589 B.C. Edom seems to have stayed aloof, perhaps accepting Jeremiah's view that rebellion would bring disaster (Jer 27:8–22). The commonly held view that Edom wholeheartedly assisted the Babylonians in the sack of Jerusalem is largely based on an uncritical reading of prophetic oracles which owe more to the communal memory of Edom's traditional enmity than to precise knowledge of Edom's activity in 587 B.C. (Lam 4:21–22; Isaiah 34; Mal 1:2–5; Joel 4:19—Eng 3:19; Ezek 25:12; 35:3, 15; Ps 137:7; Obadiah; for a detailed discussion see Bartlett 1982: 13–24). The two major complaints in this material are that Edom had annexed land (for the background to this see above) and had been guilty of violence (that Edom usually came out against Israel with a sword

was a longstanding tradition: cf. Amos 1:11; Num 20:18). A 4th- or 3d-century-B.C. development goes so far as to blame the Edomites for the burning of the Temple (1 Esdr 4:45), which 2 Kgs 25:9 attributes to the Babylonians. The most reliable evidence we have for Edom's part in the events of 587 B.C. is Jer 40:11, which reveals that Edom (with Moab, Ammon, and elsewhere) had given refuge to Jews fleeing the Babylonian forces. For inhabitants of S Judah, accustomed to the presence of an Edomite element in the population, Edom would have been a natural refuge. While some individual Edomites may have taken advantage of the opportunity to pay off old grudges, there is no evidence that Edom gave formal and military help to Babylon in 587 B.C.

On the other hand, Edom did not oppose Babylon, and probably remained intact. Josephus notes (*Ant* 10.9.7 §181) that Nebuchadnezzar subjected Ammon and Moab five years after the fall of Jerusalem, but neither Josephus nor the OT suggests that Edom was attacked on this occasion. The end of the Edomite kingdom and monarchy may have been a result of the campaigns of Nabonidus in S Transjordan and N Arabia in the years after 552 B.C. (Lindsay 1976; Bartlett 1979: 57–58). According to the Nabonidus Chronicle, Nabonidus besieged a place called [*uru A/U*]*du-um-mu* (perhaps to be interpreted as "the city of Edom," i.e., Bozrah). If so, Nabonidus may be responsible for the destruction, burning, and clearing of the acropolis at Buseira (Bennett 1977: 4–6) and perhaps also the destruction of Period IV at Tell el-Kheleifeh (Glueck 1970: 134), but both places soon revived and remained centers of population and administration or trade throughout the following period. Possibly such passages as Jer 49:7–22; Ezek 25:12–14; Obadiah 1, 7; and Mal 1:2–5 allude to these difficult years for Edom. Mal 1:2–5 notes that Edom's hill country has been laid waste, but goes on to speak of the Edomites as contemplating rebuilding. Malachi does not see the land as empty (though he does see the Edomite effort as doomed to failure).

4. Edom during the Persian and Hellenistic Periods. The subsequent history of Edom and its inhabitants during the Persian period is virtually unknown. Nabonidus' activities are unlikely to have cleared the land of its inhabitants, most of whom doubtless continued in their traditional way of life, living in caves and tents, working their land or tending their herds. A cuneiform tablet discovered at Tawilan in 1982, drawn up in Harran in Syria in the accession year of Darius (probably Darius I, 521–486 B.C., though Darius II or even III are not ruled out entirely), tells of the sale of livestock by Samsa-yabi and Samsa-idri (the names are Syrian) to Qusu-šama›, who is almost certainly an Edomite. Also from Tawilan came a hoard of gold jewelry, probably deposited in the late 6th or 5th century B.C. (Dalley 1984; Maxwell-Hyslop 1984). Bennett notes occupation at Buseira at the beginning of the Persian period (Bennett 1977: 9), and Buseira may have remained the center for whatever Persian administration may have been imposed. At Tell el-Kheleifeh, Glueck says, Period IV was destroyed before the end of the 6th century B.C.; "a new industrial city [Period V] was built over it which lasted from near the end of the 6th or from early in the 5th century B.C., mainly under Persian administration" (Glueck 1967: 442). Aramaic ostraca were found testifying to trade with Arabia; 5th and 4th century B.C. black-glazed Greek pottery indicated contact with Greece (Glueck 1967: 443). Nothing is known of this period for the site of Petra (its Semitic name was Reqem: cf. Num 31:8; *Ant* 4.4.7 §82; 4.7.1 §161; see Starcky 1965), though its importance is shown by Antigonus' attempt to capture it in 312 B.C. (Diod. 19.95).

Little is known of the people of the land, but evidence of changes in the population exists. It has been argued that by Nehemiah's time Geshem the Arab (Neh 2:19; 6:1, 9) was ruling Edom and the S Negeb (Myers 1971: 386); Geshem has been identified with Gashmu, the father of Qainu king of Qedar, the donor of a bowl found at Tell el-Maskhuṭa in the Delta region of Egypt, and a kingdom of Qedar has been postulated whose power ranged widely over NW Arabia and S Palestine (Dumbrell 1971: 33–44). A less speculative assessment of the evidence shows that the Qedarites belonged to the Syrian desert E-SE of Damascus, migrating and raiding as far as the borders of Moab, Edom, and even the Teima region, but there is no evidence that they settled or ruled in Edom. In the OT, however, the people of Qedar are closely associated with the Nabaioth (Isa 60:7; Gen 25:13; 1 Chr 1:29), who are in turn linked with the people of Esau (Gen 28:9; 36:3). It has always been tempting to identify the Nebaioth with the *na-ba-a-a-ti* of the Assyrian records, the *nbyt* of the texts from Jabal Ghunaym near Teima (Winnett and Reed 1970:

99–101), and the Nabateans *(nabaṭu)* whom Antigonus attacked in Petra in 312 B.C., and whose kings ruled from Petra from ca. 200 B.C. to A.D. 106. The identification has been opposed on linguistic grounds: in particular, it is not clear how the final *t* of the *na-ba-a-a-ti, Nebaioth,* and *nbyt* could become the emphatic *ṭ* of the *nabaṭu* of the Nabatean sources (Starcky *DBSup* 7: cols 902–3; but see Broome 1973). But close examination of the literary evidence for the homeland of the OT Nebaioth, the Assyrian *na-ba-a-a-ti,* the *nbyt* of the Jabal Ghunaym texts, and the Nabataioi of Diodorus locates them all in the region bounded by the mountains of Edom to the W, the Ḥismeh plateau to the SW, Teima to the S, the Nafûd to the E, and the Wâdī Sirhan to the NE (Bartlett 1979: 63–66), and whatever the relationship of the names, it seems clear that the forefathers of the Nabateans who became the dominant population of ancient Edom from the end of the Persian period onwards had their homes in this area. Diodorus portrays the Nabateans as people with recent experience as herdsmen in desert areas and acquaintance with the as yet forbidden pursuits of agriculture, viticulture, and house building. Diodorus' picture suggests that the older Edomite population in the 4th and 3d centuries B.C. was being overtaken by the newer Nabatean element, who in due course produced a dynasty and a kingdom of their own.

ARCHAEOLOGY OF EDOM

A. Extent of the Territory
B. History of Explorations
C. Present Status of the Archaeology of Edom
D. Conclusion

A. Extent of the Territory

Some scholars restrict the land of Edom to the territory between Wadi el-Ḥasā in the N and Wadi Hisma in the S, and Wadi ‹Arabah on the W and the desert on the E (Glueck 1970: 161–67; Aharoni *LBHG,* 40). Others extend the territory W of the ‹Arabah (Eod-Avd 1963: 622; Cohen 1962: 25; Is 1971: 370–71). The second position appears to be more consistent with the biblical data which describe the N border of

Edom as extending from the Dead Sea southward to the Ascent of Akrabbim to Zin and Kadesh-barnea (Num 34:3–4; cf. Josh 15:1–3). The N shore of the Gulf of Aqaba, according to the biblical data, appears to be the S border of Edom (Deut 2:8). Moreover, the hill country of Seir is identified with Edom (Gen 36:8–9, 21) and the land of Edom is repeatedly referred to as the land of Seir (Gen 32:3; Num 24:18, Josh 24:4; Judg 5:4; Ezek 35:15; 2 Chr 25:14; Isa 21:11). The Bible locates Seir, in part, in the E Negeb (Josh 11:17; 12:17) in relation to the territory of Simeon (1 Chr 4:42–43) and Judah (Josh 15:10; Ezek 35:2, 3, 7, 15). It also uses the name to refer to a great part, if not the whole, of the Edomite territory E of the ʿArabah between the S end of the Dead Sea and the territory of Moab (Deut 2:1, 4, 5, 8, 12, 22, 29) as far S as the Gulf of Aqaba. The land of Edom, thus, includes territory both W and E of the Wadi ʿArabah. This entry, however, will treat only the territory of Edom located in the E ʿArabah and eastward or what is now in the Hashemite Kingdom of Jordan. See Fig. EDO.01.

B. History of Explorations

Modern interest in the area essentially began with Burckhardt's visit to Petra on August 22, 1812 (1822; see Browning 1982: 64–65). He was followed to Petra by a number of scholars (Browning 1982: 70–78), including de Laborde, who made a thorough study of Petra as early as 1828 (Laborde and Linant 1830). Later, Musil (1907–8; 1926), Brünnow and von Domaszewski (1904–9), Albright (1924; 1926), Frank (1934), and Alt (1935), among others, did exploratory work in Edom. Glueck conducted extensive archaeological surveys in S Transjordan between 1934 and 1938 (1935; 1937a; 1939a). He followed this up by excavations at Khirbet et Tannur just S of Wadi el-Ḥasā in 1937–38 (1937b; 1937c; 1965a; 1970: 213–43) and at Tell el-Kheleifeh just N of Aqaba for three seasons between 1938 and 1940 (1938a; 1938b; 1939b; 1940; 1965b; 1970: 106–37; Pratico 1985). For almost 50 years Glueck's work has dominated the scholarly analysis of this area.

C. Present Status of the Archaeology of Edom

As a result of work in Edom during the past several decades a more complete picture of the archaeology of Edom is emerging. There is evidence of human occupation in N Edom dating to the Lower, Middle, and Upper Paleolithic periods. This evidence spans as much as a half million years of human cultural development (MacDonald, Banning, and Pavlish 1980: 170–71; MacDonald, Rollefson, and Roller 1982: 119–25; Rollefson and MacDonald 1981; MacDonald et al. 1983: 314–18). Prehistoric sites in the Ras en-Naqb region cover a period of over 100,000 years between the Lower Paleolithic and the Chalcolithic (Henry 1979a; 1979b; 1982: 45; 1985; Henry et al. 1981). Just N and S of this area, between Maʿan and Aqaba, there is more Paleolithic evidence (Jobling 1981; 1982; 1983a; 1983b; 1984). In the Fjaje area near Shaubak, Late Acheulian hunters "harvested" herds during their migration, through the Wadi el-Bustan drainage complex, from the E grasslands and savannahs of the plateau to the warm and lush expanses of the Rift Valley in the fall and on their return to the grazing lands on the plateau in the spring (Rollefson 1981; 1985: 105).

The early Natufian site of Wadi Judayid, in the vicinity of Ras en-Naqb, carbon-dated to ca. 12,000 B.P., was occupied by sedentary hunters and intensive collectors. During the Epipaleolithic period sites were established in the upland piedmont zone of the Edomite plateau as well as on the floor of the Wadi Hisma. These sites display marked differences in their settings, sizes, and artifact inventories (Henry 1985: 76; see 1979a; 1979b; Henry et al. 1981). The Epipaleolithic period is also well attested in N Edom (MacDonald, Banning, and Pavlish 1980; Rollefson and MacDonald 1981; MacDonald, Rollefson, and Roller 1982; MacDonald et al. 1983) and near Petra (Kirkbride 1958).

Among the Pre-Pottery Neolithic (PPN) sites in Edom, Beidha is the most important excavated to date (Kirkbride 1966; 1968; 1982; 1984; 1985). D. Kirkbride dates the beginning of Beidha to about 7200 B.C. (1982: 52; 1985: 120). She writes: "After camping for a while in temporary huts the people of Beidha also built a wall around their inner territory and created their permanent community" (1982: 52). The site was abandoned about 6500 B.C. (Kirkbride 1982: 53; 1985: 120). In the late PPN at Abu Nakhailah in the Wadi Rum there was a stone-built settlement with both round and rectangular architecture. The round houses are semisubterranean and reminiscent of early Beidha. It had a more advanced flint industry than Beidha but there was no pottery (Kirkbride 1978; 1982: 54; Kirkbride and Harding 1947). PPN sites are

also present at Jebel Queisa in the Judayid Basin (Henry 1979a; 1982; 1985: 74; Henry et al. 1981) and in the Wadi ʿArabah (Raikes 1980; 1985: 98–99). The Aceramic Neolithic site at Jebel Queisa served as a temporary hunting camp. Based upon the point typology, Henry dates the site to early in the 8th millennium (1985: 74).

The Pottery Neolithic is poorly represented in Edom. However, several sites from the period are reported from N Edom (MacDonald, Rollefson, and Roller 1982: 121) and the Hisma (Jobling 1983a: 189).

Twenty-five percent of the sites discovered in Henry's Ras en-Naqb survey contained a Chalcolithic component most of which contained "one or more circular or semi-circular stone structures in association with thick ash lenses and refuse pits" (Henry et al. 1981: 117; see Henry 1982: 45; 1985: 75). The sites normally displayed moderate densities of lithic artifacts along with some pottery (Henry et al. 1981: 117; Henry 1985: 75). Some of these sites suggest the transhumant pattern of modern pastoralists (Henry 1985: 77). There are remains of copper smelting near ʿAqaba, dating to the Early Chalcolithic period. Also found at the site were well-used, flint sickle blades and objects made from sea shells (Raikes 1985: 99). The Chalcolithic/EB is attested on the Edomite plateau (MacDonald, Rollefson, and Roller 1982: 121; Hart 1985: 412–13), between Maʿān and Aqaba (Jobling 1984: 201), and in the Feinan region in the Wadis Khalid, Ratiye, and Fidan (Hauptmann, Weisgerber, and Knauf 1985: 185–88; see Raikes 1980: 55; 1985: 99).

No Bronze Age sites have been excavated in Edom. However, Glueck reported EB sites from the SE plain of the Dead Sea (1935: 33–34). Sites belonging both to sedentary and nomadic peoples of the EB period are found in N Edom (MacDonald, Banning, and Pavlish 1980; MacDonald, Rollefson, and Roller 1982; MacDonald et al. 1983). EB sherds are also reported from the mining area in the Wadi Khalid (Hauptmann, Weisgerber, and Knauf 1985: 188). Thus, there is the possibility of EB Age mining activity in Wadi ʿArabah.

There is scant evidence of any population, either sedentary or nomadic, in Edom during both the MB and LB Ages with the exception of the copper mining areas of the Feinan region (Hauptmann, Weisgerber, and Knauf 1985: 173, 185, 188–90). A U.S. Geological Survey team has published radiocarbon dates from charcoal found in the E tributaries of the Wadi ʿArabah which yields corrected dates for Wadi Feinan-Wadi Dana area of 1390–1310 B.C. ± 70, and for Jebel Khirbet en-Nahas, 1540 B.C. (Overstreet et al. 1982: 2).

The situation changes at the end of the LB. Glueck was the first to report Iron I period sites from Edom (1935; 1936; 1939a). Weippert's work in Edom led him to conclude that the population increased during the Iron I period. This settlement began in the N between the Wadi el-Ḥasā and Tafila and gradually extended S of Tafila in the Iron II period (Weippert 1974: 30). This conclusion is supported by the Wadi el-Ḥasā Archaeological Survey (WHS) which reported LB-Iron I and Iron I sites in N Edom. These sites, which are small villages, farms, and sherd scatters, are generally located in the area best suited for agricultural activity (MacDonald, Banning, and Pavlish 1980; MacDonald, Rollefson, and Roller 1982; MacDonald et al. 1983). The Feinan region survey also reported Iron I pottery (Bachmann and Hauptmann 1984: 120–22; Hauptmann, Weisgerber, and Knauf 1985: 190–91). Thus, the archaeological evidence indicates both farming and mining activity in Edom during the Iron I period.

There was another increase in population in Edom during Iron II (Hart 1985: 412). Many of the sites from this period appear to have been agricultural settlements (MacDonald, Banning, and Pavlish 1980; MacDonald, Rollefson, and Roller 1982; MacDonald et al. 1983), but it is possible that several of these sites were fortresses or watchtowers (MacDonald 1984a).

Bennett's excavations at Umm el-Biyara, TAWILAN (M.R. 196972), and Buseira (see BOZRAH) led her to conclude that no occupation earlier than the late 8th century B.C. existed at these sites. She posits that the settlement at Umm el-Biyara had a life of perhaps no more than 50 years. On the basis of a seal impression found at the site (of Qos Gabr, one of the few Edomite kings mentioned in the Assyrian annals), the settlement could center around the mid–7th century B.C. No earlier pottery or artifacts were found (Bennett 1964; 1966a; 1966b; 1966c; 1971a: 40; 1976: 252). At Tawilan she uncovered "a large,

unfortified, prosperous agricultural settlement of the Iron Age II period" (1976: 252). She posits that neither the buildings nor the artifacts suggest a date earlier than the late 8th century B.C. for the earliest settlement (1969; 1970; 1971b; 1984). She suggests that the main period of occupation of Buseira was from the end of the 8th century B.C. to the end of the succeeding century (1973a; 1973b; 1974; 1976: 252; 1977).

There is also evidence for the Iron Age presence at es-Safi, Feifeh, and Khanazir (Rast and Schaub 1974). Rast and Schaub collected Iron II pottery from es-Safi and Feifeh and Iron I and II sherds from Khanazir (1974: 15–18).

Further S in the Feinan region, 8th–6th century sherds were found in Wadi Feinan, Khirbet en-Nahas, Khirbet el-Jariye, Khirbet Ghuweib, and the Wadi Dana (Bachmann and Hauptmann 1984: 117, 199; Hauptmann, Weisgerber, and Knauf 1985: 168). The U.S. Geological Survey reports a radiocarbon date from charcoal in the Jebel Khirbet en-Nahas area as having a corrected age of 800 B.C. (Overstreet et al. 1982: 2, 9). In summarizing its findings on mining and smelting activities in the Wadi ʿArabah the U.S. Geological Survey reports: "Certainly at the Wadi Feinan, Wadi Dana, and Jebel Khirbet en Nahas sites in Jordan, the largest slag piles are associated with dates from 3,220 ± 200 to 2,540 ± 200 years B.P. (corrected to 1,540 years B.C. to 800 years B.C.) …" (Overstreet et al. 1982: 37).

Pratico has reappraised Glueck's excavations at Tell el-Kheleifeh. He dates the site from the 8th–6th centuries B.C. with the possibility of its continuance beyond the Iron Age (1985).

There appears to be little continuity of settlement between the Edomite and Nabatean periods. The Iron Age villages that Hart surveyed, not to mention Tawilan and Buseira, show little evidence of major Nabatean reoccupation (Hart 1985: 412). Firm evidence for Persian period occupation in Edom is lacking, but Pratico writes: "Although both architectural and ceramic data are lean, the occupational history of Tell el-Kheleifeh continued beyond the Iron Age, perhaps as late as the 4th century B.C.E." (1985: 26–27). Evidence from the Hellenistic period is also poorly represented, with the exception of sherds from several sites (MacDonald, Banning, and Pavlish 1980: 177; MacDonald, Rollefson, and Roller 1982: 127; MacDonald et al. 1983: 319–20). However, no recognizable Hellenistic architectural remains are reported.

In Glueck's opinion "the Nabataean kingdom was highly organized and intensively settled, and from the fourth century B.C. on was concerned with much more than caravan trade" (1970: 193). Nabatean sites are found throughout the Edomite plateau. They made greater use, for agricultural purposes, of the wadis than either earlier or later settlers in the area. Some of their reclamation projects, instead of supporting settled villages, may have been designed to supply forts and garrisons which guarded their extensive trade networks. They positioned their signaling stations or watchtowers on the ridges between the major wadis (MacDonald 1984b; 1984c: 188–89). The countryside is covered with farms, hamlets, and villages during the period (Hart 1985). The Hisma also supported a substantial Nabatean population. Graf posits pre-Roman, Nabatean settlements at such sites as Humayma, Quweira, Khirbet el-Khalde, and Khirbet el-Kithara along the main highway to Aqaba, and in Wadi Rum which was a large Nabatean center (Graf 1983: 650–60).

Parr dates the earliest building activity in the central part of Petra, the Nabatean capital, to the mid–3d century B.C., based on the earliest coins which were minted in Aradus in the mid–3d century B.C.; and later, painted Nabatean ware is common at Petra after about 100 B.C. (Parr 1970: 369–70). In his study of Nabatean pottery Khairy states: "The best ware belongs to the time of Aretas IV (9 B.C.–A.D. 40) but the most prolific period belongs to the second half of the first century A.D. and the first half of the second century" (1982: 276).

A number of Nabatean temples are located in Edom. Glueck dates the one on Jebel et-Tannur from about 25 B.C. to about 125 A.D. (1970: 241). Another, Khirbet edh Dharih in the Wadi Laʿban, also in N Edom, is dated to the 1st century A.D. (Villeneuve 1984; 1985a; 1985b; see Savignac 1937). The Nabatean temples of Qasr el Bint (Bowersock 1976: 225–26) and the "Winged Lions" (Hammond 1982) are located within Petra. The former is dated to the reign of Aretas IV (Bowersock 1983: 61; Starcky and Strugnell 1966; Parr 1965–66; Wright 1961). Another Nabatean temple is located in the Wadi Rum (Savignac and Horsfield 1935; Kirkbride 1960).

The main theater at Petra dates to the time of Aretas IV (Hammond 1964; 1965). It is an "obvious case of the Nabataean absorption of Graeco-Roman styles" (Bowersock 1983: 61). Bowersock also dates the Khazneh ("treasury"), with its strongly Hellenized architectural elements, to the same time (1983: 62; see Schmidt-Colinet 1980; Wright 1962; 1973).

Possibly, the best route for humans and pack animals from Aqaba to Petra is up the Wadi ʿArabah. There is evidence of Nabatean presence along this route (Raikes 1985: 100) at such sites as Aqaba (Glueck 1935: 46–48), ʿAin Gharandal (Glueck 1935: 39–40), Khirbet et-Taiyibeh (Glueck 1935: 37–38), and Bir Madhkur (Glueck 1935: 35–37; see Frank 1934, pl. 24). Glueck posits that the latter three sites were all *caravanserai.* These sites were probably also occupied during Roman times (Glueck 1935: 35–40). Further N in the ʿArabah, the sites of Feinan (Glueck 1935: 34–35) and of Qasr et-Talah show evidence of Nabatean occupation (Glueck 1935: 12–17; see Musil 1907–8: 209–14; Frank 1934: 213–15; and Raikes 1985: 100).

The Romans under Trajan annexed Edom as part of their annexation of Nabatea in A.D. 106 (Starcky 1955: 103–4; 1966; Bowersock 1976: 228; 1983: 76–81). It was at this time that the *Via Nova Traiana,* which joins Bostra in the N with Aila (= Aqaba) in the S, was built (Starcky 1955: 104; 1966; Bowersock 1983: 83). The S segment of this highway, from the Wadi el-Ḥasā to Aila, passes through Edom. Parts of the *Via Nova Traiana* are well preserved (MacDonald, Rollefson, and Roller 1982: 128–29). The milestone inscriptions recorded by Thomsen (1917) along this stretch are now, in most cases, faint or completely obliterated (MacDonald, Rollefson, and Roller 1982: 128, 452). See Fig. ROA.03.

Petra apparently continued to flourish after the Roman annexation (Bowersock 1983: 86) and the domestic area of Petra has provided evidence of unbroken habitation through the Roman period, down to the great earthquake of the mid–4th century (Hammond 1980; 1981; Bowersock 1983: 86). The triumphal arch at Petra is the greatest memorial to Trajan in Roman Arabia (Bowersock 1982: 198; 1983: 84).

The WHS surveyed a number of structures along the *Via Nova* in N Edom. The most important of these is known as Rujm Faridiyyeh (Brünnow and von Domaszewski 1904–09, 1: 83; Glueck 1939a: 50; 1965; MacDonald, Rollefson, and Roller 1982: 129, 453; Roller 1983: 181; Parker 1986: 89–91).

SE of this area, and NE of Udruh, two *castella*—namely Jurf ed-Darawish and Daʿjaniya—are located E of the *Via Nova* (Parker 1976; 1986: 91–94). The former is located on a branch road which left the *Via Nova* a short distance N of Udruh (Parker 1986: 88). Parker dates it from the late 2d or early 3d century through the 4th century (1986: 91; cf. however, Brünnow and von Domaszewski 1904–09, 2: 14; Bowersock 1976: 226). Its function was to guard the outer branch road leading from Udruh to the upper Wadi el-Ḥasā (Parker 1986: 91). Parker suggests that the latter was occupied from about the time of the Roman annexation until the early 6th century, with the extant fort dating to the late 3d or 4th century (1986: 94). It protected the outer branch road E of the *Via Nova* against incursions from the E (Parker 1986: 94). S of this area, such sites as Udruh, Ail, Humayma, Quweira, Khirbet el-Khalde, and Khirbet el-Kithara are located along the *Via Nova* before arriving at Aila on the N tip of the Red Sea. Killick writes of Udruh that "in Roman and Nabataean times the site may have taken on a strategic importance because of the proximity to Petra and the construction of the Roman road network" (1983a: 239). Parker considers the fort as being the most important fortification of the S Arabian frontier and among the largest Roman military sites in Transjordan (1986: 94–95).

Humayma is located adjacent to the *Via Nova* near the N edge of the Hisma, just below the Esh Shara range. It is the largest ancient site in the Hisma and was occupied from the Hellenistic through the Umayyad periods (Eadie 1984a: 211, 220; 1984b: 5–6). The *castella* of El Quweira (Alt 1936: 96–98; Glueck 1935: 58–59; Graf 1983: 652–53; Parker 1986: 105), Khirbet el-Khalde (Parker 1986: 109; Savignac 1932: 595–96), and Qasr el-Kithara (Parker 1986: 110; Savignac 1932: 595; Glueck 1935: 54; Alt 1936: 106) were all located on the *Via Nova* between Humayma and Aila, and were all occupied during the Roman period.

A number of Roman sites were located in the Wadi ʿArabah. One of the most important of these is a fort in the Qaʿes Saʿidiyin just N of Gharandal. Many of the Nabatean sites in the ʿArabah, such as Aila, Gharandal, Khirbet et-Taiyibeh, and Bir Madkhur, were recognized during the Roman period (Glueck

1935: 35–40). SE of es-Safi and high above the Wadi el-Ḥasā, McCreery discovered a Roman period fort called Umm al-Tawabbin (MacDonald 1984c: 188–89). Evidence of Roman mining activity in the Feinan region spans the 1st to the 4th centuries. This evidence includes sherds, slag heaps, and a "triple shaft" (Bachmann and Hauptmann 1984: 114–20; Hauptmann, Weisgerber, and Knauf 1985: 169, 192).

The territory of Transjordan which had been unified by Trajan into *Provincia Arabia* was subdivided into four parts in the 4th century. The S part, which included Petra, was part of Palestine III or *Salutaris* (Piccirillo 1982: 291).

Edom continued to be occupied during the Byzantine period. The presence of pottery at nearly all the forts of Edom and the Hisma suggests continuous occupation from Diocletian to Justinian (ca. 284–530 A.D.). The fortress at Udruh apparently was refortified at this time, and the extant Hisma forts, such as Khalde and Quweira, may have been rebuilt (Parker 1986: 137, 142). Parker sees the Roman frontier of the 4th and 5th centuries as remaining essentially the system of Diocletian: "a broad fortified outer zone in Transjordan from Bostra to Aila …" (1986: 145). Moreover, he believes that the *castella* of el Hammam and el-Mutrab, just E of Maʿan, dates to the 4th and 5th centuries and represents an eastward extension of the frontier zone in this sector (1986: 146).

There was a decline in the defenses of the Arabian frontier by the late 5th century with the abandonment of the fortifications of the Diocletianic system during the late 5th and 6th centuries. Along the Edomite plateau, only the fortress at Udruh and the *castellum* of Ail yielded significant amounts of 6th-century pottery (Parker 1986: 149; see Killick 1983a: 231; 1983b: 125). Most other military sites were abandoned by the mid–6th century.

Byzantine agricultural sites are especially numerous in N Edom (MacDonald, Banning, and Pavlish 1980). Moreover, the hermitage of John the Abbot is located just S of the Wadi el-Ḥasā. The record of an abbot is the first evidence in the search for a monastery in the area (MacDonald and Vibert-Gogue 1980). Another hermitage is located on the N bank of the Wadi el-Ḥasā close to es-Safi (Frank 1934: 207–8). Frank reported finding bases, shafts, capitals (one with a cross), and several stones with crosses in Ghor es-Safi (1934: 204). Albright discovered Byzantine traces in his soundings at Khirbet Sheikh ʿIsa just S of modern es-Safi (1924; see Rast and Schaub 1974). Further S, Frank reported four churches, a monastery, and two large Byzantine cemeteries from Feinan (1934: 221–24; see Alt 1935: 64–72). Killick discovered a Byzantine church at Udruh (1983a: 231, 233). Eadie reports that abundant Byzantine pottery has been located at Humayma (1984a: 221; see Graf 1979: 124–27). He identified two Byzantine churches at the site. This is the only representation of the Christian faith in the Hisma that has been securely identified (Eadie 1984a: 219–20). Other Christian monuments located in Edom, which also date to the Byzantine period, are listed by Saller and Bagatti (1949: 229–33), Avi-Yonah (1954: 42–43), and Abel (*GP* 2).

Between 630 and 640 A.D. all of Jordan fell to Islam, after which the Umayyad dynasty was established in Damascus in A.D. 661 (Vaglieri 1970: 62, 77).

D. Conclusion

From the above, it is obvious that there is archaeological evidence for human occupation and cultural development in Edom for a period spanning approximately 500,000 years. This evidence testifies to periods of increased population and to other periods in which there appears to have been little or no occupation. On the basis of the present information, it would appear that the Iron Age II, Nabatean-Roman, and Byzantine periods were ones of increased population. On the other hand, the Pottery Neolithic, the MB, the LB, and the Early Islamic periods were ones of little or no population.

BURTON MACDONALD

EDOMITE LANGUAGE. See LANGUAGES (INTRODUCTORY SURVEY).

EDREI (PLACE) [Heb *ʾedreʿî* (אֶדְרֶעִי)]. **1.** A town in Transjordan and one of the residences of Og, the Amorite king of Bashan. Following their victory over the Amorites, who held northern Moab at the time of the Hebrew migration, the Israelites moved against the adjacent kingdom of Og. Though the capital of the ill-defined region of Bashan was Ashtaroth, Og moved his army to engage Israel at Edrei. As God had promised, the Hebrews were victorious; Og was killed, his army was soundly defeated, and Israel took possession of Og's land (Num 21:33–35; cf. Deut 1:4; 3:10; Josh 12:4; 13:12, 31). Following these events, the kingdom of Og was assigned to the Machirites, part of the tribe of Manasseh (Josh 13:31).

According to Deut 3:10, Edrei and Salecah (cf. Josh 12:5, where Salecah appears to be a regional name) seem to have formed the boundaries of Og's small kingdom in Bashan; both of these sites were situated in the southeastern region of that territory. It is normally thought that Salecah was the easternmost town in the kingdom of Og and that Edrei was on the western frontier. Because Ashtaroth is located to the northwest of Edrei, it is possible that these two sites formed the western limit of Og's territory.

In Roman times, Edrei was known as Adraene, and occupying this same spot is modern Derʿa, Syria. Derʿa sits on a tributary of the Yarmuk, ca. 60 miles south of Damascus.

2. A town in Naphtali, in upper Galilee (Josh 19:37), probably *ʾi-t-rʿ* in a campaign itinerary of Thutmose III.

GERALD L. MATTINGLY

EDUCATION. This entry consists of three articles on the subjects of schools and the education of young people in the ancient world of the Bible. The first article surveys education in ancient Mesopotamia; the second examines the principles and institutions of education in ancient Israel; the third covers the subject of education in the Greco-Roman world of which early Judaism and Christianity were a part.

EDUCATION IN MESOPOTAMIA

Education developed quite early in Mesopotamia, particularly for the purposes of training scribes. To some degree, a general portrait may be reconstructed of these "schools."

A. Introduction

Educational practices in ancient Mesopotamia can be indirectly reconstructed from preserved pupil exercises and, more indirectly, from descriptions of school activities and occasional literary references to scribal knowledge and training. Archaeological remains are at times helpful. There are no preserved theoretical treatises on educational methods and goals, and none is expected given the intellectual outlook of Mesopotamian culture, which was not given to the formulation of abstract principles and rules. Important considerations in understanding didactic practices of Mesopotamian schools are the use of the cuneiform writing system, the writing medium of clay tablets, and the bilingual nature of Mesopotamian societies. A further characteristic of historical and political import is a great uniformity of teaching materials and, presumably, of methods over very long periods of time and all throughout the entire area where cuneiform script was used. This area reached at times as far as Boghazköy in Anatolia and Tell el-Amarna in Egypt. The sources are chronologically uneven; direct sources are available only for the OB period. Unless indicated otherwise, the reconstruction of school life presented in the following paragraphs is based on and limited to the OB period.

B. Teaching Materials

1. Word Lists. Scientific and technical knowledge was transmitted in Mesopotamia primarily by extensive word lists and paradigms written on clay tablets in cuneiform script. How-to manuals or procedural instructions are known to a very limited extent. One example of such texts is the manual “Instructions to a Farmer,” giving advice on barley cultivation. Hundreds of school exercises, recovered in archaeological excavations, allow the reconstruction of word lists. These lists are already found among the earliest examples of cuneiform writing in the Uruk III–IV periods, ca. 2,700 B.C. About a dozen lists of less than 100 lines date from this period. Each list is devoted to a single subject: birds, fish, trees and wooden objects, cattle, etc. These archaic lists, with the addition of a few more from Fara, Abu-Salabikh, and Ebla, were used in school until the end of the third millennium B.C. not only in Southern Mesopotamia but also in peripheral areas where cuneiform was used, from Susa in the east to Ebla in the northwest. More recent lists include practical vocabularies (lists of frequently used words in everyday documents) and lists of cuneiform signs. A new set of lists—customarily designated by their opening lines—with many local recensions, was introduced in the early centuries of the 2d millennium B.C. Sometime around the 11th century B.C. their texts became fixed (“canonical” recensions). They continued to be copied everywhere and used in this form until the demise of the cuneiform script around the beginning of the Christian era. The major didactic compilations are the lists, or “series,” HAR-ra and Aa. HAR-ra = *ḫubullu* is an encyclopedic list of 24 tablets containing ca. 9,700 entries with the following themes:

Tablet	Contents
I–II	legal terminology
III	trees
IV–VII	wooden implements
VIII–IX	reeds and reed objects

X	pottery and clays
XI	skins, leather objects, copper
XII	bronze, silver, gold
XIII	domestic animals
XIV	wild animals
XV	meat cuts
XVI	stones
XVII	plants, vegetables
XVIII	fish, birds
XIX	textiles
XX–XXII	toponyms, stars
XXII–XXIV	food, drinks

The list AA = *nâqu* is a syllabary combined with a bilingual Sumero-Akkadian dictionary of 42 tablets containing ca. 14,000 entries. An abbreviated recension in 8 tablets is known as EA = *nâqu.* Each entry can consist of several subcolumns. In their most complete form, entries read, for instance:

ga-na GÁN *ga-nu-u* *eq-lu*

ka-ra KÁR *ga-na-te-nu-u na-pa-hu ša mê*

ri-ib KAL *gu-ru-šu* *šu-tu-qu*

To be understood as "[read] *gana* [the cuneiform sign] GÁN, [called] *ganû,* [means in Akk] *eqlu* 'field.' " The two other entries mean "to twinkle" (said of light or water) and "to surpass," respectively. Assorted word lists of various types completed the inventory of "textbooks." Among the more remarkable, one can mention: DIRI: SI.A = *atru,* a list in 6 tablets with a total of ca. 2,100 entries, similar to AA but with compound logograms. LÚ = *ša,* a thematic list in 4 tablets with ca. 1,300 entries, giving professions, kinship terms, and assorted human activities. SIG_7.ALAN = *nabnītu,* an etymological Sumero-Akkadian glossary in 32 tablets with ca. 10,500 entries, arranged according to the shape of the Semitic roots. ERIMHUŠ = *anantu* and ANTAGAL = *šaqû* are lists of synonyms, or semantically related entries, in groups of three. Naturally, more elementary syllabaries were used in the earlier stages of scribal training. The better known are Syllabary A and Syllabary B, the first in one tablet of some 400 lines, the second in two tablets with a total 743 lines; these lists were the backbone of scribal education in Post-OB times. The lexical lists can be unilingual (Sumerian) or bilingual (Sumero-Akkadian). Occasionally, one can find trilingual lists (Sumerian, Akkadian, Hittite), in Boghazköy, and even quadrilingual (Sumerian, Akkadian, Ugaritic, Hurrian), in Ugarit. Unilingual lists are naturally more common in earlier periods. It should be stressed that the use of a Sumerian unilingual lexical list in school does not necessarily exclude bilingualism. There are indications that the pupils were required in most cases to provide an Akkadian translation orally. A few examples of grammatical drills and procedural texts have been preserved. Extensive verbal paradigms, dating from the 18th century, helped in translating Sumerian texts into Akkadian and in creating new Sumerian texts. In Neo-Babylonian times lists of grammatical elements, such as affixes, appear for the same purpose. A corpus of all preserved lists is available in Landsberger et al. 1937. A few examples of the oral teaching of the masters, from the last centuries of cuneiform, have been preserved in the form of commentaries which give etymologies and illustrative quotations, often side by side with astrological and religious speculations (Civil 1974; Cavigneaux 1976).

2. Clay Tablets. Various types of clay tablets were used in school in OB times. A typical one is a round plano-convex tablet, easily fitting into the student's hand, which has on its flat side a couple of lines of a model text—written by the instructor—in Sumerian which was copied underneath by the student. Sometimes, especially in peripheral areas, the convex side has a syllabic spelling to aid in reading the Sumerian and the Akkadian translation. An example from Susa:

(flat side):
(a) PA DÈ^{mušen}
PA KUR-GI$_4$^{mušen}
(represented by the student)
(reverse, convex side):
(b) BA-A TE
BA-A KU-UR GI
(c) *ga-pu-um ša e-ri-im*
ù ga-pu-um ša ku-ur-ki
"a feather of an eagle,
a feather of a goose."
Lines in (a) are the basic exercise in Sumerian; (b) gives the pronunciation; and (c) is the Akkadian translation. In other cases, these tablets have only a two- to four-line lexical or literary excerpt, with no model. At times, these tablets are biconvex rather than plano-convex, hence the designation "lenticular" in the Assyriological literature. Examples of such tablets can be seen in Falkowitz (1983) and al-Fouadi (1979). Another is a large rectangular tablet divided in two columns, with the instructor's model on the left and the student's copy on the right. The right half was erased and reused over and over until the clay was too thin, at which time the right half was broken off and the model on the left side kept for further use. The convex side of these tablets generally has long excerpts from word lists, written from memory. When learning literary texts, the scribes wrote small one-column tablets with an excerpt from a composition; these tablets were called IM-GID-DA, and are occasionally signed and dated. To avoid the accumulation of bulky old tablets in school, exercise tablets were "melted" down by softening in water and their clay was formed into new tablets. This practice was also useful in teaching the students how to make tablets. In MB schools the most frequent type is a small oblong tablet with a short literary quotation on one side and a lexical excerpt, written at a right angle to the first text, on the other side. The classic school exercise of NB times includes, on a rectangular tablet, an excerpt from a literary or religious text followed by several five- or six-line excerpts from successive sections of the major word lists. These tablets are frequently dated by day and month, but not by year. From indirect textual evidence it may be concluded that students must have also used wax tablets, papyrus, and leather strips at the time when these writing materials became current after the NA period. Except for a few remains of wax-covered wooden boards, nothing has been preserved of these materials and there are no texts describing their use in school.

C. "School Regulations"

A Sumerian text from the OB period—not available yet in a critical edition—gives the norms or rules (Sum Á-ÁG-GÁ) for school activities and student discipline. A student is interrogated about his knowledge of them. The text unfortunately is preserved in an extremely fragmentary condition. Some examples of the better preserved passages read: "If a pupil, after he has laid down the cloth on his sitting place, strikes another pupil, after misbehaving he will not be beaten, he will be expelled." And: "After the instructor [lit. "big brother"] has collected the tablets, he will inspect them. He will correct the places where the wedges are not right. If the student is found to be deficient and could not recite his exercise tablet and his word list, the instructor and the master will strike his face. After the inspection is finished, when the "water man" says "take the jars!" and "idiot, your jar!" they [the students] will take the jars and fill them from the canal in the center of the city."

D. School Dialogues

Tablets, several still unpublished, mostly dating from the 18th century, preserve dialogues between schoolchildren. One, bilingual, probably dates from the 12th–9th centuries (Sjöberg 1975). Dialogues have been a traditional teaching tool through the millennia. OB dialogues contain ironical descriptions of school life and verbal fights between pupils and were used to learn Sumerian, the prestige language, which by then was extinct. Edubba A, or "Schooldays," is an ironical description of daily school activities and of a student's induction into the scribal ranks (Kramer 1949). The theme of the dialogue in Edubba B,

or “A Father and His Misguided Son” (Sjöberg 1973), is the age-old one of a father’s frustrations with his son’s lack of application and ambition. Edubba C is a conversation between an established scribe, with the rank of supervisor (Sum UGULA), and a student, giving advice on the latter’s future duties. Edubba D (Civil 1985) is a discussion between two students comparing their abilities and knowledge; it degenerates into an exchange of insults. Dialogue 1 is little more than an exchange of invectives between two pupils. In Dialogue 2 Enkitalu and Enkihegal discuss their social status and personal distinction. The text is not directly related to school activities, although education is a recurrent theme; the interlocutors seem to have been musicians. Dialogue 3 has two students, Enkimansun and Girnishag, fighting, in the teacher’s absence, about the extent of their respective scribal knowledge. In a dialogue (Sjöberg 1975), probably of post-OB date but inspired by earlier sources, a teacher carries out a sort of “examination” of a pupil:

A scribe tested his pupil [lit. “son”] in the masters’ assembly, in the school courtyard.

“Come son, sit at my feet, I want to talk to you, listen! From childhood to adolescence you have been attending school. You have learned the office of the scribe, but you do not know its salient points.”

“What is that which I don’t know?”

“What do you know? Come on I will question you, answer! Come on I will talk to you, speak!”

“Ask, and I will answer, speak, and I will talk to you!”

“You won’t be able to answer!”

“Why I won’t be able to answer?”

“The beginning of writing is the single wedge, its pronunciations are six and it stands for sixty. Do you know its name?”

[The student apparently cannot answer.]

“Do you know all the secrets of Sumerian you have learned that badly?”

“Do you know how to translate, transfer the words, first the Akkadian then the Sumerian, first the Sumerian then the Akkadian?”

Following several paragraphs with similar questions, after a series of complaints of the genre “How long are you going to be deaf?” the text ends with a brief praise of the scribal art.

E. Schools

The Sumerian term for “school” is É-DUB-BA-(A), “tablet house” (or “tablet room”). The term is also the normal designation for an administrative center or archive, of which there could be several in a single town. Furthermore, the signs used to write this term can also be read É-KIŠIB-BA, “house of the seal” or “of the sealed documents” (a translation “sealed house” is unlikely). This ambiguity makes it very difficult to identify references to schools proper in economic texts. School exercises have been found—in greater or lesser numbers—in practically all archaeological sites which have produced tablets: Ur, Nippur, Isin, Uruk, Girsu, Adab, Sippar, Babylon, etc. However, despite many archaeologists’ claims, no large building exclusively devoted to teaching can securely be identified. Where the large number of scribes required by the administration of the Sargonic and Ur III empires were trained is unknown. When remains of teaching activities have been found they are always in a familial milieu (Charpin 1986: 419–85, Stone 1987: 36–39) or in a section of a very large building that obviously served many other functions such as a palace or temple. Scribes, at least the ones destined to an administrative career, were probably trained as apprentices at the administrative centers (archives and repositories) or in the royal palaces where they would later ply their trade. Family teaching, on the other hand, was apparently more oriented toward the preservation of traditional literary and religious texts. From literary descriptions, it appears that teaching took place in a courtyard (Sum KISAL), covered when needed by an awning, with the student sitting on a piece of felted cloth spread on the ground. Sand in front of the student was used as some sort of blackboard to sketch models of cuneiform signs. A physical feature of the teaching place was the “school well,” a basin for the water needed to mix with the clay.

F. Curriculum and Teaching

Teaching was based on rote learning by repeated writing and recitation of word lists. Each line of text had to be written and recited repeated times, as many as four times in a single day, until well memorized by the student. After being taught how to make tablets, handle the stylus, and write elementary exercises

of a syllabic nature, the student learned the repertory of cuneiform signs. Lists of personal names were a frequent writing exercise at this stage. He then memorized thematic lists that formed a sort of cultural encyclopedia, and various other types of lists, culminating in a list of human occupations and conditions over 800 lines long. Legal formularies, metrological and mathematical tables and problems, as well as the memorization of traditional literary works, completed the scribe's education. Many, if not all, students also learned the musical skills necessary for reciting these literary works. Students spent twenty-four days a month in school, the rest being taken by three days of vacation and three days of sundry festivals. At the time when information about schools is most abundant, the language of the population was certainly Akkadian. Sumerian was then an extinct, prestige language used in administration, law, religious activities, and literature. It can be assumed that teaching was conducted in Sumerian since it is the basic language in school exercises, even though an Akkadian translation, oral or written, was constantly required. One could compare this cultural and linguistic situation to a similar one in the classical world; that of educating the young Romans in Greek for centuries.

G. School Personnel

The headmaster was called "the school father" (Sum AD-DA É-DUB-BA-A) and belonged to the rank of experts or masters (Sum UM-MI-A). There is also mention of supervisors (UGULA É-DUB-BA-A), but their rank in relation to the masters is unclear. Helping in teaching tasks as instructor was the "big brother" (ŠEŠ-GAL), presumably an advanced student or an aspirant to a teaching career. A number of aides and servants were in charge of class discipline and supplies. Their activities can be inferred from a humorous passage of "Schooldays," paralleled by damaged paragraphs of "School Regulations," and from lexical texts:

> At school, the man on duty [LÚ BAL] said "why are you late?," when he said that, I was scared and my heart pounded … the man in charge of the felted cloths [LÚ TAG-TAG, to be spread down at each pupil's sitting place] looked into the aisles and said "your felt is not picked clean!" and he beat me. I took my tablet; the model was written [on the sand] at my feet. I wrote my tablet and did my assignment, and then opened my mouth, without paying attention, and the man in charge of keeping silence [LÚ SI-TUR] said "why did you open your mouth without my permission?" and he struck me. The man in charge of the feathers [LÚ PA-MUŠEN-NA, function unknown] said "why didn't you raise your neck straight?" and he struck me. The man in charge of the drawings [LÚ GIŠ-HUR-RA] said "why did you get up without my permission [risking to step on the designs on the ground]?" and he struck me. The doorman [LÚ KÁ-NA] said "why did you go out without my permission?" and he struck me. The man in charge of the water jars [LÚ^{dug}LAHTAN-NA] said "why did you take [water] without my permission?" and he struck me. The Sumerian expert [LÚ EME-GIR$_{15}$-RA] said "put it[?] in Sumerian!" and struck me. The master [UM-MI-A] said "your handwriting is not nice at all!" and he struck me.

(Kramer 1949, revised)

It is unknown how teachers and other personnel were paid. The texts seem to indicate that they had a right to a portion of the food brought in by the students for their own meals, or that they took it anyway.

H. Students

Students were called DUMU É-DUB-BA-A, "schoolchildren," an expression occasionally used to also designate a full-fledged scribe (normally called DUB-SAR). There is no information about how many years the student's education lasted, nor about at what age boys were first sent to school. In Edubba A the student's father is educated and can evaluate the homework of the son. Many Ur III scribes were themselves sons of scribes. It appears that even if the scribes were not necessarily always wealthy, they tended to form, up to a point, a class apart. Despite the patron deity of the school being a goddess (Nidaba), no text dealing with school activities mentions female students, although three or four lexical or literary tablets are signed by females. There must have been some female students, since female scribes, although exceedingly rare, are not unknown. At least three are known in Ur III times: two in the household of Babati, an archivist of note, uncle of king Šu-Suen. Another was the wife of a high-ranking scribe in the household of the governor of Umma. The highest number of female scribes is attested in Sippar—among the *nadītu,* women at the service of the sun god—and some are known from Mari. A

daughter of king Sargon of Akkad is credited with compiling a long collection of hymns to the most famous Mesopotamian shrines. There is mention in Nineveh of a woman writing oracle questions on papyrus.

I. Literacy

Lacking reliable population estimates it is impossible to give any idea of the quantitative extent of reading and writing. For the six decades or so at the end of the second millennium B.C. for which the archives of the Ur III empire are preserved, the names of no less than 1,500 scribes are known. At that time, literacy seems to have been common in the upper classes and monarchs often boast of their literary accomplishments. Besides his uncommon scribal and musical abilities, king Šulgi claims that he could personally administer justice and conduct diplomatic relations in five languages (Sumerian, Akkadian, Elamite, Amorite, and Subarian). He describes his education as follows: "When I was a young child, there was school. There I learned Sumerian and Akkadian texts (tablets); no nobleman could write on clay like me. I surpassed everyone in cleverness in the scribal arts. I learned adding and subtracting, counting and accounting perfectly … I am a smart scribe whom nothing escapes." The theme of the learned king, protector of letters, although perhaps less explicitly expressed than in Šulgi's case, is a recurrent one in Mesopotamia. For example, the preservation of many literary and scientific works is due to the actions of Tiglath-pileser I (1114–1076 B.C.) and Assurbanipal (668–627 B.C.).

J. Social Value of Education

Good schools were eagerly sought, and children were sometimes sent away to another town for their education. A letter says " (The children) are anxious to (go to) Nippur … where they (the children) live there is no school of the right kind and they cannot learn the office of scribe. They do not recite the words twenty or thirty times; they do not perform the songs ten or twenty times … don't you know that there is one (good) school in Nippur?" The post of a scribe "who regularly comes and goes in the palace" was considered a most enviable one, a divine blessing to be preferred to material riches.

MIGUEL CIVIL

ANCIENT ISRAEL

"We should praise Israel for his education (*paideias*) and wisdom (*sophias*)." This sentence from the prologue to Ecclesiasticus shows how highly valued Israelite education was toward the end of the biblical period. However, the Bible does not present any systematic description of this education and we must try to piece together the various sources at our disposal.

A. Terminology

The main source of information about education in ancient Israel is clearly the Bible itself which, here and there, but mainly in the wisdom books, contains several references to education. Actually the Hebrew word *mûsār* is probably the best word to render "education" since it has been generally translated in Greek by *paideia* in the LXX; *paideia* appears 36 times in Ecclesiasticus and 5 times in the Wisdom of Solomon, while *mûsār* appears mostly in Proverbs (30 times), Jeremiah (8 times), and Job (5 times), and is often associated with *ḥokmâ*, "wisdom" (Prov 1:2, 7; 23:23; cf. 8:33; 13:1; 15:33; 19:20). However, *môsār* also has the specific meaning of "discipline," "punishment." If we want to understand Israelite education more generally, we must take into account many other references connected with other roots such as *ḥnk*, "initiate," "start" (cf. Prov 22:6); *yrh*, "to show," "to teach" (*Hipʿil*); and *lmd*,"to learn," "to teach" (*Piʿel*). This last root is mainly attested in Deuteronomy (4:1, 5, 10, 14; 5:1, 28; 6:1; 11:19; 14:23; 17:19; 18:9; 31:12, 13, 19, 22) where it may have been used by one of the last redactors instead of the old word *šnn,* "to repeat," "to teach" (Deut 6:7; 28:37; 32:41); *lmd* is also well known in Isaiah (1:17; 2:4; 8:16; 26:9, 10; 29:13, 24; 40:14; 48:17; 50:4; 54:13), Jeremiah (2:24, 33; 9:4, 13, 19; 10:2; 12:16; 13:21, 23; 31:18, 34; 32:33) and Psalms (mainly Ps 119:7, 12, 26, 64, 66, 68, 71, 73, 99, 108, 124, 135, 171). The root *yrh*, in the *Hipʿil* (Gen 46:28; Exod 4:12, 15; 15:25; 24:12; 35:34) is also well known by the nouns *môreh*, "teaching, teacher" (2 Kgs 17:28; Isa 9:14; 30:20; Hab 2:18; Prov 5:13; 6:13; Job 36:22; 2 Chr 15:3) and *tôrâ* (Exod 12:49; Lev 7:7, 37); this last word is very often translated "law" (Gk *nomos*) but its first meaning is "instruction" (Östborn 1945; Jensen 1973).

B. Methodological Issues

In studying Israelite education we must also take into account the fact that it probably underwent changes during Israel's long history. This is especially true of the educational institutions which were probably affected by changes in political history. More generally, education as found in the time of the judges did not remain the same down to the time of the Maccabees, who were confronted with Hellenistic education. Moreover, education was not necessarily the same throughout all levels of the society. We have to be aware of the differences in educational background between the inhabitants of a farm, a small village, or a town like Jerusalem, as well as the differences existing among Palestinian Jews or among Diaspora Jews.

The general historical and sociological context of the ANE may provide help in understanding Israelite education. What is already known about education in Egypt, Syria, and Mesopotamia must be taken into account, as well as the situation in Greece for the later periods. This background serves not only comparative purposes but also indicates possible sources of concrete influence. For instance, it is generally accepted that Proverbs contains some adaptation of part of an Egyptian book, namely the Instruction of Amenemopet (cf. Prov 22:17–24:22 and *ANET*, 421–25) and two small Transjordanian collections (Prov 30:1ff; 31:1ff). During the Exile, many Jews probably received some Chaldaean (mainly Aramaic) education in Babylonia (cf. Dan 1:4, 17). At the beginning of the 2d century B.C., the influence of Hellenistic education was so strong in Jerusalem (cf. 2 Macc 4:12ff) that the Jewish tradition was actually in danger of disappearing. Knowledge of the educational practices among Israel's neighbors is therefore a useful guide for understanding various aspects of the history of Israelite education.

A study of Israelite education must take into account the discoveries in Hebrew and Aramaic epigraphy in Palestine (Puech 1988) and in the Jewish communities of the Diaspora. Even if the texts are fragmentary, they give us some direct evidence. For example, the various ostraca with "abecedaries" and schoolboys' exercises found in the latter half of the First Temple period (ca. 800–587 B.C.) reveal that reading and writing were taught not only in the capital city but also in small towns and fortresses. The Aramaic documents from the 5th century B.C. found in Elephantine shed some light on the Jewish and apparently mainly Aramaic education there, as well as probably in other communities of the Diaspora. In Palestine, the Dead Sea Scrolls have revealed the teaching of an Essene community in the 1st centuries B.C. and A.D. In the teaching of their community, biblical books and commentaries held a prominent place (Lemaire 1986a).

C. Principles of Education

1. Parental Responsibility. Education of children appears to have been initially a parental responsibility: "Attend, my son, to your father's education and do not reject the instruction of your mother" (Prov 1:8; cf. 6:20; 23:22). Because of this responsibility, the child had to respect his parents: "Honor your father and your mother" (Exod 20:12; Deut 5:16; cf. Prov 15:20; 20:20; Sir 3:1–16; 7:28).

If the mother took an important part in the education for her children (cf. 1 Sam 1:22–28; Prov 31:28; 2 Macc 7:24ff) even when they were teenagers (Prov 31:1ff), the father is often mentioned in the education of his sons (cf. Prov 4:4; 13:1) as soon as they become boys: "Discipline your son, and he will be a comfort to you and give delights to yourself" (Prov 29:17; cf. Deut 8:5: "as a man disciplines his son …"). The father was not to be hesitant in reprimanding his son, neither was he to avoid using the rod, so that the son might not put his father to shame: "Rod and reprimand give wisdom, but a boy who runs wild brings shame on his mother" (Prov 29:15; cf. 3:12; 23:13f).

The father was often considered responsible for his son's behavior and was reproved for being too feeble (cf. 1 Sam 2:22–25, 29–36; 2 Sam 13:21 [LXX]; 1 Kgs 1:6). The law of Deut 21:18–21 (cf. Exod 21:17) shows the official procedure to follow in case of a disobedient son:

> When a man has a disobedient and rebellious son, and he does not obey his father and mother, and even if they correct him, he does not obey them, then his father and mother shall take hold of him and bring him out to the elders of his town and to the city-gate of his place. They will say to the elders of his town: "This son of ours is disobedient and rebellious, he does not obey us, he is a glutton and a drunkard." Then all the men of his town shall stone him and he will die.

This extreme case was probably very rare. It is not known whether this law was ever implemented, but this borderline case shows clearly the limits of the authority of the parents. In ancient Israel a child's parents did not have the power of life and death even in the case of a bad behavior of a son; death can be only the consequence of an official procedure. The case of a young female prostitute is not so clear (cf. Gen 38:24ff; Lev 21:9) but can also be interpreted in the same way, namely the rebellious child could only be put to death after an official judgment.

2. Moral and Religious Education of Children. The desire and love for children pervades the OT (cf. Gen 15:5; 22:17; 24:60; 26:4; Prov 17:6; Ps 127:3–5; 128:3; Job 5:25; Sir 25:7) and disciplinary strictness in education was not at all thought to be incompatible with love for children. On the contrary, "A father who spares the rod hates his son, but one who loves him keeps him in order" (Prov 13:24); "A man who loves his son whips him often" (Sir 30:1–13). Even God displays the same attitude: "For those whom he loves, the Lord reproves, just as a father reproves his favorite son" (Prov 3:12; cf. Deut 8:5; 2 Sam 7:14).

Religious education was also the responsibility of the parents; in this way the religious tradition and its teachings were passed on from generation to generation. The parents had "to tell their children and grandchildren" the religious experience of their ancestors (cf. Exod 10:2; 13:8; Deut 4:9; 32:7). It was the father's duty to explain the meaning of the family's religious rites (Exod 12:26) and to teach the commandments of the Lord (Deut 6:7, 20–25; 32:46). The principal aim of this education was to help the young child become a wise person. This goal could only be reached through a religious education: "The essence of wisdom is fear of the Lord" (Ps 111:10; cf. Prov 1:7).

3. Vocational Instruction. The parents usually taught their children their profession. Living at home with his father, the son naturally watched and helped his father at work and learned his father's profession (cf. 1 Sam 16:11; 2 Kgs 4:18). The book of Proverbs several times insists on the usefulness of good work (12:24, 27; 14:23; 18:9; 20:13; 22:29; Qoh 9:10; 11:1–6; contrast Qoh 4:4–60), especially agricultural work, the most often attested profession (Prov 12:11; 24:27, 30–34; 27:18, 23–27; 28:19; cf. Sir 7:22; Proverbs of Ahiqar: saying 40). Girls learned household activities with their mother, in particular baking (2 Sam 13:8), spinning, and weaving (Exod 35:25–26). Prov 31:10–31 seems to present the picture of the ideal woman as a model for the girls' education (Crook 1954). Young girls could also work in the fields (Gen 29:6ff; Exod 2:16ff; cf. Cant 1:6; Prov 31:16). According to Sir 42:9–11, in ancient Israel a father was generally more concerned and anxious about the education of his daughter than for his son. In later Judaism, the parents' responsibility in teaching a profession to their children was underlined by the maxim: "Who does not teach a profession to his son teaches him brigandage" (*b. Qidd.* 29a).

D. The Stages of Education

A young child first lived with his mother, who generally suckled him until his weaning. The day of his weaning was probably celebrated as a feast with a sacrifice (cf. Gen 21:8; 1 Sam 1:23–25). The date of the weaning is difficult to specify and may have varied with the mother. However, according to 2 Macc 7:27, Josephus (*Ant* 2.230), and Mesopotamian and Egyptian traditions (*ANET*, 420), it was generally celebrated when the child was three years old (Pfeiffer 1972).

In the leading families, a wet nurse (Heb *mêneqet*) could take the place of the mother (Gen 24:59; 35:8; Isa 49:23); this is especially attested among the royal families of Jerusalem (2 Kgs 11:2; 2 Chr 22:11) or of Egypt (Exod 2:7). Later on, and at least until age five or older, the child would be under the care of a dry nurse or governess (Heb *ʾōmenet;* 2 Sam 4:4). This last job was sometimes assumed by the grandmother (Ruth 4:16) or even by a male (Heb *ʾōmen:* Num 11:12; Isa 49:23; cf. Esth 2:7). Male guardians were especially connected with the sons of the king (2 Kgs 10:1, 5), like the *paidagôgos* ("family tutor") in Greece. From about five to seven years of age the child could go to school or in some cases start to work with his father, who introduced the child to a profession (farmer, craftsman, etc.).

In later Jewish tradition a boy was generally considered to be an adult, at least from the religious point of view, as soon as the first signs of manhood became apparent, probably when he was twelve to fourteen years old. Thus, according to Rabbi Yehuda ben Tema (*m. ʾAbot* 5:21):

> At five years, one is fit for the Scripture,
> at thirteen for the commandments,
> at fifteen for the Talmud,
> at eighteen for the bride-chamber,
> at twenty for pursuing (a calling),
> at thirty for authority.

These approximate stages of life seem to be confirmed by the personal stories of Jesus (Luke 2:42; 3:23) and of Josephus (*Life* 9). The data of the OT, however, are not so clear. According to Gen 37:2, "Joseph was a boy of seventeen" when he worked with his brothers in the fields and started his adventures; he was probably considered an adult at that time. Lev 27:3–7 presents an estimation of the worth of a man according to the various stages of his life: "Between a month and five years old," he is still considered a small child; accordingly his value is one tenth of an adult. "Between five years old and twenty," the child can already help and work; accordingly his value is one third or about two fifths of an adult. "Between twenty and sixty years old," the person is an adult. "Over sixty," the person cannot do much work and thus his value is only about one third of an adult. See also OLD AGE.

These verses indicate that age twenty was generally considered the approximate age for full efficiency at work, that is, for assuming full responsibility in one's job. However, other traditions indicate that age thirty was considered the usual age to assume an official position with responsibility. It was at this age that Joseph became Pharaoh's prime minister (Gen 41:42–46), David was made king (2 Sam 5:4), and the Levites became servants of the Temple near the altar (cf. Num 4:3, 23, 30, 35, 43, 47). Of course the information concerns the upper class of Israelite society, namely the members of the royal family or of the

priestly families, that is, high functionaries and leading citizens. Information about the lower class (farmers, craftsmen) is lacking.

E. Educational Institutions

1. Family. If parents were the ones initially responsible for the education of their children, other members of the family naturally could take part in this education as well, especially the grandparents (cf. Ruth 4:16), the paternal uncle, or even a cousin (cf. Esth 2:7). Actually, amid this large family, the child received not only a general education but also teaching about the national traditions, especially during the family celebrations (cf. 1 Sam 20:6) such as Passover where children played an active part asking questions (cf. Exod 10:2; 12:26).

2. Community Liturgy. Besides the family celebration at home, the child would accompany his parents on pilgrimages to sanctuaries (cf. 1 Sam 1:24). In the early period this meant a trip to the local sanctuary, but later, after the Deuteronomic reform, the pilgrimage was to the Jerusalem Temple: "Three times a year all your males shall come into the presence of the Lord your God at the place which he will choose, namely at the time of the pilgrim-feasts of Unleavened Bread, of Weeks, and of Tabernacles" (Deut 16:16).

These pilgrimages were important not only because of the sacrifices but also because of the teaching and prayer which occurred during the celebration. For instance, the *tôrâ* was to be read publicly once every seven years during the feast of Tabernacles: "Assemble the people, men, women, and children together with the aliens who live in your cities, so that they may listen and learn (*yilmĕdû*) to fear the Lord your God and observe all the words of this instruction (*tôrâ*) with care" (Deut 31:12). Parts of the instruction or similar texts were probably also read publicly at each feast, especially during the renewal of the covenant (cf. Exod 24:7).

All this teaching was memorized not only by means of hearing but also through repetition and singing. Psalms played an important role in this regard, especially the psalms of meditation on history or on the instruction (*tôrâ*).The psalms were good pedagogical means for learning about the nation's past and its foundational principles. "Listen to my instruction *(tôrātî)*, O my people, pick up your ears to the words of my mouth. I will open my mouth for sentences, I will expound the riddles of the past which we have heard and know, and our ancestors narrated to us" (Ps 78:1–3). This kind of didactic and historical meditation is well attested in several psalms (44; 105; 106; 114; 136), while other psalms insist more on moral education (cf. Psalms 15; 19; 50; 119).

Besides pilgrimage feasts, one of the best pedagogical means for developing the religious and national feeling in ancient Israel was the regularized sequencing of the Israelite feasts. In the earlier period this included every new and full moon (the sabbath of the First Temple period; cf. 2 Kgs 4:23; 11:5, 7, 9; Isa 1:13; Hos 2:13; Amos 8:5; Ps 81:4; see also Lemaire 1973); and then, after the promulgation of the Law by Ezra, every seventh day came to be used for the moral and religious education of not only children but also adults (cf. Gen 2:2–3; Exod 16:26; 20:10; 31:15–17; Lev 23:3; Deut 5:14).

3. Specific Training. Most of the specific training for a special profession was generally given when the boy helped his father as a shepherd (cf. 1 Sam 16:11) or as a farmer (cf. 2 Kgs 4:18) and when the girl helped her mother as a housewife or sometimes even went to the fields. However, some training could also be given outside of the family. Craftsmen, for example, seem at times to have been organized in guilds (Neh 3:8, 11–32; 1 Chr 4:14, 21–23). Apprentices were probably trained in this context, while midwives (cf. Exod 1:15, 21) learned their profession working with an older midwife.

Military training (cf. Judg 3:2) was probably first given within the family and the clan or the tribe; a boy gained some experience in accompanying his father (cf. Judg 8:20–21) or his brothers (cf. 1 Sam 17:13ff) at war. Military training was first a general training in physical exercises to learn steadiness and agility (2 Sam 22:34, 37) but also involved training in the handling of weapons, including the sling, bow, sword, and spear. For instance, the tribe of Benjamin was famous for the ambidextrous use of the sword (Judg 3:15–16) and of the sling (Judg 20:16), while other young men were trained to use the bow (1 Sam 20:20–22; cf. 2 Sam 1:18 MT). Youth were also trained to fight face-to-face (2 Sam 2:14–16). This specialized training was probably supplemented by learning about the heroic exploits of the past (Judg 5:14–16; 2

Sam 21:15–22) and particularly of tactical tricks (Josh 8:3ff), while past mistakes were recalled in order that they not be repeated (cf. Judg 9:50–54; 2 Sam 11:20–21). Later, military training was given under the supervision of professional officers of the king who supplied the required weapons (1 Chr 27: 16–22; 2 Chr 17:13–18; 26:11–15; 2 Kgs 25:19). Other specific training for the king's sons, scribes, and high royal functionaries was generally given in the context of schools.

4. Schools. Over the course of the last few decades there has been considerable discussion about the problem of the existence of schools in Israel from the beginning of the First Temple period (Whybray 1965; 1974; Lang 1972: 21–53; 1975; 1979; 1980; Golka 1983; Haran 1988). It is true that the Hebrew word for school, *bêt-midrāš,* appears only in Sir 51:23. According to late Jewish tradition, Joshua ben Gamla (= Jesus son of Gamaliel), high priest about A.D. 63–65, "decided that school-teachers *(mlmdy tynwqwt)* be appointed in every province and in every town, and children of six or seven years be brought to them" (*b. B. Bat.* 21a), but this decree was certainly not the creation of the first schools in ancient Israel. It was only a reform or a systematization of elementary schools everywhere in Israel; such schools and other types of schools existed long before the decree.

The general historical context of ancient Israel (at least from the time of David and Solomon), the existence of schools in Egypt and Mesopotamia from the 3d millennium B.C., as well as the recent discovery of various schoolboys' exercises from the First Temple period (Lemaire 1978) demonstrate that schools existed in Israel already during the time of the Israelite monarchy (Lemaire 1981). One must keep in mind, however, that schools in the ANE were not identical to schools today. Ancient schools were not so well organized and did not need the same furnishings. Actually, a school existed whenever a learned man, a master, taught a few pupils sitting around him. Such schools could exist in the open air or in the corner of a courtyard. The traditional Quranic schools offer some idea of the nature of these schools. Having made these observations, we may now consider various aspects of this educational institution in ancient Israel (cf. Lemaire 1984).

a. History. Before the birth of the Israelite confederation at the end of the LB Age, the small Canaanite kingdoms could use three kinds of writing besides hieroglyphic and Egyptian writing: (1) writing in Akkadian for international relations, especially with Egypt (cf. the El-Amarna letters); (2) cuneiform alphabetic writing, attested by the tablets of Beth-Shemesh and Taanak, and by a bronze blade from Nahal Tabor; and (3) linear alphabetic script, attested by a few incised and ink inscriptions scattered in Palestine, especially at Lachish. The use of these three kinds of writing as well as lexical and trilingual texts found at Aphek indicate that there was probably some kind of scribal training in Palestine during this period (Edzard 1985), but it is difficult to specify where.

Evidence from the beginning of Israel's history, namely the alphabetic ostracon from Izbet Sartah, the inscription from Qubur el-Walaydah, inscriptions incised on arrowheads from el-Khadr (Cross 1980), and a few other inscribed sherds from the 12th–10th centuries B.C. show that linear script, and apparently linear script only, continued to be used in Palestine, and that this script tradition was assumed by the Israelites from the Canaanite tradition. Actually from the biblical tradition one may assume that an Israelite culture was transmitted in the 12th–11th centuries B.C., probably mainly orally, near the local sanctuaries of Shiloh, Shechem, Gilgal, Bethel, Hebron, and Beersheba. The case of Shiloh is the clearest. Associated with that site is the story of young Samuel who stayed at the sanctuary carrying out the Lord's service in front of Eli (1 Sam 3:1). This story seems to imply that Samuel was some kind of apprentice and received cultic instruction at the sanctuary, perhaps at the same time as Eli's sons (cf. 1 Sam 2:12ff).

Later, under David and Solomon, the growth of Israelite territory and influence, the development of the administration, and the building of a new Temple in Jerusalem brought with it the need for instructing royal functionaries and for the organization of a royal school, possibly under Egyptian influence (Solomon married Pharaoh's daughter: 1 Kgs 9:17; 11:1) and according to an Egyptian model (Mettinger 1971). As in Egypt, the royal school, at least in Jerusalem and perhaps also in the twelve regional capitals, gave a formative education (reading, writing, calculation, administration, history, geography, etc.) to the "sons of the king" and to the sons of "the friends of the king" or leading citizens who might then become

high functionaries and royal advisers (cf. 1 Kgs 12:8, 10: "the young men who had grown up with him and who stood before him").

Such a royal school was also probably created in the capitals of the N kingdom, namely Shechem, Tirzah, and Samaria, but it is difficult to determine whether the seventy royal princes who were "with the nobles of the city who were bringing them up" (2 Kings 10) is a reference to a royal school or to private teachers. At least these tutors *(ʾōmĕnîm)* seem to have formed a special group at the royal court of Samaria (2 Kgs 10:1, 5).

In Jerusalem, the building of the Temple carried with it the need for trained personnel for the Temple who had to receive a formative education for their service (reading, writing, singing, music, rites, feasts, calendar, national religious traditions, etc.). This instruction was probably given at or near the Temple, perhaps under the supervision of the high priest. 2 Kgs 12:3 (—Eng 12:2) show that this priest could even, under special circumstances, be responsible for the education of the young king.

From the 8th century onward, paleo-Hebrew epigraphy (Samaria ostraca, Kuntillet-Ajrud, Khirbet el-Qôm, Khirbet Beit-Lei, Silwam, Siloah, and Arad inscriptions, as well as inscribed seals) and the biblical texts (mainly the prophetic books of Amos, Hosea, Micah, and Isaiah) show an important development in the use of writing in ancient Israel. This development may have been connected with the creation of new schools; in fact 2 Chr 17:7–9 probably refer to some reform in teaching under the supervision of high royal functionaries, priests, and Levites. The "abecedaries" and schoolboys' exercises found at Lachish, Arad, Aroer, Kadesh-Barnea, and Kuntillet-Ajrud show that at the end of the First Temple period, one could learn writing not only in the great cities but also in villages and small fortresses. Actually "Deuteronomy expects a degree of literacy to permeate society" (cf. Deut 6:9; 11:20) and according to epigraphic evidence "few places will have been unaware of writing" (Millard 1985b: 308). Such degrees of literacy can hardly be reached without the existence of local schools.

In 598 and 587, most of the exiles were well-educated people; part of them probably already knew some Aramaic as is shown by the attitude of the members of the royal cabinet as early as 701 B.C. (2 Kgs 18:26). With this knowledge the exiles could prosper in Babylonia and some could even obtain an official position in the Babylonian, and later, Persian, administrations (cf. the story of Mordecai in Esth 10:1–3). Some of their children may have been educated in the royal Babylonian schools (cf. Dan 1:3–5 with an allusion to a training of three years) and entrusted with an official position by the king of kings—as were Sheshbazzar (Ezra 1:8, 11), Zerubbabel (Ezra 2:2ff), Nehemiah (Neh 1:1ff), and Ezra (Ezra 7:12–26).

Bullae and seals from a Judean archive (Avigad 1976) seem to indicate that the governors of the Judean province appointed by the Persian authorities were all Jews (Avigad 1976; Laperrousaz 1982), some of whom came from Babylonia and spoke Aramaic as their primary language. In fact, all the administrative ostraca from this period found in Palestine are written in Aramaic; this means that the local functionaries had received formal instruction in Aramaic, while Hebrew was used mainly in the cultic celebrations of the Temple of Jerusalem and in the teaching of the schools as the classical language of national literature.

In the Hellenistic period, efforts were made to inculcate Greek language and culture, thereby superseding Jewish (Hebrew and Aramaic) education (cf. 2 Macc 4:12ff). However, the nationalist revolt of the Maccabees succeeded in preserving Jewish culture even if they also adopted some aspects of Hellenistic education. Qoheleth and Ecclesiasticus are good examples of Jewish teaching in the Hebrew language in Jerusalem during the first part of the Hellenistic period, teaching based on the "study of the Law, the Prophets, and the other Writings of our ancestors" (preface to Sirach; Qoh 12:9–10), but the text was very soon translated into Greek to be used in Jewish education in Egypt (preface to Sirach).

From the end of the 2d century B.C. onward, Jewish tradition divided itself into three main groups, namely the Pharisees, the Sadducees, and the Essenes, each of which had its own interpretation of the Law, its own masters, and its own schools. The Essene school and teaching are now well known thanks to the Dead Sea Scrolls (Lemaire 1986a), while the Pharisees were famous for their teaching in the local schools as well as in Jerusalem (cf. Acts 5:34ff; 22:3; 23:6); the teaching of the Pharisees is known from the later written rabbinic tradition (Mishnah, Talmud). The teaching of the Sadducees still remains virtually unknown (Le Moyne 1972). Around the turn of the Christian era, schools were a very well

attested institution in Jewish society, especially in the capital: "There were 480 synagogues in Jerusalem and each had a *bêt-sēper* and a *bêt-talmûd,* the former for the Scripture, the latter for the Mishnah" (*y. Meg.* 3:1).

b. Teaching. The general method of teaching in ancient Israel was probably the same as in the other countries of the ANE; that is they emphasized two pedagogical means, oral repetition and the rod. The learning of reading started with the oral repetition of the sounds of letters and of syllables as hinted in Isa 28:9–10. "Reading" (Heb *miqrā*ʾ) was essentially "to proclaim, to read in a loud voice," as is still done in traditional Quranic schools. This oral repetition bordering on chanting was a great help to memorize the whole text. This is possibly what is meant by the expression "to write on the tablet of the heart" (Prov 3:3; 7:3; cf. Jer 31:33; Deut 6:6) which could also be understood as an allusion to a tablet for schoolboys' exercises hung about the neck (Couroyer 1983). This repetition of words before writing is also referred to in the famous text of Deut 6:6–7: "These words which I command to you today will be on your heart. You shall repeat them to your sons and speak of them indoors and out-of-doors, when you lie down and when you rise." The call to memorize was also made easier with mnemonic devices used in teaching such as numerical sayings (cf. Ps 62:12; Job 5:19; 33:14; Prov 6:16; 30:15, 18, 21, 29; Sir 23:16; 25:7; 26:5, 28; 50:25; see also Roth 1965; Reuger 1981), acrostic alphabetic poems (Psalms 9–10; 25; 34; 37; 111; 112; 119; 145; Prov 31:10ff; Lamentations 1–4; Nah 1:2ff; see Freedman 1972), parallelism, key words, and alliteration. Even with good pedagogical means, the Bible knows that teaching and education are not always easy; the teacher may have to use reprimand and the rod: "Do not withhold discipline from a boy. If you beat him with the rod, he will not die. When you beat him with the rod, you will save him from death" (Prov 23:13–14; cf. Prov 10:13). This use of the rod in ancient Israel confirms what is known about schools in Egypt and Mesopotamia.

The content of teaching probably differed according to the age of the person, the schools, and the time period. Young boys used to go to school after weaning (cf. 1 Sam 1:24; Isa 28:9–10), probably when they were "five" (cf. Lev 27:6; 2 Sam 4:4; *m.* ʾ*Abot* 5:21; and cf. Egyptian custom; cf. Brunner 1957: 40), "six" (cf. *Ketub.* 50a) or "seven years" old (cf. 2 Kgs 12:1, 3?; *B. Bat.* 21a). Children at first learned to read and write by identifying the 22 letters of the alphabet in the traditional order (cf. paleo-Hebrew and square Hebrew "abecedaries"); then they copied the same word twice, complete sentences (for instance proverbs?), lists of names and months (cf. the calendar of Gezer), greeting formulas at the beginning of a letter (cf. Kuntillet-Ajrud), and even models of short messages or letters (cf. Lachish ostracon 2?). Soon, children were trained in writing ciphers and the abbreviations for the units of measures (cf. ostraca from Kadesh-Barnea), in calculation, and in drawing (cf. the copy of drawings on the pithoi of Kuntillet-Ajrud). In learning to read, children probably used classical Hebrew texts and, at least at the beginning of the Christian era, they started by reading the Hebrew Bible/Old Testament (cf. *m.* ʾ*Abot* 5:21; 2 Tim 3:15).

Later, the student would begin writing on papyrus and leather. As a future scribe, he was probably trained to write deeds of sale (Jer 32:10–14), marriage contracts (Tob 7:14 and Elephantine papyri), bills of divorce (Deut 24:1–3; Isa 50:1; Jer 3:8) and court pleas (cf. Job 31:35; Meṣad Hashavyahu ostracon). For this the student needed to be trained in Israelite law as well as in administrative texts (bookkeeping, census, etc.). During the First Temple period, most of the scribes may have been employed in the royal administration and organized in a type of guild (Heb *mišpāḥâ;* cf. 1 Chr 2:55). The most important scribe was the official "king's scribe," probably a kind of secretary of state or chancellor (2 Sam 8:17; 20:25; 1 Kgs 4:3; 2 Kgs 12:11). In 701 B.C., this function was assumed by Shebna (2 Kgs 18:18, 37; 19:2 = Isa 37:2), during Josiah's reign by Shaphan (2 Kgs 22:3, 8, 9, 10, 12), and under Jehoiakim probably by Elishama (Jer 36:12). These names, especially that of Shaphan (cf. also Jer 36:11, 12, 20, 21; 40:9), whose family may have played an important role in writing the Deuteronomic history, present us with a few names of high royal functionaries (Lipiński 1988) from among the leading families—officials who are also known from seals and bullae bearing titles such as *bn hmlk,* "son of the king," *ʾšr ʿl hbyt,* "royal steward" (more or less a prime minister), *ʿbd hmlk,* "servant of the king," *šr hʿr,* "governor of the city," *spr,* "scribe," *khn,* "priest" (Avigad 1988).

These royal functionaries probably received their training in the royal school of Jerusalem with the sons of the king, a custom attested in Egypt (cf. 1 Kgs 11:20). They had to master fully Israelite law, geography, and history as well as probably a diplomatic language such as Aramaic, the use of which is attested already in 701 B.C. (1 Kgs 18:26). Furthermore these students had to study the difficult art of ruling and administrating with success (cf. Heb *ḥokmâ,* "wisdom," "political acumen"). This kind of teaching may have been given/partly by senior officers or retired high functionaries, as is attested in Egypt. The students were probably teenagers (cf. many counsels about moral behavior in Proverbs), predominantly members of families of high functionaries, who were taught the difficult art of succeeding in the king's service. Several biblical books from this period, namely old traditions in the Pentateuch, geographical materials in Joshua, historical traditions in Samuel and Kings (Lemaire 1986b), and sapiential traditions of Proverbs (cf. mainly the proverbs about the king's court and the art of ruling) could well reflect the teaching of the royal school of Jerusalem.

The refined education needed for Temple service probably differed from that required by the royal administration. After a possible general training in reading, writing, the scribal arts, and national traditions, future priests were probably taught more specific subjects concerning rites, sacrifices, calendar, the Temple (buildings, furniture, etc.), distinctions between clean and unclean, the singing of psalms, and the playing of sacred music. Priestly instruction could well be reflected in biblical books such as Leviticus (especially chaps. 1–7; 11; 13–14; 25) or the end of Exodus (chaps. 25–31; 35–40). In fact, these biblical texts may have been used as a reference work, a kind of textbook, in the priestly school of Jerusalem, a learning center probably situated in the Temple complex having some kind of library (cf. 2 Kgs 22:8; Van der Kooij 1981: 332–35) as known from Egypt.

Some of the prophets may have originally been trained either in the royal school (cf. probably Isaiah and possibly Zephaniah) or in the priestly school (cf. Ezekiel, Jeremiah, and possibly Malachi). However, the prophets had their own teaching and their own disciples. The various stories about the "sons/disciples of the prophets" show that prophetic discipling was an old Israelite tradition. The success of this movement (cf. more than fifty "sons of the prophets" near Jericho mentioned in 2 Kgs 2:7) in the second half of the 9th century B.C. around Elisha even led to the building of a special house for teaching, since the place where the disciples used to sit and listen to Elisha had become too small; they decided: "Let us go to the Jordan and each fetch a log, and make ourselves a place to sit there" (2 Kgs 6:1–2). Expressions such as "to sit in front of somebody" are typical in describing the posture of disciples listening to their master (cf. 2 Kgs 4:38; Ezek 8:1; 14:1; 20:1). One can speak here of the building of a "prophetic school."

Prophetic teaching was different enough from the usual teaching in the royal or priestly school. The disciples may have been adults as well as teenagers, and the atmosphere may have been close enough to that of philosophical schools in Greece (Lang 1980: 31–58). The method of teaching was dependent on the individual character of each prophet. The existence of such "schools" of disciples around the prophets explains why and how the prophet's story and teaching could be written down and transmitted to posterity (cf. 2 Kgs 8:4; Isa 8:16; Jer 36:17–19).

At the beginning of the Hellenistic period, teaching such as that of Qoheleth (cf. 12:9) or Jesus ben Sira (cf. preface to Sirach and 51:23) gives us an idea of the kind of "philosophical" teaching offered in Jerusalem—teaching which was at one and the same time traditional and innovative. Toward the beginning of the Christian era, strong religious personalities such as Bannus (Josephus, *Life* 10–12) or Gamaliel (Acts 5:34; 22:3) offer examples of teaching closely tied to this traditional and philosophical teaching; John the Baptist (Matt 3:1ff and par.) and Jesus (Matt 4:23ff and *passim*), who also assembled disciples around themselves (cf. Matt 4:18ff; 5:1ff; 11:2–15), may be considered more in line with the prophetic tradition.

c. The Teacher/Master–Pupil/Disciple Relation. In conformity with ANE tradition, the relation of teacher to pupil or of master to disciple is expressed metaphorically in terms of the relation of "father" to "son" (Nel 1977). This way of speaking is sometimes misunderstood and interpreted literally as if the biological father was himself teaching everything to his children, namely reading, writing, and the national and religious traditions. If, according to biblical tradition, parents were responsible for the

general education of their children, it is however clear that most of the references to the "father" in wisdom books such as Proverbs, Qoheleth, and Sirach are to be understood as references to a teacher; the same is true about the relation between prophet and disciple (cf. 2 Kgs 2:12, 21; 13:14). The appelation "my son" *(benî)*, used by the teacher when addressing his pupil (cf. Prov 1:8, 10, 15; 2:1; 3:1, etc.; cf. also Proverbs of Ahiqar line 82, 96, 127, 129, 149), corresponds to the honorary title "father," "my father."

Two appelations are more technical: *môreh*, "instructor," which could be used for a wisdom teacher (Prov 5:13), priest (2 Chr 15:3; cf. 2 Kgs 12:4; 17:28) or prophet (cf. Isa 9:14), and *mĕlammēd*, "teacher" (Prov 5:13; cf. Qoh 12:9). In a general way the teacher was considered a man of experience, a "wise" man (*(ḥākām*); this adjective, which can be used more generally, seems in several places to characterize the teacher and master (cf. Prov 13:14; 15:12; 22:17; 24:23).

Beyond the honorary title of "father," the relation and respect shown to the teacher by the students may have been quite different according to the type of teaching given (elementary or more specialized). However, there is one point which is clear enough, namely that the student (or his parents) had to pay or give something to the master for his services. This may be the reason why Deuteronomy insists so much on giving gifts to the Levites in the cities and villages (Deut 12:12, 19; 14:27; 16:14; 26:11–13) and may also explain the insistence of Proverbs on the "price" of wisdom which is to be bought (cf. *qĕnēh ḥokmâ*, "buy wisdom"; Prov 4:7; 16:16; cf. 3:14; 8:10; 16:16; Sir 51:28). This habit of paying the teacher was well known in the antiquity and probably explains why the students of the "high schools" of Jerusalem generally came from wealthy families of high functionaries or leading citizens.

d. Schools for Younger Women. Besides the general education of young women to be good housewives and to help occasionally in the fields, a few professions seem to have been assumed by women: nurses, midwives (Exod 1:21), cooks, weavers (1 Sam 8:13; cf. Tob 2:11ff), perfumers (1 Sam 8:13), mourners (Jer 9:19), singers (cf. Sam 19:36; Qoh 2:8; 2 Chr 35:25), necromancers (1 Sam 28:7) or prostitutes (cf. 1 Kgs 3:16)—these latter two activities were reproved but were known to have been practiced by women. In Prov 31:10–31, the acrostic poem of a capable wife, the woman is quite active and this description could well have served as a guide for teaching younger upper-class women in home economics (Crook 1954).

It is possible that some kind of teaching and school existed for upper-class women, especially for the daughters of the king and of other great personalities in Jerusalem. Several seals belonging to "daughters" or "wives" are known, among them the seal of "a king's daughter" (*lmʿdnh* bt hmlk; Avigad 1978) with the emblem of a lyre, which could mean that she was an ardent lyre-player. However, the most interesting seals could be that of *yzbl*, probably to be identified with the Queen Jezebel, the wife of Ahab (Avigad 1964; cf. 1 Kgs 16:31; 18:4ff), and that of "Shelomith wife [*ʾmt*] of Elnathan the governor" (Avigad 1976: 11), probably to be identified with the daughter of Zerubbabel, governor of Judah, who was ultimately descended from David (1 Chr 3:19; Lemaire 1977; Laperrousaz 1982). This means that these women could sign official documents (letters, deeds, etc.) with their own seals and that they probably could read and write. A certain education of upper-class women in a school in Jerusalem would explain why Hulda, "the wife of Shallum son of Tikvah, son of Harhas, the keeper of the wardrobe," was considered an official prophet and consulted at home by officials sent from the king (2 Kgs 22:14–15).

F. Summary

These aspects of education in the OT do not give us all the information about the various historical problems connected with Israelite education and Israelite educational institutions; nevertheless, they clearly indicate that there is a strong connection between the Bible and education in ancient Israel. Biblical texts were essentially written with a didactic and educational aim, a position reflected in the NT (for which the OT essentially served as Scripture): "All the ancient scripture was written for our own instruction" (Rom 15:4); "Every scripture is inspired and useful for teaching, for refuting, for reformation, and for education in justice" (2 Tim 3:16).

ANDRÉ LEMAIRE

GRECO-ROMAN PERIOD

In the world of the NT, educational theory and practice were essentially Hellenistic. The Greco-Roman world had settled into a single, universal educational system that was to dominate the ancient scene until the barbarian overthrow of the West and the Muslim conquest of the East. One should not see this system as a corruption of education in classical Athens but rather as the culmination of its development. Nor should education in the Latin West be viewed as developing out of Roman educational practice in early republican times. Rather, late republican and imperial Roman educators simply adopted the main tenets of the Hellenistic system with Latin added to the curriculum and with less emphasis on physical training. Even Jewish Hebrew schools were not immune to the pervasive Hellenistic influence, and one can easily interpret rabbinic education as the Jewish adaptation of Hellenistic educational methods and curricula.

C. Secondary Schools
D. Higher Education
E. Jewish Education

———

A. General Characteristics

Evidence for the essential unity of Greco-Roman education is impressive and extends beyond a general similarity in curriculum. Methods that Quintilian advocated in 1st-century Rome are reflected in the school papyri from Hellenistic and imperial Roman Egypt. Gymnasia from Hellenistic and imperial Roman times show remarkable similarity in design. Late Greek and Latin grammarians expounded grammar in ways quite similar to those of Dionysius Thrax of Rhodes during the 2d century B.C.E.

There were, of course, some changes that took place during the long period in which ancient education followed the Hellenistic model; but these changes evolved slowly. In the western part of the empire Latin language and literature were receiving more emphasis, although the continuing importance of Greek in Roman schools meant that Paul foresaw no difficulty with Christians at Rome understanding an epistle written in Greek. In fact, Greek predominated in Christian worship at Rome until well after the NT period. The study of law was becoming more important, while music, and to a certain extent, physical education were on the decline. One reason for the decline in music was that real proficiency in musical performance was becoming the province of uncultured professionals. Even as early as 43 B.C.E., Sallust (*Cat.* 25.2, 5) casually refers to a lady who is able to “play the lyre and dance better than necessary for a virtuous woman.”

The decline in the importance of physical education should not be exaggerated. In NT times, it still played a significant role in all levels of education, particularly in the East. Physical training was centered in the gymnasium, which was often an extensive complex. The typical gymnasium generally contained a sand-covered courtyard (palaestra) for physical exercises and a stadium. In addition, the complex included a lecture hall and hot and cold baths, as well as rooms for storing oil and dust, for working out on the punching bag, and for massage. Athletes performed in the nude, a fact which helps explain the negative attitude of traditional Jews toward the gymnasium (cf. 2 Macc 4:12, 14). The major sports were *pankration* (a combination of wrestling, boxing, and kicking), boxing (cf. 1 Cor 9:26), and the pentathlon (which included running, long jumping, discus throwing, javelin throwing, and wrestling). Much is known about how wrestling was taught, and part of a handbook has been found which tells an instructor how to put two wrestlers through their paces (Townsend 1971: 143–44).

At the head of a gymnasium was a gymnasiarch; and in a city with more than one gymnasium there was a gymnasiarch general over all of them. Serving as gymnasiarch was a high honor, but one which only the very rich could afford to accept. The gymnasiarch served without pay and was responsible for

underwriting the costs of running his institution. He was not, however, expected to teach. Actual instruction was the province of assistants, gymnastic instructors, and lecturers.

Although classical education usually involved attending school, wealthy students might be tutored. In fact, Quintilian felt compelled to devote a whole chapter of his work on education to the advantages of school over a tutor. Unfortunately, there is not too much evidence about what home education was like, but sources such as Cicero's letters suggest that home study substantially paralleled education at school.

Ancient education progressed in three stages: primary, secondary, and advanced. Relatively few reached the advanced stage. Primary education, however, was widespread and not limited to freeborn males. Girls frequently attended school along with their brothers (Dittenberger 1960: no. 573 [9]); and in the case of slaves, many of them also necessarily received at least some education in order to perform tasks commonly assigned to them. In the Greco-Roman world of the NT, even the poor felt the need for reading skills. In fact, Martial, the late 1st-century Latin epigrammatist, could joke about a poor cobbler whose parents tried to save money by teaching him to read themselves (*Epigrammaton libri* 9.73.7). Even the strict Christian Tertullian recognized that the need for literacy might require Christians to attend pagan schools (*De Idololatria* 10). He did so even though pagan classrooms were decorated with representations of various gods and in spite of the fact that the students in these classrooms were expected, even compelled, to take part in pagan religious festivals.

B. Primary Schools

A few municipalities like Miletus and Teos of Asia Minor undertook the support of official primary and secondary schools. They hired the teachers but paid them only slightly more than skilled workers. Elsewhere schools were private affairs, commonly small and inadequate, and often with only one teacher. Such teachers depended on meager, sometimes unpaid fees for their living and tended to be socially despised. Classrooms consisted of whatever space was available, perhaps some curtained-off place at the market.

Students began their primary schooling at the age of seven and attended two institutions, the reading school *(didaskaleion)* and the palaestra, which at the primary stage was usually a private institution separate from the municipal gymnasium. Originally children spent all morning at the palaestra in physical education, but by NT times they were only spending the latter part of the morning there (Lucian, *Am.* 44–45; *Par.* 61) with the rest of the day in the *didaskaleion.* Still the Greek emphasis on physical training remained strong and exercised an influence even where Latin was spoken (Quintilian, *Inst.* 1.11.15).

Of special importance for primary education was the *paidagōgos,* a person whose position has no modern equivalent. The *paidagōgos* was the slave who accompanied a child to school and his role tended to be that of a male nursemaid. It is to this custodian that Paul compared the law in Gal 3:24. The *paidagōgos* was not the teacher. The teacher was a *grammatistēs,* known in Latin as a *litterator* or a *ludi magister,* whose main job was teaching children to read aloud (cf. Acts 8:28, 30) and to write.

Reading teachers first taught children to recite the alphabet forward and backward. Then the children learned two-letter syllables (*ba, be, bi, bo, bu, ca, ce,* etc.). Next came whole words with special emphasis on the rare and the archaic as well as on tongue twisters. School vocabulary lists have been found consisting wholly of proper names. After words came reading, not from simplified primers, but from passages out of the finest writers, i.e., those with a style worthy of imitation (such as Homer and Euripides). Having learned to read their selections aloud, students then memorized them for recitation.

In a world without printed books or blackboards, texts had to be hand-copied. Thus, the sooner a student could write, the sooner a student could reproduce the necessary texts for classroom use. As with reading, the learning of writing also began with individual letters. Usually the teacher would guide a student's hand over sample letters, although Quintilian (*Inst.* 1.1.27) suggests using letters carved in wood to guide the student's stylus. The emphasis was on the ability to copy one's own exercises, not grammar or free composition. In addition, students learned simple arithmetic, which included a system of using the fingers for calculation.

Most children remembered the discipline of their early school days. While Quintilian disapproved of flogging (*Inst.* 1.1.20; 2.15–19; 3.6–18), brutality was the rule. In the 3d century B.C.E. Herodas (Mime 3)

vividly depicted a school flogging with a bull-tail lash, and at the end of the 4th century C.E., floggings provided Augustine with the most vivid memories of his schooling (*Conf.* I.14). As for Jewish Hebrew schools, the 2d-century Mishnaic ruling of Abba Saul absolving a teacher who beats a pupil to death speaks for itself (*m. Mak.* 2:2; cf. *b. Sukk.* 29a).

C. Secondary Schools

After the reading school, students might choose to enter a grammar school to study the classics under a *grammatikos* or *kritikos*. Homer held first place among Greek writers, followed by Euripides, Menander, and Demosthenes. Among Latin writers, Virgil was first, followed by Terence, Cicero, and Horace. This pattern molded one's thinking. Students tended to remember the authors they had studied, and Christians were no exception. Thus, Clement of Alexandria in his *Exhortation to the Greeks* cited Homer far more than any other pagan author (39 times), with Euripides placing second (9 times).

The study of classics was divided into four disciplines *(merē).* The first was textual criticism *(diorthōtikon),* in which a student's copy of the teacher's text was checked for error. Then came reading aloud *(anagnōstikon)* with proper attention being paid not only to general meaning, but to things such as the meter and genre. Since the manuscripts were written continuously with no spacings between words and few marks of punctuation, fluent reading was difficult. Students therefore needed to prepare a manuscript for reading by adding such helps as accents and small marks to separate individual words. Only then came the actual reading followed by memorization. The third discipline was exegetical *(exēgētikon)* and involved "translating" a given selection from classical, literary Greek into the common *(koinē)* language of the day. To facilitate the process, students made vocabulary lists of literary usages along with their *koinē* equivalents. Other elements of exegesis took the form of a catechism which students memorized. Some catechisms concerned the content of the work being studied. One such catechism on the Iliad has been found. Other catechisms treated more technical aspects, such as details of meter and grammar. The fourth discipline was evaluative *(kritikon)* and was ultimately moral in character. It was believed that one could extract a whole ethical system from the poets in general and from Homer in particular in spite of the obvious problem that the classics contained so much that was immoral. Some interpreters would solve the problem through the use of allegory and so might understand the adultery between Venus and Mars astrologically as representing the conjunction of these planets (see Plutarch, *Mor. Quomodo Adol.* 4 [19F–20B]). Plutarch, however, preferred to look for clues that a poet disapproved of the evil being portrayed (*ibid.* 4 [19A–E]).

Along with reading the classics went writing in the classical style. According to Quintilian (*Inst.* 1.9.1–6), students would learn to write first a strict paraphrase of a simple fable, then a paraphrase that was freer, and finally a simple piece of original composition on a given theme. As sample themes he suggested, "When Cratus saw an ignorant boy, he beat his *paidagōgos,"* or, "Since Milo had been accustomed to carrying the calf, he [now] carried the bull."

Such training impressed upon students that only works written in the classical style were worth taking seriously. In most cases the preference was for Attic Greek, but there were exceptions. The dialect of Homer was of course generally praised, and Cicero (*Ad Brut.* 53; cf. 284–91; also *De Or.* 25) defended the Rhodian dialect. Apart from such variation, however, all students learned that serious writers must shun the common *(koinē)* language. *Koinē* Greek was only fit for casual, nonliterary use. It was for this reason that Josephus wisely arranged to have his writings styled by experts (*Ant* 20.263; *AgAp* 1.50; cf. *JW* 1.2; *Ant* 1.2). The *koinē* Greek of the NT sounded barbarous enough in the ears of the educated that it had to be defended by the early Church (Tatian, *Ad Gr.* 26–30; Origen, *Comm. in Rom.* 4:23 [Scherer ed.]; Jerome, *Ep.* 22:30).

All the subjects studied in Hellenistic and Roman schools were collectively known as the *egkyklios paideia,* the ancient equivalent of the "liberal arts." Apart from reading and composition, opinions differed over what other subjects should be studied. Quintilian's list is typical. He included music and more mathematics (*Inst.* 1.10.1–49). Music was largely musical theory. Mathematics on this level included geometry (Euclid), astronomy, and numbers; and numbers included not only arithmetic but also the aesthetic properties of numbers, e.g., perfect numbers and friendly numbers (Nicomachus of Gerasa,

Ar. I.14.1–1; 17.3–5). In fact, Nicomachus of Gerasa composed a whole Pythagorean theology of arithmetic *(Theologoumena Arithmētichēs)* on the mystical property of numbers.

D. Higher Education

After secondary school, young Greeks of good family commonly rounded off their education in an institution known as the *ephēbeia.* Many others chose the serious study of rhetoric. Somewhat fewer chose to study one of the philosophies. Other options were the study of medicine or law. In NT times, Rome was the center for legal training (Aulus Gellius, *NA* 13.13.1), although in the later empire Constantinople and particularly Berytus (modern Beirut) eclipsed Rome in this area. The great centers for the study of medicine included Alexandria, Cos, Pergamum, Smyrna, Corinth, and Ephesus. These centers commony had medical teachers loosely organized into a kind of medical faculty. At Ephesus the association *(synedrion)* of physicians used to sponsor yearly medical competition with contests in various aspects of the field (Keil 1905: 128–29). Such organizations, however, were no guarantee of reliable medical practice. Standards varied. A physician might have finished grammar school and then studied for many years at one of the major medical centers; but humble apprenticeships were more the rule, apprenticeships as short as six months (Galen, *Opera* [Kuhn ed.], vol. 1, pp. 82–83; vol. 10, pp. 4–5). Thus the NT reference to "Luke the beloved physician" (Col 4:14) tells little about his education and training.

More important in the ancient world were the Hellenistic *ephēbeia* and its Roman equivalent, the *collegia juvenum.* Originally an instrument of military training, by Hellenistic times the *ephēbeia* had become an exclusive municipal male finishing school housed in the gymnasium where future aristocrats *(ephēboi)* leisurely pursued their studies with an emphasis on physical education. Apart from athletics, learning as not rigorous. Even though various grammarians, rhetoricians, and philosophers offered courses on a variety of subjects and even though the students usually had a library available, the time for study was relatively short. Students on the island of Chios were serving three years in the *ephēbeia* (Dittenberger 1960: no. 959), but one or two years was more the norm, with much of that time spent at the palaestra and the stadium. The importance of the *ephēbeia* lay, however, not in its curriculum, but in its social significance. Study in the *ephēbeia* certified that one was truly civilized (i.e., Hellenized) and was essential for full social and political acceptance. Thus, according to 2 Macc 4:9, 12, the high priest Jason established "a gymnasium and *ephēbeion*" in Jerusalem to demonstrate his Hellenism.

Serious higher education generally meant the study of rhetoric, a discipline which scholars like Cicero and Quintilian considered normative. One began rhetoric with learning the five steps for speech preparation: invention of ideas, arrangement, style, memorization, and delivery. Each of these steps was an elaborate discipline in itself with its own rules and systems. In fact, Quintilian devoted the bulk of his work on education (Books 3–9) simply to the elaboration of these five steps, nor was he exceptional in this respect. In the 2d century C.E., Theon listed thirty-six categories under which one might invent material for lauding the subject of an encomium. Then he showed how to expand this material, for example by making comparisons. He even showed how to praise subjects who were otherwise unpraiseworthy in areas such as parentage or citizenship. As for the other steps of speech preparation, teachers of rhetoric developed them to a similar extent. The arrangement of the oration proper fell under five or six headings, each with its own rules. Style and memory both had their own subdivisions and techniques. Delivery involved not only voice production and the theory of musical intonation, but also a system of gestures, which was almost detailed enough to stand alone as a sign language (see, e.g., Quintilian, *Inst.* 11.3.96).

Although much of the study of rhetoric involved the study of the rules, students also analyzed model passages from the great prose writers. These typically included Cicero, Livy, Cato, the Gracchi, and the ten Attic orators from the 5th and 4th centuries B.C.E. After the analysis of such model passages, the students practiced writing preparatory exercises of their own. Only then were they ready to compose full speeches on given subjects. The whole discipline of rhetoric, however, included much more than the art of public speaking. Since an orator had to be able to give a discourse on any subject, it was necessary for

him to study all subjects (Cicero, *De Or.*, Book 1). The study of rhetoric, therefore, became the ancient equivalent to studying for a degree in liberal arts, i.e., the *egkyklios paideia*.

The study of philosophy generally presupposed a secondary education, although some schools were not overly strict in this regard. What they universally demanded, however, was some separation from the general culture. In this respect the Cynics were extremists; yet all philosophical schools were at least somewhat sectarian in their view of society. They expected a kind of "conversion" from their members, which was outwardly expressed by a special philosopher's garb such as Justin Martyr once wore (*Dial.* 1.2; Eusebius, *Hist. Eccl.* 4.11.8).

Even though the different schools of philosophy varied widely, there was a certain general pattern of study. Instruction typically started with the history of philosophy beginning with Thales. This was followed by some general instruction on the school's own philosophical teachings. Then came a more detailed study of the school's basic writings.

Not all learning of philosophy, however, took place in institutions. Learning might come about in any of three ways. First, one might listen to wandering lecturers and preachers. They were typically Cynics or Stoics, not unlike the Epicureans and Stoics whom Acts 17:18 portrays encountering Paul in Athens. By listening to such preachers many in the ancient world received a smattering of philosophy. It is therefore rash to assume that philosophical allusions in a Jewish or Christian writing implies that its author had deep knowledge of the philosophies behind the allusions. Secondly, an aspiring student might attend the lectures that private philosophy teachers gave on a regular basis. Epictetus, the Stoic philosopher, became such a lecturer in 89 C.E. after the emperor Domitian had exiled him to the western coast of Greece. In 2d-century Rome, Justin Martyr, Marcion, and Valentinus would have resembled such private philosophy teachers. Thirdly, as with rhetoric, one might study philosophy in established institutions. Athens was the oldest center in which Plato, Aristotle, Epicurus, and Zeno established their institutions during the 4th century B.C.E. Rivaling Athens was Alexandria. Here the center of scholarly study was the great Museum, which was founded around 280 B.C.E. In fact, Alexandria surpassed Athens in certain areas of higher learning. Thus, for example, the Alexandrian reputation in astronomy led the Church to depend on Alexandria for calculating the date of Easter (Cyril of Alexandria, *Ep.* [*Prologus*] 87.2). In the 1st century Vespasian set a precedent by establishing chairs of Latin and Greek rhetoric at Rome with salaries from the imperial treasury (Suetonius, *Vesp.* 18). In the following century Marcus Aurelius added state chairs at Athens for every branch of knowledge (Dio Cassius 72.32.3).

E. Jewish Education

Throughout the world of the NT many Jews received a standard Hellenistic education. They had accepted much of the culture surrounding them and were anxious for their children to share in the benefits which this culture offered. Thus it is not surprising that the edict of the Emperor Claudius to the Alexandrians (41 C.E.) represents a situation in which some Jews had enrolled their children as *ephēboi* while others were attempting to do so, and Alexandria was not a special situation. Lists of *ephēboi* containing Jewish names have been found throughout the Hellenistic Roman world (Applebaum 1974–76: 446–48). There were other Jews, however, who preferred a Hebrew education. They had their children learn Scripture and Jewish tradition rather than Homer along with the rest of the *egkyklios paideia*.

Jewish Hebrew schools apparently arose after Hellenistic schools were well established. The earliest reference to a Hebrew secondary school is provided by Ben Sira at the beginning of the 2d century B.C.E. (Sir 51:23), but there is little evidence for the existence of Hebrew primary schools until the 1st century C.E. (see *j. Ketub.* 8.11 [32c]). In fact they were probably not widespread until the middle of the next century (*b. B.Bat.* 21a; cf. *b. Sanh.* 17b [Bar.]). Perhaps one reason for the relatively late development of Hebrew primary schools was the biblical injunction to teach children Scripture at home (Deut 4:9; 6:7; 11:19). In any case, at home or in school, Jewish boys learned to read well enough to take part in synagogue services (cf. Luke 4:16–20; Josephus, *AgAp* 1.60). There is also some evidence for teaching Torah to Jewish girls since the Mishnah (*Soṭa* 3.4) records a controversy on the subject between Ben Azzai and R. Eliezer around the end of the 1st century C.E. Ben Azzai argued that one is obligated to teach

a daughter Torah, but the conservative R. Eliezer replied that to teach a daughter Torah was to teach her immorality.

Since ancient Jews and Greeks lived in relatively close proximity, it is not surprising to find elements of Hellenistic education in Jewish schools; and these similarities existed not only in Greco-Roman Jewish communities like the one in Rome where synagogue teachers were called *grammatei,* but even in rabbinic circles. It can hardly be a coincidence that Hebrew and Greek teachers used quite similar methods for teaching the alphabet and that rabbinic principles of scriptural interpretation had their Hellenistic counterparts (see Liebermann 1962: 47–82). In addition, rabbinic education took place in three stages that parallel the three in Hellenistic education (*ʾAbot* 5.21).

The Hebrew primary school (*bēt sēper* or *bēt sôpēr*) was taught by a scribe *(soper)* and had a curriculum not too different from Hellenistic reading schools, except for the use of Hebrew in place of Greek or Latin and the Bible in lieu of Homer and the classics. Like their Greek and Roman counterparts, Jewish students in Hebrew school began with the alphabet, which they learned to recite forward and backward (*b. Šabb.* 31a). After learning the alphabet, they proceeded directly to the reading of the biblical text. There was no intermediate study of syllables because Hebrew lacked written vowels; and since one could scarcely sound out vowelless words, reading was necessarily a matter of memory. Other differences from Greek schools arose from various precepts regarding the copying and general use of Scripture, e.g., the prohibition of copying Scripture from dictation. Besides the reading and probably the writing of Scripture, these Jewish elementary students learned to recite essential parts of the Jewish liturgy as well as how to do *targum* ("translation") in areas where Aramaic was spoken.

The Jewish secondary school *(bēt midrāš)* was concerned with the study of oral Torah. Oral Torah was the tradition of the Jewish *ʾAbot* ("fathers") and, as its name suggests, was not written down (at least not officially) but passed from the mouth of the teacher into the ears of the student. It took two forms: *Midrash,* which arranged this oral tradition as a kind of scriptural commentary, and *Mishnah,* which used a topical arrangement. Paul refers to oral Torah in Gal 1:14 as "the traditions of my fathers," and states that he had been "extremely zealous" for them, presumably at the time of his Damascus experience. This statement indicates that he reached at least the second level of Jewish education.

After studying oral Torah, a student might choose to study advanced scriptural interpretation and juridical learning, along with subjects like astronomy, mathematics, and mystical speculation. At this level it was common for students to become disciples of some great scholar. The NT represents Jesus as such a scholar-teacher surrounded by disciples, although it is doubtful whether Jesus' disciples had the academic qualifications that other great teachers would have expected. It is also unlikely that Acts 22:3 is correct in stating that the apostle Paul had advanced to studying under a teacher as famous as Gamaliel. The Pauline epistles (in spite of claims to the contrary) show little evidence that their author had reached this level of rabbinic education. Paul's scriptural interpretation is far closer to the general exegetical methods common throughout the Greco-Roman world than to specific rules of exegesis as used in early rabbinic works such as the *Mek.* R. Ishmael (see Liebermann 1962: 47–82).

Not all traditional Jewish education involved formal study. On Sabbaths and holidays Jewish scholars regularly preached in the synagogues and in doing so reached a large audience. There is some doubt about just where these homilies fitted into the liturgy (i.e., whether they introduced Scripture readings or came after them), but their popularity is undisputed. In time such homilies, or outlines for them, were arranged according to the order of the lectionary and strung together to form homiletic *Midrashim.* These preachers would have resembled Greek philosophy lecturers, except that the Jewish teachers were more popular and probably exercised more influence.

Among the Essenes there was a more intensive pattern of general education. The Dead Sea Scrolls speak of the continual study of Torah as their goal so that in any community of ten people one person was searching out Torah day and night (1QS 6:6–7). Philo gives a somewhat less mechanical picture of how Essenes studied (Philo, *Quod Omn* 80–82), but leaves little doubt that the Essenes had a reputation for taking the study of Torah very seriously.

In two areas Jewish children might receive special training that had nothing to do with Scripture and tradition. The first was vocational. A relatively early rabbinic saying clearly obligates a father not only to circumcise his son and teach him the Torah, but also "to teach him a trade" (*t. Qidd.* 1.11). Here Jewish attitudes differed from the general culture of the ancient world, which regarded manual labor and higher learning as incompatible. Thus, it is in keeping with Jewish culture for the author of Acts to represent Paul as a tentmaker by trade (18:3; cf. 1 Cor 4:12).

The other special area of Jewish education involved the study of Greek, although the place of Greek in rabbinic education is difficult to determine. In spite of the many rabbinic warnings against Greek wisdom, there is little evidence of an absolute ban against the language itself. Some knowledge of Greek was necessary for communicating with the civil government and the world at large. Although it is unlikely that Greek found a regular place in rabbinic schools, there is evidence that some who chose a traditional Jewish alternative to Hellenistic schools still achieved a certain proficiency in Greek. A notable example is Paul. Even though he never used the polished literary Greek taught in Hellenistic schools, he nevertheless had learned to communicate quite well in the common *(koinē)* Greek of everyday speech. Other Jews attained a more acceptable style than Paul, and in the 4th century C.E. a Jewish patriarch (probably Gamaliel VI) was able to carry on a written correspondence in Greek with Libanius of Antioch, the most famous rhetorician of his day. Eight of the letters from Libanius have survived (Stern 1974–78, 2: 580–99), and they indicate that he regarded the patriarch as a person with an accomplished Hellenistic education.

JOHN T. TOWNSEND

EGERTON PAPYRUS 2. Papyrus Egerton 2 (P. Lond. Christ. 1) consists of some small fragments of an early Christian papyrus codex which contained a Gospel-type document. This document, otherwise unattested, is often called "the Unknown Gospel." Four fragments of this codex were found in 1934 among a miscellaneous group of ancient papyri purchased by the British Museum from an antiquities

dealer. The place of their discovery is not known, but may have been Oxyrhynchus. Quite recently a fifth fragment of the same codex has been identified among the Cologne papyri (inv. 608, nr. 255).

The five small fragments now known preserve parts of three leaves of the original codex. Fragment 1 (11.5 × 9.2 cm.) carries parts of 20 lines of text on each side; fragment 2, only slightly larger, preserves parts of 17 lines on the recto and 16 on the verso; fragment 3 (3.6 × 2.3 cm.) offers only small parts of 6 lines on each side; fragment 4 is a mere scrap, blank on the recto and showing only one character on the verso. The newly identified fragment 5 (5.5 × 3 cm.) contributes parts of 7 lines on each side, which continue the text of fragment 1. Thus only fragments 1 (+5) and 2 provide significant portions of text.

The interest and value of this text are far larger than the fragments themselves. The ms is dated on paleographical grounds to the 2d century, and most consider it to be not later than ca. 150. Thus it is one of the earliest surviving ms of any Christian writing, rivaled only by P^{52}, and is the very earliest surviving ms of any noncanonical Christian text. Furthermore, the content of the papyrus bears upon questions about the early history of traditions about Jesus and upon problems in the emergence and use of gospel literature.

Since the original sequence of the fragments cannot be determined, their substance can only be itemized: (1) part of a controversy between Jesus and Jewish leaders over the interpretation of Scripture and the authority of Moses (fr. 1 v. + fr. 5 v.), which has some parallels in John 5:39, 5:45, 9:29 and 5:46; (2) the conclusion of a story of an attempt to stone and to arrest Jesus (fr. 1 r. + fr. 5 r.), which has some parallels in John 7:30, 10:31 and 39; (3) a virtually complete story of Jesus' healing of a leper (also fr. 1 r. + fr. 5 r.), which has features in common with Mark 1:40–45 (and parallels), Luke 17:11–19, and John 5:14; (4) part of an account of a controversy concerning tribute money (fr. 2 r.), elements of which are also found in John 3:2, Mark 12:13–17 (and parallels), and Luke 6:26; (5) part of a report of a nature miracle of Jesus at the Jordan river (fr. 2 v.), for which no parallels are known.

The similarities and differences between this "Unknown Gospel" and the canonical Gospels present a puzzling picture. In its structure, which appears to be provided only by loosely linked pericopes, the "Unknown Gospel" closely resembles the Synoptics. The vocabulary and style of the papyrus are closer to those of Luke than of any other gospel, but the most striking similarities of content (including some verbatim agreements) are with John. It is also noteworthy that incidents in the papyrus which resemble incidents in the Synoptics are recounted with some marked differences from the synoptic reports, and that those which resemble the gospel of John in content are stylistically closer to the Synoptics. Such peculiarities make it very difficult to determine what sort of relationship, if any, obtains between the "Unknown Gospel" and the canonical Gospels, and scholarly judgments have varied widely. On the one hand, it has been argued that the "Unknown Gospel" is somehow dependent on one or more of the canonical Gospels. Various scholars have considered that it is drawn, probably by memory rather than through direct literary dependence, from all the canonical Gospels, but enriched with additional material (Jeremias *NTApocr* 1: 94–97; Gallizia 1956; Vielhauer 1975: 635–39; Wright 1985), in which case the papyrus might be regarded as a gospel harmony rather than as a gospel in its own right. Another has found evidence in the papyrus only for its literary dependence on the gospel of John, supposing that for the rest it relies on independent oral tradition (Dodd 1936). On the other hand, it has been claimed that the "Unknown Gospel" is not derivative from any of the canonical Gospels but is an early and independent redaction of tradition (Bell and Skeat 1935; Mayeda 1946). Some have gone still further to suggest that the "Unknown Gospel," far from being derivative, is perhaps itself a source of the gospel of Mark (Crossan 1985) or the gospel of John (Koester 1983).

While none of these possibilities can be excluded out of hand, the newly identified fragment (fr. 5) underscores the relationship of the papyrus with the gospel of John, which, as P^{52} shows, was in use in Egypt by the early 2d century. This strengthens the likelihood of literary dependence on John, and yet it remains conceivable that both the "Unknown Gospel" and the gospel of John drew on a common source. There are, however, no compelling reasons to think that the papyrus is dependent on any of the Synoptic Gospels as opposed to oral tradition, and even those who allege dependence on them must acknowledge

that it is neither direct nor exclusive. Hence the question of the literary relationships of the papyrus to other known documents is still open to debate.

Too little remains of the document to draw conclusions about its original scope, general character, or purpose, all of which are uncertain. Presumably it contained a passion narrative, since reference is made to "the hour of his betrayal" (fr. 1 r.). Characteristic redactional tendencies cannot be ascertained in so small a sample, though the double vocative "Teacher Jesus" (twice, fr. 1 r. and fr. 2 r.) is unique, and the use of catchwords for linking purposes can be observed (the latter telling in favor of composition from memory). It has been theorized that the "Unknown Gospel" was composed for private and domestic rather than public and liturgical use (Mayeda 1946), but there is no good evidence for this. It may very well have been a gospel of the same order as other early gospels. The fact that it is attested only in this papyrus and finds neither echo nor reference in subsequent Christian literature may be explained as well on the assumption of strictly provincial use and/or by appeal to the fortuitous character of such evidence.

Finally, it should be noticed that the papyrus has some interest for early Christian paleography and codicology. It is a very early witness for the Christian convention of *nomina sacra* (see Roberts 1979), and an interesting one, since some of its contractions are unusual and even unparalleled. It also provides early attestation for the preference of Christianity for the codex or leaf book, as opposed to the roll, for the transcription of Christian literature of a "scriptural" type.

HARRY Y. GAMBLE

EGLAH (PERSON) [Heb *ʿeglâ* (עֶגְלָה)]. A wife of David and mother of Ithream (2 Sam 3:5 = 1 Chr 3:3). Little is known of Eglah or her son. She appears as the sixth and last wife/mother mentioned in two lists of David's sons born in Hebron (2 Sam 3:2–5 and 1 Chr 3:1–3). Eglah is distinguished from the other five by her designation as David's "wife." Whether or not this epithet indicates that Eglah held a favored position (Hertzberg *1–2 Samuel* OTL, 254) is difficult to establish. Jerome (*Quest. Heb.* on 2 Sam 3:5) identifies Eglah with Michal, David's first wife, and suggests she died giving birth to Ithream. No indication in the text supports this speculation.

The list of wives and sons in 2 Sam 3:2–5 serves both a genealogical and literary function. 2 Sam 3:1 notes that David grew "stronger and stronger," while his enemy Saul grew "weaker and weaker." This general statement about David's strength is made specific by the genealogical list in vv 2–5. The increase of David's strength is mirrored in the increase of his wives (i.e., Eglah) and sons. See also DAVID (PERSON); ITHREAM (PERSON).

LINDA S. SCHEARING

EGLAIM (PLACE) [Heb *ʿeglayim* (עֶגְלַיִם)]. A town mentioned in the oracle against Moab in Isa 15:8. The context and poetic parallelism of this verse make it likely that Eglaim was located near one of Moab's boundaries, at the extremity opposite Beer-elim.

Although its exact location remains uncertain, several proposals have been made. Eusebius mentions Agallim, a site located 8 Roman miles S of Areopolis (modern Rabbah); the only ruin in this vicinity is Rujm el-Jilimeh (M.R. 217064), an amorphous heap of stones. Just over 4 miles further S is Kh. Jeljul, but its pottery seems to point to occupation only in the Nabataean and Roman periods. Aharoni tentatively identified Eglaim with Mazraʿ, on the E side of the Lisan (*LBHG,* 32).

GERALD L. MATTINGLY

EGLATH-SHELISHIYAH (PLACE) [Heb *ʿeglat šĕlīšiyyâ* (עֶגְלַת שְׁלִשִׁיָּה)]. Hebrew for "the third Eglath," a place name mentioned in oracles against Moab in Isa 15:5 and Jer 48:34. Its location is so uncertain that no identification has been widely accepted.

The ASV and RSV, along with a majority of translations, follow the LXX and regard Eglath-shelishiyah as the name of a town. Conversely, the KJV translates these Hebrew words as "an heifer of three years old" (i.e., a calf not yet broken to the yoke). Such figurative language appears elsewhere in the OT (e.g., Jer 46:20; Hos 10:11) and could refer, in Isa 15:5 and Jer 48:34, to the as yet unconquered towns of Zoar and Horonaim.

GERALD L. MATTINGLY

EGLON (PERSON) [Heb *ʿeglôn* (עֶגְלוֹן)]. The obese king of Moab who, allied with the Ammonites and Amalekites, subjugated Israel for eighteen years during the period of the judges until he suffered an ignominious assassination at the hands of EHUD, son of Gera, the Benjaminite "savior" (*môšîʿa;* Judg 3:12–30).

The setting of the episode is not entirely clear from the geographical data supplied by the narrative (e.g., on the location of SEIRAH [PLACE] in v 26, see Soggin *Judges* OTL, 52; Knauf 1988: 64). It is possible that the narrative embellishment of this story has, to some extent, displaced historical details in the account (Soggin 1989). However, in its present literary form, the reference to the city of palms (v 13) is presumably Jericho, which was occupied, not destroyed, by Eglon (note Deut 34:3; 2 Chr 28:15; see CITY OF PALM TREES [PLACE]). Also, from context, it seems probable that Eglon received tribute from Ehud at this location (Josephus *Ant* 5.187; see Soggin *Judges* OTL, 53–54). However, some, for example Kraeling (1935: 205), have proposed that Eglon was at his capital, perhaps Medeba, in Transjordan; and Mittmann (1977: 227–29) has suggested that the "city of palms" originally designated Tamar (M.R. 173024) SW of the Dead Sea rather than Jericho at its NW end.

According to the account, after Ehud completed his diplomatic mission and dismissed his retinue, he obtained a private audience with Eglon by informing him that he had a "secret word" (or "thing," *dĕbar-sēter*) to give him. When alone, Ehud surprised the king by reaching unsuspiciously with his left hand for the dagger hidden at his right side. Taking advantage of the obese king's efforts to stand up, Ehud plunged the blade, handle and all, into Eglon's belly of fat.

Despite the attention to detail, the story is confounded by both incongruities in the narrative (e.g., vv 18–19; cf. explanation by Kraeling 1935: 205–7) and obscure lexical forms. The latter is particularly vexing in the finale. After Ehud stabs Eglon, leaving the dagger lodged in his belly, v 22b adds the phrase *wayyēṣē› happaršĕdōnâ.* However, *paršĕdōnâ* is a *hapax legomenon* which has been variously interpreted. The RSV translates this as "dirt" (i.e., feces), in the phrase, "and the dirt came out," the result of either the puncturing of the colon, or a post-mortem release of the intestines (so also *Targum Jonathan* and Vulgate; see Moore *Judges* ICC, 97). Halpern (1988a: 40, 69, n. 3) translates it as "anal sphinchter." The LXX omits the phrase entirely. Perhaps the episode of Joab's execution of Amasa in 2 Samuel 20 may shed light on this incident. The actions and outcome are remarkably similar to the Eglon-Ehud story:

Joab approaches Amasa, grasps Amasa's beard with his right hand to kiss him, and with his left hand he reaches for the dagger hidden under his garment (vv 8–10a). Only one thrust of the blade is needed (v 10b), and Amasa "shed his bowels *(mē‹āyw)* to the ground." Whatever the exact meaning of *paršědōnâ* in the Eglon-Ehud story, the context seems to indicate some sort of "bowel movement" as a result of the death blow, since his guards later assume that he is relieving himself when they find the door locked (vv 24–25). Consequently, this supplies valuable time for Ehud to escape, assemble the Israelite militia, and cut off the Moabite troops at the fords of the Jordan River.

The episode is framed in typical Deuteronomistic language and in the repetition characteristic of the book of Judges: (1) because the people of Israel "did what was evil in the sight of the Lord," they were given into the power of an enemy (vv 12–14); (2) when they cried out to the Lord, he raised a deliverer, who subdued the enemy and gave rest to the land (vv 15a, 30); and (3) a period of faithfulness was followed again by the people's apostasy and the appointment by Yahweh of an enemy as an instrument of punishment (4:1; see Mayes *Judges* OTG, 18–19; but cf. Greenspahn 1986).

However, while the context of this narrative served as a theological vehicle, the story was also valued as entertainment (e.g., see Koch 1969: 138–40). Especially notable is its use of satire and irony. For example, the native reader (or hearer) would immediately catch the play on Eglon's name, which recalls both "calf" *(‹ēgel, ‹eglâ)* and "rotund" *(‹āgôl, ‹āgōl).* The description of Eglon as "very fat" (*bārî› mĕ›ōd,* v 17), is echoed in the description of his troops as "plump" or "fat" (*šāmēn,* v 29). (Note also the lines in the Ugaritic Kirta story [*KTU* 1.15 IV:4, 15]: *šmn mri,* "fattest of the fatlings," in which *šāmēn* modifies *mĕrî›*, a form phonetically related to *bārî›*, "fat.") Similarly, Ehud's designation as a Benjaminite (lit. "son of the right") adds to the irony of his left-handed intrigue. The scatological details of the assassination, highlighting the humiliating effectiveness of the deed (vv 21–23), heighten the satire of the story. Even the description of the confused guards in vv 24–25 borders on slapstick, were it not for the sobering discovery on the other side of the door. The course of events, too, is enriched by ironic wordplays. For example, Ehud's pretext for revisiting the king is an extended pun on his actual intention: Ehud's "word" (*dābār,* vv 19, 20) which he has for Eglon is, in a sense, "spoken" by the dagger's two edges (*pēyôt,* lit. "mouths," v 16; see Good 1965: 33–34). Similarly, the narrative balances the dramatic action around a single verb: Ehud's "thrusting" *(tq‹)* the sword into Eglon's belly (v 21) is followed by his "blowing" *(tq‹)* the trumpet to rally the Israelites and complete the *coup d'état* (v 27). For further observations on these and other features of the narrative art of this episode, see Alonso-Schökel (1961: 148–58) and Alter (1981: 37–41).

Presumably the text reflects a period when Moab had penetrated into Benjaminite and Ephraimite territory from Transjordan (see Donner 1984: 158). In the 9th century B.C.E., the situation was reversed when Mesha, king of Moab, was obliged to deliver tribute to the king of Israel until he successfully overthrew Israelite domination (2 Kings 3; note also MESHA STELE [*KAI* #181; *ANET,* pp. 320–21, esp. lines 1–9]). Ironically, Mesha's name *(mêša‹),* like Ehud's epithet, means "savior." It seems altogether fitting that the "savior" in the Eglon-Ehud story is a Benjaminite, since in the biblical tradition Jericho was assigned to the tribe of Benjamin in the original division of the land (Josh 18:21). Later indication of Moabite influence in the Benjaminite genealogy is suggested by the list of names recorded in 1 Chr 8:8–10. See also MOAB (PLACE) D.4.; and MESHA (PERSON).

Rabbinic tradition identifies Eglon as both the grandson of Balak, the Moabite king who hired Balaam to curse Israel (Numbers 22–24), and the father or grandfather of Ruth (*Ruth Targum* 1:4; for further references see Levine 1973: 48 n. 6). Aggadic commentary finds a redeeming virtue in Eglon's effort to stand at the "word of God" (Judg 3:20). According to this tradition, the king's pious action received its reward through the inclusion of Ruth in the genealogy of David (Ruth 4:18–22; see *Ruth Rabbah* 2.9; note 1 Sam 22:3–4). Furthermore, because of Ruth's own piety, she would be the ancestor of "the six Righteous of the world," namely, "David, Daniel, his three companions, and the Messiah king" (*Ruth Targum* 3:15). Perhaps the familiarity of the latter tradition also contributed to the inclusion of Ruth in the otherwise selective genealogy of Jesus (Matt 1:5; cf. Luke 3:32).

JOHN KUTSKO

EGLON (PLACE) [Heb *ʿeglôn* (עֶגְלוֹן)]. A royal Canaanite city conquered by Joshua (Josh 10:34–35).

It was later incorporated into the Judean Shephelah district of Lachish (Josh 15:39). Eglon figures prominently in the narrative of Joshua's conquest of the south (Joshua 10). Debir, king of Eglon, was one of four Amorite kings called upon by Adoni-zedek of Jerusalem to aid him in a war against Gibeon (Josh 10:1–4), which had, through a ruse, allied itself with the Israelites (Joshua 9). Since Debir occurs as a personal name only in v 3 (all other occurrences in the MT being the name of a place; see DEBIR), it has been speculated that in this passage, too, it originally represented a city (Soggin, Joshua OTL, 119; Boling, *Joshua* AB, 280). Eglon subsequently appears only in the list of the thirty-one Canaanite kings defeated by Joshua (12:12) and in the aforementioned list of cities in the Judean Shephelah. On the critical problems of Joshua 10 see Elliger 1934; Wright 1946; Soggin, *Joshua* OTL, 116–32; Boling, *Joshua* AB, 273–95.

The proposed location of Eglon has shifted a number of times over the course of the last century. Both Tel Nagila (Tell Nejileh) and Khirbet ʿAjlan were proposed as possible sites for Eglon in the late 19th century (about the former see Doermann 1987: 130–32 and Wright 1971: 439–40; about the latter see Petrie 1891: 19 and Bliss 1898: 141–42). However, in the 20th century the two leading candidates for Eglon have been Tell el-Hesi (M.R. 124106) and Tell ʿAitun (M.R. 143099). Once Albright (1924: 7–8; 1942: 35–36, 38) had questioned the identification of Lachish with Tell el-Hesi (a site of paramount importance in the history of Palestinian archaeology, since it was there that Petrie first developed the application of stratigraphy and pottery chronology), and had located Lachish instead at Tell ed-Duweir, the way was open for the identification of Eglon with Tell el-Hesi, partly on the basis of the alleged transference of the name to the nearby Khirbet ʿAjlan (but see Rainey 1983: 9–10). This identification has become the most widely accepted (see, e.g., Wright 1971: 440–41).

However, Elliger (1934: 66–68), basing himself on the geographical progression of Joshua's conquests in Josh 10:28–39 (Makkedah, Libnah, Lachish, and Eglon, north to south, "up to" Hebron, "back to" Debir), argued that Eglon was to be sought in the region to the S or SE of Tell ed-Duweir, preferably at Tell Beit Mirsim, or perhaps at Tell ʿAitun. This latter suggestion has been taken up by Noth (*Joshua* HAT, 95) and by Rainey (1980: 197; 1983: 3, 6, 9–10) and would appear to be the current leading contender for Eglon (dissenters include Ahlström [1980], who identifies Tell ʿAitun with Lachish [but see Davies 1982 and subsequent articles in *PEQ*], and Galil [1985: 71], who identifies Tell ʿAitun with Libnah).

EGYPT (PERSON) [Heb *miṣrayim* (מִצְרַיִם)]. The second of four "sons" of Ham and the "father" of seven whose *-îm* endings suggest they are to be regarded as peoples (Gen 10:6, 13–14). Egypt appears as a personification of the land of Egypt in the Table of Nations.
RICHARD S. HESS

EGYPT, BROOK OF. The Hebrew expression *naḥal miṣrayim* (נַחַל מִצְרַיִם), "Brook of Egypt," is found only in the OT. It occurs both as a geographical term with reference to the southern border of Judah (Num 34:5; Josh 15:4, 47; 1 Kgs 8:65 = 2 Chr 7:8; Ezek 47:19; 48:28) and as an element in the phrase "from the Brook of Egypt to the river Euphrates" (2 Kgs 24:7) or its reverse (Isa 27:12). This latter phrase is a merism designating the portion of Syro-Palestine between the NE and S borders of the area to which Israel and Judah lay claim.

The expression "Brook of Egypt" is found outside the OT as a geographical term in some Neo-Assyrian documents (AOAT 6: 256). A summary inscription of Tiglath-pileser mentions a campaign to the URU *naḫal muṣur,* "Brook of Egypt," immediately after his conquest of Gaza on the S coastal plain (Alt 1953: 150–62; Tadmor 1966: 88). The use of the cuneiform determinative URU (indicating a region or country) rather than ID (designating a river) seems to indicate that the expression is a toponym in the general sense (Na›aman 1979). Tiglath-pileser's campaign can be dated during the years 734–732 B.C.

The next mention of the Brook of Egypt is in Sargon II's account of his campaign in the year 716 B.C. The prism fragment contains the phrase *ša patti* URU *naḫal* M[*uṣur*], "situated on the border of the Brook of Egypt," (Na›aman 1979). Another inscription by Sargon II gives the extent of his conquests as ranging from the Elamite border "as far as the Brook of Egypt" (Winckler 1889; Na›aman 1979). Esarhaddon refers to a city named Arza which is situated near the "Brook of Egypt" (*ANET,* 290). Another more detailed geographical notice found in the annalistic comments regarding his second campaign places Arza "a distance of thirty 'miles' from the town of Aphek [situated] on the border-region of Samaria as far as the town of Raphia, beyond the border of the Brook of Egypt, a place without [flowing] river" (after Na›aman 1979). The town Arza, probably identical with later Yarda and Orda, should be identified with the toponym Yurza known from Egyptian topographical lists; this leads to an identification of the "Brook of Egypt" with the Nahal Bezor. The commonly suggested equation with the Wadi el ›Arish should be ruled out, at least as far as the earlier lists are concerned (Na›aman 1979).

Another argument for this location may be the absence of pre-Hellenistic ruins in the vicinity of Wadi el ›Arish. The boundary between Palestine and Egypt stabilized at the latter location only in the Persian period or later (Na›aman 1979; cf. Rainey 1982).

EGYPT, HISTORY OF. In part because it was one of the greatest political and military powers in antiquity, Egypt had significant contact with the various states and peoples of the Levant. See EGYPTIAN RELATIONS WITH CANAAN. Consequently, much of biblical history is tied in with that of Egypt. This entry, which consists of nine separate articles, surveys the history of ancient Egypt. The first article covers the problems and issues related to the chronology of ancient Egypt. The remaining eight articles survey Egyptian history from the prehistoric period to the Greco-Roman period.

CHRONOLOGY

This article attempts to survey the available sources used for reconstructing the chronology of ancient Egypt, and provides a construct for dating the major periods of Egyptian history.

A. Sources for Egyptian Chronology
1. Lists of Kings
2. Genealogies Mentioning Kings
3. Original Documents and Archaeological Evidence
4. Synchronisms
5. Astronomical Data

B. Constructing an Egyptian Chronology
1. Predynastic Period
2. Archaic Period
3. Old Kingdom
4. First Intermediate Period
5. Middle Kingdom
6. Second Intermediate Period
7. New Kingdom
8. Third Intermediate Period
9. Late Period

A. Sources for Egyptian Chronology

The ancient Egyptians had no single, continuous era for reckoning the passing of the years, such as our modern use of years counted B.C. and A.D. Instead, for most of their history, the ancient Egyptians dated events and documents by the years of the reigns of their successive kings, the "pharaohs." This system had its origins in the Archaic Period (1st–2d Dynasties), when years were named after important events. Then the habit was established of counting years by "Year of the 1st Cattle-census" of a reign, followed by the "Year *after* the 1st Cattle-census," then the "Year of the 2d Cattle-census" the year after it, and so on (census-years alternating with "after-census" years) through a given king's reign. The whole process began anew with each succeeding king. Eventually, in the later Old Kingdom (later 3d millennium B.C.), this alternating year-numbering gave way to a continuous year-count, e.g., Year 1, Year 2, Year 3, etc., as mentioned above. (On Egyptian reckoning of regnal years, see Gardiner 1945.)

Unfortunately, we do not possess today an ideal, straight, unbroken line of kings' reigns and their lengths in years that would enable us to convert Egyptian years instantly into years B.C. For many kings, we do not know the exact length of the reigns. During the three Intermediate periods in ancient Egyptian history, two or more lines of kings reigned side by side in different parts of Egypt. Therefore, our ancient Egyptian chronology has to be established (and not yet precisely) by making use of a variety of sources. These include ancient lists of kings, sometimes giving their supposed lengths of reign; genealogies giving sequences of people and rulers; original documents citing regnal years of kings, and archaeological evidence; synchronisms between Egyptian and independently dated foreign rulers; and astronomical calculations based on phenomena of the sun, moon, or stars mentioned in ancient texts.

1. Lists of Kings. The seemingly oldest such monument is known to us only from some fragments of an upright slab, the largest being the so-called Palermo Stone (after the town-museum where it resides). When complete, this slab was originally inscribed on both front and back with a series of horizontal registers. Each register was marked off into rectangles, one per year of a king's reign, and each year space was compactly inscribed with a note of events considered important by the ancients. On the front, the top register gave not years but the names of "prehistoric" kings. This monument originally gave the full series of regnal years of all the kings from Menes and the first historic dynasty down to the 5th Dyn. to King Neferirkare or even later (see Helck, *LA:* 652–54; Redford 1986: 87–90, 135–36). Intact, the Palermo Stone would have been invaluable; but the mere fragments that do survive are not enough on which to base a reconstruction that can be generally accepted.

Leaving aside other minor pieces (on which see Redford 1986: 24–29, 34–64), the next equivalent of a king list is the Table of Kings originally inscribed in the Karnak temple at Thebes under Thutmose III in the 15th century B.C. (see Redford 1986: 29–34, 176–78). However, its "display" of bygone monarchs in balancing groups is not very helpful to modern chronologers.

More important are the series of kings named in three monumental king lists of the 19th Dyn. (13th century B.C.). Two are mutual duplicates, inscribed under Seti I and Rameses II in their great temples at Abydos. The other, quite similar, was included in the tomb chapel of the official Tjunuroy at Saqqara. While Tjunuroy omits the first few kings (Redford 1986: 23), these lists are excerpts from a longer tradition, giving the names (in order) of the main kings of the Old, Middle, and New Kingdoms (OK, MK, NK; ca. 3000–1250 B.C.). All exclude the female pharaoh Hatshepsut and the Amarna "heresy" kings (disapproved of by later rulers), but the Abydos lists include the Memphite kings who followed the 6th Dyn. (for texts see *KRI* 1: 177–79; *KRI* 2: 539–41; *KRI* 3: 481–82; latest discussion in Redford 1986: 18–24). So far as they go, these selective lists agree both with the evidence of firsthand documents and with the canon of kings transmitted to us by the Turin Papyrus and (a millennium later) in Manetho's work. The three lists from Abydos and Saqqara are in fact offering lists that formed part of the royal cult; nevertheless, they must derive from real, fuller king lists, simply omitting names and numerical data not needed in the limited space available.

A document of far greater extent and importance is a badly damaged papyrus in the Turin Egyptian Museum, known as the Turin Canon of Kings (text in Gardiner 1959; *KRI* 2: 827–44; for hieratic, see plates in Farina 1938). This is an informal copy, made on the reverse of an old tax register of the time of Rameses II. It gives a long list of kings: dynasties of gods and spirits, then historical kings from Menes down to the 17th Dyn., so far as preserved; originally it may have included the 18th and early 19th Dyn., perhaps to Rameses II himself. Regnal years are given for all rulers named (with life spans for early kings), including also months and days for reigns of the 12th Dyn. onward. Comparison of the canon's data with firsthand contemporary evidence indicates that its order of kings (within each dynasty or group) is mostly reliable, but not faultless. Some names have been corrupted by previous recopying, and likewise various figures (but not all). It is an unofficial and imperfect witness to a well-established historical tradition (see discussion in Málek 1982a; von Beckerath 1984; Redford 1986: 2–18, 197–201, contrast p. 5 top with p. 197, n. 238 end), but nevertheless constitutes a clear forerunner to the lists compiled by Manetho a millennium later.

In the transition from the late Persian to the early Ptolemaic period in Egypt (roughly 320 B.C.), we have the so-called Demotic Chronicle (for translations, see Spiegelberg 1914; Bresciani 1969: 551–60). In reality, this is an oracular work with commentary. It names (in order) the kings of the 28th–30th Dyn., differing slightly from Manetho for the order of the 29th Dyn. (cf. Johnson 1974; Ray 1986). See also DEMOTIC CHRONICLE.

Finally, there is the *Aegyptiaka* or "Egyptian History" by Manetho (an Egyptian priest of the 3d century B.C.), written in Greek under Ptolemy II. This work embodied in its narrative various series of kings and reigns. These are grouped in "Dynasties" or families (real or otherwise), with summaries of years of each dynasty, and of longer periods of several dynasties. Except for a few citations in Josephus (1st century A.D.), Manetho's original work is now lost. But at an early date, a basic list of the kings, dynasties, and

periodic summaries had been gathered into an *Epitome*. This summary "king list" survives in three versions: in the writings of Africanus (3d century A.D.); Eusebius (4th century A.D.); and George the Syncellus (about 800 A.D.). The Greek text/Latin version with facing English translations is conveniently available in Waddell (1940), along with other Manethonic fragments and pseudo-Manethonic "lists." Even today, the 30 Dynasties given by Manetho are still retained because they provide convenient groupings of Egyptian rulers for historical purposes. However, the names and figures in the *Epitome* have clearly suffered considerable (if uneven) corruption in the course of centuries of repeated hand-copying, and sometimes at the hands of would-be manipulators of ancient chronology. This is clear from the variant names and numbers evident in Africanus, Eusebius, the Syncellus, and Josephus, when compared with firsthand older Egyptian sources, especially from the reigns of individual kings. Thus, Manetho provides only an outline framework; in detail, his data have to be used critically in conjunction with older and original sources.

2. Genealogies Mentioning Kings. There are two types of genealogy: "unitary" and "synthetic." "Unitary" describes an entire genealogy derived from one single monument or document. "Synthetic" denotes genealogies built up by combining data from several different sources. Dating from the Late Period, the most striking "unitary" genealogy is that preserved on the tomb relief Berlin 23673 (see Borchardt 1935: 96–112, pls. 2–2a), which provides a sequence of 60 generations extending back from the priest Ankhefen-Sekhmet, who flourished ca. 750 B.C. under Shoshenq V. Going back through time, beginning with the 11th generation before himself, this man included the cartouches of kings (supposedly contemporaries of various ancestors) alongside the names of at least 26 of the 49 generations from the 11th back to the 60th. While a few anomalies occur (see Kitchen 1986: 187–90, 560), the overall span of kings and generations compares well with results obtained from other evidence. For the 21st Dyn., the genealogy itself is confirmed by another monument that belonged to another branch of the same family (Louvre C.96; see Malinine, Posener, and Vercoutter 1968: 48–49, pl. 4, No. 52).

Under this head may also be mentioned the famous genealogy of Pasenhor from the Serapeum (from Year 37 of Shoshenq V, ca. 731 B.C.), which lists his forebears back to the 17th generation—the 8th down to 5th previous generations were the kings we know today as Shoshenq I (biblical Shishak) to Osorkon II of the 22d Dyn., the 17th to 9th ancestors being also those of Shoshenq I (for text, see Malinine, Posener, and Vercoutter 1968: 30–31, pl. 10, no. 31; discussion in Kitchen 1986: 105–6, 109–12).

"Synthetic" genealogies come closer to contemporary sources. Thus if three men, C, B, and A, each mention their contemporary king (Z, Y, and X), and C is son of B and grandson of A, then we have three generations A, B, and C, which in turn establish a basic parallel series of kings, X, Y, and Z, contained within a time span (biologically) of 60 years or so. Naturally, allowance must be made for kings who had ruled (if briefly) between X and Y, or Y and Z, but not mentioned by the sources concerned. This kind of evidence—combining the data from a group of documents—is especially useful in the Third Intermediate Period, ca. 1070–660 B.C. (see Kitchen 1986: 90, 106–9, 112, etc., particularly 187–239 passim), but applies also to all earlier periods, e.g., the mass of data concerning the royal workmen at Deir el-Medina in the New Kingdom (see, e.g., Bierbrier 1975).

3. Original Documents and Archaeological Evidence. Most valuable are the explicitly dated texts and monuments that bear the names and year dates of particular kings. Such datelines can confirm or correct the later record of the king lists. The range and sheer bulk of such data forbid any detailed list here.

Archaeological findings can add fresh dimensions to our historical understanding. For example, the recently documented growth of Memphis eastward during the NK (see Jeffreys 1985: 48 and passim) transforms our understanding of the history of Egypt's longest-serving capital city. It can also solve a puzzle in the narrative of Herodotus on Egypt, where two kings with the same name (Asychis) are confused as one (Kitchen 1988: 148–51). Proper historical sequence can also be verified archaeologically. For example, the fact that Shoshenq III cut up a great colossus of Rameses II to build his own main gateway at Tanis proves conclusively that the Ramesside kings preceded the 22d Dyn.

4. Synchronisms. The ancient Egyptians did not live in total isolation. By trade, or in war and peace, they had contacts with neighboring cultures and rulers. In the earliest periods, these linkups are

archaeological and (in years) only approximate, not precise. Thus, links can be seen with Protoliterate Mesopotamia, as well as Early Bronze Age Palestine and Syria during the late Predynastic (prehistoric) period through the Archaic Period (1st and 2d Dyn.) into the OK (see Kantor 1965: 10–19 with references; Gophna in Rainey 1987: 13–21).

Later in the 3d millennium B.C., we have a link in the 6th Dyn. with the Syrian Early Bronze Age IV, provided by finds of stone vessels naming Khephren (Khafre) and Pepi I at Ebla (Scandone Matthiae 1979a: 33–43, figs 11–14).

In the early 2d millennium B.C., cross-links are still limited. The Tod treasure (a temple foundation-deposit) includes varied material from Western Asia; the cartouche of Amenemhet II provides an upper limit, but the actual date of deposit can be much later (Kemp and Merrilees 1980, Appendix II, correcting Kantor 1965: 19). Equally vague (in terms of cross-dating) is Minoan pottery in 13th-Dyn. (not 12th) deposits at Kahun. Turning to inscriptional data, it may be possible to link up Neferhotep I of the 13th Dyn., via Yantin (-Ammu) of Byblos, indirectly with Zimri-lim of Mari, who in turn was a contemporary of Hammurabi of Babylon. But a strictly fixed and agreed date is not yet available for Neferhotep or Hammurabi (Kitchen 1987a: 48; Franke 1988: 273–74).

During the NK (late 2d millennium B.C.), we have far more evidence. The great pharaohs of the 18th and 19th Dyn. engaged in war and diplomacy with the "great kings" of Hatti, Mitanni, Assyria, and Babylon, besides vassals in the Levant and important smaller states such as Ugarit. Given the high accuracy of Mesopotamian dates during the 10th to 5th centuries B.C., and the close limits (within a decade or so) for such dates back to ca. 1400 B.C., the Mesopotamian data are of value in helping to set limits for Hittite and Egyptian dates for the 14th and 13th centuries B.C.

In the 1st millennium B.C., close dating becomes better as time passes. During the 22d Dyn., from Soshenq I to Osorkon IV, occasional cross-links with the Hebrew kingdoms and Assyria complete and confirm the general dates obtainable by dead reckoning of reigns before the 25th Dyn. In turn, the 25th and 26th Dyn. were involved with Assyrian and Neo-Babylonian rulers, for most of whom we have very precise dates based on firsthand cuneiform sources. These dynasties and Egypt in the time of the Persian Empire and after are enmeshed by classical writers and chronographers with later classical history and chronology (from Herodotus onward) down to Roman times.

5. Astronomical Data. In the past, vigorous attempts have been made to fix ancient Egyptian dates more precisely by using astronomy to set dates for mentions of new moons or so-called "heliacal" risings of the Dog Star, Sothis, in ancient sources. But here, too, various uncertainties make it difficult to reach firm results.

The problem with records of observations of the new moon is that any particular rising in the Egyptian calendar will be repeated every 25 years precisely, in an unending cycle (Parker 1976: 180–81; 1957a). Thus, we need to know in advance (within half a century) the general date of a given mention. Usable lunar dates are found in the Lahun papyri of the late 12th Dyn., and in Year 52 of Rameses II, which can be utilized within a wider frame of dates established on other grounds. However, attempts to turn most Egyptian festival dates into lunar dates for chronological purposes (so Kraus 1985: 136–63) are premature and too theoretical to be of any use at present.

So-called Sothic dates operate on a far grander scale, based on the slight difference in length between the Egyptian civil calendar and the real solar calendar. The latter is (in practice) 1/4365 days long. But it is not convenient to work with a quarter of a day. So, since every four years the four quarters add up to one whole day, we maintain a calendar of 365 days per year, but with a leap year of 366 days (the extra day) every four years. Consequently, our calendar stays basically in line with the year as expressed by the movements of sun and earth, and so with the seasons.

However, the ancient Egyptians did not operate as we do. Probably in the early 3d millennium B.C. (see Parker 1950: 53 and generally), the Egyptians instituted a calendar of 12 months of 30 days each, plus "5 days over the year"—a calendar of 365 days like ours (and the origin of ours). But they did not notice (or if known, did not bother with) the odd 1/4-day by which their calendar was short. So, after four years (with *no* leap year), their fourth civil calendar year ended one day too soon, and the next year began a day

too soon. After another four years, the 8th year ended 2 days too soon. As this process of every year finishing too early continued, each year's calendar months began earlier and earlier during the natural seasons of the solar year. At first, no one would notice this. After 120 years, the civil calendar year was beginning a whole month (30 days) ahead of the real solar year, and by the time that 700 years had passed, the civil calendar year would begin (and end) 6 months too soon; then, the "winter" months of this calendar would have crept forward into nature's summer season of the previous solar year! But as time passed, after a total of some 1460 years, the too-short civil year would have overtaken itself by one complete year of 365 days, and everything (like the seasons) would for the moment be in its right place again. This, of course, applies to all phenomena dated by the civil calendar. The ancient Egyptian New Year was supposed to coincide with the observed rise of the new Nile flood, i.e., in July—or, the coming of the "inundation" be dated to the 1st day of the 1st month of the 1st season, in calendar terms. But of course, after several hundred years, any such report of the rise of the Nile would be dated correspondingly to some later date in the civil calendar, because that too-short calendar had meantime been creeping forward as noted above.

The rise of the Nile was not the only event noticed in the July time of the year in Egypt. Quite by coincidence, the so-called "heliacal rising" of the Dog Star (Gk *Sothis,* from Egyptian *Sopdet*) also took place on the original July "New Year" of the civil calendar. (The heliacal rising of Sothis is defined as that day on which this star first becomes visible just before sunrise, after 70 days of invisibility, Parker 1950: 7.) Because of the behavior of Egypt's too-short civil calendar, some 1460 years have to elapse between one sighting of this heliacal rising of Sothis on the 1st day of the 1st month of the 1st season (New Year's Day) in the civil calendar and the next time this exact sighting could reoccur. This period of about 1460 years is therefore called a Sothic cycle. Fortunately, one such date point is known: within the period 139–42 A.D. (Parker 1976: 182). Therefore, allowing for variations in the stellar motion of Sothis, it can be calculated that previous Sothic cycles would begin in 1313 B.C. and 2769 B.C., if observed at Memphis (see Parker 1976: 182, who uses astronomic notation).

Fixing the date of these cycles should (in theory) help us to date any reign of a pharaoh, if a heliacal rising of Sothis is found mentioned in a particular year of his rule on a specific date in the civil calendar—one only needs to know inside which cycle his reign falls. For example, if some king who belonged within the period 2700 to 1350 B.C. had a document dated to his Year 1, mentioning the rising of Sothis on the 6th day of the 4th month of the summer season (11th month in the year), it is clear that the civil calendar had crept forward 335 days since such a rising last happened on its New Year's Day. So, 4 × 335 years had elapsed since 2769 B.C., putting our theoretical king's accession (Year 1) at about 2769 minus (4 × 335) years B.C., or 2769 minus 1340 = 1429 B.C.

Alas, in practice things are not so simple. There are several complications. First, one must allow for a 4-year margin of error (before quarter days add up to one day, among other factors). Second, the geographical location of any reported Sothic sighting affects reckoning of the date. In practice, the further south the sighting, the later the date B.C. So, we need to know, for example, whether a report of Sothis was made in Memphis, Thebes, or Elephantine. Only two usable Sothic rising reports are known to us at present: one in Year 7 of Sesostris (Senwosret) II or III, and one in Year 9 of Amenhotep I. The former one may have been observed either in Memphis or Elephantine; there would be a roughly 30-year difference in date, depending on place of observation. The latter one would have been seen in either Thebes (source of the Ebers Papyrus bearing the datum) or Elephantine; the date difference is then only about 11 years. (For the suggestion of Elephantine as the point of observation for both risings, leading to ultra-low dates for both, see Krauss 1985; contrast Kitchen 1987a: 42–44, 47, where the corresponding options of observations made at Memphis and Thebes respectively are preferred.)

B. Constructing an Egyptian Chronology

In the light of the kinds of evidence and their various problems sketched above, the only proper way to build up a chronology for ancient Egypt is to begin at the end and work our way back from the well-fixed dates of the 26th Dyn. to Roman times, step by step, until we reach the beginnings, i.e., the 1st Dyn. and

the prehistoric era beyond it. However, for the reader's convenience, the chronology will be presented here in its natural order from the beginning to end.

While the long line of 30 dynasties is still useful as a basic framework of kings, it has been found helpful in modern times to divide the dynasties into larger, more convenient historical periods, i.e., "kingdoms" and "intermediate periods"—the former being eras of power and political unity (one line of kings), and the latter periods of political disunity (with parallel lines of kings). The following brief table will summarize the position.

Predynastic Period prehistory
Archaic Period Dyn. 1–2 (Formative Age)
Old Kingdom Dyn. 3–8 ("Pyramid Age")
• *1st Intermediate Period* Dyn. 9–10 (partly contemporaneous with Dyn. 11)
Middle Kingdom Dyn. 11–12 (reunification, "Classical" Period)
• *2d Intermediate Period* Dyn. 13–17 (overlapping lines of kings)
New Kingdom Dyn. 18–20 ("Empire Period")
• *3d Intermediate Period* Dyn. 21–25 (age of disunity)
Late Period proper Dyn. 26–"31" (Saite, Persian, and independence rulers)
Greco-Roman Period Ptolemies and the Romans

The dating of each period in this long history can now be reviewed.

1. Predynastic Period. Traditionally, prehistory in Egypt ends with the union of the two "predynastic" kingdoms Upper and Lower Egypt (Nile valley and delta, respectively) by "Menes" the Narmer of the monuments), founder of the first line (dynasty) of kings of all Egypt. This event can be set somewhere about 3000 B.C., so Egypt's prehistoric ages are earlier than that approximate date. For the three main successive cultural periods in Egypt's prehistory (Taso-Badarian, Naqada I and II), no precise dates can be assigned beyond locating them in the 4th millennium B.C. (For Carbon 14 dates for the Naqada I and II periods [4th millennium], see Hassan and Robinson 1987: 128, 127 end.)

2. Archaic Period. The contemporary monuments and later king lists agree on 8 kings for the 1st Dyn., but neither set of sources enables us to know the actual lengths of these 8 reigns. For the 2d Dyn., the Abydos list has 6 kings, the Saqqara list 8 kings, and the Turin Canon and Manetho each have 9 kings. From the firsthand monuments we have rulers corresponding to the first five kings in all the lists. At the Dynasty's end, Khasekhem and Khasekhemwy appear to be successive forms of the same name used by one king during his career; this gives us a 6th king. In the middle of this dynasty, problems arise. It is still uncertain whether Sekhemib Perenmat is the same individual as Peribsen, and whether either is Senedi of the later lists. Therefore, a minimum of 7 kings is likely. The Turin Canon's figures for the 2d Dyn. are incomplete and not yet verifiable; from the Palermo Stone fragments we have just the 20 years of king Nynetjer. Thus, no definite total is available for the 2d Dyn. either. Involving yet another theoretical reconstruction of the Palermo Stone, a computation made by Kaiser (1961) suggests about 300 years for the whole of this period (1st Dyn., ca. 160 years; 2d Dyn., ca. 140 years). Such a period may be dated to roughly 3000–2700 B.C., if we begin the OK at about 2700 B.C.

3. Old Kingdom. Our first problem in this period is that the alternation of years of cattle census and years after census (see above) was no longer maintained. Under Snofru, for example, the 7th cattle count was immediately followed by the 8th with no intervening year "after" the 7th (Gardiner 1945: 13–14). Thus, there is uncertainty as to how one should reckon many reigns—assuming the usual scheme of alternating years of *x*th cattle count and that years after counts provide a total of years for a king's reign; this total well exceeds the corresponding figure for the reign found in the Turin Canon in a suspiciously high number of cases. Snofru was probably only one king of several who sometimes reckoned cattle-count years consecutively. Each reign has to be considered on its own merits.

The 3d Dyn. has 5 kings in the Turin Canon (two with 19 years each, two with 6 years each, and the last with 24 years similar to Snofru who follows). Even if these curiously paired figures are not all correct, they may at least indicate relatively long and short reigns. For example, Djoser Netjer-khet (given 19

years) did complete his pyramid complex, but Djoser-Teti Sekhemkhet (given 6 years) did not. So 70/80 years (74 in the Turin Canon) may not be far wrong for the 3d Dyn., within 2700–2600 B.C. at most.

For the 4th to 6th Dyn., similar detailed argumentation (using the incomplete data from original documents, the Palermo Stone, and later lists) enables us to suggest about 102 or 112 years for the 4th Dyn. (18 or 28 years for Menkaure), within roughly 2600–2500 B.C. Three apparent kings in Manetho (Bicheris, Hardjedef, and Thamphthis) are probably spurious and never actually reigned. In the 5th Dyn., we have an agreed 9 kings from Userkaf to Unis, and in the 6th Dyn. probably 7 rulers down to Nitocris/Netjerkare, if the enigmatic Userkare be included between Teti and Pepi I. In terms of years, the 5th Dyn. cannot have lasted much under 150 years (about 2500–2350 B.C.), and the 6th may be allowed about 160 years (say 2350–2190 B.C.), although the internal details remain difficult to sort out. (For example, Teti may have reigned 12 or 20 years; Pepi II reigned at least 63 years, but may have died at 100 after 94 years if the cattle counts are interpreted strictly and the Turin Canon and Manetho figures are accepted.)

The length of the 7th to 8th Dyn. (all one line in the Abydos and Turin lists) is unknown. The Turin Canon has only 6 rulers here (Abydos has 16) and is obviously incomplete. Therefore, its total of 187 (= 181 + 6) years for the 6th to 8th Dyn. is most likely too small. It would be wiser to allow about 30 years for the 16 kings of the 7th–8th Dyn., as reigns of 1, 2, and occasionally 4 years are given by our sources for some of these kings. This would set the 7th–8th Dyn. within about 2190–2160 B.C. on the scheme adopted here. During this general period, we have evidence from Dendera on the sequence of local provincial governors ("nomarchs"). These data indicate 2 (perhaps 3) nomarchs contemporary with the 7th–8th Dyn. and at least 2 more contemporary with the 9th–10th Dyn. before the emergence of the 11th (see Fischer 1968; cf. Kitchen 1972: 124–25). Such a series of four, five, or even six nomarchs as stable local dynasts would require a period of some 60 to 90 years (note also Hayes, *CAH*³ 1/1: 180–81), within (in this case) about 2190–2100 B.C.

4. First Intermediate Period. The last of the 7th/8th Dynasty kings at Memphis was replaced by a fresh line of rulers from Heracleopolis, the House of Khety of Egyptian sources, and the 9th/10th Dyn. of Manetho. The Turin Canon does not distinguish between two separate dynasties here, but has one group of 18 kings, just as it has one set of kings that correspond to Manetho's 7th and 8th Dyn. However, it is convenient here to reuse the term "9th Dyn." for the first few kings who ruled all Egypt, and the term "10th" for their immediate successors who lost Upper Egypt to the new 11th Dyn. in Thebes. For an initial four Heracleopolitan kings of all Egypt, we may guess at some 50/60 years, at about 2160–2100 B.C. on the scheme used here. The remaining Heracleopolitan rulers will have been short-lived contemporaries of the 11th Dyn., who were finally brought to an end by Nebehepetre Mentuhotep II of the 11th Dyn. The date of that triumph within his long reign is unknown; it probably falls at some point after his Year 14, but not later than Year 39, allowing for this king's changes of titles, reflecting his political fortunes. Generally, the reunion of Egypt by Mentuhotep II has been set at about Years 20–25 of his reign (Stock 1949: 80, 92, 99, 103; Hayes, *CAH*³ 1/1: 181). On the scheme used here, the ending of the 9th/10th Dyn. by Mentuhotep II would have fallen in about 2010 B.C.

5. Middle Kingdom. In Manetho, the 11th Dyn. is accorded 16 kings for 43 years, which is transparently corrupted from the Turin Canon's figure of 6 kings for 143 years—a realistic figure, in terms of the amounts that can be assigned to individual reigns. Hence, depending on the date used for the following 12th Dyn., the 11th can be set best at ca. 2106–1963 B.C., or at the very latest (according to Krauss 1985) ca. 2080–1937 B.C.

Until recently, the anchor for all the early Egyptian dating down to this point had been the 12th Dyn., set at 1991–1786 B.C., as classically established by Parker (1950: 63–69, 81–82), using the Sothis datum of Year 7 of an unnamed king (probably Sesostris III and not before Sesostris II [document from his temple's archive]) calculated to be 1872 B.C.

However, three factors have rather dragged this "anchor" from its usual moorings. First, reductions in the supposed lengths of reigns of Sesostris II and III. Sesostris II is not known to have reigned any more than 6 full years (rather than 19), while Sesostris III cannot be shown to have reigned beyond 19 full

years—his Year 19 is followed by a Year 1 in the Lahun papyri, and officials from before his Year 19 are still in office in the reign of his successor Amenemhet III (less likely if Sesostris III had really reigned 36 years; see Simpson 1972: 52–54; *LA* 5: 900, 903–4; Krauss 1985: 194–95). As a result, even if we kept the date 1872 for the Sothic rising of Year 7, the limits of the 12th Dyn. would shrink to a theoretical 1978–1801 B.C.

Second, it has been questioned (see above) whether this rising of Sothis was observed in the region of Memphis, as is usually assumed. Krauss (1985) locates its observation far south at Elephantine. This would lower the date from 1872 to 1830 B.C., reducing the date of Sesostris III by 42 years. Combined with the reduced reign lengths noted above, the theory of Krauss (and it is *only* a theory!) would produce a new low date of 1937–1759 B.C. for the 12th Dyn. (Kitchen 1987a: 43; Krauss 1985: 207).

Third, all these changes have required a reevaluation of the lunar dates of the late 12th Dyn. and inclusion of new ones, a topic tackled at length by Krauss (1985: 15–35, 73–103). So the various possible dates for the lunar entries in the Lahun papyri have to be integrated with those for the Sothic datum, a matter of complexity.

Out of all this, we have for the Sothic date of Year 7 of Sesostris III (rather than II) a possible date in 1831/1830 B.C. (if observed at Elephantine) or else a higher date in 1856/1855 B.C. if observed near Memphis (so Baer, based on, and courtesy of Krauss). Combined with the revised lunar dates, the accession of Amenemhet III came in 1818/1817 B.C. (Elephantine dating) or 1843/1842 B.C. (Memphis dating) (see Krauss 1985: 96). It should be noted that the Elephantine dating for the 12th Dyn. is only usable if one adopts a similarly low Elephantine dating for the Sothic datum of Amenophis I in the 18th Dyn. (see below; see Kitchen 1987a: 44–46, 47). The Memphis location for the 12th-Dyn. Sothic observation would date this Dyn. at 1963–1786 B.C.—the date used as the baseline for all dates in the preceding sections of this survey. This location and date agrees well with a Theban location (and consequent date) for the Sothic datum of Amenophis I.

6. Second Intermediate Period. The limits of this period (13th–17th Dyn.) are set by the end of the preceding 12th Dyn. and the beginning of the following 18th Dyn. On the higher dates for those two "framing" dynasties, this intermediate era can be assigned either 236 years (1786–1550 B.C.) or 220 years (1759–1539 B.C.) on the lower dates of Krauss. Since the Hyksos regime was not expelled until the 11th year of Ahmose I of the 18th Dyn. (cf. von Beckerath 1965: 210–11), this era in fact did not fully end until either 1540 or 1529 B.C.

This whole era is characterized by the existence of contemporary lines of kings. Essentially, the 15th (Hyksos) Dyn. ejected the ruling 13th Dyn. from *Ithet-tawy* and Memphis, confining its rule to Upper Egypt as a vassal. The 17th followed the 13th Dyn. in Thebes, still contemporary with the 15th in the north. The somewhat nebulous 14th and 16th Dyn. were little more than local Egyptian and Hyksos princelings in the delta, largely contemporary with the mainline 13th/17th and 15th Dyn. (For the respective lengths of the various dynasties, see von Beckerath 1965: 135–37; Kitchen 1987a: 50, 44–45; and Franke 1988.)

7. New Kingdom. Here, the key figures chronologically are Amenhotep (Amenophis) I and Thutmose III (18th Dyn.), and Rameses II (19th Dyn.). A rising of Sothis is recorded for Year 9 of Amenhotep I in Papyrus Ebers, a document found at Thebes. If the observation of Sothis was also made at Thebes, the most natural solution, then it would lead us to set the accession of Amenhotep I at 1525 B.C., and the beginning of the 18th Dyn. (and NK) with the accession of Ahmose I at ca. 1550 B.C. If, however, we follow the theory of Krauss that all Sothis observations were taken far south in Elephantine, then the 18th Dyn. would have begun 11 years later, in 1539 B.C. From the reign of Thutmose III we have a lunar date which would imply his accession to the throne in 1479 B.C., in line with a similar datum from the reign of Rameses II, favoring his accession in 1279 B.C., in conjunction (1) with synchronisms with other Near Eastern rulers and (2) with the lapse of generations linking the Rameside period to later epochs.

If the 18th Dyn. began in 1550 B.C., there is ample time for the reigns of Thutmose I and II in between those of Amenhotep I and Thutmose III. If, however, the dynasty began in 1539 B.C. (so Krauss 1985), then only 13 years are available for those two reigns—which is decidedly cramped and not realistic.

Between the reigns of Thutmose III of 54 years (1479–1425 B.C. and Rameses II of 66 years (1279–1213 B.C.), all the intervening reigns can be fitted in without any serious problems. Most lengths of reigns can be determined quite closely (Kitchen 1987a; 1989). Bones of contention include the possibility of a coregency between Amenhotep III and Akhenaten, which would require a longer reign for Amenhotep II; and whether or not Amenmesses of the 19th Dyn. had an independent reign (on the latter point, see Kitchen 1987b).

8. Third Intermediate Period. Dead reckoning from the beginning of the 26th Dyn. back to the accession of Shoshenq I, founder of the 22nd Dyn.—plus the use of synchronisms with Assyria and the Hebrew kingdoms—enables us to set the accession of Shoshenq I in (or close to) 945 B.C. The claim that the Egyptian dates of this period depend entirely on Hebrew/Assyrian dates is a false one; these merely refine dates now obtainable by dead reckoning of known consecutive reigns.

Before 945 B.C., we have the 21st Dyn. for which there is good agreement between original data on kings and their reigns and the data in Manetho; the total count comes to 124/125 years—certainly not more than the total of 130 years given in Manetho, a figure which cannot itself be justified at present (Kitchen 1986: 531–33). At any rate, the death of Rameses XI (the end of the NK) and the start of the 21st Dyn. can be reasonably set within ca. 1075/1069 B.C.

For the 22d (Libyan) Dyn., the main sequence of kings from Shoshenq I down to Osorkon IV is now clear and generally accepted. By dead reckoning of known reigns from a bottom date of 712 B.C. (by which time Osorkon IV disappears), and allowing the data that speak for a minimum reign of 33 years (probably 35 years) for Osorkon I and 14/15 years for Takelot I, the accession of Shoshenq I could *not* fall any later than ca. 930 B.C. However, two synchronisms at least require an earlier date. First, despite occasional suggestions to the contrary, the So of 2 Kgs 17:4 (whose help Hoshea of Israel sought in 725 B.C.) was a king, not a place (Sais deep in the west delta had no role in Levantine politics before the 7th century B.C.). Osorkon IV is the only serious candidate for identification with So (see data, references and discussion in Kitchen 1986: 372–75, 551, 583). This has the effect of raising the minimum accession date of Shoshenq I to ca. 940 B.C. He in turn invaded Palestine in the 5th year of Rehoboam, which is virtually certainly 926/925 B.C. (Hornung 1964: 28; Thiele 1983: 80, Table and passim; Kitchen 1986: 74–75). There are good reasons for dating Shoshenq's campaign to his last year or so, hence his 21-year reign will have begun in 945 B.C. or very soon after. The 23d and 24th Dyn. were wholly contemporary with the 22d and 25th Dyn. (details in Kitchen 1986).

The 25th Dynasty's last full ruler of Egypt, Taharqa, reigned 26 years (690–664 B.C.) just prior to the fixed accession year 664 B.C. for the 26th Dyn.; his successor Tanutamun was entirely a contemporary of the 26th Dyn. Of Taharqa's two main predecessors, the first—Shabako—reigned at least 14 years (perhaps 15), conquering Egypt in his 2d year. That event cannot be set later than 712 B.C., when Sargon II of Assyria had contact with a king of Egypt *and* Nubia (as Shabako was), or any earlier than 716 B.C., when Osorkon IV still ruled in the east delta as the (U)shilkanni of Sargon II. Depending on whether a totally hypothetical coregency of up to 2 years between Shabako and Shebitku is accepted (probably not; Kitchen 1986: 164–72, 555–57, 583), Shebitku must have reigned 10 or 12 years.

9. Late Period. The dates from the 26th Dynasty to the Roman period are, with very few exceptions, well fixed by Egyptian, Near-Eastern and classical sources, and require no consideration here.

Table of Dates

PREDYNASTIC PERIOD

c. 4000 B.C. Taso-Badarian period
c. 3700 B.C. Naqada I (Amratian) period—C-14, 3850–3650 B.C.
c. 3500–3000 B.C. Naqada II (Gerzean) period—C-14, 3400 ± 139 B.C.

Later in this period belong traces of such Upper Egyptian local kings as "Ka" (Sekhen?) and "Scorpio," also, Lower Egyptian rulers (West Delta?), of whom some 9 names are preserved on the Palermo Stone.

ARCHAIC PERIOD

1st Dynasty (ca. 3000–2840 B.C.)

Horus	Eg. lists	Manetho
1. Narmer	Meni	(menes)
2. Aha	(A)teti	(Athothis)
3. Djer	Atet	(Kenkenes)
4. Djet	Ite (r)ty	(Uenephes)
5. Den/Udimu	Khasty/Semti	(Usaphis)
6. Anedjib	Merpabia	(Miebis)
7. Semerkhet	Irynetjer	(Semempses)
8. Qa/Sen	Qebehu	(Bieneches)

2d Dynasty (ca. 2840–2700 B.C.)

Horus	Mons.	Eg. lists	Manetho
1. Hetep-sekhemwy	Hetep	Bedjau/Bauneter	(Boethos)
2. Nebre	Nubnefer	Kakau	(Kaiechos)
3. Nynetjer	Nynetjer	Baninetjer	(Binothris)
4. ——	Weneg	Wadjnes	(Tlas)
			? same as
5a. ——		Senedi	(Sethenes)
5b (6). Sekhemib	Perenmat	Neferkare/Aka	(Chaires/ Nephercheres)
			? same as
		Neferkasokar	(Sesochris)
5c (7). Peribsen (= Seth)		“Hudjefa” [lacuna?]	——
6a (8). Khasekhem, *prob. same as:*			
6b (9). Khasekhemwy		Nebwy-hetep-imef Bebti/Djadjay	(Kheneres)

OLD KINGDOM

3rd Dynasty (ca. 2700–2600 B.C.)

Horus	Mons.	Eg. lists	Manetho
1. Sanakht	Nebka I	Nebka	(necherophes?)
2. Netjerkjet	——	Djoser Sa/Ti	(Tosorthros)
3. Sekhemkhet	Djoser-ty	Djoser- Te (ti)	(Tureis + Tosertasis)
4. Khaba	——	Sedjes/ … djefa? Nebkare	(Mesochris + Aches)
5. Qahedjet	Nebka II	Neferkare Huni	(Souphis + Sephuris)
——	——	——	(Kerpheres)

4th Dynasty (ca. 2600–2500 B.C.)

1. Snofru (Soris)
2. Khufu (*Kheops; Suphis)
3. Redjedef (Ratoises, 5th)
4. Khafre (*Khephren; Suphis)
5. Menkaure (*Mycerinus; Mencheres) (Bicheris)
6. Shepseskaf (*[S]asychis; Sebercheres) (Thamphthis)

*=Herodotus

5th Dynasty (ca. 2500–2350 B.C.)

1. Userkaf
2. Sahure
3. Neferirkare I Kakai
4. Shepseskare Isi
5. Neferefre
6. Neuserre Ine
7. Menkauhor Ikauhor
8. Djedkare Isesi
9. Unis

6th Dynasty (ca. 2350–2190 B.C.)

1. Teti
2. Userkare
3. Meryre Pepi I
4. Merenre I Nemtyemsaf I
5. Neferkare Pepi II
6. Mernre II Nemtyemsaf II
7. Netjerkare Nitocris

7th–8th Dynasty (ca. 2190–2160 B.C.)

	Abydos	Turin		Abydos	(Turin omits)
1.	Menkare	——	7.	Seneferka (Neferkamin)	I
2.	Neferkare	Neferka	8.	Nekare	
3.	Neferkare Neby	Nefer, “child”	9.	Neferkare Teruru	
4.	Djedkare Shema	——	10.	Neferkahor	
5.	Neferkare Shema	——	11.	Neferkare Pepisonb	
6.	Merenhor	——	12.	Seneferka (Neferkamni)	II ‹Anu
			13.	Qa (?)ka (u)re Ibi (Saqqara pyramid)—Ib (Turin)	
			14.	Neferkaure ?Koptos: Kha (bau) Wadjkare (…)	
			15.	Neferkauhor Koptos: Netjerbau Neferkauhor (+ Turin)	
			16.	Neferirkare II ?Koptos: Demdjibtawy (+ Turin)	

1ST INTERMEDIATE PERIOD

9th Dynasty (ca. 2160–2106 B.C.)

1. Meryibre Khety I
2. (…)
3. Neferkare (“Kaneferre”)
4. (Nebkaure) Khety II

10th Dynasty (ca. 2106–2010 B.C.)

FOURTEEN KINGS, FEW NAMES PRESERVED, BUT INCLUDING AT THE END:
12. (Wahkare) Khety III
13. Merykare ("Kameryre")
14. (A last, ephemeral ruler?)

MIDDLE KINGDOM

11th Dynasty (ca. 2106–1963 B.C.)

B.C.	Horus	Prenomen	Name	Reign
2106– (2100?):	"Ancestor" (Tepy-á)	——	Methuhotep I	(6?)
(2100?)–2090:	Sehertawy	——	Intef I	(10?)
			Total:	16
2090–2041:	Wah ankh	——	Intef II	(49?)
2041–2033:	Nakhtnebtepnufer	——	Intef III	(8)
2033–1982:	Seankhibtawy	——		
	Netjerhedjet	Nebhapetre	Mentuhotep II	(51)
	Smatawy	Nebhepetre		
1982–1970:	Seankhtawyef	Seankhkare	Mentuhotep III	(12)
1970–1963:	Nebtawy	Nebtawyre	Mentuhotep IV	(7)

12th Dynasty (ca. 1963–1786 B.C.)

B.C.	King	Reign	(Krauss:)
1963–1934:	Amenemhet I	(29)	(1937–1908)
1943–1898:	Sesostris I	(45; 9 CR)	(1917–1872)
1901–1866:	Amenemhet II	(35; 3 CR)	(1875–1840)
1868–1862:	Sesostris II	(6; 2 CR)	(1842–1836)
1862–1843:	Sesostris III	(19)	(1836–1817)
		(Sothic date, Year: 1856–55)	(1830)
1843–1798:	Amenemhet III	(45, min.)	(1817–1772)
1798–1789:	Amenemhet IV	(9)	(1772–1763)
1789–1786:	Sobeknofru	(3)	(1763–1759)

2D INTERMEDIATE PERIOD

13th Dynasty (ca. 1786–1633 B.C.)

B.C.	Kings	Reigns	(Krauss:)
1786–1723:	first 21 kings	(63 years)	(1759–1696)
1723–1712:	Neferhotep I	(11)	(1696–1685)
1712:	Sihathor	(3 months)	(1685)
1712–1705:	Sobekhotep I	(7)	(1685–1678)
1705–1701:	Sobekhotep II	(4)	(1678–1674)

1701–1691: Iaib	(10)	(1674–1664)
1691–1668: Merneferre Ay	(23)	(1664–1641)
1668–1633: later kings	(35 years)	(1641–1606)

14th Dynasty

Either local Egyptian (West) delta kings, or "76 kings who reigned 184 years" in Xois (W. delta) with Manethos; 1786–1602 B.C. (1759–1575 B.C.).

15th (Hyksos) Dynasty (ca. 1648–1540 B.C.)
(Krauss 1985: 1637–1575 B.C.)

1. "Salitis"
2. "Bnon"
3. "Apakhnan"
4. Khyan ("Iannas"), Sewoserenre
5. Apopi ("Apophis") Nebkhepeshre/Aqenenre/Awoserre
6. Khamudy ("Assis")

16th (Hyksos) Dynasty (ca. 17th century B.C.)

Probably local Weat Semitic princes in East Delta

17th (Theban) Dynasty (ca. 1633–1550 B.C.)
(Krauss 1985: 1606–1539 B.C.)

1663–1575:	includes Rahotep, Thuty Nebiryerau I and II; Sobekemsaf II; Intef V (Numkhepere); Intef VI and VII (Herihirmaat, Wepmaat).	
1575–1565:	Tao I (Senakhtenre)	(1565–1555)
1565–1555:	Tao II (Seqenenre)	(1555–1545)
1555–1550:	Kamose (Wadjkheperre)	(1545–1539)

NEW KINGDOM

18th Dynasty (ca. 1550 [or 1539]–1295 B.C.)

B.C. King	Reign	(Krauss:)
1550–1525: Ahmose I	(25)	(1539–1514)
1525–1504: Amenhotep I	(21)	(1514–1493)
1504–1492: Thutmose I	(12)	(1493–1481) (12?)
1492–1479: Thutmose II	(13)	(1481–1479) (2?)
1479–1457: Hatshepsut	(22)	
1479–1425: Thutmose III	(54)	(Coregency option, Am. III/IV)
1427–1400: Amenhotep II	(27)	(1427–1392: Amenhotep II (35)
1400–1390: Thutmose IV	(10)	1392–1382: Thutmose IV (10)
1390–1352: Amenhotep III	(38)	1382–1344: Amenhotep III (38)
1352–1336: Amenhotep IV/Akhenaten	(16)	1352–1336: Amenhotep IV (16; 8CR) [Akhenaten])
1338–1336: Smenkhkare	(2 CR)	

1336–1327: Tutankhamun (9)
1327–1323: Ay (4)
1323–1295: Heremhab (28)

19th Dynasty (ca. 1295–1186 B.C.)

1295–1294: Ramesses I (1)
1294–1279: Seti I (15)
1279–1213: Ramesses II (66)
1213–1203: Merenptah (10)
1203–1200: Amenmesses (3)
1200–1194: Seti II (6)
1194–1188: Siptah (6)
1188–1186: Tewosret ("6"+2=8)

20th Dynasty (ca. 1186–1069 B.C.)

1186–1184: Setnakht (2)
1184–1153: Ramesses III (31)
1153–1147: Ramesses IV (6)
1147–1143: Ramesses V (4)
1143–1136: Ramesses VI (7)
1136–1129: Ramesses VII (7)
1129–1126: Ramesses VIII (3)
1126–1108: Ramesses IX (18)
1108–1099: Ramesses X (9)
1099–1069: Ramesses XI (30)

3D INTERMEDIATE PERIOD

21st Dynasty (ca. 1069–945 B.C.)

Kings	High priests of Amun
	1081–1074: Herihor (7)
	1074–1070: Piankh (4)
1069–1043: Smendes I (26)	1070–1055: Pinudjem I as high pr. (15)
1043–1039: Amenemnisu (4)	1054–1032: Pinudjem I as "king" (22)
1039–991: Psusennes I (48)	1054–1046: Masaharta (8)
	1046–1045: Djed-Khons-ef-ankh (1?)
	1045–992: Menkheperre (53)
993–984: Amenemope (9; 2CR)	992–990: Smendes II (2?)
984–978: Osoekon the Elder (6)	
978–959: Siamun (19)	990–969: Pinudjem II (21)
959–945: (Har-)Psusennes II (14)	969–945: Psusennes "III" (24) [= Ps II?]

22d Dynasty (ca. 945–715 B.C.)

945–914: Soshenq I (21)
924–889: Osorkon I (35)
ca. 890: Shoshenq II (*x*, CR)
889–874: Takelot I (15)
874–850: Osorkon II (24)
ca. 870–860: Harsiese (ca. 10, CR)
850–825: Takelot II (25)
825–773: Shoshenq III (52)
773–767: pimay (6)
767–730: Shoshenq V (37)
730–715: Osorkon IV (15/17)
(-713?)

23d Dynasty (ca. 818–715 B.C.)

818–793: Pedubast I (25)
?804–803: Iuput I (*x*, CR)
793–787: Soshenq IV (6)
787–759: Osorkon III (28)
764–757: Takelot III (7;5 CR)
757–754: Rudamun (3?)
754–720:Iuput II (34–39)
(-715?)
(720–715: Shoshenq VI (5?)
(existence doubtful)

24th Dynasty (ca. 727–715 B.C.)

727–720: Tefnakht I (7) (or 727–719 [8])
720–715: Bakenranef (5) (or 719–713 [6])

25th (Kushite) Dynasty (ca. 780–656 B.C.)

CA. 780–760: ALARA (CA. 20?)
ca. 760–747: Kashta (ca. 13)
747–716: Pi (ankhy) (31) (or 747–714 [33])
716–702: Shabako (14) (or 714–700 [14])
702–690: Shebitku (12) (or 702–690 [12; 2 CR])
690–664: Taharqa (26)
690–664: Taharqa (26)
664–656: Tantamun (8)

SAITE-PERSIAN PERIOD

26th Dynasty (ca. 664–525 B.C.)

664–610: Psammetichus I (54)
610–595: Necho II (15)
595–589: Psammetichus II (6)
589–570: Apries [Hophra] (19)
570–516: Amasis II (44)
526–525: Psammetichus III (1)

27th Dynasty (1st Persian Dominion) (ca. 525–404 B.C.)

525–522: CAMBYSES (3 IN EGYPT)

522–486: Darius I (36)
486–465: Xerxes I (21)
465–424: Artaxerxes I (41)
424–404: Darius II (20)

28th Dynasty (ca. 404–399 B.C.)

404–399: AMYRTAIOS (5)

29th Dynasty (ca. 399–380 B.C.)

399–393: Nepherites I (6)
393–380: Hakor (Achoris) (13)
[392–391: Psimut (Psammouthis), rival (1)]
380: Nepherites II (and possibly a "Muthis") (months only)

30th Dynasty (ca. 380–343 B.C.)

380–362: Nakhtnebef (Nectanebo I) (18)
362–360: Djedhor (Teos) (2)
360–343: Nakhthorheb (Nectanebo II) (18)

"31st" Dynasty (2d Prsian Dominion) (ca. 343–332 B.C.)

343–338: Artaxerxes III (5 in Egypt)
338–336: Arses (3)
336–332: Darius III (4)

HELENISTIC-ROMAN PERIODS

332–323: Alexander the Great (9)
338–30: Eraof the Ptolemies
30 B.C.–A.D. 641: Roman and Byzantine epochs
A.D. 641: Arab conquest

Mons. = The Monuments
CR = Co-regency

    1. Early Neolithic and Cattle Domestication
    2. Middle and Late Neolithic

_____

A. Introduction

Egypt can be divided into two strikingly different geographic areas. See Fig. EGY.01. On the one hand is the Nile Valley, the narrow strip of land bordering the river, which supports rich agricultural fields and lush vegetation and is most suited to human habitation. The waters of the Nile come not from local rainfall but from the highlands of East Africa. They travel the length of Egypt, dividing the country into two, and flow into the Mediterranean. In marked contrast to the valley are the deserts on each side; they are essentially rainless and barren of vegetation. The landscape consists of vast expanses of rock and sand, and, except in a very few, favored areas, is uninhabitable. Because of the differences in resources, these two zones have had very different histories of human exploitation, but each has made important contributions to the prehistory of Egypt. The Nile Valley, so far as we know, has probably been occupied more or less continuously for the last half-million years and possibly more. The deserts, or at least the W Desert (almost nothing is known about the prehistory of the Red Sea Hills and the desert E of the Nile), saw human occupation only during episodes of increased moisture, of which there have been several in the last few hundred thousand years.

B. Early and Middle Paleolithic

Our knowledge of the Early Paleolithic in Egypt is very limited. There is no reason why Egypt should not have been occupied during the Oldowan period (beginning about 1.75 million years B.P.), but no evidence for such an occupation is known at this time. The earliest conclusive evidence of human occupation are the numerous large, crude hand axes and cleavers in the W Desert, associated with deflated remnants of fossil ponds along the margin of a large basin or much older river system. At one locality, a thermoluminescence date of 350,000 B.P. was obtained on sediments overlying the artifacts, but this provides only a minimum age for the occupation. Similar crude hand axes (but apparently lacking cleavers) have also been recovered from Nile sands, silt, and gravels near Cairo.

Finely made hand axes, which may be in the order of 250,000 years old, are more common. They have been reported from several sites in the Nile Valley, as well as from the W Desert, where they are associated with deflated fossil spring vents and remnants of shallow ponds. One of the spring vents with Final Acheulian tools also yielded bones of a horse or ass and fragments of ostrich eggshell, indicating a grassland environment and suggesting that there was significant local rainfall at this time (Caton-Thompson 1952; Schild and Wendorf 1977; 1981; Wendorf and Schild 1980).

We have much more detailed knowledge of the Middle Paleolithic in Egypt. Several varieties of occupation are known and seem to reflect both regional adaptations and diachronic change. The best data are from the W Desert, where a long sequence of Middle Paleolithic occupations has been found in two adjacent basins, Bir Sahara East and Bir Tarfawi (Wendorf and Schild 1980). The sequence is tied to a series of lacustrine events, which reflect periods of a high water table. The periods of lake development are separated by intervals of lower water table, wind erosion, and eolian deposition. The age of this Saharan Middle Paleolithic is not firmly established. The last lacustrine phase may date to about 90,000 B.P. and the beginning may be as early as 200,000 B.P. Many of the occupations fall within the Last Interglacial.

All the settlements share a similar tool kit, but there is considerable diversity in the functions of individual sites. Some sites were workshops; others had little manufacturing debris but numerous tools, and still others had quantities of both debris and tools. The associated fauna consisted predominantly of large herbivores, including rhino, buffalo, giraffe, extinct camel, and several varieties of antelope and

gazelle (Gautier 1980). The microfauna and avian remains suggest that the environment was tropical and that the rainfall was probably about 600 mm per year (K. Kowalski, personal communication, 1986). There is no direct evidence that Middle Paleolithic people hunted the large animals, but many of the bones have been cut, split, or battered, and clusters of bones often occur closely associated with heavy cutting or scraping tools, indicating that the animals were butchered, regardless of how they may have died.

In the Nile Valley, most of our knowledge of the Middle Paleolithic comes from S Egypt and adjacent Sudan, N of the 2d Cataract (Wendorf 1968a). One site, deeply buried in ancient Nile sediments, had two cultural layers, with abundant remains of wild cattle in the lower and numerous fish bones in the upper layer (Shiner 1968a). This is the first evidence for the specialized exploitation of the two food resources, wild cattle and fish, which were to dominate the economies of the Egyptian Nile Valley until the adoption of food production during the Neolithic.

We do not know what the Middle Paleolithic inhabitants of Egypt looked like. Their contemporaries in Europe and the Near East were Neanderthals, and skeletons of this period found elsewhere in North Africa have Neanderthal features (Trinkaus 1982). In South Africa, however, Middle Paleolithic skeletons have been identified as modern *Homo sapiens sapiens.*

C. Upper and Late Paleolithic

The W Desert seems to have been hyperarid and uninhabitable from the time of the Middle Paleolithic until the early Holocene about 10,000 B.P. In the Nile Valley, the record is also far from complete, with a hiatus from before 45,000 B.P. until the first Upper Paleolithic, which is dated between 35,000 and 25,000 B.P.

One of the most interesting early Upper Paleolithic sites is a shafted and chambered flint mine, with several radiocarbon dates around 33,000 B.P.; it is perhaps the oldest known flint mine (Vermeersch et al. 1984b). On an adjacent hill was an extended human burial with an associated adz-like tool similar to those recovered from the mine (Vermeersch et al. 1984a). The identification of the burial as that of a miner is supported by the archaic physical features of the skeleton: he was a Mechtoid, a robust variety of *H. sapiens sapiens* known from several Late Paleolithic sites in the Maghreb and in the Nile Valley.

The quantity and quality of our information are much greater for the Final Pleistocene, beginning around 21,000 B.P. (Close, Wendorf, and Schild 1979; Hassan 1974; Lubell 1974; Phillips 1973; Wendorf 1968a; Wendorf and Schild 1976; Wendorf et al. 1980; 1986–89). The Nile at that time was very different from today. The highlands of E Africa were cold and arid; the Blue Nile had a very restricted flow that was loaded with sediment and the White Nile did not flow at all. As a consequence, the Egyptian Nile was a braided stream with several channels, which deposited sediment in the Valley, raising the level of the river much higher than it is today (Wendorf et al. 1986–89, vol. 2).

Most of the known sites seem to have been seasonal camps occupied immediately after the annual flood, which today occurs in late August and September. The period after the flood is an ideal time for fishing, because the fish can be readily caught by simple techniques as the floodwaters recede. Most of the sites contain numerous fish bones, but other subsistence activities included the gathering of starchy tubers, which grew along the edge of the flood plain and were in prime condition for harvesting shortly after the flood, and the hunting of hartebeest, wild cattle, gazelle, and hippo (Wendorf et al. 1986–89, vol. 2). In some sites, particularly those occupied after 15,000 B.P., there are indications that cattle were the most important prey.

The tool kits include numerous grinding stones on which the starchy tubers were crushed to remove volatile toxins and to improve their digestibility. Bone tools and ornaments make their first appearance in the prehistoric record; they are not common but include simple bone awls and narrow bi-pointed pieces which may have served as fish gorges, as well as beads made from ostrich eggshell (Wendorf et al. 1986–89, vol. 3).

Human remains of this period are known from several sites, including three graveyards containing multiple burials (Anderson 1968; Green et al. 1967; Wendorf 1968b; 1968c). All of them were Mechtoids, the same type as appeared in the valley in the early Upper Paleolithic. Their presence suggests that there was a single human type throughout N Africa during this period, from the Nile Valley to

Atlantic Morocco. In the graveyards at Jebel Sahaba, near the Sudanese-Egyptian border, more than 40 percent of the skeletons—men, women and children—had stone artifacts embedded in their bones, fractures, cut marks, or other evidence of violent death; the actual percentage to have died violently was undoubtedly much higher. The skeleton of a male from Wadi Kubbaniya in Egypt had two stone blades in its pelvic cavity and signs of older, healed traumas (Wendorf et al. 1986–89, vol. 1). It is not clear that these deaths bear witness to organized warfare, but this was obviously a period of intense and violent competition for the limited resources of the valley.

D. The Holocene and the Neolithic

After about 13,000 B.P., there was a significant increase in the rainfall in E Africa, the White Nile began to flow, Victoria Falls became active, and the river soon broke through the dunes which had blocked its channel S of Khartoum. A stream regimen developed similar to that of today. At first, this produced record floods, traces of which are still evident along the edges of the flood plain, but the multiple braided channels which had characterized the river for nearly ten millennia were soon abandoned for a single, wide-stream course, which began to cut through the soft sediments that had filled the valley. This new and greatly enlarged river provided more stable, and probably richer, resources than before, but successful exploitation of them undoubtedly required new adaptations and technological skills.

1. Early Neolithic and Cattle Domestication. The period between 12,000 and 8000 B.P. is poorly represented in the archaeological record of the Nile Valley; only four or five small sites are known (Schild, Chmielewski, and Wieckowski 1968; Vermeersch 1978). Fishing and hunting were still important economic activities, and grinding stones continued to be used, but there are no plant remains to tell us whether they were for processing tubers or for crushing grass seeds. There is nothing to suggest the presence of domestic plants or animals.

In striking contrast, we know much about developments in the W Desert during this period (Banks 1984; Caton-Thompson 1952; Wendorf and Schild 1980; Wendorf et al. 1984). The increased rainfall had spread N into the S Sahara by 11,000 B.P., ending the long period of hyperaridity. It was not as wet as during the Middle Paleolithic, with perhaps only 100 mm per annum even during the wettest periods, but this was sufficient to permit men and animals to recolonize the area. The summer monsoons created temporary ponds, or playas, in basins scoured out of the bedrock. Several meters of sediment had accumulated in the basins before the first evidence of human occupation, indicating a significant delay between the onset of the rains and the arrival of the first human groups (Wendorf et al. 1984).

The earliest Holocene sites are small clusters of stone artifacts, representing brief occupations by small groups of people. The tools closely resemble those from contemporary sites along the Nile. Several sites have also yielded a few sherds of well-made pottery, decorated with rows of designs made by pressing a comb into the clay while it was still soft. This pottery, called Early Khartoum ware, is known from the Nile Valley in central Sudan, and also from much of the S part of the Sahara.

The associated fauna is very different from that of the Middle Paleolithic, consisting mostly of the small dorcas gazelle, with some specimens of the slightly larger dama gazelle and an occasional hare. Many of the sites also contain the bones of cattle intermediate in size between wild and domestic forms (Gautier 1987). These are believed to have been domestic, primarily on ecological grounds. If the cattle were wild, there should have been the range of animals that usually accompanied them. For example, in the Nile Valley, where wild cattle were present, there were hartebeests, occasional Barbary sheep, wild asses and hyenas, as well as dorcas and dama gazelles, hare, and other small mammals. The early Holocene desert fauna lacks these medium-size animals, indicating an environment too harsh to support anything larger than a small ruminant. In addition, unlike gazelles and hare, cattle need to drink water. There was no permanent standing water in the Holocene desert. When the playas were dry, the only way to obtain water was to dig for it. Wild cattle thus could not have survived in the W Desert and the cattle must have been brought, as domestic animals, by the Neolithic people who found water and pasturage for them (Wendorf, Close, and Schild 1987). Since these Saharan cattle are quite as early as the earliest domestic cattle in the Near East and SE Europe, this raises the possibility of an independent African domestication of cattle.

There are two kinds of settlements among the earliest Neolithic sites (Wendorf et al. 1984). The first are small but relatively dense concentrations of artifacts with one or several hearths. Such sites are always located in the seasonally flooded lower parts of the basins. None of the sites has any indication of a dug well, so surface water must have been available nearby, in still deeper portions of the basins; these settlements do not, therefore, date from the very driest part of the year.

The second kind of settlement has small, thin clusters of artifacts and an occasional hearth, but with very few and often crudely made stone tools. These sites occur on the higher plateaus and on the sand sheets, where grazing would have been available in periods of increased rainfall. Since all the known earliest Neolithic sites seem to have been temporary camps occupied after seasonal rains, and since the associated faunas consistently include a few bones of presumably domestic cattle, it is likely that both varieties may have been herding camps occupied by small groups, but that each represents a slightly different function. The small clusters, with a few crudely made tools, are seen as representing satellite groups, possibly of young men or boys, who were tending cattle herds in distant pastures. The more elaborate sites in the playa basins are interpreted as the remains of camps of the families from which the herding groups were derived.

Since there is no evidence for the digging of wells, these groups must not have remained in the desert throughout the year. It is likely that the Early Neolithic cattle herders left the desert unoccupied each year from the beginning of the dry season until the grass began to grow—that is, from late winter until after the summer rains. They seem not to have moved S into Sudan, but may have gone E to the Nile Valley. However, there is an important difference between the Nilotic sites and those in the desert. Although the sites on the Nile contain cattle, they are larger than those found in the desert sites, falling within the normal range of wild cattle (Gautier 1987). However, the Neolithic groups in the Nile Valley may have kept herds of domestic cattle primarily for milk and blood, and obtained their meat from the wild cattle which roamed naturally in the lush environment of the valley. In that case, the cattle remains would represent almost exclusively the hunted wild animals, with only an occasional bone from a herd animal.

After a brief but intensely arid interval around 8200 B.P., distinctly different groups suddenly appear in the W Desert at about 8100 B.P. (Wendorf and Schild 1980; Wendorf et al. 1984). These new people lived in true villages, often with a clearly defined plan of houses set in rows, or with storage pits placed in an arc. Some of the villages had large, deep wells, with steps cut into the side, making it possible to walk down to the water. Hunting was still important, but hare were now relatively more common in the faunal remains. Cattle were present, although still rare, and domestic cereals (six-row barley) were also known. Pottery was more abundant, although it was not common.

The houses and pits indicate long-term or, at least, recurrent occupations, and they may even have been occupied for most of the year. These people seem no longer to have migrated to the Nile Valley; no sites have been found there of this age with anything approaching this level of social complexity (although they might, of course, now be buried). The stimulus for these new developments is not well understood, but one contributing factor may have been the domestication of plants, for which these sites provide the first evidence in Egypt.

2. Middle and Late Neolithic. The trend of Saharan development was again broken by aridity between 7900 and 7800 B.P. When the rains returned, the playa sediments once more began to accumulate in the basins and the desert was reoccupied by people with a different stone tool technology, new preferences in raw materials, more abundant and differently decorated pottery, and a social system that did not require organized villages like those of the preceding period. Middle Neolithic sites are numerous and a few are very large. Settlement was almost certainly restricted to the desert. Occupation lasted 1500 years (until about 6200 B.P.) without interruption, even though there is evidence for several intervals of pronounced aridity during this period (Wendorf and Schild 1980; Wendorf et al. 1984).

Cattle were still present but rare, and the later part of this period may have seen the introduction of sheep or goats. Domestic emmer wheat occurred, as well as the already known six-row barley. Hare and gazelle remained the most important sources of meat. The only evidence of direct contact with people living along the Nile is a few shells from Nilotic and Red Sea shellfish, but stone tools in the two areas

are remarkably similar, which should indicate more than occasional contact. There are only a few human skeletal remains which can be assigned to this period, and these seem to have Negroid features.

The Middle Neolithic saw the development of considerable variety in settlements, but in all the variations the availability of water remained the crucial factor. The communities include numerous middle-sized settlements, each with several wattle-and-daub houses, located in the lower portions of large playas, and small one- or two-house settlements in the lower part of small basins. On the higher plateaus and distant sand sheets, there are small clusters of hearths and artifacts, like those of the Early Neolithic; these, again, are thought to represent herding camps. There is also one very large settlement (>15 ha), on a dune overlooking one of the largest playas and above the highest reach of the seasonal floods (Banks 1984). No trace of houses has been found, but there are deep storage pits, large walk-in wells, and many hearths throughout a 2 m deep sequence. The bones of cattle are significantly more frequent here than in any other type of Middle Neolithic site.

We may try to reconstruct how these settlements articulated into one system. The exceptionally large site may have been the place where most, if not all, of the local population gathered, presumably for social purposes, during one period of the year. This period was probably within the rainy season, because only then would there be available sufficient water for a large group. The social purposes of such a gathering are, of course, unknown, but they may have included betrothals and marriages, trade, and religious or ritual activities. This may also explain the relative abundance of cattle remains, which recalls the practice among many modern cattle pastoralists of slaughtering cattle to mark socially significant occasions.

Later, near the end of the wet season, the people dispersed into medium-sized groups who moved onto the lower levels of the playas as the water levels receded. Before the playas had completely dried, crops were planted around the still-moist margins of the basins. The very small scatters of artifacts on the plateaus and sand sheets may also date from this season and may represent the pasturing of cattle on the new grass that came up during and after the rains. The one- and two-house sites in the playas may represent simply an alternative type of settlement during the same season, and the existence of such sites strongly suggests that there was no warfare or less formal conflicts, such as banditry. All the sites on the playas would become uninhabitable at the onset of the rains, and it was perhaps then, or shortly thereafter, that movement began back to the large aggregation sites.

Contemporaneous sites known in the Nile Valley are few and small, and date only to a late phase of the Middle Neolithic (Shiner 1968b). Thus, the best evidence now available suggests that an efficient settlement system, together with a rather sophisticated technology and a moderately stable interval of increased rainfall, permitted large communities to live permanently in what must still have been a very harsh environment.
